

TO THE SUBSCRIBERS

TO THE

COMPREHENSIVE HISTORY OF ENGLAND.

THE Publishers have much pleasure in presenting the concluding portion of the **COMPREHENSIVE HISTORY OF ENGLAND** to their Subscribers. Some delay has occurred in the completion of the Work, which may be briefly explained. It was at first proposed to finish the history at the end of the Russian War, but it was afterwards determined to continue it to the Suppression of the Sepoy Revolt. Hence the originally proposed limits were exceeded, and the period of completion deferred, whilst the careful preparation of the closing details necessarily occupied much time. Every care has been taken to render the history attractive to the reader as he pursues the narrative continuously, and equal care has been taken, by a copious and diligently compiled Index, to give him facilities for turning on the instant to any of its multifarious details. It has been the Publishers' aim to present in the text and in its illustrations (above Eleven Hundred in number) a trustworthy and interesting record of the national annals.

The Publishers take the present opportunity of directing attention to their

COMPREHENSIVE HISTORY OF INDIA,

of which a Prospectus is annexed. This Work is intended to be a companion to the **HISTORY OF ENGLAND**, and in the careful preparation of all its details, it claims equal acceptance and regard.

TO BE COMPLETED IN ABOUT 24 PARTS, PRICE 2s. EACH.

A COMPREHENSIVE HISTORY OF INDIA, CIVIL, MILITARY, AND SOCIAL,

FROM THE FIRST LANDING OF THE ENGLISH TO THE SUPPRESSION OF THE SEPOY REVOLT;
INCLUDING AN OUTLINE OF THE EARLY HISTORY OF HINDOOSTAN.

By HENRY BEVERIDGE, Esq., ADVOCATE.

ILLUSTRATED BY ABOVE FIVE HUNDRED ENGRAVINGS ON WOOD AND STEEL.

THE HISTORY OF INDIA forms a most attractive subject of study for all classes of readers. In the remarkable series of events brought under review in the course of the narrative, we see the humblest beginnings gradually leading to the most magnificent results—feeble factories converted into forts, and made the centres of permanent settlements—desperate struggles for existence succeeded by aspirations after dominion—powerful combinations of native Princes and European rivals defeated by indomitable courage and perseverance—great battle-fields—deeds of heroic daring—moving incidents by flood and field—and a glorious roll of statesmen and warriors, emblazoned with such names as Clive, Hastings, Cornwallis, Wellington, Bentinck, Hardinge, and Napier. The rise, progress, and actual position of an Empire thus wonderfully established, and now justly regarded as one of the brightest jewels in the British Crown, furnish ample materials for a narrative of surpassing interest—a narrative of which, even for its own sake, few would willingly remain ignorant, and with which every British subject who understands his position and feels his responsibility must long to be thoroughly acquainted. A painful additional interest is conferred on this history by the atrocious mutiny which recently burst forth with devastating fury; relieved, however, by the noble manner in which it was met and combated, and the heroism almost unparalleled which it evoked, in which the passive endurance of feeble women shares the palm with the gallant exploits of veteran warriors. To supply, in a pleasing and instructive form, such an account of our Eastern Empire as may at once meet the wants of the present time, and command general confidence by its accuracy and impartiality, will be the great aim of the COMPREHENSIVE HISTORY OF INDIA.

The *Illustrative Engravings*, above *Five Hundred in number*, will comprise illustrations of the Armour, Dress, Manners and Customs, and Utensils of the People of India; Views of Historical Sites, Temples, Palaces, and Monuments; Portraits of Illustrious Persons; Maps and Plans of Historical Localities, Battles, Battle-fields, Forts, Towns, &c.; the whole executed in a style similar to the illustrations in the *Comprehensive History of England*; and also Engravings on Steel, consisting of a Frontispiece and Vignette Title to each Volume. The Work will be completed in about Twenty-four Parts, price 2s. each.

OPINIONS OF THE PRESS.

"It is impossible to speak too highly of this admirable work. The more we see of it the more we are convinced that the favourable opinions expressed by the press in general on its first appearance, will be fully justified by the result, and that this will prove, when

complete, one of those rare books that claim a position in every library."—*Cheltenham Journal*.

"A valuable and interesting work; elegantly written, and supplying a fund of information respecting a country whose history is all romance. It

is also beautifully printed and illustrated."—*News of the World*.

"Cannot fail to become popular."—*Critic*.

"This history is proceeding well, and the illustrations are both correct and beautiful."—*Literary Gazette*.

THE COMPREHENSIVE HISTORY OF ENGLAND.

BOOK X.—CONTINUED.

CHAPTER XXXI.—CIVIL AND MILITARY HISTORY.—A.D. 1792.

GEORGE III.

The French revolutionists impatient for foreign wars—Necessity of war at this time for France—Predominance of the Girondists in the government—Introduction of pikes and caps of liberty—Grounds of quarrel between France and Austria—Eagerness of Dumouriez for a war between the two countries—Becquey's arguments in favour of peace—They are disregarded—France declares war against Austria—France divided into three military commands—Its armies and commanders—Disagreement of the French generals about the plan of the campaign—War commences against Austria—Panics of the French troops at the commencement—They complain that they are betrayed by their officers—The clubs of Paris take up the cry—Robespierre's proposal to make war with the press as well as with armies—Prevalence of suspicion and fear in Paris—Crowding of the prisons—Commencement of the "Reign of Terror"—Dr. Priestley confides his son William to a member of the French assembly—William Priestley presented by it with letters of naturalization—Penalties denounced on priests who had refused to take the *serment civique*—The king refuses to sanction the decree—Insolent treatment of Louis by the *sans-culottes* ministry—Pedantic conduct of Roland, minister of the interior—His notable letter to the king—Roland dismissed from office—Mischievous effects from the publication of his letter—Resolution of the Parisian mob to break into the Tuileries and indoctrinate the king—Their ominous banners and emblematic devices—They demand permission to enter the national assembly—Debate of the assembly on the propriety of granting their demand—They rush in without leave—Imperious harangue of the mob to the assembly—They march through the hall—They attack the Tuileries—They are admitted by the national guards—Their violent conduct—Their reception from the king—Their rude treatment of Louis and the royal family—Addresses of sympathy to the king from several parts of France—La Fayette uselessly returns to Paris—His increasing unpopularity—Tidings of hostile movements of the King of Prussia—A feast of the pikemen, &c., in the Champ de Mars—The king and his family are present at the spectacle—Inefficiency of their presence to recall the loyalty of the people.

THE French revolutionists, not avoiding war but courting it, were in a most bellicose attitude at the end of the year 1791. They announced that the whole French people was eager to march into the Low Countries to attack the emigrants at Coblenz and elsewhere, and all the princes, whether an emperor or a little margrave, that harboured and assisted them. As early as the 1st of January the great Girondist orator, Gensonné, said in the assembly that there was no use in attempting to disguise the fact that they were ready to attack all the despots in Europe. On the 11th of January the war minister assured the assembly that from the completeness of their troops, fortresses, and preparations, they had nothing to fear from an immediate war. Upon this, fresh defiance

were hurled in the teeth of all the sovereigns in Europe, and fresh Jacobin emissaries were sent into the states of most of them. It was now found that foreign conquest would be the most profitable employment for a revolutionized and virtuous democracy. New rules were adopted for recruiting the troops of the line with more facility; and, when some economical deputies objected to the great expense which must attend this scheme, Lacombe exclaimed, "Do not be sparing of your money! With money we shall obtain troops, and victory, and conquests; and victory will bring us back plenty of money!" Thus early did the Jacobins adopt a principle which was destined to carry the French arms so far. Fresh *émeutes* broke out in Paris and the faubourgs on account of the dearness of bread and *sugar*, and the want of employment for the working classes. What employment was so easily

to be obtained and likely to be so profitable as that of war, for which the French people had so natural an inclination? Among many things which are obscure enough, this one is perfectly clear to every eye not blinded by prejudice:—if Austria and Prussia had never attacked France, they would have been attacked by the French.

The Girondists, or Girondins, as they were called from the district which had given birth to some of their leaders, now formed the majority of the new assembly. Though, for a time, figuring as constitutional monarchists or champions of the existing order of things, they were one and all republicans, and impatient for the overthrow of the last semblance of royalty. After breaking up the king's disjointed ministry, these triumphant Girondins entered the cabinet by storm, and inundated all the places of government. The husband of the ultra-republicaness, Madame Roland, became minister of the interior, and that true chameleon Dumouriez minister for foreign affairs; De Grave, who was soon replaced by Servan, got Narbonne's post as minister of war, and Lacost was appointed minister of marine; the finances were confided to Clavière, a poor republican stockbroker and man of letters from Geneva, who had first signalized himself by attacking his compatriot Necker; and the important department of justice was given to Duranton, a little lawyer from Bordeaux, after Roland, the virtuous, had failed in obtaining it for the obscene Faublas Louvet. Madame Roland, who had had much to do with the formation of this Girondist ministry, but who had not been able to appoint to all the places, and who had afterwards personal reasons to complain even of some who had obtained their posts with her good wishes and concurrence, speaks very slightly in her *Mémoires* of most of these new statesmen, finding not one of them, save and except her own husband, who was but the double or echo of herself, precisely what he ought to have been. The court called this ministry, which was formed in the month of March, the *sans-culottes* ministry. Between these Girondins and the Jacobins there was already a mortal feud. For a season the Jacobins had pretended to be anxious for the preservation of peace; but when Robespierre and his party saw that a declaration of war was inevitable, and that they might risk their popularity by opposing it too long, they originated or promoted measures for arming and strengthening the people; and the Girondins, striving with them for popularity, and shutting their eyes to the inevitable consequences of arming the mob, encouraged the same system, which was gradually to destroy the present ascendancy of the middle classes, and erect on a broad basis the dominion of the multitude—of the most desper-

ate and the neediest, the real *sans-culottes*. Brissot, a leader of the Gironde, was among the very first to recommend that pikes should be forged in every section of Paris, in every department, in every town in France; and that the hat should be thrown aside as a vile slavish thing, introduced by priests and despots, and give place on every true French head to the *bonnets rouges*, or red night-caps, such as were worn by some of the lowest people. Brissot, in his journal, demonstrated that the *bonnet rouge* was the real Phrygian cap of antiquity, the proper cap of maintenance for the French people, the real cap of liberty; that such caps had been worn by the Greeks, the Romans, the Gauls, and all the great nations and illustrious men of antiquity; that Rousseau was a great partizan of the red cap as the symbol of liberty; and that Voltaire was equally proud of it, and always wore it.

This essay from the pen of Brissot appeared in February, and within a month the *bonnet rouge* was in high vogue. Pikes were forged faster than red night-caps were made, patriots and patriotesses subscribing or clubbing together to keep the smiths going; and still Brissot kept saying in his newspaper—"Citizens and patriots, let us forge pikes from one end of the kingdom to the other!" And Gorsas, and other newspaper-men, kept echoing, "Pikes! pikes! pikes! Nothing but pikes and bonnets rouges, and tricolor cockades to put upon them." There were soon pikes enough, with blood enough upon them!

The Emperor Leopold, who had fondly clung to peace, and to the hope that all difficulties might be settled by means of a congress, died suddenly on the 1st of March. His son and successor, Francis II, immediately saw that war was inevitable. In one single case he had matter enough to fill a manifesto and justify a declaration of hostilities. A number of German princes, holding large estates in Alsace, and thence called by the French *princes possessionnés*, had been deprived by the revolutionists and the decrees of the assembly of all their ancient hereditary rights, which had been acknowledged and confirmed by treaties, when Alsace (for the general misfortune of Europe) was allowed to be incorporated with France. The French had refused to give these dispossessed princes any equivalent or compensation whatever—compensation being a word obliterated in the political dictionary of these revolutionists, who, in like manner, had taken Avignon from the pope. As a guarantee of treaties, Francis, on the failure of diplomacy, and on the insulting refusals both he and his father had received, was fully justified by the law of nations in declaring hostilities. Instead of clearing of troops such of his territories as bordered on France, and prohibiting the gatherings of the

emigrants, as his predecessor Leopold had done, the young emperor, Francis II., it was said, collected troops, appointed generals, traced out camps, gave open countenance to the expatriated French princes and noblesse, and declared that the court of Vienna must and would insist on the restoration of the possessed princes to their rights in Alsace, &c.; on the restoration of Avignon to the pope; on the cessation of that French propagandism which was seeking to undermine all the thrones and established governments of Europe; and, finally, on the restoration of Louis XVI. to his liberty and royal dignity, or at least on some adequate guarantee that the peace and tranquillity of the neighbouring powers should not be disturbed through the present weakness of the internal government of France. Prince Kaunitz refused to treat any longer directly with French negotiators, or with the government now established in France; and the Baron de Cobentzel informed the ambassador whom Dumouriez and the Gironde had sent to Vienna, that Austria would on no account qualify or recede from this ultimatum. Dumouriez, who had obtained great influence over the mind of the king, who had formed in his own mind a grand plan of campaign, who intended, though now minister for foreign affairs and not war minister, to direct and manage the whole of the war, was overjoyed at this termination to diplomacy; and he immediately carried poor Louis with him over to the assembly, to give, in constitutional form, the note of war. It was the 20th of April, when Louis, with the confident and tricky Dumouriez by his side, and all the rest of his ministers at his back, rose to inform the national assembly that he had come there for one of the most important objects that could possibly occupy the attention of the representatives of the nation; and that his minister for foreign affairs would read them a report which he had made in council on the actual situation of affairs. When this was done or said, Dumouriez, whose schemes of conquest fell but little short of those that were subsequently entertained by Napoleon Bonaparte, commenced reading his report, with a voice and manner full of hope and hilarity. By suppressing every allusion to the revolutionary propagandism—the open war which the Jacobins had long before this declared against thrones—the infectious nature of rights of man and Jacobin principles—the indisputable invasion of the rights of the possessed princes—the barbarous treatment which the revolutionists had bestowed upon the queen, a daughter of Austria—it was not difficult for so brisk and adroit a man as Dumouriez to make out a terribly bad case against Austria, with its conferences at Mantua and Pilsnitz, its coalitions, completed or in progress,

its open protection of the emigrants who were in arms to invade France, and its haughty, imperious tone towards a country at least as great in the European scale as itself. Dumouriez, as the conclusion of his spirit-stirring report, announced that there must be an immediate declaration of hostilities, and that the king, whose honour and good faith were indisputable—that Louis XVI., the constitutional king of the French, who was the depository of the dignity and security of France—was quite ready to make this declaration of war.

Becquey, a moderate man, and one who had obtained a reputation for ability and prudence, ventured to say that reformed France ought not to be so eager for hostilities; that if they invaded the Netherlands they would provoke a general war; that England was bound to protect Holland; that if the war was once begun, there was no seeing where and when it would end; that Austria, after all, had taken none but defensive measures; and that France had placed three formidable armies upon her Belgian frontiers, while Austria had only a very inferior force in the country beyond those frontiers, which was her own. "*You know this,*" said Becquey, "*and without doubt, you only wish to attack her at this moment, because you are certain that you are better prepared for a war than she is!*" Becquey might have added that the assembly knew equally well that the Belgic revolutionists, who had only been put down in 1790, were very willing to rise again by the spring of 1792; that an incessant correspondence had been carried on between these revolutionists and the French Jacobins; that those who were stronger than diplomatists and ministers, or any established or tottering authority in France, had promised succour and co-operation, fraternity, and a democratic liberty of the widest extent; that other emissaries besides the Demoiselle Théroigne and Bonne-Carrère had been sent, during the last two years, and were at this moment constantly going to Luxemburg, to Liege, to Brussels, to Bruges, to every town in Brabant and Flanders, to excite the people to rise and arm against the Austrians; and to Amsterdam, Rotterdam, and the other United Provinces, to induce the people there to take the same course against the stadtholder and his party. Becquey boldly predicted the evil reputation the French would acquire if they went to war thus hastily; and prosecuted the war, in the way proposed, by foreign invasion and conquests, and the propagandism of universal insurrection of peoples against their governments. "If," said he, "we attack Austria, in this manner we shall force all the kings of the earth to enter into a league against us, for they will see that we are shaking all their thrones! Let us content ourselves with preparing resolutely to defend our

own country; and then, in all probability, we shall have no war at all. If we begin the attack, we shall make our cause odious in the eyes of our neighbours. We shall obtain the character of aggressors; we shall be represented as a restless, turbulent people, disturbing the repose of Europe, in contempt of old treaties, and of our new laws, which forbid us to aim at conquests. You will have to combat, in the end, not only the kings of Europe, but the peoples of Europe, who will fight you with that natural animosity felt by every man against those who go to disturb the repose and well-being of his country!" The war party, the overwhelming and intolerant majority, had called for an unanimous vote; the mob in the galleries were ready to set down as traitors to their country all such as opposed the general wish; and, in the excited humour of the moment, there might have been imminent danger in voting in opposition to the galleries: only Theodore Lameth, Dumas, Becquey, and four other members, had the courage to stand up as a minority; all the rest, who disapproved of this precipitating of hostilities, remained seated and silent; and the question was declared to be carried in the affirmative, with a shouting and a noise as loud as could have been made if house and galleries had been in the act of charging the Austrian army. As soon as the "Vive la guerre!" "Vive la liberté!" "Mort aux tyrans!" &c., had somewhat subsided, Condorcet rose to state that it became the national assembly to publish a declaration of the political principles which had led them to their present resolution, and that he had such a declaration ready written for them. The assembly agreed that the philosopher and master in politics should be heard; and thereupon Condorcet began to read a long paper, the scope of which was to prove that the French people were forced into this war by the iniquity of despots, and that they had given no provocation whatever. Gensonné, who had been working with a committee appointed to draw up the decree of war, soon stepped forward with that decree written and finished; and forthwith the assembly adopted it unanimously, and appointed a deputation of twenty-four to carry it to the Tuileries for the king's signature and sanction.¹

The poor helpless king, who hoped that the chances of war might liberate him from his captivity, if they did not restore him to his former power, gave the required assent, and war was declared, to the universal satisfaction and joy of the people. Becquey, who had been hissed and hooted in the assembly, was almost the only public man that deprecated hostilities, and quite the only one that had the boldness to declare that the French from the beginning were aiming

at aggressions and foreign conquests, and were looking to war as the most profitable occupation in which their unbridled, half-famished democracy could be engaged. Robespierre and his party regretted the declaration of war, only because they considered that the army had not yet been sufficiently democratized, and that La Fayette and the generals of the old monarchy would be sure to betray the people. The language of the Jacobin Club was—"Let us have sans-culottes generals, sans-culottes officers, and none but sans-culottes for soldiers, and, by arms and by adroit emissaries, the tricolor cockade will make the tour of the globe."

At the moment when war was declared, the vast frontier of the kingdom from Dunkirk to Huningen was divided into three great military commands; and was watched, besides, by numerous corps of national guards, and a whole people more or less armed. On the left of this long line, from Dunkirk to Philippeville, was the army of the north, commanded by old Rochambeau, and consisting of 40,000 men and 8000 horses. Between Philippeville and the lues of Weissenburg was the army of the centre, commanded by La Fayette, and counting at least 45,000 men and 7000 horses; and to the right of this centre, and stretching away from the lues of Weissenburg as far as Basle, was the army of the Rhine, commanded by Luckner, and consisting of 35,000 men and 8000 horses. The frontier of the Alps and the Pyrenees, where attacks were expected from the King of Sardinia and the King of Spain, was watched by General Montesquieu with another army, which, for the present, had nothing to do, as the Italian and Spanish courts were not yet ready to act in concert with the emperor. Of the three generals on the northern frontier, where the war was to commence, La Fayette was the best stationed; and, as he was also the youngest, it was expected that he would be the most active of the three. He had spoken loudly of the great things he would perform, but he was destined soon to find that he could do little or nothing; that he was suspected by his own troops, and that the widest differences of opinion prevailed between him and Rochambeau and Luckner, and again between all three of them and Dumouriez, who, though minister for foreign affairs, acted as war minister and took upon himself the entire direction of the campaign, the Girondist De Grave, the nominal war minister, being a young man, and equally without experience and ability. Dumouriez insisted from the beginning that they ought to commence operations by making a dash upon Belgium, where the people were ready to rise and join them. "The number of the discontented in that country," says Dumouriez himself, "was so very encouraging! The dismantling of

¹ *Ibid.* *Parlement*

the fortifications, and the rupture of the barrier treaty, caused by the late Emperor Joseph, had prepared the Belgic provinces to receive the law from France, because there was nothing to protect them from invasion. The people appeared to solicit our assistance. In short, whether friendly or unfriendly, it was wise to select this as the first theatre of the war, in order to anticipate the house of Austria. . . . Besides, but little preparation was needful for the attack. The Austrians had not more than 30,000 men there. The country was rich and fertile and everywhere open, and the people expected us with impatience: as a proof of which it is to be recollected that they received us with joy six months after, notwithstanding the shameful disasters that accompanied our first ill-managed attempts at invasion." But Rochambeau, when this plan was opened to him at Paris, had strongly disapproved of it, had recommended remaining on the defensive, had called Dumouriez a fool, and had set out for his head-quarters on the frontiers in a pet. La Fayette, who had been so eager to assist the Belgian revolutionists two years before, when the Emperor Leopold was reducing them to order, and when Austria had given no provocation whatever to France, not only approved of the plan of invasion, but endeavoured to appropriate to himself the original conception of it. He not only attempted to deprive Dumouriez of his glory, but, according to that brilliant adventurer, the most trickish and intriguing of men, he tried to trick him and dupe him in other matters, and set forth ambitious claims, which could not have been listened to without disgusting Rochambeau and Luckner, and giving to him (La Fayette) more power than any party was disposed to intrust him with.

The plan being somewhat modified, a part of the invading force, which was all to be concentrated under the present command of La Fayette, was drawn from Rochambeau's army of the north, and a part from Luckner's army of the Rhine. By the 1st of May, La Fayette got all his heavy artillery as far as Givet; but instead of pressing forward for Namur, which he might have taken on the 2d of May, he began making a fixed position of Givet. General Biron, setting out from Valenciennes, crossed the Belgian frontiers on the 29th of April, and on the 30th pressed onward for Mons. But scarcely had his people caught sight of some Austrian light troops which General Beaulieu had sent out of Mons, when they set up a terrible shout that they were betrayed, and this was presently followed by the cry of *Sauve qui peut*. Two regiments of dragoons, who are said not even to have seen the enemy, galloped back into the ranks of the in-

fantry, swearing that they were surrounded and betrayed; and the infantry, thrown into perfect disorder by this unsoldierlike movement, took them at their word, and followed them in their mad flight. In vain Biron, young Rochambeau, and other officers conjured them to stop; there was no rallying them; and they never stopped till they reached Valenciennes, where they threatened to massacre all their general officers. These 10,000 runaways were pursued by only 500 or 600 Austrian light horse, who captured Biron's baggage and military chest. On the very same day and hour Major-general Theobald Dillon's division of 3000 men, which had left Lille and advanced as far as Bessieux, manifested the same panic at the apparition of 800 or 900 Austrians who had sallied out of Tournai; and they fled back to Lille without ever looking behind them, abandoning artillery, baggage, and almost everything else. Theobald Dillon, who entered Lille after the fugitives, was massacred by his own men, as well as a lieutenant-colonel of engineers. The bodies of these two victims, together with that of an unsworn priest, were hung up on a gallows; and, the populace joining the soldiery, all kinds of excesses were committed, including the butchery of some Austrian prisoners of war, who had been surprised and taken near the frontier at the first irruption.² No one dared to hint that brave men ought to have stayed to see how they were betrayed before they fled; all joined in crying that their superior officers were aristocrats, and engaged in a plot against liberty. La Fayette would no longer venture to move from the position he had chosen at Givet, and he stayed there, doubting of his troops and complaining of Dumouriez and the rest of the Gironde ministry, till his provisions began to fail him. Although they agreed on no other point, old Rochambeau united with La Fayette in writing letters to the king and to the national assembly, to throw all the blame of what had happened upon Dumouriez and his plan of campaign, and at last to declare that they could no longer obey the orders of an ignorant Gironde council and a presumptuous minister.

The Parisian clubs took up the cry of the soldiery, that they had been betrayed by their aristocratic leaders. The Cordelier Club sent a deputation to the bar of the assembly, to complain that the lives of their brave soldiers had been treacherously sacrificed by their generals. But in simple truth, there had been no fighting whatever, for except a few stragglers, none of the French had got within reach even of an Aus-

² The reader will look in vain for this horrible fact in M Thiers and the French writers of history. We derive it from a letter addressed by La Fayette to the minister at war, dated Givet, the 2d of May.

trian rifle; if they had stopped in their panic flight, and had formed, the Austrians must have run back without fighting, for they were solely light troops, without artillery or anything whatever to support them; but the journalists and popular harangues had always been talking about Thermopylæ, and the orator of the Cordelier deputation was determined that a Thermopylæ there should be, or should have been, with a perfect parity of numbers to the ancient one. "Three hundred of our brethren," said they, "have perished! They have had the fate of the Spartans at Thermopylæ! The public voice, always truer than the ministerial voice, makes us believe that they have been the victims of treachery and treason!"

During all these days, or from the arrival of the news of the disgraceful flight of the troops on the frontier at the beginning of May, down to the dissolution of the king's guard at the end of that month, many significant debates and proceedings had taken place in the great Jacobin Club; and it may be imagined whether the teeming Jacobin press lay unproductive or silent. After Chabot had declared that not only Dillon, who had been massacred, but that all the other generals were rank traitors and conspirators, Robespierre undertook to explain the results which might be expected in future, if the whole army was not put under true sans-culottes generals. He also delivered a discourse, and printed it afterwards in his own newspaper, "On the means of making war usefully." In this discourse he said that the idea had often been emphatically announced that the French printing-press would be as terrible an engine as French artillery in prostrating kings and tyrants; yet, under a corrupt administration, no life and activity had been put into this revolutionary press. Why had there not been printed manifestoes and short essays to develop the doctrines of the rights of man, and the true principles of democratic liberty? Why had not such papers been translated, under the eye of the French government, into the German language and the Belgic patois? Why had not such translations been distributed, by tens of thousands, among the people and the soldiers of the Austrian army, before the French columns attempted to move into Belgium? This was a monstrous omission. If the French really wished for victories, and the destruction of kingships and aristocracies, they must thoroughly convert the common people, the popular masses, in the countries which were to be the seat of their wars; they must indoctrinate and revolutionize the standing armies of all the despots; and, in working in this sense, the French press would be indeed more terrible than French artillery. But before they could carry on the war usefully

abroad, there was one general measure that was absolutely indispensable: this was to make war at home upon aristocracy, perfidy, and tyranny! If they struck down the enemies to the people, if they thoroughly worked out the glorious principle of the rights of man within France, they might expect victory and every advantage without, but not otherwise. After warning the people to beware of La Fayette, and of every other commander, Robespierre concluded by saying, "Frenchmen, if you would conquer, be patient, intrepid, cautious, proud, cool, and distrustful!"

Urged on by suspicion and fear (the two great sources of the national cruelty) numerous arrests were made; the prisons were crammed with unsworn priests and with men who had had the misfortune to be born in the condition of gentlemen; riots and *émeutes* were made in Paris and elsewhere; it was announced that Paris alone contained 40,000 conspirators against the rights of man, who must be watched and kept down by the true sons of liberty from the departments; a cry for blood ran through the whole kingdom, and that this thirst might be satisfied, the Girondins, uniting with the ultra-Jacobins, passed a decree, calling to the capital 20,000 of the provincial federates—the most needy and desperate of those armed rabbles which La Fayette had mainly helped to call into existence. These desperadoes were for the most part sans-culottes in the literal meaning of the term. When they joined and fraternized with the now pike-armed *canaille* of Paris and of the faubourgs, they were irresistible; and the reign of terror, with its wholesale massacres, may be said to have begun from that day.

At this critical moment Antoine François, a member of the assembly, and a native of Nantes, where, before the revolution, he had exercised the double calling of lawyer and officer of customs—a thrifty, shifty man, who was now a hot republican, but who, like so many others, became an imperialist under Napoleon and a royalist under the restored Bourbons—announced that the great Dr. Priestley had confided his son William to his care, in order that he might make a good Frenchman, or citizen of the world, and republican of him. Priestley himself, in a farewell address which he or his friends took care to print, said to his son, "Go, and live among a brave and hospitable people! Go, and learn from them to detest tyranny and to love liberty!" François of Nantes, after reading a long eulogium on the science and exalted liberalism of the English father, demanded letters of naturalization for the son. Lacépède, the naturalist, who had acquired fame before the revolution began by a treatise upon reptiles, seconded the motion, and the letters of naturalization were granted unau-

mously. This being done, William Priestley presented himself at the bar of the assembly, to express his gratitude for that national adoption which had admitted him into the number of French citizens, &c. Together with the decree for calling up the provincial federates, the assembly also presented, for the king's sanction, a terrible law, awarding transportation or imprisonment to all priests who had refused to take the *serment civique*. "This prince," says Dumouriez, "was not only scrupulous, but courageous, when religion was concerned." Louis laid the decree of law upon the council-table, and declared that nobody should ever prevail upon him to sanction it. Dumouriez told him, that far from saving the priests by his veto, he would expose them to the danger of being massacred. The queen objected to the proposed federated camp. "Think, sir," said she to Dumouriez, "how hard it is for the king to sanction a decree which will bring 20,000 rogues to Paris, perhaps to massacre him!" The constitution established allowed the king a suspensive veto, but his present Girondist ministers, in common with the assembly, were determined that he should not exercise any such power. These sans-culottes ministers insulted Louis to his face, browbeat him, and turned the council-chamber into a bear-garden; they frequently quarrelled with one another in the royal presence; and, on one occasion, a quarrel came very nigh to the drawing of swords and the shedding of blood under Louis's eyes. The virtuous Roland, who assumed to be a sort of premier, behaved towards the king in a heartless and treacherous manner. He was leagued with all the men that were most eager for the abolition of royalty and the overthrow of the constitutions they had so solemnly and so repeatedly sworn to maintain at the cost of their lives; and, while occupying the post of a minister of the crown, he was incessantly sneering at monarchic institutions. Now he obstinately persisted in reading a long letter at the council-table, which he had addressed some two or three days before to his majesty. This precious piece of political pedantry and republican insolence was written, not by Citizen Roland, but by the citizeness his wife, who was in the habit of drawing up nearly all his plans, and writing nearly all his papers; and who magnanimously declares, in her *Mémoires*, that for her husband she could even have condescended to write homilies and sermons!

The Girondist lecture to royalty, like nearly all the productions of that school, is long and tediously verbose; it has been printed in many places, and may be found entire in the book of M. Thiers, who calls it "that famous letter;" but the substance of it was, that, through various iniquitous means, the constitution had got lamed,

and could not march; that the king had been guilty of perjury, &c.; and that nothing could make the constitution go, except the rigorous execution of the new decree against the priests, and the immediate assembling of the patriotic camp of 20,000 men. After telling the king that it was vain for him to think of drawing back or of temporizing, this amiable republicanism, who soon saw blood enough, and whose own veins soon went to swell the red torrent, said in this letter, which her husband read to the king's face—"The revolution is in the mind of the people; it must be purchased at the price of blood, and be cemented by blood, if wisdom does not prevent it by adopting measures which are still possible!" "Monsieur Roland," said Louis, "it is now three days since you transmitted a copy of this letter to me: it was therefore useless to read it to me before my council; and, besides, you told me it was to remain an eternal secret between you and me." The king then withdrew. By the advice of Dumouriez, the king dismissed Roland and his satellites, Servan and Clavière. Upon this Roland wrote a letter to the assembly, and basely inclosed in it his letter to the king, which he had solemnly declared should never be known, except to Louis and himself. The assembly read "that famous letter" with enthusiastic applause, and forthwith ordered it to be printed, and sent to the eighty-three departments. The menaces and sinister prophecies it contained insured, in a manner, their own fulfilment; and Roland's telling the king all that he had to fear from the people was, indeed, suggesting to the people all that they had to do against the king.¹

The publication of this letter to the king, which, as Dumouriez says, actually pointed daggers at the breast of that unhappy prince, would have produced some terrible *émeute*, without any other agency, public or secret. But there were secret and most powerful agencies that had been most actively employed ever since the moment that Louis turned out the Girondist ministers; and nothing was more true than the intelligence Dumouriez gave the king, that the Girondists, united by Mayor Petion and the municipality, were agitating the Faubourg St. Antoine. Petion—Virtue Petion, as he was now styled by the sans-culottes, who, in little more than a year, drove him away, to perish by famine or by poison, and to be devoured by wolves—had all the necessary knowledge of persons and places. He called upon the brewer Santerre, the butcher Legendre, the ex-Capuchin Chabot, the ex-Marquis St. Huruge, and other men of that stamp; he held several meetings with them, and urged them to make a demonstration with their Parisian pikes, which, by this time, were counted at some 30,000

¹ Dumont.

or 40,000. Petion even made up matters for the nounce with Robespierre, whose *esteem* he had lost by identifying himself with the Gironde party; and the immense popular influence of the Incorruptible was added to that of the mayor of Paris.

It was soon resolved to break into the Tuileries, and give the king and queen a moral lesson. On the 20th of June, at the dawn of day, an immense mob began to assemble in the Faubourgs St. Antoine and St. Marcel to beat of drum. About eight o'clock they began to form themselves into marching columns; but it was not until nearly eleven o'clock, when Brewer Santerre, at the head of a strong detachment of invalids and other old soldiers, joined them, that they began their march towards the Tuileries. Nothing could be more terribly clear than their em-

enough to express their opinion, declared that the assembly ought not to admit this armed multitude; but the Jacobins and the Girondists, with louder and bolder voices, declared that the citizens, who only wanted to present a petition, ought to be received by the representatives of the people with civility, respect, and a welcome. Vergniaud, "the most eloquent orator of the assembly, whose soul was devoured with the love of the public good," mounted to the speaking-place, and told the assembly that these were not times to be too particular, and that petitioners not a few had been admitted there before. Dumolard, on the other side, said that everybody knew that that shameful abuse had been established; but that it was now time to put an end to it, if they did not wish the assembly and the king to appear

equally, in the eyes of all Europe, the merest slaves of an insolent mob. But, while he was speaking, the lumbering of cannon, the roll of drums, and the shouts, and shrieks, and shrill cries of men, women, and children, announced that the faubourg columns had arrived in the square outside the Salle de Manège, and a letter was handed in from Santerre to the president. This letter, which was read with that promptness which was demanded by any missive from such a quarter, stated briefly that the patriots of the faubourgs merely wanted to be admitted to the bar, in order

SANS CULOTTES AND BONNETS ROUGES.—From Bertaux's Etchings

blems and devices. Their standard, *par excellence*, was a pair of old black silk breeches extended on a tall cross-staff, with these words underneath:—"Tremble, tyrants! the sans-culottes are coming!" On another tall staff they carried a bullock's heart, pierced through with the steel head of a pike, and having inscribed beneath—"Aristocrat's heart." Women and children marched in column with the men, and all were armed with pikes and iron-shod clubs. From the pike-heads streamed tricolor ribands; and banners were distributed along the line of march, with inscriptions like these:—"Without breeches, but free," "Down with the veto;" "Long live liberty;" "Death to all tyrants;" "Advice to Louis XVI.," "When the country is in danger all sans-culottes rise;" "The people are tired of suffering, and will have an entire liberty or death;" "We only want union, liberty, and equality;" &c. They halted at the door of the assembly. All the côté droit who had courage

to confound their calumniators, and prove themselves still the men of the 14th of July, 1789. In the midst of an idle debate—most idle and absurd in every respect, for if they had wished it, the assembly could not have kept out the pikes and the clubs, the bullock's heart, and the black breeches—the impatient mob rushed into the hall, and filled it almost to suffocation. Then Guadet made a speech, not merely to excuse, but to justify their coming; and to propose that they should be permitted to defile, with their arms and banners, before the assembly. Crowding into some order, the head of the columns came up to the bar; and then Santerre, with a naked sword in his hand, being flanked by St. Huruge, who held another drawn sabre, delivered an oration in his loudest voice. The burden of it was that the sovereign people must have their way in all things; that the king had committed a crime against the nation by the late dismissal of that patriotic minister Roland; that the armies,

instead of being in the high career of victory and conquest, were inactive and paralyzed; that it was suspected that this inactivity was owing to the executive power, and that, if this were true, the executive power ought to be annihilated forthwith. When this precious harangue was finished, the president (M. François of Nantes, the same who had made Dr. Priestley's son a French citizen) replied, with what some French writers call "remarkable dignity." He told Santerre and the pike-armed rabble that they were all fellow-citizens, and that the people and the assembly were but one; that the assembly, as the representatives of twenty-four millions of men, announced to them through his organ that they would disconcert all the plans of the conspirators by the sword of the law, as the law alone ought to avenge the people, &c. By that time there were at the least 30,000 men, women, and children in the Place du Carrousel, and they all intended to defile through the hall with their pikes and their bludgeons, their swords and guns. One formalist of a deputy wished to know whether the citizens of the Faubourgs St. Antoine and St. Marcel were to be permitted to traverse the hall thus armed; but the assembly, to save their dignity, called him to order, and, without mentioning arms, decreed that the citizens should traverse the hall. While this idle talk was going on among the legislators, the sovereign mob formed, and began to march through the hall, coming in at one door and going out at the other, and shouting "Down with the veto!" "Long live liberty and equality!" "Long live the patriots without breeches!" and dancing the Carmagnole, which was their war or liberty dance, and singing, in deafening chorus, the *Ça ira*, or "It will go" song. A very long time was necessarily consumed in these performances; and it appears to have been about four o'clock in the afternoon before the patriot citizens got clear of the hall, and consolidated their columns for an assault on the Tuilleries. They had scarcely cleared out when another formidable deputation, though not quite so numerous, marched up to the bar of the house, as if to give an additional, but scarcely necessary proof of how much the Girondists had had to do with this insurrection. The deputation consisted of armed men from the first and second battalion of the department of the Gironde, who were going, they said, to the frontiers, and who could not, in passing through Paris, neglect to pay the homage of their respect and fidelity to the assembly. As soon as their orator had read his oration, and the complacent president had replied to it, the house adjourned till the evening, and the deputies went to their dinners. In the meantime the patriot columns, with the transfixed heart at their head, moved along the

strong iron railing which incloses the garden of the Tuilleries. Some faint hope was entertained that the gens d'armes and the national guardsmen would stand by the king; but the gens d'armes refused to load their muskets, and the national guards surrounded the artillery, swearing that they would not permit them to fire upon the people. If the king's guard, so recently and so opportunely disbanded, had been there, matters might have taken a different turn; but, with such precious defenders as Louis had, he could do nothing but submit. The national guards threw open the gate, and the living torrent rushed into the garden, with Santerre and a cannon at their head. Near the door of the palace a number of respectable citizens surrounded the brewer, and endeavoured, by persuasion or by terror, to prevent his entrance. They told him that he would be responsible for whatever might happen; that he was the sole chief of that most unconstitutional movement; that he had basely deceived the people, and would soon be regarded by all as a scoundrel. Santerre turned pale; but Butcher Legendre gave him an encouraging wink, and then the brewer cried out, "Gentlemen, I take you all to witness that I refuse to march at your head into the king's apartments!" and then the *gentlemen* who carried pikes and the bullock's heart, perfectly understanding what was meant, closed their ranks, pressed forward, and swept on before them Santerre and those who were remonstrating with him. They found the strong oak door of the outward apartment closed upon them; but they dragged a cannon up the broad staircase, and pointed it against the door, which presently flew open. At the same moment other divisions of the patriots broke open other doors and windows with sledge-hammers and axes, and entered different parts of the palace at once. Nothing remained between the king and the mob, save one inner door, which presently shook and cracked under the blows of the sans-culottes. Louis ordered it to be opened, and even advanced to meet the mob, expecting instant death, but being prepared to die unflinchingly like a martyr. "What is it you want?" said he. The foremost patriots recoiled awe-stricken; but anon the masses in the rear, who could neither hear his words nor see his calm, unmoved countenance, drove them forward, and in they rushed by hundreds. Some of the grenadiers of the national guards who belonged to the more respectable classes had got into the room by a private staircase. M. de Bougainville, fearing that, if they did not murder the king with their pikes and axes, the in-rushing multitude would throw him down and smother him, cried out to these grenadiers to carry his majesty into the embrasure of one of the windows, and place benches and tables before him

to keep off the crowd. This was promptly done, and the few grenadiers placed themselves immediately in front of the benches between the king and the rabble. "Sire, fear nothing," said one of the grenadiers. Louis took the man's hand, and, placing it over his heart, said, "Feel whether I fear!" Twice, it is said, a pike was thrust at his body, but parried by one of the national grenadiers. But there was another member of that doomed race who could meet martyrdom with a heart as unpalpitating as Louis, and who had active courage as well as fortitude and the power of enduring. At the deadliest part of the hurly-burly and fury, Madame Elizabeth attempted to run to her brother. The irresistible mob, were uttering frightful imprecations against the queen, and calling for her head. "Ah!" said Elizabeth, "let them believe that I am the queen, so that she may have time to escape!" The noble-minded woman could not reach the king, nor could the queen and her children escape out of the palace, which was invaded on every side, and completely surrounded without. They, too, were prudently carried into the embrasure of a window in the council-chamber, which was within the apartment where Louis was standing; and there they stood, behind chairs and tables—the queen, her little boy and girl, Madame Elizabeth, the faithful Princesses of Lamballe, the Princess of Tarente, and three other ladies. A national grenadier had the forethought to hand the queen an enormous tricolor cockade, and this she stuck in her cap. Many of the sans-culottes had got drunk on bad wine, which had been copiously distributed to them by Santerre and others. One of them in this condition presented to the king, at the end of a pike, a cap of liberty or bonnet rouge, one of those red worsted night-caps which Brissot had learnedly recommended as the proper head-gear for republicans: Louis calmly took it, and placed it on his head; and, further to pacify the madmen, he joined in the cry of "Long live liberty!" "Long live the nation!" By this time the heat was suffocating. The king complained of thirst: a black bottle was handed to him from the mob, and he drank out of it—to the health of the nation. The grenadiers had placed him on a table, as near as possible to the window, and there he stood for full four hours with the red cap on his head. A young man mounted another table in front of him, and kept repeating for a long time, "I demand, in the name of the 100,000 souls who surround me, the recall of the patriot ministers! I demand the sanction of the decree against the priests, the sanction of the decree for the camp of 20,000 men! I demand the immediate execution of both decrees, or you shall perish!" The only answers that these and other

terrible and indecent threats could extort from the king were that this was not the form or the manner in which to demand his assent—that he would never depart from the strict line of the law and the constitution. The assembly, who had adjourned and gone to their dinners, in order not to be called upon to interrupt the moral lesson of the mob, did not re-assemble until past six o'clock. Then, to preserve some appearances, they sent a deputation to the palace to request the mob to withdraw, and to tell the king how sorry they were for all that had happened. About the same time Mayor Petion found his way to the Tuileries, to allay the storm—to conjure the foul fiend which he more than any other man had raised. Approaching the king, he said, with one of the most barefaced lies that ever came from the lips of Jacobin or Girondist, "Sire, I have only this instant learned the situation in which you are placed." Louis calmly replied, "That is very astonishing, for I have been in this situation these two hours!" And there, in spite of the coming of Petion and the deputation from the assembly, he was destined to remain nearly two more mortal hours, half-stifled by the heat and stench, half-deafened by harangues here and harangues there (there were fifty orators speaking at once in different parts of those state-rooms), and by shouts and clamours inside and outside, that never ceased for a single second. In the end, between eight and nine in the evening, it being considered that the moral lesson was complete, Santerre, "the king of the faubourgs," got all his patriots out of the palace. Vergniaud and the republican deputies, who had come over from the assembly in deputation, could scarcely have desired to see royalty in a more degraded state, or a palace more perfectly sans-culottized. The sadness of the scene, and perhaps still more the tone of the queen's voice, and the expression of her countenance, drew tears even from the eyes of that lost Jacobin, Merlin, who was one of the deputies whom the assembly had so opportunely and appropriately sent to the king. Marie Antoinette perceived his emotion, and said to him, "You weep, M. Merlin, at seeing the king and his family treated thus cruelly by a people whom he has always wished to make happy." "It is true, madame," replied Merlin, "I weep for the misfortunes of a woman, handsome, endued with sensibility, and the mother of a family; but, do not mistake me, there is not one of my tears shed for the king or for the queen: I hate kings and queens—this is the only feeling they inspire in me—this is my religion." Thus ended that doomsday of monarchy, the 20th of June, in the Tuileries; for no pen has attempted to put upon record the scenes which passed in that palace when rabble and legislators were all

withdrawn, and the royal family were left to themselves.

Eight thousand Parisians, not of the sans-culottic order, had signed a petition against the federate camp, and 20,000 of the same class of citizens now signed an address to the king. Some other addresses came up from Rouen, Havre, and several large towns. All the respectabilities of the national guards vowed—now that it was far too late—that they would stand by the king, and resist the pikemen, who were threatening the most complete and most sanguinary anarchy. La Fayette, too, brimful of confidence, resolved to go to the capital, and there bring the Jacobins and pikemen to order, and set all things straight. He who was, in very truth, “by dint of experience improving in blunders,” quitted his army, and suddenly appeared in Paris on the 28th of June, at an early hour of the morning. Old Luckner had told him that the sans-culottes would surely cut off his head; and several persons on his road had entreated him to give up his desperate project. His arrival, the news of which was heard with astonishment, was soon known throughout Paris. He went to the bar of the assembly, and said that “the acts of violence committed on the 20th at the Tuileries have excited the alarm and indignation of all good citizens, and especially of the army!” This was doing worse than nothing. He saw the king and queen at the Tuileries, and told them that he was going to save them and the monarchy from destruction; but he had no rational, feasible plan of deliverance to propose, and their majesties would not and could not trust him. It was said that the queen declared to those about her, that it was better to perish than to trust a man who had done them so much harm. After passing a night or two at Paris, not without the risk of being assassinated, this hero of two worlds fled rather than travelled back to his camp on the frontiers. He had not got many miles on his road ere he was burned in effigy by the Parisians, with horrible imprecations; and at the same time Jacobin emissaries, travelling nearly as fast as himself, were wending their way to the army to preach mutiny and murder to the common soldiers. That nothing might be wanting to keep up the ferment, Mayor Petion placarded the streets of Paris with an alarming proclamation, commencing, “Citizens, the storm is preparing!” As it was a Sabbath-day, when all the world was idle and abroad, this placard was seen by everybody. It led to a deal of scuffling and fighting with sticks in the streets and public places; and several individuals who belonged, or were supposed to belong to La Fayette’s party, were wounded and all but killed in the Palais Royal.

It was not long after this that certain intelli-

gence was received of the hostile movements of the King of Prussia. On the morning of the 11th of July the assembly voted that the country was in danger. This decree made the people more suspicious and more ferocious than ever; and the dethronement and imprisonment of the king were now loudly called for on all sides. La Fayette had made a federation of respectabilities; but now it had been resolved to have a feast of the federation of the pikemen, and the 20,000 desperadoes from the provinces. On the morning of the 14th of July, the federates assembled in the Faubourg St. Antoine with the most desperate of the sans-culottes; the pikemen and pikewomen were admitted into the ranks of the national guards, whose commanders had been all changed; the gendarmerie on foot and horseback, and all the troops of the line then in Paris, drew up on the boulevards; and from the square of the Bastille to Porte St. Martin nothing was seen but troops and an armed multitude, the rough pikes being rather more numerous than the bayonets. Some of La Fayette’s respectability battalions were observed to be sadly thinned; the bankers, the stockbrokers, the merchants, the lawyers, the men of property or gentlemanly habits, had refused to serve under the sans-culotte commandants that had been appointed. A faubourg orator delivered an harangue upon this text:—“All the kings of the earth are conspiring against us; therefore let us swear the ruin of all kings.” The members of the assembly, the municipal authorities, and all manner of constituted bodies joined the armed mob. Nearly every man wore on his hat the words, “Long live Petion!” or “Petion or death!” The virtuous mayor was the real hero or idol of this feast, as La Fayette had been of the federation of 1790; but already his glory had reached the culminating point. The wretched king, who had not been able to prevent this new federation, made up his wavering mind to be present at it, with some most faint hope that, by showing himself in the midst of the people and these much-dreaded federates from the provinces, and by protesting and taking fresh oaths, he might turn the ceremony to his own advantage, disarm the popular animosity, and still that terrible cry for *déchirance*, which could only be a synonyme for death. The queen, who showed on every occasion a determination to share in the dangers of her husband, insisted upon accompanying him. They took the little dauphin with them to the Champ de Mars, where they arrived long before the procession, and where they were kept waiting, without receiving one sign of respect or good-will, except from a few timid hirelings whom Bertrand de Moleville had paid to cry “Vive la reine!” when the queen should hold up the dauphin in

her arms to show him to the people. The Champ de Mars was surrounded with eighty or more pieces of artillery; and every inscription, emblem, or device looked like a threat and a malediction to royalty. At last—at about five o'clock in the evening—the multitudinous procession, loosely estimated at from 400,000 to 500,000 men, women, and children, began to arrive, deafening the royal ear with shouting "Long life to Petion!" "Petion or death!" and revolting the strong religious feelings of the king by filling the air with church incense, burned before the only god of the French, the plaster-of-Paris image of Liberty. When the federates and the pikemen, the national guards, and the troops of the line, had volleyed their oaths, as if they had been firing shot at the ene-

my, the king proceeded on foot, from a tent which had been pitched for him and his family, to the deal altar of the country, to swear again to that constitution which was falling all to pieces, and which was so soon to bury him and his under its ruins. The president of the assembly and a host of other functionaries committed, knowingly and wilfully, the same act of perjury, in the midst of cannonading, shouting, and *Ça ira* singing. Louis then descended, and traversed again the confused mass of the people, which rolled and roared like the Bay of Biscay in a storm. These people never saw him again until they saw him, firm and composed even as he now was, upon the guillotine scaffold in the Place Louis XV., re-named "Place de la Révolution."

CHAPTER XXXII.—CIVIL AND MILITARY HISTORY.—A.D. 1792.

GEORGE III.

Fresh attack of the Parisian mob upon the Tuileries—Louis in vain presents himself to them—He and his family compelled to take refuge with the assembly—Assault upon the Tuileries after his departure—Defence made by the Swiss guards—Their brave resistance—They are overpowered and massacred—Consternation of the national assembly during the conflict—Their incoherent deliberations—Their decree for the suspension of royalty, &c.—A new government hastily formed—Its chief ministers—The king and royal family imprisoned in the Temple—The arrest of La Fayette determined—He escapes into the Austrian dominions—His capture and imprisonment by the Austrian government—Disorganized state of his army at his flight—Slow advance of the Prussians upon France—They capture Longwi—Measures of resistance decreed by the assembly—Danton's plans for the national defence—He recommends a rule of terror and the destruction of the royalists—The Girondists offer no opposition—Danton commences the reign of terror—The royalists cooped up in the prisons—Preparations for their wholesale butchery—Proceedings and decrees of the national assembly—Their apathy about the coming fate of the royalists—The prisons forced and their royalist inmates murdered—Continued interference of the assembly—Roland's justification of the prison massacres—Account of the Princess de Lamballe—Her horrible murder by the mob—Republican massacres throughout France—Various statements of the numbers who perished.

Y the reception of two terrible and most ill-timed manifestoes of the Duke of Brunswick, commander-in-chief of the Prussian army of invasion—the arrival of more republican federates from the south—the re-modelling the Paris municipality—and the fury of the clubs, excited by Robespierre, Marat, Danton, Camille Desmoulins, and men of that stamp—a more sanguinary invasion of the Tuileries was soon occasioned. The king had been permitted to collect, for the defence of the palace, the Swiss guard and some of the cannoneers of the national guard. On the night of the 9th of August the tocsin was sounded in the faubourg and throughout Paris, and early on the morning of the 10th the mob and the federates began to assemble in the Place du Carrousel, where they massacred four individuals, because they were dressed like gentlemen, and wore small

swords at their sides. For some time there was hesitation and fear of red-coated Swiss among the sans-culottes of the faubourgs. That burly brewer Santerre, who had a very loud voice and very little courage, proposed that the business should be put off for a day or two. But Westermann, the hero of this 10th of August, caught the brewer by the throat, and told him that he must march or die. At about six o'clock the heavy firing of cannon told the court that their merciless foe was coming. "Sire," said the queen, "this is the time to show yourself, or never." Louis put on his hat, and descended to the gardens to address his troops. Some grenadiers of the national guard belonging to a respectable section put their caps on their bayonets and cried for the last time "Vive le roi!" But the rest looked with mixed anger and contempt at the king, and, irritated at the cry of the grenadiers, and encouraged by the arrival of some of the

cannoneers, who came to point their guns, not against the people, but against the palace, they shouted "Vive la nation!" "Vive la liberté!" "A bas le veto!" "A bas le tratre!" "Vive Pétion!" and presently mingled with such cries hooting and cursing. Røederer, one of the highest municipal authorities, who appears to have been employed to frighten the royal family into taking refuge among the legislators, now told the king and queen that they must flee to the assembly. While Røederer was speaking, another municipal officer arrived, and said that the people demanded *only* the dethronement of the king. "But," said the queen, "after this dethronement, *what will happen?*" The municipal was silent. "Sire," cried Røederer, "your majesty has not five minutes to lose! there is no safety for you except in the assembly." "But, sir," said the queen, "we have troops yet— . . ." "Madame," replied Røederer, interrupting her, "all Paris is marching!—*tout Paris marche!*" And then addressing the king with greater earnestness than before, the procureur-général added, "Sire, time presses; it is no longer a prayer that we make to you, it is no longer an advice that we take the liberty to give you; we have but one thing to do in this moment, and that is, to demand permission to drag you to the assembly!" At these words poor Louis, who had been seated near a table with his hands on his knees, and his eyes fixed on the ground, raised his head, looked fixedly at Røederer for some seconds, then turning towards the queen he said, "*Marchons—let us march,*" and then rose. His affectionate sister said to the procureur-général, "Monsieur Røederer, you answer for the life of the king?" "Yes, madame, with my own life," replied Røederer, who then opened the death-march. At the foot of the great staircase Louis halted, and said to Røederer, "But what is to become of all those persons left up stairs?" meaning the members of the diminished court, his faithful servants, and the devoted men who had run to the palace in the course of the preceding night to share in his danger. It was never in the heart of Louis to be indifferent, as monarchs so often are, to the fate of his friends and servants; nor could any extremity of danger or distress drive them from his mind. Røederer replied, that, as all the gentlemen appeared to be in plain clothes, they had nothing to do but to leave their swords and come out—that harm could scarcely happen to them. The king continued his march. As they passed along the terraces of the Tuileries gardens, they had to walk over leaves which had fallen abundantly from the trees in the course of the night, although it was only the 10th of August. "Here is a great fall of leaves," said Louis; "they fall early this year!" Some days before this, Manuel had writ-

ten in a newspaper that the king would only last till the fall of the leaves. The little dauphin playfully kicked the leaves about, all ignorant of the prophecy and its actual fulfilment. The president of the department ran beforehand to the assembly to announce that the king was coming. A deputation came forth from the assembly to meet the king. "Sire," said the president, "the assembly, eager to concur in securing your safety, offers you and your family an asylum in its own bosom."¹

With the departure of the king all motive for resistance seemed to cease at the palace, where the means of defence were diminished by the departure of the grenadiers and others who had helped to escort the king. The gens d'armes, who had so implicitly obeyed Procureur Manuel, quitted all their posts, and joined the people with cries of "Vive la nation!" the national guards that remained in the great courtyard and in the gardens of the Tuileries were now all of one mind, for those who were well disposed to the king saw now no chance of saving their lives except by declaring for the insurgents; but the brave Swiss—500 or 600 men, for some of this corps too had gone to give escort to the royal family—remained at their posts within the palace, nothing daunted by the tens of thousands that were gathering around them; and there they determined to remain until their orders to that effect should be revoked by those who had given them. On the other side, the Marseillaise and the Breton federates, who had come to fight, and who could not brook the idea of being disappointed of the pleasure of storming the château, were resolutely bent upon entering the palace; and the party, or rather the parties, whose impulses they obeyed, wished for some grand scene there that might terrify all non-republican members, and drive the assembly to a rapid solution of the *déchéance* problem. To scare the Swiss, who, with their muskets on their shoulders, were looking out at the windows and doors of the palace, the mob paraded along the Feuillant terrace with four bleeding heads stuck upon pikes. Finding that this had no effect, some of the insurgents parleyed with the Swiss, who, in sign of peace and friendship, threw cartridges out of the windows, but intimated at the same time that they must do their duty. Westermann, who had removed the indecision of Brewer Sauterre in so energetic a manner, could, as a native of Alsace (which was still more than half German), speak a bad German dialect with facility; and, as he fancied the Swiss might not well have understood those who

Parlement*; Pétion's "Account," *ibid.*; Cléry, valet de chambre de Louis XVI., *Journal*; Madame Campan; Toulougeon, *Hist. de la France depuis la Révolution*; Marquis de Ferrières, *Mémoires*: and other mémoires of the time.

had parleyed with them in French, he spoke to them in his Alsatian German. Still the brave, stern men from the mighty Alps and the high Swiss valleys, remained firm as their native rocks,

time entirely cleared the Place du Carrousel. Many of the fleeing rabble never stopped until they reached the Faubourg St. Antoine, and never re-appeared on the scene of action until the only work to be done was to butcher helpless prisoners. Westermann, who had risked life and limb like a soldier, rallied the Breton federates, and the Demoiselle Théroigne, a lady of the Palais Royal, who had had a great deal to do with every revolutionary demonstration since the march to Versailles, ran from rank to rank, crying "Vengeance! vengeance! victory or death!" Even some of the runaway pikemen rallied; and some of the national guardsmen who had remained within the iron railing of the Tuileries, infuriated at seeing Frenchmen flee before the Swiss, and the blood of their countrymen shed by foreigners, fired upon the Swiss on flank and rear.

SWISS GUARDS.—From prints by Bertaux and Wille.

the only men or things that were firm on that day. Not only was the Place du Carrousel now crowded, but the quays on the other side of the Tuileries, and every spot of ground near the palace, were covered with armed multitudes, who, for the most part, were kept in ignorance of the fact that the king and his family were no longer there, and who consequently urged on the attack with a blind fury. Some voices nearer at hand roared out, "Only give up the château to us, and we are friends!" But the Swiss made no answer. The next message or summons on the part of the patriots was spoken by three loud cannons that fired over or into the roof of the Tuileries. Such of the nobles and gentlemen in black, and such of the servants of the royal household as had not escaped before, now fled from the doomed place in the best manner they could. Many of them, however, were slain either by cannon balls within the palace, or by the pikes of the patriots outside of it. The Swiss returned the fire of the three great guns; and the insurgents then plied all their cannon and all their musketry, firing on the palace from different sides and angles, and aiming chiefly at the doorways and windows. But presently the Swiss made a bold sortie from the palace, drove the insurgents back from a barricade which they had almost mastered, and out of the great courtyard, seized one of the pieces of artillery which had been placed there, turned it against the retreating Marseillaise, gave many of them a lasting quietus, and in brief space of

The very battalions of Filles St. Thomas and Petits-Pères joined in this fusillade. The mass of the artillery of the besiegers was gradually collected on one good point; more guns, seized by the mob at the arsenal and in other places, were dragged forward; some barricades were raised, and a close concentrated fire was opened upon the Swiss and the château. But still the Swiss kept up their fire by volley and platoon, and, by dint of musketry and their single cannon, they captured three other pieces of artillery—but unfortunately without their linstocks. At this moment many lookers-on were very doubtful whether a complete victory would not remain to the Swiss. Napoleon Bonaparte—then a very young and a very poor officer of artillery, who was among the spectators, and who afterwards pretended that he was indifferent or merely led to the spot by curiosity, although in fact he was then professedly an out-and-out Jacobin of the school of Robespierre—thought that the Swiss must beat if they had only a skilful commander. But the Swiss, unable to use the three guns they had just captured, and assailed by the national guards as well as by the enemy in front, were soon compelled to fall back upon the palace. They had left, however, on the Place du Carrousel from 1000 to 1200 Frenchmen killed and wounded—so dreadful had been their fire, and so close and thick the masses against which it had been directed—and their case was by no means desperate when M. d'Hervilly arrived from the assembly.

with the king's order to them to cease firing. The Swiss, relieved from that duty for which alone they had been hazarding their lives against such fearful odds, would gladly have piled their arms; but the insurgents, who obeyed no orders, or at least none that came from the king or from any other constituted authority, kept firing on more vigorously than ever. Some few of the Swiss did, however, quit their posts to follow M. d'Hervilly to the assembly, where he promised them life and security; but the rest remained in the palace—and many of them, it is said, never knew, or had an opportunity of knowing anything about the king's order. Cannon-balls and bullets were flying about too thickly to allow d'Hervilly to make any long stay. He was scarcely gone ere Westermann led the Marseillaise and Bretons to another assault in front of the palace, while another body of insurgents attacked it with artillery on the side of the Louvre. Long and bloody was the contest, and many a Marseillaise and Breton fell dead on the terrace and on the marble steps before Westermann forced an entrance by the great door; and then the Swiss obstinately defended every step of the broad staircase. But, as soon as the Marseillaise and Bretons got footing in the interior of the palace, they were followed by thousands of national guardsmen of the sans-cullotic districts, and by thousands of pikemen from the faubourgs, by a living mass which might have seemed sufficient to make the old oak beams and rafters of the Tuileries crack and break, and so bury together in one hideous ruin Swiss and French, the assailants and the assailed. The republicans even dragged up heavy guns to burst open the inner doors with grapeshot. At last the Swiss, who were for the most part wounded and covered with blood, threw down their arms and cried for mercy. Never was such a cry more vainly raised, the French fell upon them, and commenced one of the most atrocious of massacres—a butchery in which mere children and women, armed with pikes and knives, took part. One division of the victims, from 200 to 300 strong, formed into a column, rushed out of the palace, and endeavoured to cut their way to the Champs Elysées, and thence on to Courbevoie, where were hundreds of their brave countrymen and brothers in arms, in barracks and doing nothing, but who, had they been kept in Paris, might have given a very different turn to the fortune of the day. They kept together and in perfect order for some time, defending themselves with their bayonets, for they had consumed all their cartridges before they quitted the palace; but, attacked from every side, fired upon by artillery and musketry, and seeing every avenue blocked up, they hesitated, halted, consulted, and then broke and fled in small parties,

and in every direction, crying, "Quarter! quarter! mercy!" Nearly every man of them was massacred by the ferocious mob, who mutilated their bodies, and stuck their heads upon pikes. Out of 700 or 800 brave fellows who had mustered in the palace on the preceding evening, not more than 150, or at most 180, outlived this bloody day; and many of these afterwards died of their wounds or of grief. But few were killed in battle; they were butchered when they were prisoners or utterly helpless. So madly savage were the Parisian mobs, or patriots and patriotesses, that they murdered all the door-porters they could reach, as some of those men were Swiss, and as they were all called Swiss—the word *Suisse* having become, in Parisian French at least, a synonyme for "door-porter." As a large party of them—fifty, or, according to other accounts, eighty—were on their way to the Hôtel de Ville, under escort of a detachment of national guards to whom they had surrendered—a ferocious multitude in the Place de Grève burst through the ranks of the national guards, and murdered the helpless prisoners in cold blood to the last man, the guardsmen looking on, and, it is said, making not the slightest effort to save men whose lives ought to have been sacred in their eyes.

The massacres were not all over till late in the evening; but as early as eleven o'clock in the morning the triumphant shouts of the people informed the republican deputies sitting in the assembly, Jacobins and Girondists, who had set them to this work, that they had conquered, and that the Tuileries was in their possession. Until the moment when this certain intelligence was received, these reformers and reconstructors of nations, though they had the king and his family in their hands, were quivering with agitation and alarm. The cannon which was fired close by—for their hall was not many hundred yards from the palace—shook the walls of their Areopagus, and their windows were nearly all broken by the concussion of the atmosphere and by random musket-shots. Some of the illustrious deputies rose and went to the door; but to go out where balls were flying like hail was more dangerous than to remain in; and so they returned to their seats or vaulted into the speaking-place to talk about the glory of dying for the country, and the imperative duty of all representatives of the people to remain at their posts in the hour of danger. As the guns boomed and the house shook, they talked the louder to keep up what heart was left in them. A portion of the armed mob rushed in at the door of the hall; but it was not the mob that these orators feared, and so they greeted the in-comers with shouts of "Vive la nation!" The next thing they did was to decree

an address calling upon the people to respect, not the palace they were attacking, but "the rights of man, liberty, and equality," and to order that this brief address should instantly be printed and placarded. As soon as this was decreed they had recourse to some more swearing, which they always employed like a dram: they all rose on their feet, stretched out their right hands, and to the loud accompaniment of the galleries, they swore that they would perish if necessary, for the defence of liberty and equality. Then a deputation from one of the sections, composed of daring men who had ventured to come to the house through the terrible storm that was raging, appeared at the bar to say that their section fully concurred in the petition for *déshéance* which Mayor Petion had presented, to declare that they too had sworn to die for liberty and equality, that they were all tired of the crimes of the court, and wanted to get rid of kings for ever. The king and his family were present, though stowed away in the reporters' box. After some more harangues from deputies of the mob, and some very long ones from deputies of the assembly, President Vergniaud, with the ordinary Gironde cant, spoke of his own tender feelings, and of the deep grief the assembly must necessarily feel in being obliged to have recourse to rigorous measures; but he ended with saying that these measures must be adopted instantly, or farewell liberty! farewell equality! farewell the existence of France as an independent nation! His propositions were twelve, but the essential ones were these:—1. That the French people were invited to form a national convention, to take place of the existing assembly. 2. The king was provisorily suspended from his functions, until the national convention should pronounce upon the measures proper to secure the sovereignty of the people and the tranquil reign of liberty and equality.

The uncrowned king, panting in the close hot box of the short-hand writers, had scarcely heard the assembly vote this decree, ere Guadet presented the plan for constructing a new popular ministry—a plain and simple rule, for the members of the assembly were themselves to elect all the ministers for the present. And as soon as this was agreed to, Guadet said that the same rule would do very well for choosing a governor for the king's son. Two things appear pretty certain: the Girondists must have had these decrees, and projects of decrees, and orations ready written in their pockets, and the *côté droit*, who had shown so much energy and boldness during the two or three preceding days, must either have kept away from the assembly for fear of being massacred, or they must all have lifted hands and taken oaths with the republicans in dread of the armed patriots, who crowded both the gal-

leries and the body of the house. Hitherto there had been no division, everything being carried by acclamation; nor can we find that, in the course of the whole day, or in the course of several following days, there was a single deputy that ventured to offer one word of opposition, or remonstrance, or protest. And the Jacobins, who were determined not to leave all the honours of the day to the Girondins, now proceeded rapidly to propose and carry decrees which could not be otherwise than fatal to the Gironde, who had little or no hold on the popular masses. Jean Débrie proposed that the assembly, having just sworn so solemnly to maintain and carry out the principles of liberty and equality, ought forthwith to admit the natural right of universal suffrage, and ought to decree that, for the approaching convention, every citizen of the age of twenty-five, and living by the produce of his labour, should have a vote; and this, too, was adopted unanimously. Choudieu demanded, as measures very essential to the general safety, that a camp should be formed under the walls of Paris, to be composed of the people of Paris, and of all other patriots that chose to repair to it; that the Parisian cannoneers who had been so active in this day, should be allowed to place their artillery battery on the heights of Montmartre, which commanded the capital; and that from this moment the assembly should remain in permanent session. As soon as all this had been decreed unanimously, Lacroix, another most thorough-paced Jacobin, demanded that the assembly should instantly appoint a committee, or commissioners, to go to the army on the frontiers to announce the changes which had taken place, and to keep the soldiers in the right path.

When this and more was done, Isnard called the attention of the house to the new cabinet that it was to form. "And," said this Girondist, "since the assembly declared that *Roland, Clavière*, and *Servan* carried with them the regret of the nation, we owe it to the public opinion to reinstate those three virtuous ministers immediately by an unanimous vote!" The house voted as he proposed, and thus, through the bloody paths of insurrection and anarchy, the husband of Madame Roland found his way back to the cabinet. The assembly then proceeded to elect the three other ministers by simple vote. Danton, who had gone into the Tuileries when all the fighting was over, with a drawn sword in his hand, was appointed minister of justice by an overwhelming majority; Monge, the mathematician, was named minister of marine, and Lebrun minister for foreign affairs. At half-past three in the morning the assembly suspended their labours for a few hours. The king and his family were conducted to four small rooms on the upper

floor which had been destined to the use of Camus the archivist. On the afternoon of the 13th, they were all conveyed from the assembly to the dismal prison of the Temple, situated in the filthiest

that country, and confessing (as he does repeatedly) that he was fully convinced that England was the only country in Europe in which he could be secure from arrest and captivity, he re-

ROOM IN THE TEMPLE, PARIS, where the Royal Family was confined - From Bertaux

part of Paris. "And thus," says Dulaure, who is an historian worthy of his subject, "thus the antique monarchy of the Franks, the dynasty of the Capets, established by force in barbarous times, was annihilated by force in civilized times!"

The vapouring confidence, the pride of La Fayette had a terrible fall. He was compelled to run from the monster whom he had unchained. The assembly sent three members of their house to arrest him in his camp, and then ordered Dumouriez, who had been appointed to the command of a division of the army on the frontiers, to march against him as a rebel to the people. When he appealed to the soldiers in his camp, they told him that they were all sans-culottes, and threatened to lay hands on him; and, on the 19th of August—only nine days after the bloody affair of the Tuileries—the hero of two worlds found himself under the humiliating necessity of fleeing from the fury of his own troops into the territories of the Austrian emperor. His kind words and deeds towards our country during the American war are pretty generally known, but not so is the fact—though derivable from his own writings—that, during his brief revolutionary greatness in France, he had proposed a scheme for lighting up the flames of rebellion and civil war in Ireland;—and this too at a time when we were at peace with France, and more than two years before our friendly intercourse was threatened with interruption! Yet, despairing of making a new insurrection in Holland (another of his darling projects), and even of being safe in

resolved to honour us with a visit, and claim the protection of our laws and the benefits of our hospitality. Perhaps it would not have been easy for the most ingenious of men to traverse the Low Countries at such a moment; but La Fayette chose his course so badly that he went but a very few miles ere he fell into the hands of an Austrian detachment, and was taken prisoner together with the few companions of his flight. He remained in captivity until the peace of Campo Formio in 1797, when he owed his liberation from the dreary fortress of Olmutz to Napoleon. He filled the wide world with

his loud complaints of Austrian injustice and cruelty, but if he had been caught on his flight by his own countrymen, either he would have been torn to pieces, or he would have perished under the guillotine. As it was, the assembly outlawed him, and the commune had his effigies destroyed by the common hangman. La Fayette, in quitting France, had boasted that he had put his lines in excellent order for repelling the foreign invaders. Dumouriez says that he found all the dispositions La Fayette had made as bad as they could well be: the army was divided into two bodies; the advanced guard, consisting only of 6000 men, occupied an extensive camp on the right bank of the Meuse, which it would have required 40,000 men to defend; the main body, consisting of 17,000 men, was posted three leagues in the rear, in a bad camp on the heights that overlook Sedan. He says that the consternation was general; that the soldiers considered all their officers as traitors; that no one took upon him to issue orders, and that, assuredly, if the Duke of Brunswick, any time between the 22d and 28th of August, had but pushed forward 10,000 men towards Sedan, La Fayette's army would either have dispersed itself among the fortified places, or have fled as far as Paris. But the Duke of Brunswick was moving in a different direction, and by marches that were not forced marches. Slow, however, as was their progress, the Prussians sat down before Longwi on the 23d of August. This town, on the Moselle and the north-eastern frontier of France, was small and poor, but it had a fortress on a rock, which had been

constructed by the great Vauban. After summoning the place the Prussians commenced bombarding it. The garrison was in a terrible state of disorder and indiscipline; their commandant had no control over them; and the inhabitants, although they had all sworn to die for the country, had not fixed the when or the where, and were anxious not to die just yet. In a very few hours the place was surrendered to the Duke of Brunswick, who allowed the garrison and the commandant to retire to other fortresses more in the interior of France. The Prussians then blockaded Thionville, and advanced upon Verdun. On the 26th the news of the surrender of Longwi was known all over Paris. It produced the greatest alarm and rage: the people, who attributed the surrender to treachery, believed that they and their cause would be betrayed everywhere, and that the Duke of Brunswick would be allowed to reach the capital and execute his tremendous threats without any valid opposition. Cambon demanded that the assembly should instantly decree a levy of 30,000 men in the department of Paris and the departments nearest to the capital. The proposition was voted by acclamation. It was then hinted that though men might be ready enough to march, they could not well march without muskets; and this led to the passing of resolutions, that all those citizens who were not going to march to the frontiers should deliver up their guns to those who were; that domiciliary visits should be made, and that muskets and all other arms should be seized whenever they could be found. It was also voted that every citizen in a besieged town who talked of surrendering should be punished with death.

But it was in the municipality or commune that the greatest fervour and energy were displayed. Danton, who attended there much more constantly than in the council of ministers, recommended the measures of vigour and rigour that ought to be adopted at the present crisis. It was he that suggested the taking into pay and arming all the indigent men in and about Paris. It was Danton's plan that the barriers should be strictly guarded and closed for forty-eight hours, and that the domiciliary visits should not be made merely in search of arms, but also for the arrest of all aristocrats, of all unsworn priests, of all who had put their names to anti-revolutionary petitions—of all, in short, who were in any way *suspect*. In order that all these victims might be seized within Paris, the strictest and most terrible orders were given to let no living being pass the barriers; and the pikemen and the sans-culotte national guardsmen, who watched those barriers and every issue from the capital, wanted neither threatening nor prompting to make them keen in their duty. On the morning of the ter-

rible 29th, news was received that the Austrians were advancing rapidly, and that nearly the whole of La Vendée was up in arms. The panic and the fury were trebled. The Girondist ministers lost what little heart had been left in them, and proposed abandoning the capital and retiring to Saumur. But here Danton raised his sonorous voice, and said—"You cannot be ignorant of the fact that all France is in Paris! If you abandon the capital you are lost for ever, and you deliver up all France to the enemy. You must maintain yourselves in Paris, cost what efforts it may. It is also impossible to think of fighting under the walls of the capital: the 10th of August has divided France into two parts, one attached to royalty, and the other wishing for a republic. The republicans, whose extreme minority in the state you cannot conceal from yourselves, are the only men upon whom you can rely—are the only men that will fight. The rest will refuse to march; they will agitate Paris in favour of the emigrants and foreigners, while your republican defenders, placed between two fires, will get themselves killed in endeavouring to repel the invasion. If they fail, as it seems to me they must do, the ruin of France and your own ruin are certain: if, contrary to every expectation, they should return as conquerors of the coalition, still this very victory will be a defeat for you; for it will have cost you the lives of thousands of brave republicans, while the royalists, even now more numerous than you, will have lost none of their force or influence. My opinion therefore is, that, to disconcert their measures and stop the foreign enemy on his march, we must strike terror into the hearts of the royalists!" The Girondist ministers understood the sense of these terrible words: it is said they shuddered at them, and remained speechless. "I tell you," rejoined Danton, "that there is nothing for us but terror! We must terrify the royalists and all our enemies here at Paris! (*Il faut faire peur!*)" Gentle Roland, honest Clavière, amiable Servan, mathematical Monge, are said to have continued to sit silent and horror-stricken, staring with eyes of wonder at their brother-minister Danton and one another; but, whatever was their wonder, whatever their horror, it is not shown or even said by any one that they made the slightest effort to stop the realization of the scheme of terror and slaughter proposed by this truly revolutionary minister of justice. We know their utter powerlessness, we know that no efforts they could have made would have prevented the massacres which had already been determined upon; but just and brave men, enthusiasts in all the higher virtues, as the Girondists pretended to be, would have made the attempt, and would have been massacred themselves rather than

have lived to witness such infernal cruelties, such an eternal disgrace on the character of their country. But these men were hollow pretenders: they only felt for their own personal danger, which is said to have been great, inasmuch as some of the directors of the massacre wished to include them in it; and when their own danger was over, they would have shaken hands with the blood-stained ruffians who had relieved them from all future dread of royalty and aristocracy.

DANTON — From a French print of the period

From the council Danton strode to the Hôtel de Ville, to give the last directions as to the proper means of beginning the reign of terror. The chief men who acted under him or with him were Marat, Tallien, Billaud-Varennes, Collot d'Herbois, Panis (a little lawyer, and brother-in-law to Brewer Santerre), Sergent (an engraver and Cordelier), Duplain, Lefort, and Jourdeil; but the active agents in the arrests, which were preparatory to the massacre, included nearly every member of the commune, whose total number was at this moment from 500 to 600. All kinds of subterfuges and suppressions are employed by French writers to diminish the numbers of the butchers of the revolution, and to make the world believe that all the worst crimes were not only conceived, but were absolutely perpetrated by a few individuals; but their ingenuity can deceive no one that will look into the facts. Before these hundreds of municipals began the domiciliary visits, they knew as well as Danton himself their meaning and their object.

At the appointed hour the drums beat to arms, the tocsin was sounded, alarm-guns were fired, and the visitations were begun. Many hundreds of victims of both sexes and of all ages were torn from their homes or from their hiding-places, and

crowded in upon the many thousands that already occupied the prisons. Nobles, officers, men of letters and journalists that had taken the wrong side, or that had not gone far enough or fast enough with the revolution; ladies who had belonged to the old court, and ladies who had never belonged to any court, but who had emigrants or some other aristocrats for their husbands or lovers; priests who had not taken the civic oath, and priests who had taken it and repented of it afterwards; men, and women too, who had never taken any part in political matters, but who had been denounced as *suspect*, by personal enemies or by busy-bodies, to the committees of research and surveillance, were all clutched by the municipals and their armed force, and put into prison like sheep into pens to be ready for slaughter. These operations were continued during the following day and night. On Saturday, the 1st of September, they ceased, and the barriers were once more opened for a few hours. But in the course of the day it was reported (prematurely) that Verdun had fallen.—and fallen, like Longwi, through treachery. Hence fresh panic, and fury and madness, and hence a cry for blood from every faubourg and section, from every street, lane, place, and corner of that large mad-house—a cry which encouraged Danton, and gave him the assurance that all Paris, or the sans-culotte part of it to a man, would either co-operate in his great work of terror or look on complacently. The burly minister of justice or blood went again to the Hôtel de Ville, and helped the commune to decree that on the morrow the tocsin should be sounded, the guns of alarm should be fired, and the citizens should all meet in arms, with their muskets or their pikes, in the Champ de Mars. The decree added, for form's sake, that these armed citizens were to march off on Monday morning for Verdun: but no one was deceived by this pretence, and those who had relations or friends in the prisons, and who had courage enough to show their interest in them, well knowing that the prisons were to be forced, and that all in them were to be murdered, hastened to supplicate and implore the commune to liberate the objects of their affections.

The morrow, the 2d of September, was a Sunday; it had been chosen because most of the people would be idle, and so have time to spare for the bloody work. Most of the grand crimes of the revolution were, for the same reason, committed on Sabbath-days. The commune issued a proclamation to tell the people that the country was in far greater danger than ever; that the enemy was almost at the gates of Paris; that there was nothing but Verdun between them and the capital. A report was also circulated that the aristocrats were going to break out of prison that

very night in order to put Paris to fire and sword. The national assembly met in the morning, and, while the sans-culottes were assembling in the streets, or marching to the Champ de Mars, the honourable deputies, who must have known what was coming, spent their time in speech-making and in spinning rhetorical figures. That there might be no mistake, two members of the commune came to the bar to announce that the tocsin was going to sound, and that all the patriot citizens of Paris were assembling in the Champ de Mars in order to march against the enemy. The assembly thanked their municipals in the name of all France for their beautiful patriotism, and invited them to the honours of the séance. Orator Vergniaud poured out a long rhapsody. "It is to day," said this great Giroudin, "that Paris will really show herself in all her grandeur! From this day forward we have nothing to fear!" After talking about the corrupting gold which the enemies of liberty were distributing, and after making use of other arguments and figures which, however he might mean it, certainly tended to keep up the popular fury and thirst for blood, Vergniaud proposed that the assembly should every day send twelve of its members to work with the people in digging trenches on Montmartre. At this proposition all the house rose and shouted, and all the galleries did the same; the decree was passed in a whirlwind of enthusiasm. Soon after this scene the tocsin was heard ringing from the Hôtel de Ville, and all the church towers, the Salle de Manège was shaken by tremendous discharges of artillery, and Danton came to the bar with a radiant countenance. "Gentlemen," said this minister of justice, "it is very satisfactory to the ministers of a free people to have to announce that the country is going to be saved. Everything is moving, everything is shaking itself, every man is burning with anxiety to fight. You now know that Verdun is not taken, but only invested. You know that the garrison have sworn to immolate the first man that proposes a surrender. One portion of the people of Paris are going to march to the frontiers, another portion are going to work at the entrenchments, and a third will defend the interior of the city with their pikes! . . . The tocsin that you hear is not the signal of alarm; it is only sounding the charge on the enemies of the country! To conquer them, to annihilate them, what is wanting? Audacity, audacity, and still audacity!—*toujours de l'audace, et la France est sauvée.*" The assembly applauded, the assembly approved all that he and the commune had done, saying nothing, hinting nothing about the first and immediate consequences of this universal insurrection and meeting in the Champ de Mars.

The honourable members went quietly to their

dinners at four o'clock, and returned to the house at six, with a fuller knowledge than ever of what was to be done; but still no generous effort was made, no voice was raised to plead the sacred cause of humanity. They knew that the barriers were again closed—that the prisoners in all the prisons and strong houses in Paris, that the royal family in the Temple were in agonies of alarm, and expecting instant death; yet they passed their time in listening to deputations who came to make vapid speeches, and to offer for the service of the country a new musket, an assignat of fifty livres (not then worth five-pence), a pair of hackney-coach horses, a uniform coat, &c., &c. A deputation of citizenesses came into the hall to make the significant demand that all such as were detained in prison merely for debt should be instantly liberated, in order that they might not be confounded and punished with the traitors. Yet still the assembly did nothing, said nothing, to avert the horrible doom that was hanging over many thousands of their countrymen and countrywomen; nay, at this very moment they agreed to a demand that the state prisoners at Orleans should be brought nearer to Paris, or nearer to torture and death. Some mad Englishman had just offered a musket for the defence of liberty, when news was brought that the prisons were forced, and that the massacres were beginning; and a minute or two after, Fauchet announced that 200 priests had been already butchered in the church of the Carmelites, which, like other churches, had been converted into a prison. Then the assembly, without any evident or extraordinary emotion, appointed a deputation to go forth and tranquilize the people; and for this object they selected only five of their members, and those five were men more likely to encourage the people than to check their savage rage: they were the ultra-Cordelier-Jacobin Bazire, the Jacobins François de Neufchâteau, Dussaulx, and Lequinio, and the Girondist Isnard, who is generally reputed the most enthusiastic or maddest of his faction. As soon as these members had quitted the hall, other deputations arrived to make more speeches about dying for one's country; and there sat the assembly listening to these orations, while young and old, the innocent and the helpless, were dying in heaps all round them. At one o'clock in the morning it was reported in the hall "that the disorder continued, and that the people were still killing the prisoners." Then for the first time—when the massacres had been going on for nine hours—the assembly made an application to the omnipotent commune. And what was the nature of this application? Was it an earnest entreaty, a solemn injunction, a passionate appeal to the commune to put forth its whole strength, and stop these murders *en masse*? No!

it was nothing of the sort; it was merely to request the commune to give the assembly "precise information" as to what was passing. At half-past two in the morning three commissaries of the commune, Tallien, Truchot, and Giraud, presented themselves in the hall in order to give this "precise information." Truchot, who spoke first, said with a coolness that could only have proceeded from his approbation of all that had been done, "Gentlemen, most of the prisons are now empty; about 400 prisoners have perished. At the prison of La Force to which I repaired, I thought it my duty to get out all the persons detained there only for debt. I did the same at the prison of St. Pélagie," &c. Tallien, who spoke next, was equally cold-blooded. "The people," said he, "went first to the Abbaye. They demanded from the governor of the prison his register and list of prisoners. All the prisoners detained for the affair of the 10th of August, or for forging assignats, perished at once. The council of the commune sent a deputation to oppose this *disorder*. [The villains would not even call it a massacre.] The procureur of the commune employed all the means suggested by his zeal and humanity. He could do nothing, and saw several victims perish at his feet." What the assembly did for some hours after we know not; we only know that the massacres continued, and that no effort was made by them or by any of the Gironde ministers to stop them. This duty more especially concerned the virtuous Roland, as minister for the home department; and Roland did nothing until the evening of the 3d, when he *complained* to the assembly—or rather until the 4th—when he wrote a pressing letter to Santerre for a military force, which Santerre never sent.

We cannot enter upon anything like a complete account of these orgies of human blood, which did not entirely cease until the 9th. Such an account, compiled from the innumerable narratives left by eye-witnesses, would fill a larger volume than ever has been written upon the Sicilian Vespers or the massacre of Saint Bartholomew, and would contain details infinitely more atrocious than any connected with those two celebrated butcheries of human beings. The slaughterers—the *égorgeurs*—proceeded systematically with their bloody work, enlivening their toils with song and dance, and exhibiting as much of the monkey as the tiger part of their character. The first victims sacrificed on the Sunday were twenty-four priests who had been arrested that morning for refusing the *serment civique*. They were put into six hackney-coaches and were literally hewn to pieces in the streets, with the exception of one, the Abbé Sicard, the celebrated teacher of the deaf and dumb, who was bravely and miraculously rescued by a watch-maker who

knew him. Billaud-Varennes, at this time a member of the council of the commune, dressed in his insignia of office, applauded this butchery of aged helpless men, and told the people they were doing their duty. This being done, 200 priests who lay under lock and key in the church of the Carmelites were massacred to a man, not without much laughter and many jests on the part of their murderers. Being refreshed with wine sent to them by the committee of the section, the *égorgeurs* went to the Abbaye, wherein were confined from 200 to 300 persons, including Swiss, gardes du corps, deputies of the first assembly, priests, ladies, and others. These were nearly all despatched in the course of the night; and during that same night, throughout which the assembly sat, some hundreds were massacred in other prisons, and many scores in the streets.

On the following day, Monday the 3d, Roland and that other extra-virtuous Gironde minister, Servan, appeared in the assembly, to request that some stop might be put to the popular excitement, "which had been produced by a few malicious men." The house agreed on a proclamation to the people, which was to be read by sound of trumpet. But it was late in the evening of the 3d before this proclamation was drawn up, although, from morning till noon, from noon till night, the *égorgeurs*, with short intervals for rest, continued their work. Roland, who had accompanied Servan to the bar, did not speak, but he handed in a long-winded, pragmatical, pedantic letter, full of generalities, commonplace axioms, and self-laudation. Madame, his wife, applauds his wondrous courage in being the first to raise his voice against the massacres. Yet how did virtuous Roland speak of these multitudinous and gigantic abominations? Why, he mingled praise with his blame, and, in most gently condemning what had happened, half hinted at the usefulness of the popular fury; and he openly and directly eulogized the 10th of August, which threw both the throne and the assembly under the feet of a rabid democracy, and which led directly to these very massacres. "The wrath of the people," said this self-sufficient, cold-blooded formalist, in this letter to the assembly—"the wrath of the people and the movement of the insurrection are to be compared to the action of a torrent which sweeps away obstacles which no other power could remove, but the over-flooding and rush of which spreads ravage and devastation, unless it return very soon into its bed. Without the day of the 10th of August [a day rendered, by the massacre of the Swiss, as atrocious as any single day of blood that followed it], it is quite evident that we were all lost; the court, fully prepared long before, was only waiting the moment to fill up its treasons,

to spread over Paris the flag of death, and to reign by terror! The feeling of the people, always just and prompt when their opinions are not corrupted, anticipated the moment marked for their ruin, and rendered it fatal to the conspirators! It is in the nature of things, and in the nature of the human heart, that victory should bring with it some excesses: the sea, agitated by a violent storm, continues to roll and roar for a long time after the tempest is over; but all things have their limits." Could Danton, could Robespierre at any time, could Marat himself have spoken of blood and horror with more coolness than this? In another part of his letter, virtuous Roland said, "Yesterday was a day, on the events of which we ought perhaps to throw a veil. I know that the people, terrible in their vengeance, yet observe a sort of justice: they do not take for their victim every man that is presented to their fury; they direct their fury against those whom they believe to have been too long spared by the sword of the law, and whom the perilous circumstances of the times persuade them to immolate without delay. But I know that it is easy for scoundrels, for some traitors, to bring about an abuse of this effervescence, and I therefore know that it ought to be stopped. I know that we owe to all France the solemn declaration, that the executive power has been able neither to foresee nor to prevent these excesses; I know that it is the duty of the constituted authorities to put an end to them, or consider themselves annihilated. I also know that this declaration exposes me to the rage of some agitators: well, then, let them take my life; I only wish to preserve it for liberty and equality," &c. He eulogized the gentleness and docility of the French people, and said he was quite sure that if they were only properly informed, and placed "on a level with the circumstances of the times," all would go well until the meeting of the convention, which was close at hand, and which could not fail of securing tranquillity and happiness under the best of republican institutions. The assembly had opened their debates at the usual hour in the morning, and apparently without feeling any interest in the massacres that were in progress. A letter was transmitted from Mayor Petion, who coldly and lyingly affirmed that he knew nothing of the events of the night, until it was too late to apply any remedy! Brissot announced that Verdun was still holding out, and that the enemy had met with a repulse at Montmédy; and was honoured with loud applause. A milliner came to present some trinkets for the service of the country, and to offer to mount guard in Paris as a soldier: her patriotic daughter, who came with her, presented a silver thimble and fifteen sous. Not a word was

said about the butcheries which were going on more actively than ever at some of the prisons, and no further allusion was made to them until the day was far advanced, when the council of the commune requested that the assembly would be pleased to name six of their own members to act conjointly with them "in calming the effervescence." [The most atrocious, the most immense and astounding of crimes was, in the language of Petion's colleagues, only *disorder* or *effervescence*.] The assembly instantly did as they were ordered, and named six deputies to act with the commune—Bazire, Chabot, Choudieu, Thuriot, Dussaulx, and Lacroix. Four of these six were disciples or admirers of Marat—were Jacobins of the very worst kind; and the remaining two, to say the least of them, were men impatient for a republic, and who were sure not to expose themselves to danger by counteracting their bloodthirsty colleagues, or by opposing the will and energy of the sovereign people. The individuals selected by the council-general of the commune to act with them in calming the effervescence were Robespierre, Manuel, and Deltroy. Business was then suspended in order that the deputies might have time to dine—for men dined in the midst of all these atrocities, sipped their coffee and their *chasse-café* while the streets of Paris were running with blood; and the graceful and gracious Madame Roland was giving her dinner-parties and displaying such wit as she had, and turning fine phrases in her *hôtel du ministère* all the while—at least she gave her usual five o'clock dinner to her husband's colleagues in office and the select members of the Gironde on this very day, the 3d of September, entertaining the madman Anacharsis Clootz, who then and there undertook to prove that the massacres in progress were indispensable and salutary. Yet this woman, who tells us these facts about the dinner, tells us also that the massacres were continuing; that they lasted at the Abbaye from Sunday afternoon till Tuesday morning, at La Force still longer, at Bicêtre four days, &c.

It was on the morning of this day, the 3d of September, and while the assembly and the council of the commune were both sitting, that one of the most damnable of all the murders—that of the Princess de Lamballe—was committed. This lady, a foreigner of royal blood, descended from the ancient house of Savoy, had come into France at an early age to be married to the Prince de Lamballe, a branch of the house of Bourbon-Penthièvre. Marie Antoinette had become greatly attached to her, and had lived with her for many years as an equal and a sister. Hence, when that torrent of obscene slander and libel began, which preceded the revolution, the name of the princess was always coupled with that of the queen, and

she was charged with nearly every vice and turpitude that is to be found in Juvenal's sixth satire. At the time when the reign of liberty began, the princess was a widow, and superintendent of the queen's household. She was and ever had been gentle in her manners, generous in her actions, graceful and kind-hearted to all people, and, though in her fortieth year, her face and form were eminently beautiful. She had never interfered in any business in court or cabinet, except to procure pardons for offences, or promotions and favours for others; but all these things weighed lighter than a feather in the balance against the foul imputations which had been cast upon her for years, and the fact of her being the friend and confidante of the defamed queen, next to whom she was the most hated woman in all France. Her life had been repeatedly threatened—had at one time, when the court was brought from Versailles to be imprisoned in the Tuileries, been threatened daily—and the poissardes, the dames de la halle, and the other furies who had been wont to sit "kneeting i' the sun" under the walls of the palace and in the Tuileries gardens, had often sung in her hearing songs which expressed the happiness they should feel in carrying her bowels on their pike-heads, along with those of the Austrian woman. At the time of the flight to Varennes, the princess got safely out of this pandemonium; she was living in security and honour in England when the king accepted the constitution, and when her generous affection and devotion to the queen induced her to return to Paris. She followed her royal mistress to the dungeons of the Temple, and was barbarously torn from her at the end of a few days, to be sent alone to the prison of La Force. She was there when the massacres began on Sunday afternoon; she was there when her chamber door was burst open, and she was told that she must go to the Abbaye. She said she did not wish to be removed; that she was as well at La Force as she could be at the Abbaye, or in any other better prison. A national guardsman approached her bedside—for she was lying on her bed, though not to sleep—and told her that she must go; that her life depended on her obedience. Having with difficulty obtained permission to be left alone for a minute, she rose from the bed and arranged her dress. When the ruffians went in with their infernal "*Allons, marchons,*" and when she saw the blood upon their faces and their hands, she almost sank to the earth or into it; but two men supported her, and leaning upon them she walked or was dragged down to the terrible gate. All agree in relating that she had scarcely crossed the threshold of the prison ere she received a blow on the head from a sabre which made her blood spout; that the blow was presently repeated;

that she fell dead among the heaps of dead, and that then the people (horrible to be told!), *women* mixed with men, stripped her beautiful body stark naked, cut off her head, and committed

THE PRISON OF LA FORCE, PARIS—From a sketch by T S Boys

other mutilations and *acts* which cause the pen to drop from one's hand in thinking of them. They stuck her head, her heart, her limbs, and other parts of her body upon pikes, and singing and dancing they promenaded them through Paris. When they had done their worst there was a worse behind—when all that they could do to the remains of a beautiful, noble-hearted woman could only damn them to eternal fame without hurting her, an accursed villain cried out, "*We must carry her to the foot of the throne, Allons, au Temple!*" and to the Temple they ran, to show her to the queen, with their horrible shrieks and hell songs, rounded off from time to time with the "*Ça ira,*" "*Vive la nation!*" "*Vive la liberté!*" and the Marseillaise hymn, the only hymn now sung in revolutionized France. While these massacres were raging in the capital, fifty-three political prisoners were sacrificed at Versailles.

In various towns and municipalities the people rose with the avowed intention of murdering all political prisoners, all priests, all aristocrats—all men whatsoever who outraged the principle of equality by possessing property and elegant houses or dresses; but in many instances the communes would not consent to take their lesson from Paris,

and the national guards, not yet sufficiently sans-culottized, courageously opposed the égorgeurs. At Meaux fourteen individuals were butchered in the prison of the fort, and a day or two later a good many priests of the town and neighbourhood were put to death by the mob, who carried their heads upon pikes through the streets. At Caen, at Rouen, other horrors were committed; at Roanne seventeen heads of priests and officers were promenaded on pikes, at Gisors the Duke de la Rochefoucauld, ex-president of the directory of the department of Paris, was cut to pieces under the eyes of his mother and his wife; at Rheims, eight priests and laymen were put to death. In the south there were many massacres; at Lyons nearly every prisoner in the Château Pierre-Eucise was despatched, and Avignon, where fighting and massacring had never ceased since the expulsion of the Papal authorities and its annexation to France, became a universal slaughter-house. At Bordeaux, the headquarters of Girondism, attempts were made to seize the priests, but the mayor and the municipality made head against the insurrection, and it happily appears that not many were murdered there.

No two accounts agree as to the total amount of these wide-spread massacres. Nothing like an exact account was attainable at the time, and now no such thing is to be expected. The *Histoire de l'Espion*, a work of some authority, states broadly that the number of all who were massacred in the course of the month of September, at Paris and in all parts of France, was 15,000. Barrère and Berville, who published their *Mémoires* in 1823, make the numbers of those who were égor-gés in the prisons of Paris alone, amount to 12,800. In this calculation there is evidently some great exaggeration. Peltier, the royalist writer, calculates the number killed in the prisons at 1005; but he omits several of the prisons in his account, and among them that of Bicêtre, where, according to every relation, the murders were the most numerous, and attended with the most horrible circumstances. Maton de la Varrenne, speaking only of the prisons, and not of all of them, sets down the number of the killed at 1049, of whom 202 were priests; but he relied upon prison registers, which were very imper-

fectly kept, and took no account of the murders that were committed in the streets and in private houses, or of the massacres perpetrated in Paris after the 5th.¹ There was only a lull then; and though the prisons were emptied by the butcheries of the 2d, 3d, 4th, and 5th, the work of killing was loosely renewed on the 6th and 7th, and was not entirely over on the 9th, while the massacres were well nigh recommencing with as much fury as ever on the 16th and 17th. It is not very probable that any very exact list was taken at any of the prisons of the immense numbers that

PRISON OF PETIT CHÂTELET, PARIS.—FROM *L'UNIVERS PITTORESQUE*

were sent into confinement by Danton's domiciliary visits just before the massacres began. As there was no possibility of escape—as the barriers were strictly guarded all the time the massacres lasted—as the people had lists of the names of many thousands of obnoxious individuals—as the butchery indisputably lasted four days and nights, in full activity—and as assassinations were performed from time to time during a whole fortnight—we believe it may safely be assumed that from 4000 to 5000 victims perished in Paris alone, and that in all France there fell in the course of this dismal month, by murder alone, some 7000 souls, or near upon half the number stated by the author of *L'Histoire de l'Espion*.

CHAPTER XXXIII.—CIVIL AND MILITARY HISTORY.—A.D. 1792—1793.

GEORGE III.

War of the allied powers against France—Their dilatory proceedings—Military condition of the contending parties—Dumouriez's plan of operations—His successful occupation of Argonne—His resistance to the Prussians at Valmy—Sufferings and disappointments of the Prussians—They retreat—Dumouriez marches against the Austrians—Battle of Jemappe—Defeat of the Austrians—French conquest of Flanders—Dumouriez captures Mechlin—Facilities in recruiting the French republican armies—Dumouriez defeats the Austrians at Tirlemont—The Austrian Netherlands conquered by the French—Dumouriez prevented from invading Holland—He captures Aix-la-Chapelle—The French invade Germany—Their successes under Custine on the Upper Rhine—Their capture of Mentz and Frankfort-on-the-Main—The French resolve to invade Savoy—Arms used to win over the Savoyards—Savoy invaded and overrun by the French—Massacre committed by the French at Oneglia—Events in Paris—Election of its deputies to the convention—Character of the deputies—Dr. Priestley becomes a French citizen and deputy—Parties into which the convention was divided—The trial of Louis XVI. commences—Charges against him and his answers—Popular urgency for his condemnation—He is voted guilty—Clamorous demands for his execution—Meeting of the convention upon the final question—Variety of punishments voted—Conduct of the spectators during the voting—The Duke of Orleans votes for the king's death—Indignation of the convention at the interference of Spain in behalf of Louis—Humane attempt of Duchâtel to save the king—Louis by a majority condemned to die—Execution of Louis XVI.

FROM these civil proceedings it is a relief to escape, even to the horrors of war, for the worst of them are less revolting. It is admitted by a French military man, writing shortly after the crisis, that, notwithstanding the discordant views of the allied powers, there was a moment when everything was possible; but they suffered that moment to be lost. The French people had been expecting invasion, and preparing to meet it for many months—for more than a year France had been one great drill-ground. There was a time when a large part of the population, not yet indoctrinated by the clubs, or emboldened by success, or committed by daring and extreme acts, were wavering and uncertain; but the allies waited to make their attack till the moment when the unity of feeling and the popular enthusiasm were at their highest pitch; and even then, instead of beginning the campaign early, so as to have all the summer before them, they did not enter France until the month of August. Before Verdun surrendered to the Prussians, Dumouriez called a council of war at Sedan, composed of Lieutenant-general Dillon, four major-generals, Petit (his principal commissary), and his own staff, which consisted only of three experienced officers. He opened the map of Champagne, into which the Prussians were penetrating; and he showed that, Longwi being taken and Verdun invested, while another body of the enemy had advanced beyond Thionville, and were threatening Metz, there were no means left either to form a junction with Marshal Luckner, or to receive succours from any other quarter

in time to deliver Verdun; and that accordingly there was nothing to be depended upon but his own army. This army was far inferior in number to that of the Duke of Brunswick: but then the cavalry of it was composed of the best regiments of France, and was upwards of 5000 strong; more than one-half of his infantry (exceeding in all 18,000 men) was formed of regiments of the line; the rest consisted of national guards, being well disciplined, rendered warlike by a year's encampment, and by continual marches and skirmishes with the Austrians; the artillery, too, being excellent, counting a park of sixty pieces, besides battalion guns. With such means there was no reason to despair; he thought that this army might be the salvation of France. It had the inestimable advantage of acting in its own country, where everything was to be expected from the enthusiasm of the people. On the other hand the Prussians would be retarded by the sieges, by the difficulty of finding provisions, by the delays incident to their own convoys, and by the terrible quantity of their heavy artillery. The equipages of so many princes, the number of draught-horses necessary to drag their cannon, stores, and baggage over rough roads, must make their march exceedingly slow. On the contrary, his own army, which could not possibly remain where it was, might move with great rapidity. But in what direction should it move? After various schemes had been proposed, Dumouriez, who abounded in that military genius of which his late rival La Fayette had never given a token, pointed to the forest of Argonne upon the map, and exclaimed, "Behold the Thermopylæ of France! If I

can but arrive there before the Prussians, all will be saved!" The forest of Argonne is a belt of wood running on elevated rocky ground, nearly all the way from Sedan to Passeyant, a league beyond Ste. Ménéhould, the entire length being about fifteen French leagues, its breadth very unequal, varying from four leagues to half a league.

GENERAL DUMOURIEZ —From a French print

It separates the Bishoprics (Les Trois Evéchés), a rich and fertile country, from Champagne the Hungry, or the Lousy (as *pouilleuse* properly signifies), a district cursed by nature, in which was neither water nor wood, forage nor pasturage, but one cold bed of clay, without towns or bourgs, with no habitations but a few wretched villages scattered here and there and far apart. The forest was intersected with rocks, water-courses, bogs, and marshes, which rendered it impenetrable to the march of an army except by five openings or passes. As there were no other means of advancing on the French capital, where the Duke of Brunswick had promised to dine by a certain day, it is astonishing that he should not have secured one or two of the best of these passes; but he had done nothing of the kind, wasting several days in the sieges of Longwi and Verdun, places which he might have left in his rear without any danger. But if he could now discover Dumouriez's intentions, he could hardly fail of remedying his blunder; and, as he was considerably nearer to the best of the passes, or those which led most directly to the capital, the French general must move with the greatest rapidity, or see his plan frustrated. But Dumouriez not only moved with admirable rapidity, but also marched in such a way as to conceal his intention, until it was too late for the Duke of Brunswick to attempt anticipating him. He moved his army in several separate columns; and

by the 4th of September all the five passes of the forest of Argonne were occupied by different divisions of his army, which was every day reinforced by the arrival of national guards and volunteers. He had also transmitted orders to Beurnonville to quit the fortified camp of Maulde and march straight to Argonne with his 10,000 men, a considerable portion of whom consisted of Belgians who had revolted against the emperor and joined the French; and Beurnonville was expected to arrive in a very few days. Other troops—another army, in fact—were collecting in his rear at Rheims under General d'Harville.

It was not until the 8th of September that the Duke of Brunswick extended his front, and approached the forest and passes of Argonne. His head-quarters were constantly distracted by conflicting opinions, and disturbed by the petulance and evil counsels of the emigrants, who pretended that, as Frenchmen, they must best know how to manage a war in France, and who evidently misled him from the beginning of the campaign to the end of it. There were several very narrow chances; at one time Dumouriez was driven from his fortified camp: at another a panic seized his new levies, and more than 2000 men fled with incredible speed to the distance of thirty leagues, publishing everywhere that the army was betrayed and annihilated, and that Dumouriez and all the generals had gone over to the enemy. But the able strategist contrived to keep the Duke of Brunswick and his army at bay; and by the 19th of September, Dumouriez, being joined by Beurnonville and Kellermann, found himself at the head of a force far superior in number to the army of Brunswick. On the 20th the Prussians made a somewhat spiritless attempt to drive the French from the steep hill of Valmy. The affair has been very properly called the *Cannonade of Valmy*: each of the two armies fired more than 20,000 cannon-shot, and yet lost no more, in killed and wounded, than 300 or 400 men each. It however gave great encouragement to the French, by proving to them that their steadiness and their fire could arrest the progress of so formidable an enemy. The young Duke of Chartres (*then* plain M. Chartres, and afterwards Louis Philippe, King of the French), was in this battle or cannonade, serving as a general officer, and having for his aide-de-camp his younger brother, the Duke of Montpensier, then a youth of seventeen. Kellermann praised the valour and conduct of both princes, and honourable mention was made of them in the bulletins sent to Paris. Fresh armies were now collecting round the Prussians, who found themselves still entangled in a sterile country, in want of forage and provisions, a prey to a cruel dysentery, occasioned by the badness of their food and by the drenching

of the autumnal rains, which now fell incessantly for many days, making the bad roads still worse, swelling all the rivers and streams, and ruining all the baggage.¹

At the beginning of the campaign the Duke of Brunswick had been assured by the sanguine emigrants, that the mass of the population, who must by this time be disgusted with the revolution, would rise and join him, and fight under the French princes who were with him; and, in short, that the campaign would be nothing but a pleasant promenade along the banks of the Marne. But, instead of joining him, or even of remaining neutral, the population of the country seemed armed to a man against him, the peasantry cutting off and butchering all his stragglers, fighting in ambush on almost every road, and not unfrequently intercepting his convoys; and at Valmy he had found that the sans-culottes were commanded by skilful and experienced generals—that shoemakers and tailors were becoming very good officers, and that the new levies, mixed with old troops, could keep their ground. It was clear that neither he nor the emigrants had sufficiently reflected on the aptitude of the French people for the art and practice of war; or upon the fact that such revolutions must nearly always produce great soldiers. The Prussians were pedants in war, believing that it could only be a successful art when subjected to their own rigid rules; and, as for the emigrants, it was one of the few articles of their limited belief, that *roturiers* could never make good officers—a conviction which was scarcely removed from their minds until the sans-culotte armies, under sans-culotte officers and generals, had overrun half Europe. On the 30th of September, at the dead of night, Brunswick struck his camp, having sent before him his artillery and heavy baggage. On the morning of the 1st of October, Dumouriez detached General Dampier to occupy the abandoned camp of La Lune, which was found strewed with the carcasses of men and horses, and offering such startling proofs of the epidemic malady or maladies which had been raging there, that Dampier precipitately abandoned the post, lest his men should be infected. Dumouriez, whose vanity was at least equal to his genius, hurried to Paris to show himself at the theatres, to receive compliments and laurel crowns, to solicit for more troops in order that he might conquer Belgium, to see which party was getting strongest in the con-

vention, and to make friends accordingly. In many respects his reception was as flattering as he could have desired; but some of the Jacobins thought that he had not done all that he might have done, and other Jacobins were mortally offended at his having punished some federates who had brutally massacred four deserters from the emigrants. He was, however, enabled to march against the Austrians, who under the Duke of Saxe-Teschen had been obliged to abandon the siege of Lille, and to recross the Belgian frontier, a few days after the Duke of Brunswick's retreat from the Argonne. On the 4th of November, two French armies under Dumouriez entered the Austrian Netherlands in nine columns; and on the 5th, being reinforced by another corps d'armée under D'Harville, they came up with the Duke of Saxe-Teschen, who occupied an excellent position on some wooded hills near the village of Jemappe. But if the Austrian position was good, their disproportion in number was very great, Saxe-Teschen not having more than 15,000 or 16,000 men to oppose to 50,000 or 60,000 French.

On the morning of the 6th the French began a general action by cannonading, to which the Austrians replied from some well-placed redoubts. This heavy firing continued without intermission, and without any great effect on either side, till ten o'clock, when the young Duke of Chartres, or, as he was now called, young Egalité, recommended an attack with fixed bayonets.² From eleven o'clock till one in the afternoon several charges were attempted, but every time the French were driven back by cannon-ball and grape-shot. At one time their centre, after losing a great number of men, was thrown into complete disorder, and was not rallied by the young Duke of Chartres without extreme difficulty. While the duke returned with the centre to attack the village of Jemappe on Saxe-Teschen's right, Dumouriez, putting himself at the head of two fresh brigades, and singing the Marseillaise hymn, "*Allons, enfans de la patrie*," moved rapidly to attack some redoubts towards the enemy's left. He was accompanied by several regiments or strong squadrons of horse, and not relying solely on the bayonet, he carried some light artillery with him. These redoubts were defended by some Hungarian grenadiers, who fought most desperately; but attacking by the gorge of the redoubts, and bringing their artillery within musket-shot, the French at length carried the works, when a fearful butchery of the Hunga-

¹ Dumouriez, the Duke of Brunswick, the Jacobin commissioners, Goëthe, the French newspapers, the English newspapers of the day, all mention these dreadful rains. But a critic in the *Edinburgh Review*, in commenting on Mr. Carlyle's account of the campaign of Argonne, doubts or denies that there was any rain at all, and assures us that September is not a rainy month on the Continent!

² The Duke of Orleans, on being elected a member of the convention, had taken the name of Philip Egalité, or Philip Equality. Doddsley's *Annual Register*, and other works of the day, speak of General Egalité, and of the bravery he displayed at Jemappe, without any notion that he was the Duke of Chartres, the son of the Duke of Orleans.

rians ensued. Dumouriez, anxious about his centre, put himself at the head of his cavalry, and was proceeding at a smart trot to its succour, when he met the young Duke of Montpensier, who was galloping to tell him that the centre was victorious, and that his brother had gained possession of the village of Jemappe after a bloody engagement. This decided the affair; it was only two o'clock, and the Austrians were in full retreat for Mons. The conquered moved off in admirable order, carrying with them all their artillery except seven or eight pieces; the conquerors had scarcely secured their victory ere they were seized with a terrible panic, and, imagining that the Austrians had undermined the hill and that they would all be blown into the air, five battalions abandoned the heights they had gained, and fled in the utmost disorder to a village at some distance. Dumouriez says that it was in consequence of this panic, and of the cowardice of one of his generals and of the disobedience of others, that he could not molest the Duke of Saxe-Teschén on his retreat. The battle of Jemappe decided the fate of the Netherlands, so miserably weak was the force collected for the defence of that rich country, and so disaffected were the Belgians to the house of Austria. Dumouriez states his own loss in killed and wounded at 2000, and that of the imperialists at twice that number; but there is reason to doubt whether, from the nature of the combat and of the ground, and from the want of pursuit, the French did not lose as many men as the Austrians. On the 8th, Tournai opened its gates to Labourdonnaye, Dumouriez's second in command; Courtrai, Menin, and Bruges, which had been well jacobinized beforehand, sent deputations to the commander-in-chief and to the convention; and, as soon as the intelligence of the battle of Jemappe arrived, the French commandant of Dunkirk, with only 1800 foot and 200 horse, marched to Nieuport and Ostend, which received him with joy. Without a single musket having been fired, all Flanders was subdued—or rather, the people joined the French and removed every obstacle to their progress. The exultation of the Flemings and Brabanters was in the course of a very few weeks considerably damped by the arrival of Jacobin commissioners from the assembly, who plundered them most mercilessly, levying contributions, taxing and harrowing them, as if they had really been a conquered people. Even Dumouriez himself gave them a sad proof of what they had to expect: for almost as soon as he had entered Mons, where the inhabitants received him with the utmost joy, he issued an ordinance requiring from the clergy a forced loan of one year of their revenues; and subsequently, in managing contracts for provisions, he forced

the Belgian contractors to accept of payment in French paper money, which was every day becoming more discredited and worthless. His excuse is, that the convention had no money to give him, and that the troops, engaging in a winter campaign, were almost naked.

Old Marshal Bender, who had once so terrified the Belgian patriots by the threat of pulling on his boots, was left in Brussels, not to offer any resistance, which was impracticable, but merely to arrange a capitulation. On the evening of the 13th the marshal was summoned by the Alsacian Westermann, become a colonel in the armies of the French republic by virtue of his exploits in the Tuileries on the 10th of August. Old Bender made the best terms he could, and on the 14th, Dumouriez entered Brussels amidst the acclamations of the people, and shouts of "Long live the French! Long live liberty and equality!" Having called upon all the towns in Belgium to raise and equip volunteer corps and militia, Dumouriez left Brussels on the 19th of November, when Labourdonnaye was already laying siege to Antwerp, while Valence was blockading Namur. He captured Mechlin, where he found a great quantity of ammunition and arms, and an excellent foundry for casting cannon. This enabled him to improve the equipment of his troops, and to arm crowds of volunteers who had come from France, where they had been starving for want of employment, to take part in this harvest of glory and gain. The situation of France continued for years to furnish the like adventurers in prodigious numbers; for there was starvation at home, and no calling within the reach of the common run of men was half so profitable as that of arms. To these must be added numbers—not inconsiderable—of downright republican enthusiasts; and of men passionately fond of war for the mere sake of war and its glories; and again other numbers who could only be safe from the Jacobins and the guillotine by throwing themselves into the ranks of marching armies. All this enabled the revolutionary generals to be careless whether a given operation cost them thousands of lives more or less; the immense numbers which fell were replaced by fresh arrivals: the want of regular employment at home, and the system of terror, were by themselves sufficient to recruit their armies. On the 22d, Dumouriez was astonished by finding the Duke of Saxe-Teschén firmly posted at Tirlemont. Another battle took place. The Austrians, though defeated, continued their retreat in admirable order, abandoning the country foot by foot, and fighting again on the 27th in front of Liége. At the beginning of this war of the revolution many of the Austrian retreats, if properly examined, will be found to be more extraordinary things

than the French victories. Liège, which swarmed with revolutionists and Jacobins, who in various ways had hampered the operations of the emperor's general, welcomed Dumouriez as a deliverer on the 28th. The strong fortress of Antwerp surrendered about the same time to the Peruvian Miranda, whom Dumouriez had sent to supersede Labourdonnaye; Namur surrendered to Valence on the 2d of December; and thus, one month after opening the campaign, the French found themselves completely masters of all the Austrian Netherlands, excepting the duchy of Luxemburg.

Dumouriez, having sent Miranda forward to Roermond, wished to continue his winter campaign by capturing Maestricht, by calling up the Dutch democrats, and by revolutionizing Holland, and all those Seven United Provinces. It was true the Dutch government had not declared war or entered into the coalition against France; but its predilection for the Austrians, Prussians, and emigrants, and its aversion to the French revolution, were not disguised. But greatly to Dumouriez's mortification, the convention and the executive would not send him the order to attack the Dutch; thinking it better, *for the present*, to maintain a neutrality with the stadtholder, until the Dutch democrats were better prepared for insurrection. Thus circumstanced, he resolved to capture Aix-la-Chapelle. But he was sadly impeded by a pestilent Jacobin poet, Ronsin, who had been sent by the convention to superintend the civil concerns of his army. On the 7th of December the Austrians fought another battle; but they were far too weak to secure or cover Aix-la-Chapelle, and on the 8th, Dumouriez entered the ancient city of Charlemagne as a conqueror. On the 12th, when little more than ten leagues from the Rhine, he put his army into winter-quarters.

But it was not alone in the Netherlands that the French, from being invaded, became invaders. The energetic men of Paris had resolved that Germany should be entered. General Custine, who had been attached to the French army on the Upper Rhine, commanded by Biron, made, with 18,000 or 20,000 men, a dash into the little circles of the empire, where there were no troops in the field, and none but weak garrisons in the fortresses. These silly German electors had all been indulging in the pleasant dream that the Duke of Brunswick would get to Paris, and therefore they had not thought it necessary to make any extra exertions. Spire and Worms capitulated to Custine on the 30th of September and 5th of October, and on the 21st of October Mayence (Mentz) threw open its gates, all the garrison laying down their arms, except some 800 Austrians, who marched out and joined the grand army of the coalition. All these successes

could have been obtained only through the disaffection of these Germans to their rulers, and the dissemination among them of French principles. Custine had no artillery or material for conducting any siege, and the least resistance must have preserved Mayence: but the town and university were full of democrats and believers in the new exposition of the rights of man; and these men had secret intelligence with Custine before he approached the place, and as soon as he had summoned it they urged the necessity of an immediate capitulation. In all directions the first progress of the republican armies was favoured by the people of the countries they invaded, so that the French press and their political propagandists were indeed of more service than French artillery. Custine soon gave the speculative Germans some cause for regretting the welcome they had given him. Quitting the banks of the Rhine, he rushed to Frankfort-on-the-Main. This free commercial town had remained neutral in all the wars, and her neutrality had been respected by the armies of kings and emperors; but these republicans were not so scrupulous, and they resolved to plunder it, notwithstanding the fact that the people were disposed in their favour, and were wishing them every success. They entered the open undefended place on the 27th of October, and levied contributions in the most rapacious manner.

Ever since the time of Louis XIV. the French had pretended that the natural frontiers of their country were the river Rhine and the high chain of the Alps; and that Belgium, Savoy, and Nice, which lay within these limits, belonged to France by the assignment of nature. Dumouriez, when minister, had recommended, as a beginning, the conquest and permanent occupation of these countries. We have seen how easily he overran one of them. General Montesquiou, beginning earlier in the season, found Savoy quite as easy a conquest; and General Auselme, who was detached by Montesquiou, and reinforced by 6000 Marseillaise, moved under the Maritime Alps to make a prey of Nice. In both these possessions of the King of Sardinia, the propagandists had long been at work, and their labours had been attended with very great success. Several days before they made their declaration of hostilities, the Girondist executive had given peremptory orders to General Montesquiou to attack Savoy, and drive all the troops of the King of Sardinia across the Alps, as these troops had been collected for no other purpose than to invade France, and to co-operate with the coalition. Before any blow was struck, the French had made pretty sure of the Savoyards, who hated the Piedmontese; and, by a variety of ingenious devices, they had gained all the information they wanted. A republican

general, who thought it no shame to play the part of a spy, took the dress and the name of an Irish priest; and imposed sadly on the credulity of Colegno, the commandant of Chambery, the

tress of Montmelian, which had been abandoned by its garrison, although well furnished with powder, ball, and provisions. On the side of Nice there was the same mixture of imbecility and

FRANKFURT, THE FISHERGATE, looking up the Main From Harding's Sketches at Home and Abroad

little capital of Savoy, and also upon the too easy faith of Count Perrone, the governor-general of the duchy. Other emissaries went among the citizens and the people, explaining the stupendous benefits they must derive from the French system, the promulgation of the rights of man, the overthrow of the aristocracy, and a fresh division of property. Montesquieu knew that the Savoyards would everywhere join him; and that the troops of the King of Sardinia, about which so much talk had been made, did not really exceed 10,000 men, and these, too, scattered over the country, through the false security or the treachery of those who had the command over them. On the night of the 21st of September, in the midst of a hurricane and torrents of rain, the republicans dashed across the frontier of Savoy, and took by surprise the important fortress of Sauparellian, which was garrisoned only by a handful of Piedmontese. Without losing a man, almost without firing a gun, the French reached Chambery, and were there received with transports of joy by the Savoyard patriots. After making a triumphal entrance, and installing a provisional council of government, composed of ardent democrats, who were invited to consider the expediency of an immediate union and incorporation with the French republic, Montesquieu advanced a few miles on the road that led to the pass of Mont Cenis, and took the formidable for-

treachery in those who commanded for the King of Sardinia, and the same sympathy among the people for the French and their enticing principles. Anselme crossed the river Var, which there forms the frontier, on the night of the 23d of September. An inconsiderable corps d'armée, composed of Piedmontese and Sardinians, retreated in the greatest confusion, and, without firing a shot, left the city of Nice open to the invaders. Without the least exertion

except that of marching to their prey, the republicans got possession of all that sea-board, of all the lower part of the country of Nice lying between the Maritime Alps and the Mediterranean, save and except the citadel of Mont Albano. To co-operate in this war of coasts the Gironde executive had despatched, from the near port of Toulon, Admiral Truguet, with eleven ships of the line, some frigates, and other vessels, having on board 2000 land troops. This fleet now came to anchor, and assisted in the siege of Mont Albano, which soon capitulated. Truguet perpetrated a horrible slaughter at Oneglia, a small but thriving town on the coast, the birth-place of the great Andrea Doria; and soon after this exploit he returned to Toulon, not without some apprehension of being intercepted by an English fleet, for the British ambassador had withdrawn from Paris in consequence of the dethronement of Louis XVI. and of all that had been done on the 10th of August. Two-thirds of a century have passed since these horrors were committed, but the memory of them has been transmitted from father to son in eloquent and exciting tradition, and there is not at this day, on all that coast, a mariner or peasant but will recount with flashing eyes the horrible particulars of the destruction of Oneglia.

We return to Paris. On the appointed day, the 21st of September, the members elected to the convention met in the Tuileries, the greater part of which was riddled by the cannon-balls of

¹ Carlo Botta, *Storia d'Italia dal 1789 al 1814*

the 10th of August. The elections for the city of Paris may enable the reader to judge of the spirit and influence under which they had been made, and will convey a tolerably correct notion of the character of the deputies returned by most of the departments. The Parisian deputies were—Robespierre, Danton, Camille Desmoulins, David, Fabre d'Eglantine, Legendre, Panis, Sergent, Billaud-Varennes, Augustin Robespierre, Collot d'Herbois, Dussaulx, Fréron, MARAT, Philippe Egalité, Thomas Manuel, Boucher Beauvais, Raffron, Robert, Lavicomterie, Osselin, and Laignelot. They included in their number all the members of the notorious committee of surveillance of the commune who had directed the égorgeurs or Septembrizers. Among them were three newspaper editors, a butcher, a painter, an actor, an engraver, a prince of the blood-royal, two street orators and authors, and one advocate—"which," says Thiers, "represented the confusion and the variety of existences which then agitated the capital of France." The first two returned by the Paris electors were Robespierre and Danton. Their success, about which there never could have been a moment's doubt, was hailed with enthusiastic joy by the Jacobin Club and by the commune, who, in fact, had secured their return. Marat had the same all-efficient support, and was passionately recommended to the Parisian electors by Chabot, who treated with contempt the remonstrances of such as represented that the friend of the people was rather too fond of blood and was already lying under two criminal accusations. Brissot, who was Marat's rival candidate, had no chance against him, and was obliged to get returned by one of the departments. These elections proved that he and his party could do nothing with Paris, and without Paris there was no hope of victory to them in the mortal combat they were entering upon with the ultra-Jacobins. After the failure of Brissot, some of the Girondins set up *Doctor Priestley* against Marat; but the divine was beaten by the horse-doctor. It might have been thought that the September massacres would have dispelled the admiration of the blinded or most frantic of the English republicans; but it was after these atrocities, and at a moment when the details of them were ringing throughout Europe, and filling men's minds with horror, that Priestley became a French citizen, and was elected a member of this convention, which, from the first, showed its determination of pursuing the same sanguinary course. Some have thought that the losing the honour of representing the city of Paris in the convention, and his mortification at being beaten by a man like Marat, may have contributed to keep Priestley away from France. Thomas Paine, who had gained additional consideration by publishing the second

part of the *Rights of Man*, was elected by the department of Pas de Calais. Priestley was elected by the department of Orne, but never took his seat in the convention; "because," as his friends said in the house, "he could not speak our language." Abbé Sièyes, who had not very patiently endured Robespierre's self-denying ordinance, was returned by the department of La Sarthe; and various other members of the first or constituent assembly, who had scarcely been heard of since the dissolution of that body, found their way into the convention. The departments of the south remained tolerably constant to their representatives in the legislative assembly, and there was not one Girondin of any note but found a place in the convention. These Girondins, who had sat on the left before, now took their places on the right, the Jacobins taking the left, and Robespierre with the deputation of Paris and all the most excessive Jacobins seating themselves at the summit of the left (*sur la crête de la gauche*), from which position they obtained the name—the memorable name—of "La Montagne," or the Mountain. What had been called the "Centre" was now called the "Plain;" and at the beginning, it was occupied by a very considerable portion of the house, some being moderates, some cowards, and a great many mere trimmers, ready to go with the Jacobins or with the Girondins, according to circumstances. The first president appointed was Mayor Petion. There was an immediate throwing down of gauntlets between the Girondins and the ultra-Jacobins. The Gironde ministers, by means of their orators in the house, attempted to discredit Marat and crush Robespierre, who still retained his name of the "Incorruptible." They failed completely, and only embittered by their attempt an enmity which was already implacable. But both parties soon agreed in bringing the king to trial and execution. In the meantime all the captives in the Temple—the king's sister Elizabeth, his queen, and his two young children, as well as Louis himself—were treated with the most execrable barbarity.

The mockery of a trial began on the 11th of December, when the king was brought to the bar of the convention. Although Louis had been diligently studying during his captivity the trial of Charles I. as related by Hume, he did not, like that prince, deny the authority of the court before which he was brought, or refuse to answer. He urged that up to June, 1789, there was no constitution, or no existing laws, which hindered his doing what he had done. The president then charged him with having surrounded Paris with troops in the month of July, 1789, and of having caused blood to be shed. Louis replied, that at the time he had the right of commanding the troops,

protesting that he had never had any intention of shedding the blood of any of his subjects. In this manner they went through the articles of charge, fifty-seven in number; Louis either answered by a simple negative, or insisted that what he had done had been done before the constitution, or was justified by the laws as they then existed, or had been done since the constitution, which threw all the responsibility upon his ministers. In reply to the charge about the journey to Varennes, he said that he must refer to what had passed in the constituent assembly at the time, which assembly had set aside the charge for ever by restoring him to the throne, and by swearing with him to the monarchic constitution. He scarcely showed any warmth or vehemence, except when the president charged him with having caused all the bloodshed on the 10th of August, 1792, when he cried out with a loud voice, "*No, sir! No! that was not I!*" . . . The Tuileries was threatened, in a way which all constituted authorities witnessed. The mayor and other municipality saw it; and as I was a constituted authority, I had a right to defend myself; but I did not do even that—I sent for a deputation of the national assembly, and I came and took refuge here with my family." It was, however, resolved that all the blood poured out on the 10th of August should be laid directly to the charge of the king; and it was by the cry of vengeance for this blood—a cry incessantly kept up by the mob, the clubs, and the newspapers—that these proceedings were precipitated. On the 30th of December, deputations began to present themselves at the bar to tell the honourable deputies that the citizens of Paris were wearied out by their long delays. Eighteen of the Paris sections sent petitions and committees; and the men who had been wounded on the 10th of August, and the widows and orphans of the patriots who had perished on that day, came in one grand dramatic group to the convention to demand vengeance and blood for blood. Some of the wounded dragged themselves slowly along upon crutches, and one of them was carried in a litter. Their orator delivered a terrible speech to the "fathers of the country, legislators of all mankind," telling them that Louis must perish on the scaffold forthwith; that there would be no *humanity* upon earth until all kings were destroyed; and that there would be no virtue until all priests were destroyed also. The president made them a very complimentary speech in return, and invited them all to the honours of the sitting. The greater part of them went and sat on the benches with the members of the house.

A.D. 1793. On the 1st of January more addresses were presented from the departments demanding the immediate execution

of the king, who had been voted *guilty* on the night of the 28th of December, in the midst of the joyous acclamations of the blood-thirsty mob that crowded the galleries of the house, and frequently took part in the debate. It was timidly hinted by some that the English government would resent the death of the king. Billaud-Varennes said that this was a dishonouring and groundless apprehension, and that he was astonished the French executive had not sent over an address to the English *people*, which had been prepared some time ago. "Everybody," said Billaud, "knows the sad situation of the English *people*, and that they are our friends. The oppressed English desire nothing better than to fraternize with us." Men and women were now crying through the streets of Paris, "There has not been blood enough!" "Let the scythe of equality strike off more heads!" "Give us bread and equality!" "Put the traitor to death, and then we shall have both equality and bread!" "The cause of all our woe is in the Temple and in a part of the convention!" &c. Some of the Gironde, fearing the consequences rather than pitying the king, would fain have stopped short of immediate execution on the scaffold; but they were powerless, they had helped to surrender all power to a sovereign mob, and, while sitting in the assembly or skulking in their lodgings, they trembled for their own lives. One of them had the extraordinary courage to declare that all forms of justice and all feelings of humanity were outraged, and that the convention was deliberating under the daggers and cannons of a faction; but these self-evident truths made no impression either upon the mobs in the galleries or upon the men of the Mountain, who had the cannons and the daggers under their control. Out of 721 members present there was not one who would venture to say that the king was not guilty, and only thirty-seven who declared that they were incompetent to pronounce judgment, or who recommended some punishment short of death.

After a long and most riotous debate on the 16th of January, the house proceeded to vote the execution. A secretary began to call over the muster-roll, in order to show who were present and who were not; for all such as should be absent or refuse to vote on this solemn occasion had been threatened with destruction by the clubs and the mob. It was eight o'clock at night, and the hall was only imperfectly lighted up with lamps and candles. All faces were either pale or flushed—the heads and shoulders projecting from the galleries seemed about to fall upon the members sitting in their seats. By a drawing of lots, or by some operation styled a *roulement*, the deputies of the Garonne, Gers, and the Gironde, who nearly all belonged to the party named

Girondists, were the first called upon for their votes. The first of all who voted was Mailhe, and his vote was *LA MORT* (Death); but he demanded that the convention should afterwards discuss the point whether execution should follow immediately, or whether sentence should be suspended for a time, taking care, however, to add that his vote of death was independent of this proposition. The next two members that voted were Delmas and Projean, who both said *LA MORT*, and nothing more. As the business went on, the galleries applauded all who voted simply for death, and hooted and threatened all such as attempted to qualify the sentence, or to commute it into imprisonment or banishment. Early in the roll, Vergniaud, who was acting as president, was called upon; and pale and trembling, and cowering before the popular fury, he pronounced the monosyllable *DEATH*, although he had previously declared that his heart and conscience would never permit him to give such a vote against the unfortunate king. Guadet, who voted next, said *DEATH*, but recommended the suspension of execution (*le sursis*), which had been first suggested by Mailhe. Next came Gensonné, who followed up the concise vote *LA MORT*, by demanding that the convention, in order to prove to Europe that the condemnation of Louis was not the work of a faction, should deliberate immediately after judgment on the measures of security proper to be taken in favour of the children of the condemned, and against his family; and that, in order to prove that no distinction was made between villains (*scélérats*), the convention should enjoin the minister of justice to pursue before the tribunals the assassins and brigands of the 2d and 3d of September! In some few instances courage and humanity were found where their existence could never have been expected. Thus Grangeneuve boldly voted "*IMPRISONMENT* (*la Détenion*);" and Manuel, with equal boldness, said "*BANISHMENT*," and soon afterwards rushed out of the house for ever—but not before he had been hustled, kicked, and beaten, beaten on the very floor of the house, and then in the lobby. As the voting continued, one opinion, delivered by Servière, to keep the king in prison, and only execute him in case of the coalition again invading France, seemed to make some little impression; but it was only for a moment, as the conviction was by this time universal that republican France, instead of suffering invasion, might now invade all Europe, and, in alliance with the people, bring down every throne to the dust. Lepelletier Saint-Fargeau, a man of noble birth and large fortune, who had figured in the constituent or first assembly, and who had harangued and written largely for the abolition of all capital punishment, now, to save his own life, said,

Vol. IV.

DEATH. Condorcet said, "*THE GREATEST PUNISHMENT SHORT OF DEATH*." Thomas Paine, who had previously urged his opinions with more courage than any of them, both in conversation and in writing, voted for *IMPRISONMENT TILL THE PEACE, AND THEN BANISHMENT*. Several members of the Mountain voted, like the majority of the Girondists, for *DEATH, WITH THE SURSIS*. As every member had to answer to his name, to ascend the tribune, to deliver his sentence *vivâ voce*, and then to write it and sign it in a *procès verbal*, the dismal business proceeded very slowly. Some of the deputies fell asleep in their places, and had to be roused by the ushers when their names were called. Others, choosing their time, ran out of the house to get dinner or other refreshments. The people in the galleries brought their refreshments with them, and were seen drinking wine and brandy as in a common tavern. One particular gallery set aside for distinguished visitors was occupied by Philippe Egalité's mistresses, and by other rouged and splendidly dressed dames, some of whom, with cards and pins, pricked down the ayes and noes as if they had been at the roulette-table or playing at rouge-et-noir. Deputies of the convention carried ices, and bon-bons and other condiments, to these proper priestesses of that temple of liberty; and love-making of the French fashion, and gallantry, and assignation, went on even as if the harlots and scoundrels had been at a merry play. From time to time some fellows went over to the neighbouring coffee-houses, where other cold-blooded scoundrels were betting upon the results of the *appel nominal*, or vote by name. Marat voted, *DEATH WITHIN TWENTY-FOUR HOURS*; Danton, simply *DEATH*; but Robespierre accompanied his vote of *DEATH* by a long comment, in which he said that the very reasons which had formerly induced him to call for the abolition of capital punishment now made him demand the death of the tyrant, and in him the death of all royalty. When the turn of Siéyes came, that ex-abbé said, shrilly and briefly, *LA MORT SANS PHRASES* (Death without speechifying). But the vote which made the most sensation, was that delivered by the ex-Duke of Orleans, who mounted the tribune between night and morning, and with a hollow, shaking voice said, "Solely occupied by my duty, convinced that all those who have made attempts, or shall hereafter make attempts against the sovereignty of the people, merit death, I vote for *DEATH*." There was a universal murmur, a sort of subdued groan; but this was all, and with the vast majority there collected, the feeling of horror was transitory. All through the next day, the 17th of January, this voting continued. At eight o'clock at night, when Chazal the younger gave the last vote of all, the president announced that

he had received two letters, one from Louis's counsel, the other from Lebrun, the minister for foreign affairs, who inclosed a note about the king from the Spanish ambassador. Garan-Coulon, and a great many more deputies, Girondists as well as Jacobins, shouted that the letter from the Spanish minister was an insult, and that it

was carried unanimously. The note of the Spanish ambassador, who offered, in the name of his sovereign, not only the neutrality of Spain, but her friendly mediation with the other powers, if they would only spare the life of Louis XVI., was thrown over the table and sent back unread to the foreign office; and, if all the courts of Eu-

rope had sent similar notes, they would all have been treated in the same manner. They then read the note from Louis's counsel, who begged to be heard once more at the bar. Robespierre insisted that the counsel could not be heard until the *appel nominal* had been scrutinized, and the result of it made known; and, after some debate or clamour, the house agreed with him. At this moment Duchâtel, a farmer from the neighbourhood of Thouars in Poitou, who had been returned to the convention by the department of Deux-Sèvres, and who had generously exerted himself in favour of the king, was carried into the hall in blankets, and with his head wrapped up. He had been lying on a sick bed, but had risen from it in the belief that one humane vote more would turn the balance. Draper Lecointre, Duhem, and some other Jacobins, contended that he could not vote, as the *appel nominal* was over, and the result of it known; but Valazé, who was acting as one of the secretaries, said that the scrutiny was not over, and the majority decided that the house could not refuse to any member his right of voting. Duchâtel crawled up the steps of the tribune, and gave his vote for BANISHMENT. Charlier, a member of the Mountain and a close adherent of Marat, demanded that the president should interrogate the sick member in order to make him confess who had sent to bring him there in that state; but this proposition was rejected with murmurs. The secretaries then presented the lists to the president (Vergniaud), who, putting on a solemn countenance, said, "Citizens, I am going to proclaim the result of the scrutiny. You are going to perform a grand act of justice. I hope that humanity will induce you to maintain the most profound silence when justice has spoken, humanity ought to have its turn."

After this preamble he read the result of the third *appel nominal*. The number of members absent on commission was fifteen, eight were absent through real or feigned sickness, and five had refused to vote. Of the 721 that remained, two had voted for the galleys; 286 for imprison-

¹ The place was subsequently named Place de la Révolution, and is now known as Place de la Concorde

PLACE LOUIS XV, PARIS. Scene of the Execution of Louis XVI. — From the Nouveau Plan Routier 1792

ought not to be read. Danton exclaimed, "I am astonished at the audacity of any power pretending to exercise an influence over our deliberations. If everybody was of my opinion, we would this instant declare war against Spain, were it only for this letter." Gensonné said he thought like Danton, and he moved the order of the day, which

CHAPTER XXXIV.—CIVIL AND MILITARY HISTORY.—A.D. 1793.

GEORGE III.

Feeling in London at the tidings of the execution of Louis XVI.—Popular demand for war against France—Parliament assembled early by royal proclamation—The royal speech preparatory to the question of war—Its complaints about the propagation of French insurrectionary principles—Its notices of French aggressions on the Continent—Its proposal to increase the naval and military establishment—Opposition of Fox to the royal speech—His apologies for the excesses of the French revolution—His deprecations of war with France—Windham's reply—His account of French propagandism in England—Speech of Dundas in favour of war with France—Statements of Burke of the connection of English revolutionists with the French convention—Fox again recommends a peaceful negotiation with the French government—He eulogizes the proceedings of the convention—Burke's reply—His appeal to the difficulty of negotiating with the anarchical government of France—Fox a third time proposes negotiation—Arguments in the debate for and against the measure—Review of the question—Provocations to war afforded by France—Impossibility of longer enduring or overlooking them—Necessity of war to the French rulers—Neutrality hitherto observed by Britain in the war of the allied powers against France—Patience of our government under French aggressions and insults—Recal of the British ambassador from Paris—Necessity of the step from the insecurity of the French government—Hostile proceedings of the convention against Britain—The dinner at White's Hotel in Paris—Sole condition on which war with France could be avoided—Its degrading character—The French continue their pretended negotiation with England—Their delay occasioned by the difficulties of the conquest of Holland—War declared by the convention against Britain—Universality with which the resolution was carried—Justification of British politics in entering into this war—Symptoms of the feebleness with which it was to be prosecuted.

ON the day that the death of Louis XVI. was made known in London, that immense city looked as if a great national calamity had happened. The news carried grief and consternation to other populous capitals, in many of which reigned the blood relations or the close connections of the unfortunate monarch, who might command the outward signs of mourning, grand masses for the dead, and pompous funeral services; but in none of those cities was the sadness so universal and spontaneous, so much the uncontrolled and undisguised feeling of the mass of the people, of all classes and conditions of men, as in London. The general conviction had been that the convention would stop short of death; and at first the report of the execution was scarcely credited; but a moment's incredulity, or stupor and bewilderment, gave way to indignation and horror; and, except in the case of some incurable political fanatics, the French people and their present rulers were execrated for the deed by every man, woman, and child in the three kingdoms. So vehement was this feeling that there arose a cry of war from every part of the island.

Parliament had met on the preceding 13th of December, several weeks earlier than had been intended, the government having by royal proclamation called out the militia on the 1st of December. The speech from the throne was much longer than usual, and full of alarm—alarm at the spread of French principles, not only on the Continent, but at home. It attributed the call-

ing out of the militia to seditious practices which had already been discovered, and to a spirit of insubordination, tumult, and disorder which had manifested itself in various places. It declared that there was some fixed design against the constitution, and that this design was evidently pursued in connection and concert with persons residing in foreign countries. It declared that his majesty had observed the strictest neutrality in the present war on the Continent, and had uniformly abstained from any interference in the internal affairs of France; but that it was impossible for him to see without serious uneasiness the increasing indications which appeared there of an intention to excite insurrection in other countries, to disregard the rights of neutral nations, and to pursue schemes of conquest and aggrandizement. It mentioned the fate with which Holland was threatened by the French armies which had overrun the Netherlands; and it said that, under all these circumstances, his majesty had thought it right to adopt precautionary measures, and to make some augmentation of his naval and military force. Fox, who was not yet disenchanted of his dream and idolatry of French liberty, and who perhaps had some reason to say that ministers were exaggerating the dangers to be apprehended from popular disaffection at home, made a brilliant speech, condemning every part of the address, and every sentiment that had been uttered in support of it. He declared it to be his firm opinion and belief that every fact asserted in the king's speech was false, that all its insinuations were unfounded,

that no improper spirit existed, and that the alarm had only been raised by the artful designs and practices of ministers. He rejoiced in the triumph of men fighting for liberty over the invading armies of despots, and said that when there had been a probability of the triumph of the armies of Austria and Prussia over the liberties of France his spirits had drooped, and his heart desponded. He bitterly condemned the calling out of the militia; he taunted government for daring to assume a power or control over the minds and speculative opinions of men; and he said, not without some foundation, that the ultra-loyal and Tory clubs and societies had been going to as great extremes in one direction as the reforming societies could have gone in the other. He did not think that England was in a state to go to war; he did not think that anything which had occurred in France, or in Belgium, or in Savoy, or anywhere else, would justify us in going to war with the French republicans. He condemned ministers for not sending *a new ambassador to treat with the present executive government of France*. Pitt was not there to answer him, but the reply came with more force from the lips of Windham, who had figured for so many years as one of the leaders and most eloquent chiefs of the Whig opposition, and who had been linked in such close friendship and fellowship with Fox. This eloquent and elegant man had been scared by the horrors perpetrated in France, and had followed Burke, whose political pupil and friend he had ever considered himself. He declared—and this was at the least as true as Fox's asseveration that the danger was exaggerated—that, whatever might be the amount of real danger, the real alarm was exceedingly great, was felt in every town, village, and hamlet in the kingdom, was agitating every man who had a veneration for the institutions of the country, or had property to lose, or had a proper English aversion to anarchy and bloodshed. For himself he believed that the alarm was not greater than the real danger. He knew of his own knowledge, and all men must know, that there had been and still was a constant communication between persons in Paris and persons in London, the object of which was the destruction of our present form of government. The effect was already felt in an alarming degree; for in every town and village, and almost in every house, these worthy gentlemen had their agents, who regularly disseminated their pamphlets. These agents delivered the pamphlets gratis; a proof that there must be somewhere a society that defrayed the expense, for the agents themselves were poor men. The greatest pains had been taken with the poorer part of the community, to wean their affections from government, to make them dis-

satisfied with their lot, and eager to pull down and plunder all who were above them in fortune and station. Windham believed that the motives of the combined armies that had attempted to march to Paris and liberate Louis XVI. were good. The maxim that no country ought to intermeddle with the internal affairs of another might be true in a limited sense, but he could not admit it as an unvarying rule, as some countries might choose to set up principles that were subversive of the government and tranquillity of all their neighbours; and, even without stirring beyond their own frontiers, or openly intermeddling in the affairs of their neighbours, they might commit incalculable mischief, which would call for repression and suppression. But, he would ask, how had France observed the rule that no country ought to interfere with another? How had she abided by her decree that she abandoned for ever all ideas of foreign conquest? What had she done with Savoy? She had converted it into a department. She was now treating the little republic of Geneva still worse. Her decree that she would give liberty to all mankind was no better than an avowal of a design to disturb every power of Europe. They talked, indeed, of giving to the people of every country where their arms were victorious a free choice of the form of government; but did they ever wait to take the sense of the majority? Not they. Mr. Grey, who remained an unchanged Foxite, replied to Windham, and Dundas to him. Dundas declared that the utmost arts and industry had been used to circulate Paine's *Rights of Man*, and other works of the same tendency, among the poorest and most ignorant of the people; and that they had been told that it was time for them to assert their own rights, to confound all distinctions, to seize and divide property, and, in short, to follow the example which the French had set them. The national convention had been eager to countenance every complaint of grievance from the factious and discontented in this country; and, in proof of this fact, Dundas read addresses which the convention had received with great applause, from several political societies in England. Was not this, on the part of the French, an unjustifiable interference in the internal affairs of another country? And had not leading members of the convention repeatedly declared that they would look not to the sovereign, but to the people of Great Britain—that they would appeal from the government to the republicans of England? Some might pretend to shut their eyes to the truth, but he would never believe that the passion of the French for conquest and aggrandizement had been changed by the change of their government from a monarchy to a democracy, or that the slightest trust

was to be put in their decrees, manifestoes, and proclamations, to which they had already given the lie by their conduct in Belgium, in Savoy, and at Geneva. He referred to the treaties which bound us to assist Holland, intimating that these alone imposed the necessity of our arming and preparing for the worst. The French, since their conquests in the Low Countries and the capture of Antwerp, had declared that they would open the navigation of the Scheldt. This must be ruinous to the commerce of the United Provinces, and England was a guarantee that this should never be allowed. Burke, who had seen many of his predictions already verified, and whose horror of the Gallic revolution was unbounded—Burke, who believed that, if Fox had been suffered to succeed in his project for the amendment to the address, he would for ever have ruined this nation, along with the rest of Europe—rose and spoke with extraordinary warmth. Considerations of party, he said, and all minor considerations, must now give way: he came forward not as the defender of opposition or of ministry, but of the country. He believed the country to be in great danger; he knew that there was a faction in England who wished to submit to France, in order that our government might be reformed upon the French system; and he knew that the French corresponded with and encouraged this faction, and were preparing to aid them. The cabals and conspiracies, the practices and correspondences of this French faction in England, were of public notoriety. Mr. Cooper and Mr. Watt had been deputed from Manchester to the Jacobins: these ambassadors had been received at Paris as British representatives. Other deputations of English had been received at the bar of the national assembly: they had gone the length of giving supplies to the Jacobin armies, expecting in return military assistance in England. A regular correspondence for fraternizing the two nations had been carried on by societies in London with the Jacobin societies in various parts of France. To prove the truth of these assertions, he read the addresses of the Englishmen and Irishmen resident at Paris; and of Joel Barlow and John Frost, deputies from the Constitutional Society of London to the national convention. He declared that the question was not whether they should make an address to the throne, but whether they should have a throne at all. There would soon be no throne or settled government in Europe, if French arms and French principles were allowed to take their own course; and he recommended and prayed for unanimity and determination in England as the best means of stopping the progress of French arms. The division, which did not take place till three hours after midnight, exhibited the

numerical weakness of the Foxites: 290 members voted for the address, and only 50 against it. The great majority of the Whigs, vexed at his imprudent conduct and alarmed at the tone held by men and societies which Fox frequented, had parted company with him for ever, and had followed the Duke of Portland and Burke. He, however, now gave notice that to-morrow he would move an amendment upon the report. And accordingly on the 14th of December, when the lord-mayor brought up the report of the address, he proposed the addition of a clause requesting that the king would enter into negotiations with the present Jacobin government of France. In his speech Fox threw the whole blame of the horrid scenes which had occurred in France upon the coalition, and eulogized the spirit and valour of the French republicans, who had taught the proudest men in this world that there was an energy in the cause of justice and freedom which nothing could defeat. "Thank God," said he, "Nature has been true to herself! Tyranny has been defeated, and those who fought for freedom are triumphant." He said that all the inhabitants of Europe sympathized with the French and wished them success, regarding them as men struggling with tyrants and despots. He could see no force in the objection raised by some men that France had actually no government to treat with. Surely that was a government which the people considered as such. Great Britain ought immediately to acknowledge that government and negotiate with it. He proceeded to contend that we could not go to war without the greatest hazard; that Ireland was disaffected, so that no man in his senses could expect any hearty support from that kingdom; that we could obtain no new allies on the Continent, and that our ally the King of Prussia could not be depended upon; and that no reliance whatever was to be placed on the emperor. Among *some* *exceptionable characters* Burke had classed and reprobated M. Roland, a man *eminent for many virtues!* [The cant about this "eternally virtuous" individual had reached England, and Fox probably did not yet know to what a condition of discredit and insignificance Roland had by this time fallen in France, any more than he knew that these Girondist rulers with whom he would have negotiated were to be swept away in the course of a very few months by the "exceptionable characters" to whom he alluded as being the only bad men in this new republic.] He said that such invectives did not tend to conciliate France; that such gross insults and injuries could not be forgotten or forgiven by a spirited people like the French. He said that sooner or later we must acknowledge this French republic. Was not the republic of this country readily acknowledged at

the time of Cromwell? Did not courts vie in their civilities to our commonwealth after the execution of Charles I.? If ministers' objection to receive an ambassador at present was that they did not know how to introduce a French republican minister into the king's drawing-room, he wished they would fairly confess it, to the end that the English people might see that their blood and treasure were to be sacrificed for a mere punctilio! [Many persons were hurt at this sarcasm, and none more than George III., who is said to have treasured it in his memory, and to have frequently repeated afterwards, that Mr. Fox would have presented to him Marat or Robespierre, or Samson the headsman.] He bestowed some pathos upon the unhappy prisoners of the Temple; but he soon passed from their sufferings to dwell more tenderly upon those of that "brave but unfortunate gentleman" La Fayette, whom the despots had locked up like a felon because he had always been a friend to liberty. Sheridan seconded the amendment, as being calculated to rescue the country from a war with France. Burke again rose to declare that he saw a spirit at work that would leave England no option between war and peace. Considering it as admitted that France must not be permitted to open the navigation of the Scheldt, and that she must be induced by negotiation or compelled by arms to restore the conquests she had made, he thought it a very extraordinary way of effecting either purpose to represent our internal situation as rotten, and all our allies as powers not to be depended upon. Would Mr. Fox make a choice of friendships and enmities, and renounce all former alliances with established governments to contract a close alliance with a country that had no government at all—with an anarchy? And were we sure that the French republicans, even if courted, would come to any reasonable terms with us? Yet this was the contingency for which we were to renounce our present allies, the ancient and established governments of Europe. The French republic had not yet been recognized by any power whatever. And what was the peculiar time when England was to be the first to recognize it, and to send over an ambassador to Paris? Why, it was the very moment, perhaps, when the merciless savages had their hands red with the blood of a murdered sovereign! To follow the course proposed would look like giving a sanction to a bloody act—like giving currency to regicide, and affording a preliminary to the murder of our own sovereign. He shattered at a blow the argument that Fox had drawn from the conduct of Europe towards Cromwell and the English commonwealth. The French republic, he said, was *sui generis*, and bore no analogy to any other republic

or system of government that had ever existed in the known world. The English commonwealth did not attempt to turn all the states of Christendom into republics; it did not wage war with kings merely because they were not democrats; it professed no principles of proselytism. The same might be said of the republic of the United States of America. But France wanted to make all the world proselytes to her opinions and dogmas—France was for turning every government in the world into a democratic republic. If every government was against her, it was because she had declared herself hostile to every government. This strange republic might be compared to the system of Mahomet, who, with a Koran in one hand and a sword in the other, compelled men to adopt his creed. The Koran which France held out was the declaration of the rights of man and universal fraternity; and with the sword she was determined to propagate her doctrine, and conquer those whom she could not convince. Wilberforce, though deprecating war, if war could possibly be avoided consistently with justice, concurred with the speech from the throne and the proposed address; and Fox's amendment was rejected without a division.

On the very next day—December the 15th, which was a Saturday, a day when parliament did not usually sit—Fox came forward with a third proposition, moving, "That an humble address be presented to his majesty, that his majesty will be graciously pleased to give direction that a minister may be sent to Paris to treat with those persons who exercise provisionally the functions of executive government in France, touching such points as may be in discussion between his majesty and his allies and the French nation." Mr. Grey seconded the motion, declaring that an immediate embassy to Paris was the only means of averting the greatest of calamities, the most dangerous war that England had ever undertaken. Some gentlemen expressed a hope that Fox might be prevailed upon to withdraw his motion; some said that that motion was a palpable encroachment on the royal prerogative; and some bitterly censured him for his conduct during the last three days. Fox, however, pursued his object with so much heat and perseverance as to cause the house to sit into Sunday morning, a thing not known in parliament for many years.¹ Mr. Jenkinson (afterwards Earl of Liverpool) was of opinion that the motion did encroach on the prerogative, and was otherwise improper and dangerous. He believed that there were disaffected persons in the country whose activity made them dangerous; but he thought that war, instead of increasing their power of

¹ Burke, letter to the Duke of Portland on the conduct of the minority, &c.

mischievous, would greatly lessen it. The King of Sardinia had endeavoured to negotiate and conciliate the French, and what had he gained by it? Ministers were blamed for not having taken the same course—for not having some months ago treated with the French; but for many months there had been nothing in France with which they could treat. And now, when persons and things were every day changing, when all rule belonged to a mob of robbers and assassins, where could we apply? What government could we acknowledge where there was actually no government? How could England recognize a constitution which the French themselves were every day violating? How could we negotiate with men who had declared a universal war to all governments? "On this very day," he exclaimed, "while we are here debating about sending an ambassador to the French republic—on this very day is the king to receive sentence, and, in all probability, it is the day of his murder! What is it, then, that gentlemen would propose to their sovereign? To bow his neck to a band of sanguinary ruffians, and address an ambassador to a set of murderous regicides, whose hands are still reeking with the blood of a slaughtered monarch?" The master of the rolls thought that Fox himself ought to be sent on this embassy. Perhaps he might be as well received as Frost or Joel Barlow; perhaps not. The French rulers might say to him, "Do you come from the King of Great Britain? If you do you can have no business here, as we have sworn eternal enmity to all kings; you had therefore better be gone!" Mr. Windham contended that not only experience, but higher principles, and the dictates of humanity, forbade any present recognition of the French republic. If Great Britain gave that recognition, which had been given by no other power, what would be the consequences? Some of those consequences would be the alienation of all those powers with whom she was at present allied, and a universal discouragement on the Continent: for, by giving the whole weight of her character to France, she would place all the rest of Europe in a situation truly deplorable—she would arm every subject of every kingdom against the powers that governed that kingdom—she would recommend and facilitate the imitation of what had been done, or was still doing, by the sans-culottes of Paris; and all this could not be otherwise than fatal to the future interests of the world. Mr. Grant, who had studied the law of nations, and who was well read in what the French now styled "the worm-eaten writings of Grotius, Puffendorf, and Vattel," replied to some gentlemen who chose to think that the forcible opening of the navigation of the Scheldt was not of sufficient importance to justify any loud

complaint on the part of the Dutch. Not only the trade, but also the internal security and independence of Holland depended upon that river. All the celebrated writers on the law of nations had laid it down as a clear and indubitable principle that rivers belonged to those who inhabited their banks, just as far and no farther than those banks extended. If the banks belonged to different peoples or nations, then the dominion over the river was divided, each people possessing the part of the river that was contiguous to their domain; and such was the policy of this distribution, that, if it had not been laid down by the law of nature, it would have been a positive stipulation under the law of nations, for without it no state traversed by rivers could be secure. If, as the French were now contending, the course of rivers was as open and common to all mankind as the sea itself, a fleet of French or Spaniards might sail up the Thames, and we should have no right to molest them until they actually began hostilities.

We can neither follow up the long and complicated debates (which did not end with the present session) upon the justice and propriety of England's engaging in this war, nor enter upon an adequate detail of the facts and reasons which justify the belief that the choice of peace or war no longer rested with the British government; that the direct provocations to hostilities did not originate with us; and that, whatever complaints may justly lie against the unwise manner in which the war was for a long time conducted, the government of the day must be wholly freed, by every candid mind, from the charge of heedlessly and wantonly running into hostilities.¹ In the incurable madness of party it is still vociferated that Burke drove us into a crusade against the French republicans; but, in sober truth, there was, on our part, no crusade at all: we raised our bucklers to prevent the French republicans from crusading over all Europe; we went to war because neither our duty to our allies nor our duty to ourselves, neither our honour nor our interest, allowed us to remain longer at peace. Unlike his father, the Earl of Chatham, Pitt was essentially a peace minister; his pride, his hope was

¹ For the true diplomacy of the time, and for a very clear recital of the course of events, supported by documentary proofs, we refer the inquiring reader to the *History of the Politics of Great Britain and France, from the time of the Conference at Pilnitz*, by Herbert Marsh, Bishop of Peterborough, 2 vols. 8vo. This able work, in which no fact is stated without full and convincing evidence (taken chiefly from French decrees, manifestoes, declarations, and other state papers, and memoirs), was originally written in the German language—a language which a long residence at the university of Leipzig had rendered as familiar to the author as his own—and was first published at Leipzig in February, 1799. He translated it himself into English in the course of the same year; and it was published in London in 1800.

centred in measures which could be realized only in peace. The great aim of his life was to extend the industry and commerce, and improve the financial condition of his country; and he shrunk from the aspect of war so long as he could do so without absolute dishonour and unequivocal danger. No amount of neutrality and silence on his part could have long delayed the declaration of hostilities by the convention. The English people were prosperous, and welded to the arts of peace; the French people, armed to the teeth, had little to put into their mouths; their industry had ceased; they looked to war and invasion as means of living; and their rulers looked to their constant employment in foreign conquest as their only safeguard. "*Peace*," said the virtuous Roland, "*is out of the question; we have 300,000 men in arms; we must make them march as far as their legs will carry them, or they will return and cut our throats!*" And this dread of an armed multitude must have existed and have led to the same decision, of making them march as far as their legs would carry them, if Prussia and Austria had never given refuge to the emigrants, or remonstrated against the acts of violence and encroachment that were committed—if they had reduced their armies to the peace establishment, and quietly assented to all that France was doing at home and abroad; for the popular masses were armed long before there was any talk of foreign invasion; they were armed, not to contend with Prussia and Austria, but to put down, destroy, or drive out the aristocrats, by which term was understood every Frenchman that differed in opinion with the majority, and had property and a name. Before the conference at Pilnitz the principle had been adopted of arming the sans-culottes, as the class that was the most interested in the progress of the revolution, and best prepared for the privations and risks of war. Before there was any intimation of foreign interference France was converted into a great drill-ground, and the shock and convulsion which had taken place, the flight of the opulent and luxurious classes, had created a dearth of employment, which drove men to the army as their only resource. These legions, after doing the work of their rulers and legislators at home, would have demanded a proportionate reward, and their rulers would have sent them to glean it in the neighbouring countries, in the circles on the Rhine, in the rich fields of Belgium, and Piedmont, and Lombardy. This they would have equally done to save their own throats. Such an army could neither have been reduced nor maintained by any government in France; but, in the national passion for war and conquest, these troops would have been ready at any signal to throw themselves upon their neighbours to obtain

Vol. IV.

not only free quarters, but excitement, fame, and the chances of high promotion, the highest ranks in the army being now not merely open to, but almost exclusively reserved for men of the lowest conditions. Thus, whatever course the European sovereigns and governments had pursued, there would still have been an European war.

In the conferences of Pilnitz, where, in the month of August, 1791, the emperor and the King of Prussia signed a declaration that they would take certain measures to rescue the King of France, provided other powers would support them, England took no part whatever; and when the conferences were over, and the emperor had returned to Vienna, she declared she was resolved to preserve the strictest neutrality. Besides the letter of the emperor, whom the British government could have no interest in deceiving, there are various other proofs that Great Britain, at that period, took no part in the coalition against France. It was an afterthought of the French republicans to charge Great Britain with being a party to that coalition: *they did not mention the charge in their present long declaration of war*; and before issuing that declaration they had repeatedly declared, in the convention and elsewhere, that Great Britain had nothing to do with the conferences at Pilnitz. Brissot, a bitter enemy to England, said she acted the part of a mediator on that occasion, and laboured to calm the effervescence of the German princes. Before the revolution had made so awful a progress, and even during the time of the first assembly (when La Fayette was in the ascendant, and was devising how to federate and fraternize with the Irish), many gross insults had been offered to, and wisely despised by the British government. But, between the month of November, 1791, and the month of February, 1793, there had been an accumulation of outrages, each of which, singly, would have provoked a declaration of hostilities from a testy nation, or from a government eager for war. And every time our silent submission or contempt was interpreted into fear and helplessness, and was followed up by some new and grosser outrage.

At the beginning of the year 1792 the British government reduced the number of sailors and marines to 16,000 men, made a reduction in its very inconsiderable army, and gave up, or rather did not renew the treaty of subsidy with Hesse-Cassel; Pitt, in his confidence of peace, abolishing taxes to the annual amount of £200,000. At the same time the French not only augmented prodigiously their land forces, but also increased their navy, declaring that they would have 80,000 sailors and marines, and that the thunder of their ships was ready to roar in all seas. They must have contemplated a war with England, for Prussia and Austria had no fleets whatever.

When those two powers moved their armies towards the French frontier, the great naval preparations were of necessity suspended: but, as soon as those armies were in retreat, the preparations were resumed; and three months before they declared war they had twenty-one ships of the line, thirty frigates, eighteen sloops, twenty-four cutters, and ten sloops armed *en flûte*, not only in commission, but actually at sea. The brutal bombardment of Oneglia, and the impunity with which they had been allowed to scour a part of the Mediterranean and to insult the helpless Italian states, had wonderfully elated their sailors. Upon war being declared by the convention against Austria (in April, 1792), Chauvelin notified the event to the English court, and received another positive assurance that England would persevere in her neutrality. Chauvelin, an observing and an acute man, expressed his conviction that there was every reason for relying on these assurances of the English government; stating that Pitt was solely occupied with his schemes of finance and home improvements; that he had formerly assured a deputation of merchants that England would not meddle in the affairs of France, that the nation had no taste for war; that no preparations were making either in the ports or in the arsenals. A few days after, Chauvelin delivered a note to Lord Grenville, the secretary for foreign affairs, requesting that all British subjects should be forbidden to serve under any foreign power at war with France; and with this request the court of Great Britain promptly complied, issuing a proclamation on the 25th of May. Nearly at the same time that this proclamation was issued there appeared the proclamation against seditious writings; but this was a mere act of national police, which had no relation to the government of France, and which no more concerned that government than the measures taken in France relative to the emigrants concerned the English government. Chauvelin never pretended that any injury or insult was intended against his government or country in this proclamation. Nearly a month after its appearance he, in the name of his government, thanked his Britannic majesty for his pacific intentions; and a month after that, or on the 17th of July, 1792, he acquainted his government that the British court remained steady to their friendly disposition. In the meanwhile the insults heaped personally upon Lord Gower, our ambassador at Paris, were numerous and excessive. But for great temper on his part he would have withdrawn from Paris long before the terrible 10th of August, and but for the real anxiety of his government to avoid a war, he must have been recalled. He remained when assassination was the order of the day; he remained when the sanguin-

ary clubs and mobs were the arbiters and real masters of France; he remained when his life was scarcely to be considered as safe, and he came home just in time to escape the sight of the monstrous September massacres.

On the 17th of August, 1792, after Louis XVI. had been dethroned and his Swiss guards butchered, the British government recalled their ambassador; but, in his letter of recal, Lord Gower was instructed to neglect no opportunity of declaring that his majesty meant to observe the principles of neutrality in everything which regarded the arrangement of the internal government of France. Lord Gower communicated this letter to Lebrun, and that French minister returned an answer to it in the name of the new republican government of France, expressing, indeed, some regret at his recal, but, at the same time, their joy at the continuance of the friendly assurances of Great Britain. They did not affect to consider the recal as a violation of neutrality, and in ordinary circumstances the recal of an ambassador precedes a declaration of hostilities; but ambassadors had often been recalled without that step being followed by any war, and in itself it never amounts to a declaration. When hostilities are intended the ambassador takes no leave; but Lord Gower had taken leave in a friendly note. In the present case a recognized government had been overthrown, and no regular government had been substituted for it. No one yet knew what manner of government might be set up by the plotting Jacobins and Girondins who had made the revolution of the 10th of August, but who had scarcely begun to make the constitution which was to take the place of the one they had all sworn to—no one yet knew whether there might not be a fresh popular insurrection and a new revolution within a month, a week, a day. Lord Gower had been accredited to Louis XVI. as to the person invested by the constitution with the executive power of France; but Louis was now a prisoner in the Temple, and his authority was transferred to a *provisional* executive council. His lordship's letters of credence were therefore no longer valid. For him to remain at Paris it would have been necessary to have sent him new credentials. But to whom could he be accredited? Not to the executive council, for that was only provisional and temporary, and liable to be changed every hour—not to the national assembly, for it had pronounced its own dissolution; it had ordered the election of a convention, and it had decreed not that the king was actually dethroned, but that he was only provisionally suspended from his functions until the convention should meet and decide what was to be done with him. As all authorities, or semblances of authorities (for there

was no real one except that of the armed mob), were at that time merely transitory; as there was nothing that a regular government could recognize, the most prudent and the most moderate step which England could take was to withdraw its ambassador, and wait at least till the new constitution should be determined by the convention. There was, indeed, an incessant haranguing and writing about *the nation*, which was said to be distinguishable and recognizable apart from any *government* it had adopted or might hereafter choose to adopt. But governments can only treat with governments; Lord Gower could not take the sense of the French people by *appel nominal*. In the assembly he saw one party succeeding another, and each pretending that it represented the whole nation. If he had asked the Girondins, they would have told him that *they* were the nation, and their adversaries a mere faction; if he had put the same question to the ultra-Jacobins, he would have been told that *they* were the nation, and the Girondins a faction. Every man in France foresaw that very soon these parties would make a relentless war upon one another, but as yet few persons could be certain which of the two would remain masters of the field. It was even more necessary to be neutral between these two parties than between France and the coalition. If the British government had treated with the party now in power, they would have been accused by the succeeding ruling party of having treated with a faction—of having intermeddled unwarrantably in the internal affairs of France. The recal of our ambassador was positively the best and the only means of preserving both neutralities.

No complaint was raised by the executive council of France upon the recal of Lord Gower until *after* the Duke of Brunswick had been defeated, and the French troops had commenced their career of conquest. Then murmurs were heard, then decrees intended to produce social insurrection and social war throughout the civilized world were promulgated one after the other, and then, too, more open and flattering countenance was given to those wrong-headed deputations that carried over to the foot of the national convention the congratulations of the English societies and clubs—and then, too, fresh thousands of secret agents and propagandists received their commissions to penetrate into every quarter, and to preach the rights of man and the blessings of anarchy to the poorest classes of society. Gregoire, the Jacobin priest, called these agents “missionaries,” Camille Jordan called them “apostles of rebellion,” and Chaussard, who declares that London abounded with them at the end of November and beginning of December, 1792, called them “revolution professors.” They were furnished with money for the purpose of bribing

and seducing the needy, and paying interpreters and other assistants. According to Brissot himself, the executive council was authorized to take, under the head of army extraordinaries, *unlimited sums for these secret operations*. He also intimates that a great deal of this money was sent over to London, although the greater part of it was embezzled and appropriated by the patriotic executive.¹ At this moment, too, La Fayette's cherished plan for revolutionizing Ireland was taken up with vigour; and, a month or six weeks before the convention declared war against England, Lebrun, the minister for foreign affairs, most confidently asserted that the French were quite sure of Ireland, and that a revolution must take place in England. This conviction was so strong and so universal, that no line of conduct which the British government could have adopted would have prevented their declaration of hostilities. And certainly there were some subjects of the King of Great Britain and Ireland who laboured with all their might to confirm Lebrun and his colleagues in their mistake. On the 18th of November, the very day before the convention issued its formal decree that France was prepared to assist every nation which was ready to rebel against its own government (a decree which was translated into all the languages and sent to all the countries of Europe), a grand dinner, or *fête cinquième*, was celebrated at White's Hotel in Paris. The company was composed of Englishmen, Irishmen, and Frenchmen, with some few republicans from other countries. Lord Edward Fitzgerald, and other men of some name and consequence in the world, sat down to table and fraternized with Santerre, Thomas Paine and other characters of the same notoriety. Among the toasts that were drunk were “The National Convention of France”—“The Patriotic Societies of Great Britain and Ireland, with those men who have contributed to inform and enlighten the people—Priestley, Fox, Sheridan, Barlow, &c.”—“the approaching National Convention of Great Britain and Ireland”—“May revolutions never be made by halves.” Eight or nine days after the publication of the decree for universal insurrection, deputies from certain British societies appeared at the bar of the national convention, and signified their intention of adopting the republican form of government now so happily established in France. “We hope,” said the orator of the first of these deputations, “that the troops of liberty will never lay down their arms so long as tyrants and slaves shall continue to exist. Our wishes, citizen legislators, render us impatient to see the moment of this *grand change*. Nor are we alone animated by these sentiments; we doubt not that they would be equally conspicuous in the great ma-

¹ Brissot à ses Commettans.

jority of our fellow-countrymen if the public opinion were consulted there, *as it ought to be*, in a national CONVENTION." In replying to this address, the president of the convention said, "Citizens of the world, royalty in Europe is either destroyed or on the point of perishing on the ruins of feudality; and the declaration of the rights of man, placed by the side of thrones, is a devouring fire which will consume them all. *Worthy republicans*, congratulate yourselves on thinking that the festival which you have celebrated in honour of the French revolution is the prelude to the festival of nations." Chauvelin and his picked and rather numerous legation, who came over to London shortly after France had declared war against Prussia and Austria, came with strange instructions, and acted in a manner altogether unbecoming and irritating. It was observed that, as soon as they arrived, they eagerly sought the acquaintance of literary men and opposition journalists. The English public, therefore, took them for revolution professors or apostles, who came to propagate their system and make proselytes and disciples. This view of their real functions is borne out by the instructions they received from their government:—"1. To embrace every opportunity of assuring the English *nation* that, notwithstanding the ill-humour of its *government*, the French desired nothing more ardently than to merit the esteem of the English *people* 2. To threaten the British *government* with an *appeal to the people*." Their reception at court was of course not very cordial. They soon seemed to shun all intercourse with ministers and the friends of ministers, and to seek exclusively the society of Fox, Sheridan, and men of that party. Nothing could well be more indecent, or contrary to the rules which regulate diplomatic intercourse, than this conduct on the part of the Frenchmen. The conduct of the English opposition would merit still harsher language; and, taken in connection with Fox's behaviour towards the Empress of Russia, it looks almost like the adoption of a settled system, that the party, besides opposing ministers by national and legal means, should resist and thwart them by foreign means, and by connections and correspondences with governments that were on the very brink of war with us. Chauvelin, before negotiations really commenced, communicated his secret instructions to an intimate friend of Mr. Fox. On one occasion he wrote to his government, "that, though he was not well with the English minister, yet he was perfectly so with Mr. Fox, and some other members of opposition; and that it would not be prudent in France to lose the fruit of his labours with these gentlemen, and their subsequent services, for any vague form of diplomatic etiquette." No government would

have allowed such a diplomacy to be continued, or such diplomatists to reside in their country.

Moreover, the extreme offence had been given and repeated: on the Malabar coast a French frigate had fired upon an English man-of-war, and the national assembly had never condescended to make any apology; and at the beginning of the present year, 1793, just as the French were sending an ambassador to the United States of America in order to engage them to join France in a war against England, the garrison of Brest made an attempt to sink a British sloop which was cruising outside the harbour; and they poured a cross-fire into her, and hoisted a blood-red flag over their tricolor. If these things had occurred when Chatham was minister, and at the height of his warlike ardour, it can scarcely be doubted that hostilities would have been proclaimed immediately by England.

There was one condition—and only that one—by which England might for the present have preserved herself from the declaration of war by the French, and that was, by concluding a treaty, offensive and defensive, with the republicans and Jacobins. That the French had the audacity to propose such a treaty is an indisputable fact, although French historians pass it over in silence. In July, 1792, Chauvelin gave Lord Grenville clearly to understand that what they required was an English armament and an effectual and decisive co-operation on our part with France against our ancient friend and ally the house of Austria, and against our present closest ally the King of Prussia! Mr. Fox and his opposition, who had made so terrible an outcry against our Russian armament, and who had defeated the object of it, could hardly have expected the government to comply with this strange request. Moreover, a naval armament against two powers who had neither ships nor ports would have been of no more use than an armament against the moon; to adopt effectual and decisive measures, England must have sent a land army to the Continent to co-operate and fraternize with the thoroughly jacobinized and sans-culottized armies of the French republic. But the whole proposition is too gross and monstrous to deserve a thought or a word, were it not that the Foxite opposition pretended that the French had never made any very unreasonable demands, and that by continuing our friendly negotiations with them, we might very well have kept out of the continental war.

Under the influence of Dumouriez it had, however, been secretly determined to amuse England a little longer with some feigned attempts at negotiation; and, on the 26th of January, M. Maret had been again sent across the Channel to ask Mr. Pitt if he would treat with General Dumouriez. On the road between Dover and London,

Maret, who evidently was not admitted into the whole secret, met Chauvelin returning to Paris, and, fancying he himself might yet be the means of preventing the war, he wrote to his employers in very pressing terms for fresh instructions, intimating that he would not request an interview with the English minister until he had received them. Maret remained eight days in London, but no instructions came for him. At the end of that time, or on the 4th of February, the declaration of war, which had been made by the convention on the 1st, was known in London, leaving nothing for Maret to do but to get back to France as quickly as possible. So much truth is there in the harangues of the parliamentary opposition and in the narratives of party writers, who asserted at the time, and continued to assert long after, that Maret had come with full powers to treat and to offer extensive concessions and securities; and so perfectly true was the declaration of Pitt in the House of Commons, that M. Maret, during his whole stay in London, had proposed to his majesty's ministers no question of state whatever.

The real motive of Dumouriez in sending Maret arose out of that general's discovery that the conquest of Holland presented more difficulties than he had contemplated; and that Miranda, whom he had ordered to begin the attack before the 22d of January, was not in a condition to move so soon. And therefore, also, it was, that on the same day on which Maret was despatched for London, De Mauld was hurried off to the Hague again with a letter from Dumouriez to Lord Auckland, the British ambassador, intimating that he (Dumouriez) would be very happy if an opportunity presented itself of conferring with his lordship on the frontiers of Holland. Lord Auckland consulted the grand pensionary, Van Spiegel, and, after some deliberation, both these ministers consented to confer with Dumouriez. Dumouriez, quitting Paris in the last days of January, before the convention issued the declaration of war, and not being informed by the Girondin ministers, who all feared and suspected him, of their fixed determination to issue that declaration on the 1st of February, went down to Dunkirk, and thence proceeded to Antwerp, examining the country and the French army on his way, and finding everything in confusion, everything in a condition that boded ill for the success of his next campaign, unless he could gain time to remedy the disorder. It was the 2d of February when he arrived at Antwerp. It was agreed that, as soon as Lord Auckland could receive his instructions from his court, conferences should be opened at Mœrdyk on board a yacht. Though they could scarcely have been blind to the real motives of Dumouriez, the British government, to avoid the reproach which

would have resulted from a refusal, immediately consented to the hollow negotiation, and authorized Lord Auckland to treat with the French general. On the other side, it was on the very day that the overture was made to Lord Auckland at the Hague by De Mauld that the French executive issued the order to lay an embargo on all British vessels in the French ports. On the receipt of his instructions from London, Lord Auckland despatched a courier to Dumouriez, who was still at Antwerp, and proposed the 10th of February for the day of holding the first conference. But now Dumouriez knew that the convention had declared war on the 1st, and this rendered further thoughts of negotiation impracticable. Two capital and evident consequences attended this manœuvre of the French Proteus and its failure: the one was, that it showed a willingness on the part of the English government to negotiate even down to the last moment; the other, which followed on the failure of the scheme for delay, was a series of failures and defeats on the side of Dumouriez, who, instead of taking Holland in the ensuing campaign, lost nearly the whole of Belgium, and saw the war carried once more to the frontiers of France.

If, in England, there was a small minority desirous of continuing friendly relations with the revolutionists, there was no party or section of a party in France willing to continue in friendship with England. The declaration of war was the unanimous vote of the national convention. Although the decree was drawn up by the hated Girondists, and presented by Brissot, the personal and deadly enemy of Robespierre and Danton, both those Jacobin chiefs and all the Mountain enthusiastically concurred in it; not a man of any party opposed it, not a single man in the house offered a remonstrance or amendment, or so much as a remark on the decree—all cried impatiently, "Vote! vote!" and it was put to the vote and carried instantly, with a unanimity which had hardly ever been seen before on any subject, and which was never seen again in that assembly. When it was carried, they voted an address or appeal to the *people* of Great Britain, and the creation of assignats for 800,000,000 livres.

Such are a few, and only a few, of the particulars of the diplomacy which preceded the breaking out of this most memorable of wars; and the reader may judge from them whether it was possible for England to have kept out of the contest, or to have treated with a set of anarchists who were determined upon the war from the beginning. But neither these facts (and there were others quite as decisive), nor the strongly pronounced sense of the vast majority of the nation, could prevent the Foxites from moving resolutions against our taking up arms. These resolu-

tions were negatived by parliamentary majorities of more than six to one, or were negatived without a division. A bill was passed for preventing traitorous correspondence with the enemy. A number of petitions for parliamentary reform were quashed in the commons, and a drag was for some time put upon Mr. Wilberforce's project for emancipating the negro slaves. A bill to relieve the Roman Catholics of Scotland was passed without the slightest opposition.

Burke had strenuously recommended that the war should be prosecuted with all the vigour of which the country was capable; but here the great statesman was never properly listened to. To those who deplored the interruption of our commerce with the French, Burke replied, "We ought not to enable France to carry on war out of resources drawn from the bowels of Great Britain. We must not allow Englishmen to fight against their own country, and make contracts to its ruin!" "Let us not," said he, "sacrifice everything—the

love of our country, our honour, our virtue, our religion, our security—to mere trade and traffic: let us not estimate these high things by the scale of pecuniary or commercial reckoning. The nation that goes on that calculation destroys itself!"

On the 6th of March some lamentable evidence was given of the weak and ineffectual manner in which ministers intended to begin the great struggle on the Continent. Pitt acquainted the house, in the form of a royal message, that his majesty had engaged a body of Hanoverian troops to assist his allies the States-general; and on the 11th, the house being formed into a committee of supply, the minister made a statement of ways and means, making it appear that a loan of £4,500,000 and an issue of £4,000,000 of exchequer bills, would, in addition to the ordinary revenue, carry him through the year. Resolutions were passed for the loan and for the exchequer bills.

The king prorogued parliament on the 21st June, with a hopeful and confident speech.¹

CHAPTER XXXV.—CIVIL AND MILITARY HISTORY.—A.D. 1793

GEORGE III.

Dumouriez continues his military operations—His success in Holland—He is brought to a stand at Williamstadt—Successes of the Austrians and Prussians over the French in the Netherlands—Dumouriez defeated by the imperialists at Neerwinden—He resolves to attempt a counter-revolution in France—His declarations and menaces against the convention—Deputies sent from the convention to arrest him—He arrests the deputies—His proclamation to the army and France—He and his confederates escape to the Austrians—He is succeeded in command by Dampierre—The Duke of York lands with an English army at Ostend—They join the allied army—They defeat Dampierre at Valenciennes—Valenciennes and Condé taken by the allies—Slow operations of the allied powers against France—Their dilatoriness occasioned by their selfish designs on Poland—The King of Prussia sends troops to Great Poland—His tyrannical proclamation to the Poles—His proceedings seconded by Austria and Russia—Proceedings of a fresh partition of Poland—The allied powers occupy the country with their armies—Their limited military contributions to the war against France—Mayence taken by the Prussians—Want of concert and promptitude among the allied armies—Military operations of the Duke of York—His retreat from Dunkirk—Success of the allied Prussian and Austrian army on the Rhine—They are driven back from Strasburg by the French—Successes of the French under General Hoche—Disensions between the Austrian and Prussian armies—The convention declares war against Spain—Chief events of the war—Defeats of the French royalists of the south—Toulon held for Louis XVII.—It is reinforced by England and the confederate powers—Siege of Toulon by the republicans—Bonaparte appears at the siege—He directs the operations—The English evacuate Toulon—They destroy the shipping, magazines, &c., at their departure—Vengeance inflicted by the republican army on the Toulonese—Timid neutrality of the Italian states—Contests in the convention between the parties of the Gironde and Mountain—Their leaders, resources, and proceedings—Plot of the Gironde to expel the Jacobins—Their plot detected and defeated—The Girondins proscribed and obliged to flee—Miserable end of their leaders—Execution of Queen Marie Antoinette—Execution of the Duke of Orleans—Execution of Madame Roland—Wholesale executions by the guillotine—Popularity of these exhibitions—Atheistic decree of the French convention—Their republican calendar—New division of months and weeks—Abolition of religious worship—Atheistical proceedings of Fouché and Anacharsis Clootz.

WE pass to the seat of war. On the 17th of February, Dumouriez moved from Antwerp, and attacked the Dutch town of Breda, which capitulated immediately. On the 26th, Klundert surrendered upon summons; and on the 4th

of March, Gertruydenburg capitulated, after a short and slight bombardment. The Dutch garrisons behaved in a manner which proved that they were disaffected, or infected by the new

¹ Horace Walpole, writing from Strawberry Hill to the Hon. H. S. Conway, July 17th, 1793, gives a striking picture of the condition of England at that time:—"It is much cooler to-day,

doctrines of the rights of man, and the proselytism of their countrymen of the Batavian legion. They made little more than a show of resistance; and, after capitulating, a great many of them joined the French or the Batavian legion. Dumouriez's plan was to penetrate rapidly into the heart of the United Provinces, where he expected to be joined by Miranda, his second in command, whom he had sent to the right to reduce the important town of Maestricht, on the Maes or Meuse. Without counting his Dutch partizans, he had between 20,000 and 30,000 men; but his army was badly provided, because all parties in the convention suspected him, and because the republican commissaries sent to supply clothes, provisions, &c., were the greatest and most barefaced thieves that had been seen in modern days. The shifty Dumouriez might, however, have made up all these and other deficiencies in the country if he had been allowed to advance; but at the fortress of Williamstadt, which commanded the passage of an arm of the sea called Bies Bosch, he was brought to a pause. Williamstadt was occupied by a brave old Dutch general, Count Botzlaer, with some Dutch troops that were not jacobinized, and by a strong detachment of the English guards, who had just arrived. Moreover, there was a small squadron of gun-boats on the Bies Bosch, which had been fitted out by Lord Auckland at the expense of Great Britain; and this flotilla, manned by British seamen taken from our merchant ships in the Dutch ports, and ably commanded by Captain Berkeley, not only presented a formidable obstacle to the passage of that water, but greatly annoyed Dumouriez's troops as they prepared for the siege of Williamstadt. While Dumouriez was thus brought to a stand on the wrong side of the Bies Bosch, Miranda, who was at Maestricht, and Miazinski, who was at Aix-la-Chapelle to defend the passage of the river Roer and cover Liège, were both defeated and compelled to give ground. On the last day of February the reinforced Austrian army, commanded by General Clairfait, passed the Roer under cover of night, attacked Miazinski by surprise, and defeated him. On the following day the Archduke Albert, with a portion of the Austrian army, carried several French batteries. On the 6th of March the Prince of Saxe-Coburg, with the Austrian van, gained a complete victory over Miazinski's main body in

front of Aix-la-Chapelle, drove the French entirely out of that town, and followed them almost to Liège, inflicting on them a loss estimated at 4000 killed and wounded and 1000 prisoners, and taking from them twenty pieces of cannon. And on the same day Prince Frederick of Brunswick, with a detachment of the Prussian army, gained some important advantages near Roermond. Miranda had invested Maestricht, and had commenced a pitiless bombardment, for the French, who had made such an outcry against the Austrian bombardment of Lisle, never hesitated at having recourse to that destructive operation of war whenever they thought it suited their purpose. But the repeated defeats of Miazinski now compelled Miranda to retreat precipitately from Maestricht, to abandon a good part of his artillery and baggage, to recross the Meuse, and to seek shelter, and a junction with the scattered troops of Miazinski, in the heart of Belgium. The archduke reinforced Maestricht, crossed the Meuse, and followed Miranda as far as Tongres, where he obtained another advantage. Dumouriez now returned from Holland into Belgium, and placing himself at the head of the French army there, he on the 18th of March attacked the imperialists at Neerwinden. The battle, which lasted from morning till night, ended in the entire defeat of the French. About 10,000 republicans deserted the army, and scarcely paused in their flight until they had got on the other side of the French frontier, where they spread a fresh panic, which as usual led to fresh atrocities at Paris. Dumouriez soon fell back as far as Tournai, and thus the Austrian Netherlands were recovered as rapidly as they had been lost. Being menaced by the Jacobins, and disgusted with the incompetent Girondins, he now formed a design of marching to Paris to effect a counter-revolution, and he secretly entered into negotiations with the Austrian generals. It is conjectured that Dumouriez proposed setting young Egalité, or Duke of Chartres (the late Louis Philippe), on the constitutional throne of France, and re-establishing, with some modifications, the constitution of 1791. The young prince of the Orleans branch was with him, and had bravely fought under his eye at Neerwinden. To some Jacobin emissaries who came to his camp, Dumouriez somewhat prematurely declared that neither their horrible club nor the national con-

but still delicious; for be it known to you that I have enjoyed weather worthy of Africa, and yet without swallowing mouthfuls of mosquitoes, nor expecting to hear hyenas howl in the village, nor to find scorpions in my bed. Indeed, all the way I came home, I could but gaze at the felicity of my countrymen. The road was one string of stage-coaches, loaded within and without with noisy, jolly folks, and chaises and gigs that had been pleasuring in clouds of dust; every door and every window of every house was open, lights in every shop, every door with women sitting in the street, every inn crowded with jaded

horses and every ale house full of drunken toppers, for you know the English always announce their sense of heat or cold by drinking. Well! it was impossible not to enjoy such a scene of happiness and affluence in every village, and amongst the lowest of the people, who are told by villainous scribblers that they are oppressed and miserable. New streets, new towns are rising every day and everywhere; the earth is covered with gardens and crops of grain. How bitter to turn from this Elysium to the Temple at Paris!—See *Correspondence of Horace Walpole*, vol. iii p. 460.

vention could be tolerated any longer. "The convention," said he, "is composed of 200 brigands and 500 fools! As long as I have three inches of steel at my side, I will never suffer it to reign, to shed blood by means of the revolutionary tribunal they have just established! As for your republic, I only believed in it for three days. Ever since the battle of Jemappe I have regretted every advantage I have gained in the field for so bad a cause! As for your Jacobins, if they wish to expiate all their crimes, let them save the unfortunate prisoners in the Temple, and drive out the 749 tyrants of the convention, and they shall be pardoned." The emissaries spoke of his own personal risk and danger, and of the terrible fate which might befall him in case of any failure. "Oh," said Dumouriez, "I shall always have time enough to gallop over to the Austrians." "But, how! will you flee to be thrown into a dungeon, like La Fayette?" "I shall go over to the enemy in a very different manner from that of La Fayette," quoth Dumouriez; "and, besides, the foreign powers have a very different opinion of my talents, and cannot reproach me, as they do him, with having had part in the 5th and 6th of October at Versailles." The general's proceedings and intentions were soon revealed to the convention, who sent off four of their members. The archivist Camus, Quinette, Lamarque, and Bancal arrived, together with Beurnonville, the new minister at war, to arrest Dumouriez and to bring him to their bar. These deputies were in camp on the evening of the 2d of April. Archivist Camus began in his prim starch manner, to read the decree of the convention; and the other commissioners united in the solemn lie that no harm was meant in calling him to the bar. Dumouriez replied that the tigers of Paris were yelling for his head, but should not have it. The ultra-republican deputies endeavoured to represent to him, by force of old Roman examples, that it was his duty to submit to the republic. "Gentlemen," replied Dumouriez, "we are constantly committing mistakes in our quotations from the classics; we parody and disfigure Roman history in citing their virtues to excuse our crimes. We are plunged in anarchy; we are wading in blood!" "Citizen general," said Camus, "will you obey the decree of the national convention, or not?" "Not exactly at this moment." "*Eh bien!*" rejoined the archivist; "I declare in the name of the convention that you are no longer general of this army; and I order that your papers be seized and that you be arrested!" "*Ceci est trop fort—this is rather too strong,*" cried Dumouriez: "halloo, hussars!" (*hussards à moi!*) The Berchigny men, who were nearly all Germans, trooped in with ringing spurs and rattling sabres. The

general said a few words to them in the German language, the French of which would be, "*Arrêtez ces gens-là, mais qu'on ne leur fasse aucun mal,*" and the plain English, "Arrest these people, but do not hurt them." The hussars surrounded the deputies. War-minister Beurnonville begged to share their fate. "Be it so," said Dumouriez; "and I believe that, in packing you off with the deputies, I shall render you a great service, and snatch you from the revolutionary tribunal." As they had been travelling all day, and might be hungry, he ordered some supper to be served up for them; and when that was over, the four deputies and the war minister were put into two chaises, and whisked away to Tournai as fast as the post-horses and the horses of a detachment of the Berchigny hussars could go. On the route Beurnonville made an attempt to escape, for which one of the rude Germans cut him over the pate. The Prince of Saxe-Coburg passed them on to Maestricht, and they were kept as hostages in different Austrian fortresses till the end of November, 1795, when they were exchanged for the princess royal, the only survivor of the captives in the Temple. During the night Dumouriez drew up a proclamation to his army and to all France. With some eloquence and effect—for he was a good penman—he recalled his past services—his exploits at Argonne, which had obtained for him the name of "The Saviour of France," his ever-memorable battle of Jemappe, and his rapid conquest of all Belgium. He attributed his reverses to the enmity of Marat and the Jacobins, who had devoted him and all honourable men to destruction. He drew a frightful picture—but not less true than frightful—of the prevailing sanguinary anarchy; and he called upon all Frenchmen to rise and rally round him and the monarchical constitution of 1791. On the following morning the army were informed of all that had happened; they expressed no dissatisfaction; the troops of the line seemed steady and devoted to Dumouriez, as did also the artillery. At an early hour on the 4th of April the general with the Duke of Chartres and the staff mounted their horses to keep an appointment with the Archduke Charles, the Prince of Saxe-Coburg, and Colonel Mack—afterwards the hero of Ulm. The party had not gone far when they met two battalions of volunteers, who shouted "Treachery, treachery!" "Arrest these traitors!" and anon these cries were mingled with a crash of musketry. Quitting the highroad, Dumouriez and his companions struck right across the country, and over hedge and ditch, as if they had been riding a steeple-chase. They rode nearly the whole day through a rough swampy country, where their horses frequently sank to the saddle-girths; some of the horses were abandoned, some

of the servants were killed; but, some on foot, and some mounted, and all covered with mud from the tip of the spur to the top of the feather, General Dumouriez, the Duke of Chartres, his brother the Duke of Montpensier, and all the rest of the officers, reached an Austrian position in safety as the sun was setting. Nothing daunted by the narrow risk he had run, and believing that his regular troops would still stand by him, Dumouriez, with the Duke of Chartres and the staff officers, and with an escort of only fifty Austrian horse, returned towards his own camp on the very next morning. But, quick as he was, he came too late—the Jacobin emissaries had been quicker than he. Some of these emissaries from Valenciennes had assured his troops that he was killed or drowned; and during the night the artillery had risen upon their officers and had marched off with all their guns, ammunition, and baggage for Valenciennes, and the troops of the line had followed or were following their example. Dumouriez turned towards the headquarters of the imperialists, and, with the Duke of Chartres and his brother the Duke of Montpensier, Colonel Thouvenot, and the rest of his numerous staff, he rode away from St. Amand. The entire regiment of Berchigny, 1500 strong, and some fragments of some French regiments, followed him and the sons of Orleans; but these were all; the rest, taking care to secure the military chest (said to contain 2,000,000 livres), joined General Dampierre, who had been appointed by the convention to the command of the army, and who established his head-quarters in Valenciennes.

The fugitives who would not serve with the Austrians received friendly passports, and were allowed to go wherever they chose. The Duke of Chartres, who performed a good part of the journey on foot, went into Switzerland, where he arrived with hardly any worldly property except the clothes on his back and the good stout stick in his hand. As for Dumouriez, after a long and restless life of exile on various parts of the Continent, chiefly spent in military and political plans that came to nothing, and writing memoirs and pamphlets that are now forgot, he died in England in 1823, at the age of eighty-five. General Dampierre, who had succeeded to the command of the republican forces, threw himself into the fortified camp of Famars, which covered Valenciennes. The Duke of York having landed at Ostend with a small English army, it was resolved to make a vigorous attack along all that part of the French frontier, and to reduce Valenciennes and Condé (if not Lisle also) at any price; and to this end General Clairfait, who—not without jealousies and dissensions—held the supreme command of the armies of the coalition, where

Austrians and Prussians, English and Dutch, were mixed without being amalgamated, reinforced Saxe-Coburg, who was commanding at Condé, and advanced towards Valenciennes. On the 8th of May Dampierre issued from his camp and made an attack on the allies; his volunteers soon fell into confusion, his best troops were beaten at all points; he was driven back to his camp with terrible loss, and a cannon-ball carried off his leg. Dampierre died the next day under the hands of his surgeons, thus escaping the guillotine, which the Parisians kept in permanence for all unsuccessful commanders. The Duke of York displayed much personal bravery, and the success of the battle was materially promoted by the British troops. On the 23d of May the camp of Famars was attacked and carried by the allies; and Valenciennes being thereby laid open, the siege of that town was committed to the Duke of York, who reduced it by a bombardment on the 28th of July. Condé surrendered to the Austrians a few days earlier. Many circumstances, besides the old Austrian slowness, contributed to retard operations. The King of Prussia, who had undertaken to open in person the campaign on the Rhine, to drive in Custine, and to invade France by the valley of the Moselle, was slow in coming; and when he came, he did not bring with him anything like the number of troops he had promised, having found it necessary to send a considerable part of his army into Poland to secure the territory which he had so unjustly seized in that country.

And here it will be proper to mention a few facts connected with that dark transaction, which, in many ways, acted as a spell and curse upon the coalition. At the beginning of the year, when all minds were occupied about the French revolution, Frederick William sent some Prussian troops into Great Poland, and seized upon Thorn and Dantzic, justifying his proceedings in a manifesto which declared that the Poles had behaved very ungratefully to his ally the Empress of Russia; that they had disquieted his own dominions by repeated excesses and violations of territory; that they had imbibed the French democracy, and the principles of that detestable faction who were seeking to make proselytes everywhere, and who had already been so well received in Poland; that the enterprises of the Jacobin emissaries were not only most powerfully seconded, but even revolution societies were established that made an open profession of Jacobin principles. "His majesty," continued the memorable manifesto, "being necessitated, in common with the allied courts, to continue the war (*against France*), and being on the eve of opening a campaign, thought it proper to concert measures with the courts of Vienna and St. Petersburg; and their

imperial majesties could not forbear owning that, from sound policy, it could not be allowed that the factions should be suffered to have their way in Poland, and expose his majesty to the danger of having an enemy in the rear, whose violent and wild enterprises might become a source of fresh troubles." The miserable Polish diet or confederation assembled at Grodno, issued on the 3d of February a long and solemn protest against the Prussian invasion; but this was nearly all they could do. On the 14th of February the Emperor Francis put forth a declaration importing that, inspired by the love of peace and good neighbourhood, he would not interfere with the plans of the King of Prussia and the Empress of Russia, or permit any of his subjects to counteract them. The Poles at Grodno appealed to the generosity and magnanimity of Catherine, whose army occupied all the country that was not in the hands of the Prussians or overawed by Austrian troops in Galicia; and Catherine answered their appeal in the month of March by an ukase, in which she declared that thirty years' experience had proved that all her generous efforts to put an end to the innumerable quarrels and the eternal disputes which tore the Polish republic had all been thrown away; that, latterly, some unworthy Poles, enemies to their country, had been sent to the ungodly rebels in the kingdom of France, to request their assistance in involving their country also in bloody civil wars; and, finally, that for these and other considerations she had been pleased now to take under her sway, and unite for ever to her empire, certain specified parts of Poland, with all their inhabitants, who, from the highest to the lowest, within one month, were to take the oath of allegiance to her before witnesses whom she would appoint. On the 25th of March his Prussian majesty put forth another manifesto, in which, speaking more plainly than he had done before, he told the Poles that, in conjunction with her majesty the Empress of Russia, and with the *assent* of his majesty the Emperor of Germany, he had resolved to take possession of certain districts of Poland, and also of the cities of Dantzic and Thorn, for the purpose of incorporating them with his own states. Frederick William also called upon the Poles dwelling in the said cities, and within the line of demarcation he had drawn, to take the oath of allegiance to him, or abide the consequences; but (in this more delicate than Catherine) he did not command them or their priests to pray to God for him and his line. This was followed, on the 29th of March (old style), or the 9th of April (new style), by a Russian declaration from De Sievers, Catherine's ambassador extraordinary and plenipotentiary, who was residing at Grodno. In this public document fresh vials of wrath were poured

upon the constitution of May, 1791, and upon the secret machinations which had followed the victories of the Russians and the overthrow of that constitution. De Sievers finished his declaration by inviting the Poles to assemble, as soon as possible, in a special diet, to agree to an amicable arrangement, and to concur with the salutary intentions of Russia and Prussia. The general confederation, including and mainly consisting of the same Polish magnates who had invited the Russians into Poland to overthrow the constitution of 1791, expressed, in a note to De Sievers, their astonishment and dismay at these propositions for a fresh partition of their country. King Poniatowski, after in vain petitioning Catherine, and offering to abdicate the throne, was compelled to assemble a sort of diet; and this diet, though not without coercion and violence, the threat of exile in Siberia, and the actual arrest of some of its members by Russian soldiery, was compelled to ratify a fresh partition which made over to Russia a territory containing a population of more than 3,500,000, and to Prussia a territory containing nearly 1,500,000 of inhabitants, together with the navigation of the Vistula, and the port of Dantzic on the Baltic, which she had so long coveted. The leavings were secured to Poniatowski, but he was bound to govern according to the old crazy constitution; and, to keep him in the right path, a strong Russian garrison was fixed permanently at Warsaw, and the Russian ambassador gave the law in all things. Prussia was obliged to employ a large part of her army in garrisoning Dantzic and Thorn, and in keeping down insurrection in Great Poland; and Austria was obliged to keep one large force in Galicia, and another on the Turkish frontier, as, in case of any renewed attempts on the part of the Poles to recover their independence, they would be sure to attempt an insurrection in Galicia (which was their country until the time of the first dismemberment), and to try to bring their old allies the Turks into the war.

In consequence of these transactions, which were not terminated when he took the field, but which continued to distract his attention all through the campaign, it was the month of April before the King of Prussia crossed the Rhine and invested Mayence; and then he only brought with him some 50,000 men, including Saxons, Hessians, and Bavarians, who served under their own princes. Even when joined by 15,000 or 20,000 Austrians under Wurmser, and by 5000 or 6000 French emigrants under the Prince of Condé, his force was insufficient for the work he had undertaken to do; for in their fortresses alone the French had between 40,000 and 50,000 men, while their army on the Rhine was at least 50,000 strong, and their army on the Moselle

more than 30,000; and garrisons and armies had it in their power to draw continual reinforcements from the interior of France—that vast fermenting camp. Moreover, the French had 20,000 men within the walls of Mayence when his majesty of Prussia and Wurmser began to invest it in the old formal and slow manner.

In the month of May, Custine, who had put himself at the head of the troops in the field, made an attempt to raise the siege, and was routed with great loss; but still the immense garrison held out, and it was not until the 22d of July that Mayence surrendered to the King of Prussia, who, though the French were actually starving, and must soon have surrendered at discretion, allowed them to march out with the honours of war; and these 20,000 men, marching away into the Vendée, contributed very materially to the internal success of the republicans. If, instead of wasting their time, and exhausting the strength and spirit of their troops, in long blockades and sieges, *all* the allies—Austrians, Prussians, English, Spaniards, and Sardinians—had advanced boldly and simultaneously from the Belgian frontier, from the Rhine, from the Pyrenees, from Savoy, and from Nice, right into the heart of France, while the insurrection in the Vendée in the west, insurrections in Languedoc and Provence, and all through the south, and other troubles, were at their height, they might possibly have all met at Paris; but this bold way of making war had not yet been invented; it was still considered necessary that an army should leave no great fortresses in its rear in the hands of the enemy; and thus, before they had finished their sieges, the Vendéans were checked, the other insurgents were scattered, and an improved organization was introduced into the armies of the republic. Most of the allied powers, too, had their separate views, and were seeking how they could best turn the war to their own immediate advantage; and, even without this conflict of selfishness, there must have been a divergency of opinion and a want of proper concert among so many princes, chiefs, and generals, some of whom were separated from each other by the whole length or breadth of France, and with none but tedious or uncertain communications with one another.

In the month of August, the Duke of York had to march back to Menin, to the relief of the hereditary Prince of Orange, who was enveloped by a superior French force, and whose Dutch troops showed little stomach for fighting. Three battalions, headed by General Lake, liberated the prince, and afterwards drove the French from a strong redoubt they had thrown up at the village of Lincelles. The Duke of York then moved towards Dunkirk, and began, at the end of Au-

gust, to lay regular siege to that place. Badly seconded, or not seconded at all, by the Dutch under the Prince of Orange, who remained posted at Menin at the distance of three days' march—badly aided by Marshal Freytag, who ought to have been close at hand at Furnes, but who preferred keeping at a distance—disappointed in the arrival of an English squadron—harassed by a French flotilla of gun-boats and small vessels that came out from Dunkirk—vigorously opposed by a strong garrison under Souham and young Hoche—and threatened by a force more numerous than his own, which was manœuvring round him under Houchard—the Duke of York, after some sharp skirmishing, found himself compelled to raise the siege on the 7th of September. In the meantime the Prince of Coburg defeated a strong body of republicans near Landrecies; and, in consequence of this victory, Quesnoy surrendered to him on the 11th of September. On the same day Houchard fell upon the Dutch at Menin, and, after two days' skirmishing, drove them from their positions; but on the 15th the Austrian general Beaulieu fell upon Houchard between Menin and Courtrai, and defeated him with the greatest ease; for, at the unexpected apparition of a small corps of cavalry on one of their wings, the *sans-culottes* set up the cry of "*Sauve qui peut*," ran from the field, and never stopped until they got under the walls and guns of Lisle. Houchard was presently recalled to Paris to be guillotined.

By this time the French, who had put in requisition every species of vehicle in order to forward with more speed the regular troops they collected from various quarters, and from their garrisons which seemed safe from attack, had formed an immense overwhelming force on the Belgian frontier. Shortly after the retreat of the Duke of York from Dunkirk, the French attacked every post on that long frontier line, but, in spite of their numbers, they were everywhere repulsed. On the 15th and 16th of October the republicans were more successful. General Jourdan, who had gradually collected an immense force in a fortified camp close to Maubeuge, sallied out against Coburg, who had been watching the camp, attacked him with great spirit, and, after two days' manœuvring and fighting, induced him to recross the river Sambre. The Duke of York, who had come up by forced marches to assist Coburg, was indignant at this retreat, and declared it to be unnecessary. The arrival at Ostend of a considerable English armament, under the command of Sir Charles Grey, enabled the allies to stop and head back the republican torrent, and to preserve the Low Countries during the rest of the year.

Having taken Mayence, and permitted the

20,000 republicans to march off for La Vendée, and having gained some trifling advantages in skirmishes on the Rhine, the King of Prussia quitted his army, and travelled with all speed into Poland, to look after his acquisitions in that country, and to patch up some differences and jealousies which had broken out between him and the Emperor of Germany. He left the command of his army on the Rhine to the Duke of Brunswick, who was to act in concert with the small Austrian army under Wurmser. These two generals, with some slow, cautious, but well-combined movements, drove the republicans from several strong posts, and about the middle of October expelled them from their fortified lines at Weissenburg, their great bulwark in that direction, and also from the fortified camp and triple lines at Lauter. The Prussians then laid siege to Landau; and the Austrians, invited by the noblesse and no inconsiderable part of the people of Alsace, which had once belonged to the imperial house, and which still was more like a part of Germany than a part of France, invested Strasburg, the capital of that province. The convention, who always sent a pair of their most daring and desperate members to every point where the danger seemed to be great, despatched St. Just and Lebas to Strasburg; and these two worthies introduced the reign of terror into the town, and into the whole of Alsace, except only the narrow slips of it that were covered by Wurmser's arms. It was a facetious saying of Lebas, that, with a little guillotine and a great deal of terror, the republicans might do everything. Custine was wanted at Paris to be beheaded. St. Just called young Hoche from Dunkirk, and gave him the command of that army, which was now reinforced by nearly the whole of the army of the Moselle, which had done little, and hitherto suffered nothing, in this campaign. Wurmser was obliged to retreat before these overwhelming numbers, and Strasburg was left to the sans-culottes, the two commissioners of the convention, and the guillotine. Hoche made a bold attempt to get between Wurmser and Brunswick, but the commander of the Prussian army was on the alert; the ground was difficult and unfavourable to the French; and Hoche, after skirmishing and fighting all the three last days of November, was repulsed, beaten, put to flight, with the loss of 3000 or 4000 men, and with scarcely any loss to the Duke of Brunswick. The republican general then effected a junction with all that was left of the troops that Lebas and St. Just had collected in Alsace; and, crossing the heights of the Vosges, and taking Wurmser by surprise, and then outflanking him with his vast superiority of numbers, he defeated the Austrians, made many prisoners, and took a considerable portion

of Wurmser's artillery. Besides their numerical superiority, the French had the incalculable advantage of being animated by one spirit and guided by one will; but many recent circumstances had revived the inveterate national animosities between the Austrians and Prussians, who now rarely met except to quarrel, and who, when separate, seemed to care little about acting in concert or aiding one another. Those who suffered most by Wurmser's retreat were his unfortunate Alsacian partizans. On the 26th of December, Hoche, aided by Desaix, Pichegru, and Michaud, made a tremendous attack upon the lines of Weissenburg, and was on the point of driving the Austrians from those lines when the Duke of Brunswick arrived in force, beat back the French, and kept them at bay for the remainder of that day. On the morrow Wurmser withdrew his army in good order, and the French obtained repossession of their old bulwark. The Prussians, who had now raised their siege of Landau, wished the Austrians to remain on the left bank of the Rhine until all the Duke of Brunswick's artillery and stores should be well advanced on the road towards Mayence; but the Austrians would not consent to stay a single day, and they crossed the Rhine on the 28th, leaving the Duke of Brunswick to shift for himself. The duke got his army safely into Mayence, but soon afterwards resigned the command of it, with many bitter accusations against the Austrians, to which Wurmser and some of his friends replied with counter-accusations and reproaches just as bitter. By the end of the year the French had not only recovered their old frontier lines in this direction, but they had also the whole of the Palatinate at their mercy. It was in the Palatinate that Hoche chose his short winter-quarters.

The convention had issued a declaration of war against Spain on the 4th of March. The Spanish government was not in a condition to set on foot a very large land army; but the troops she had brought into the field acted for some time with considerable spirit and intelligence. Instead of waiting to be invaded, the Spaniards set their foot on French territory, and soundly beat the republican general Deflers in his fortified camp, about the middle of May. They then advanced upon Perpignan, taking several fortresses; but Deflers, being greatly reinforced, gained a victory on the 17th July, and obliged the Spaniards to abandon their conquests and retire towards the frontiers of Catalonia, just as the great royalist insurrection of the south of France broke out, and just as the British and Spanish fleets obtained possession of Toulon. At the other extremity of the Pyrenees the Spaniards made a good beginning, and gave for many months em-

ployment to one of the numerous corps d'armées of the republic.

While La Vendée, in the west, from end to end, continued in a blaze, the hot royalists of the south armed and confederated. Lyons, Marseilles,

and Toulon were at the head of this formidable confederation. The republican general Cartaux defeated the Marseillaise royalists in a hollow on the road between Aix and Marseilles; the sans-culottes of Marseilles fell upon their fleeing townsmen, and opened the gates of their town to the republicans and the commissioners of the convention, who came to make the guillotine permanent. From Marseilles to Toulon was no very long march; and the Toulonese were warned by the fugitives from the former city of the terrible fate which must befall them if Cartaux should pay them a visit and find them undecided and unprepared. There was no time to be lost; and on the 29th of August these royalists concluded a treaty, which they had begun some time before, with Admiral Lord Hood, who agreed that the town should be held by the English for Louis XVII., and that the ships and forts should be restored

at the conclusion of peace. Lord Hood had scarcely landed 1500 men, under the command of Captain Elphinstone, when General Cartaux arrived with his victorious army from Marseilles, and cantoned in the villages and bastides round about, calling upon all the four corners of France for reinforcements, and upon every patriot in it for aid and assistance. Kellermann detached Lapoype to his assistance with 4000 or 5000 men; and volunteers and other corps gradually collected. On the other side, Lord Hood, sensible that the most desperate efforts would be made to recover the place, and that his sailors and the French royalists would be unequal to its defence, applied in all directions for troops and other reinforcements; and, with rather unusual activity, our allies in the Mediterranean sent ships and troops to Toulon. The Spanish admiral Langara, who was nearest at hand, took on board 3000 men of the army of Roussillon, came up with his fleet, and joined Hood. The Bourbon King of Naples, whose wife, Caroline of Austria, was sister to Marie Antoinette (now no more), had declared war against the French republicans, and at the first summons he sent down his small fleet and some land troops to co-operate. The King of Sardinia sent another detachment, and 5000 men were promised from the Austrian army in Lombardy; only these last never arrived. In several sorties made by the English and a few Spaniards, the republicans were well beaten; but sans-culotte reinforcements poured in from all quarters, and Cartaux was succeeded by Dugommier, a much abler man. Moreover, Dugommier brought with him from Nice, where he had been serving during the summer, a little Corsican, a young officer of artillery, who was worth more

TOULON HARBOUR, from the Inner Road - From an original drawing.

than many thousand men. This was Napoleon Bonaparte, who displayed an activity, and, above all, an intelligence and a quickness which commanded attention. At first he had been received

almost with insolence by Cartaux and Doppet; but Dugommier, a veteran soldier, had a better sense of his merits, and he was strongly supported by the Jacobin commissioners of the con-

SIR WILLIAM SIDNEY SMITH — From a print, after Sir R. K. Porter

vention, one of whom was the brother of the then all-powerful Robespierre, with whose party the young officer had recently identified himself by writing and publishing a political pamphlet, entitled, *The Supper of Beaucaire*. Under such patronage he got the command of the whole besieging artillery, amounting to 200 or more pieces; and he was pretty certain that in the councils of war, which were now frequently called, any opinion he might emit would be listened to, at least, with respect. Batteries were erected to sweep the harbour and the roadstead; and from 30,000 to 40,000 men were now collected round Toulon. Our expected succours had arrived from Gibraltar, but they consisted merely of two foot regiments and a few artillerymen, under the command of General O'Hara, who took the command of the place and of all the land troops of the allies, which did not even now exceed 11,000 men, counting all nations and including some corps that had nothing of the soldier but the name. To keep all that wide range of hills (some of which commanded the two harbours and the fleets in them as well as the town) would have required, at the very least, 30,000 troops of the best quality. Some of the Neapolitans behaved very badly; yet the French never made an advance without sustaining great loss. On the 30th of November, General O'Hara was wounded and taken prisoner in a sortie, in the course of which Bonaparte received a bayonet wound, and was carried off the field fainting. On the 17th of December, Lord Hood called a council of war. It was readily agreed that Toulon and both its ports should be evacuated as quickly as possible; that such of

the French ships as were rigged and fit for sea should be carried off, and that all the rest, on the stocks or in the dock, should be destroyed; that all possible exertions should be made for carrying off the other French royalists. On the morning of the 18th, the sick and wounded and the British field artillery were sent off; and in the course of that night nearly all the troops were embarked on board the fleet, which had come to anchor in the outer harbour. Then, at a given signal, commenced one of the most terrible scenes that even war has ever presented: then Sir Sidney Smith—who had recently arrived at Toulon, and who had volunteered to conduct the perilous operations of blowing up and destroying all the French ships of war which could not be removed, the powder-magazines, the stores, and arsenal—set to work, having previously made some hurried preparations. Then followed a series of terrific explosions, each resembling the eruption of a volcano. Unhurt, Sir Sidney and his exhausted men joined, in the outer road, Admiral Lord Hood, who embarked all the English forces without the loss of a man. The fleet remained for some time in the roadstead, all eyes on board fixed on the mighty conflagration; and then they steered for the Hesperides of France, the beautiful islands of Hyères, which, lying close under the coast of Provence, and covered with groves of orange, and citron, and myrtle, look like a piece of Italy dropped there by mistake.

The English had destroyed one ship of eighty-four guns, one of seventy-six guns, seven of seventy-four guns, and two of twenty-four guns; and they brought away with them more vessels than they burned—one immense ship of 120 guns, two of seventy-four guns, one of forty guns, four frigates, and seven corvettes, brigs, &c., following Lord Hood to Hyères. The Spaniards brought away one vessel of eighteen guns, the Sardinians one of thirty-two guns, and the Neapolitans one of twenty guns. Yet the whole blow at the French navy was not so decisive as had been expected; fourteen sail of the line and five frigates escaped destruction, or were only so partially destroyed that it was found possible to repair them afterwards. Nearly 15,000 men, women, and children, inhabitants of the town, or royalists from other parts of the south, who had taken refuge in it as the last asylum they had in France, were carried safely away by the allied fleets. It appears that hardly any were left behind who had committed themselves by counter-revolutionary deeds, or by correspondence and connection with Lord Hood and his allies; but what M. Thiers styles "the revolutionary vengeance" would not submit to be disappointed of its prey and its victims. Upon the first entrance of the republicans into the half-ruined town they mas-

sacred every one they met, not excepting even some 200 or 300 Jacobins who went to meet and welcome them. The released *galériens*, whose exertions in saving the shipping had converted them from felons into patriots, joined in the excesses of the soldiery; and for twenty-four hours there was a revelry of crime and horror in which every possible monstrosity was committed. And after these abominations the slaughter was continued for a long time in a regular, organized manner. Several hundreds of poor workmen and labourers, who had been employed by the English and their allies in improving the fortifications of Toulon, were condemned in a mass, and were executed in the same manner, the executioners being cannoneers, who fired upon them with grape-shot. The guillotine, which always followed in the wake of the victorious republican armies, was then set up and made permanent: the possession of money or lands, or of a respectable station in society, was guilt and proof enough to the improvised revolutionary tribunal, and to the military commissions, which were presided over or directed by the younger Robespierre, Barras, and Fréron, the three commissioners from the convention.

While Lord Hood was in possession of Toulon, he had detached a squadron to Corsica to carry assistance to the anti-republican and anti-French party in that island; and another, commanded by Admiral Gell, to call to account the republic of Genoa and the Grand Duke of Tuscany, or his authorities at Leghorn, who, under the mask of neutrality, had for some time pursued a system almost openly hostile to the allies. The French army in Nice had been supplied from Leghorn with provisions and stores, although the grand duke's government had refused a small supply of bullocks to the English fleet. Genoa was for the present overawed by our demonstrations; and the Grand Duke of Tuscany—beset not merely by the minister of Great Britain, but also by the ministers of all the allied powers and by the messages and agents of the King of Sardinia, the King of Naples, and of nearly every prince in Italy—not only agreed to break off all intercourse with the French republic, but further engaged to unite with the grand European coalition. But the Genoese senate already stood in terror of the jacobinized Genoese democracy; and the traffickers and speculators of that ancient republic continued the contraband trade with the French armies. The republic of Venice followed the same line of conduct as Genoa, but derived less pecuniary advantage from her neutrality. Efforts were made by the English resident minister, and by the representatives of other powers, to draw the Venetian senate into the league against France; but they failed for the present, and

Venice became on the Adriatic what Genoa was on the Mediterranean side of the peninsula—a centre of intrigue and a sort of head-quarters for revolution-professors and proselytizing Jacobins. Chauvelin and his comrades, flourishing under the protection of the Lion of St. Mark, which had become as timid and crouching as a cur—which was trying to fawn on all parties, with the certainty of being kicked by all—preached the sacred duty of insurrection in all the Venetian states and dependencies, and excited the Grisons on one side and the Dalmatians on the other to take up arms against the poor old and decrepid republic, while other agents from the convention were labouring hard at Constantinople to entice the Turks into the war as allies of the French, by showing how easy it would be to profit by the present weakness of the Venetians, and by the over-occupation which the Austrians had given themselves on the Rhine.

The head of the unfortunate Louis XVI. had scarcely been struck off ere the Gironde and the Mountain renewed their death-struggle with an increase of fury, each party striving to send their adversaries to the guillotine, and each feeling convinced that their only hope of life lay in the wholesale destruction of the other faction. Having remained in office just long enough to witness the trial and execution of the king, the virtuous Roland, harassed to death by the Jacobins, and evidently alarmed at their increasing power as well as rage, retired from the ministry with certain moral reflections which he might have made several months before. The ministers remaining were absolutely under the dictation of Brissot, who held no office, and who had provoked the mortal hatred of the ultra-Jacobins. Marat set his fangs into Brissot's side, and nearest to the heart; he was accused of the most detestable speculation, and the scarcity of provisions and the dearth of money were attributed to Roland, to those who remained in office after him, and to Brissot. In the mother society, Robespierre invoked the destruction of the whole of the Gironde, and with great art and address made sure of the means of accomplishing their ruin. That wretched party wanted the revolution to stop where it was; but Robespierre still repeated that he did not believe that the revolution was finished yet. The Girondins could count only upon the timid respectabilities, or upon that middle class which is least fitted for daring action and great personal sacrifice; the Jacobins appealed to the popular masses, to the indigent shopkeeper, the ill-employed mechanic, the common soldier, the hard-toiling peasant—to every man that might hope to gain, and that had nothing to lose, by the continuance of revolutionary troubles, and these Jacobins, by holding the sovereignty of the clubs,

must inevitably become for a season the masters of France. For one man that would dare to raise hand or voice for the much-talking, philosophical, pragmatical Gironde, 500 greedy, infuriated, desperate men would be sure to draw the sword or raise the pike for Robespierre and his party. Beaten entirely out of the clubs, beaten in the convention itself, and subjected daily to the insults and menaces of the Parisian mob, the Girondins, in secret conclaves, deliberated on the means of striking a *grand coup d'état* by which they might dissolve the convention or forcibly expel the Jacobins. These consultations became known to the Jacobins, who had spies everywhere; and the Girondins revealed their own secret by demanding a body of troops to act as guard to the convention and government, and to be composed of *respectable men* drawn from the Gironde departments; or from the very towns and villages of the south which had given birth to these select republicans and perfectibilians. Moreover, the same weak faction ventured to affirm that Robespierre, Marat, Danton, and the rest of the powerful Jacobins, were and had been all along in an infernal plot with Philippe Egalité, or his Highness of Orleans; that they intended to make that *débauché* a king, and that all the atrocities which had already been committed, or which were proposed as the means of securing liberty and equality, had for their object and end the restoration of the abjured monarchy in the person of Philip. When these and other denunciations had been made in the convention, the Jacobins felt that this was a quarrel for life and death, and that they must guillotine the Girondins, or wait and be guillotined by them. Nor, from what we know of the character and doings of these men, are we inclined to doubt that the Girondins would have been as pitiless in the hour of victory towards their political adversaries as ever were the Jacobins. But they had no chance of victory, they had not so much as the means of offering combat. Being convinced of this fact, they conceived the absurd project of removing the seat of government from Paris, and of splitting up France into a number of confederating republics! It is still an incurable fashion with certain writers even in this country to represent the Gironde party as an interesting company of virtuous and unfortunate reformers, as men of vast genius and acquirements, and as great political philosophers; but their utter inaptitude as politicians is demonstrated by every step they took and by nearly every project they entertained. Under the name of *Federalists*, they now became quite as odious as the royalists had been at the commencement of the revolution. The clubs put themselves in permanent session; the mob was appealed to; the barriers were closed; a new in-

surrection was organized; the trembling Girondins hid themselves in garrets and cellars; and on Sunday, the 2d of June, while the tocsin and alarm-guns were firing, the convention was surrounded by 163 pieces of artillery, and by 80,000 armed men (the pikemen being included), who shouted "Death to the Gironde!" and who demanded from the legislators that were in the house an immediate vote of arrest or proscription against the leaders of that party. Under the dictation of Marat, the list of proscription, which contained thirty-two names, was soon settled, and scarcely one of the moderate or anti-Jacobin members present had courage to vote against it or to offer any remark offensive to the sovereign people.

The Girondins, who had themselves trampled upon the constitutional inviolability of Louis XVI., called upon heaven and earth to witness the monstrous crime of their adversaries in trampling upon their inviolability as representatives of the people. The simple truth was, that, as they had got rid of the king because he stood in the way of their republic and of their personal aggrandizement, so the Mountain had got rid of them because they stood in the way of their sans-culottism, and because they had declared war to the guillotine-axe against them. The common calamity which had befallen them did not produce any unanimous plan. They separated into small companies, or endeavoured to escape singly. A little sooner or a little later nearly all these thirty-two Girondins perished miserably, those being the least unfortunate who perished first. Some were caught by the Jacobins and guillotined, and some destroyed themselves to avoid that fate. The virtuous Roland drove a sword through his heart and was found by the roadside, together with a note in which he declared he could no longer remain in a world that was soiled by so much guilt. Virtue Petion was found in the south, dead in the fields, and half-eaten by wolves; and his friend Buzot was discovered near him and in the same condition: it still remains doubtful whether they were assassinated or died of hunger. Nowhere—not even in their native places—could any of these miserable men find shelter and hospitality: all France was either madly jacobinized, or overpowered by dread of the Jacobins. The fury of that triumphant faction was augmented by the assassination of the monster Marat, who fell under the knife of Charlotte Corday, on the 14th of July. On the 1st of August the convention voted that Marie Antoinette, the hapless and long tortured queen, should be brought to trial. Not a single charge was proved against her; but the revolutionary tribunal, declaring that they were going to give a grand example to the uni-

verse, and satisfaction to the holy doctrine of equality, pronounced her guilty. She died on the scaffold like a heroine, on the 16th of October, amid shouts of "*Vive la république!*" The execution of the queen was followed, on the 31st of October, by that of twenty-one Girondins. Included in this list were the eloquent Vergniaud; the active and pragmatical Brissot; Lebrun, ex-minister for foreign affairs, with whom our Foxite opposition would have treated for a peace only a few months before; Sillery, the husband of Madame de Genlis and the friend and adviser of Philippe Egalité; Fauchet, the socialist, and others of the like revolutionary celebrity. The guillotine, and Samson the well-practised executioner, worked with such rapidity that in *thirty-one minutes* their heads were all off.

There was now no single day on which the guillotine was idle; but six days after the execution of the twenty-one deputies, a victim appeared on the scaffold who demands some more particular though brief notice. This was Philippe Egalité, ci-devant Duke of Orleans, who had been alternately accused by the Girondists of being an ultra-Jacobin, and by the Jacobins of being a Girondist. As soon as the flight of his sons with Dumouriez was known in the convention, certain messengers, who found him playing at whist in his splendid residence of Palais Egalité, late Palais Royal, were despatched to tell him that he was wanted at the bar. He went, appealed to his inviolability as a representative of the people, to his past services to the revolution, and protested that he was entirely ignorant of the causes which had led to the defection of his eldest son. "If," said he, "my son is really a traitor, I see here the image of Brutus, and I know how to follow that Roman example." But all this availed him nothing; and a decree was presently passed which sent him a state prisoner to Marseilles. On the 3d of November, he was brought back to Paris; on the 6th of the same month he stood before the revolutionary tribunal, and on the same afternoon he was sent to the scaffold in company with four other victims. He perished on the same spot as the king and queen and the twenty-one Girondins. It is said that he complained neither of his friends nor of his enemies, and that, when he was told he might be respited till the next day, he refused the favour, saying that, as he was to die, the sooner the better. The mob expressed their "lively satisfaction" when Samson exhibited his head. He was forty-five years old when he died—if not the very worst, then the most defamed man of his bad times.

Next followed Madame Roland. She had been released from the Abbaye on the 27th of June, but had been arrested again on the very same day by order of the commune, and carried to

Sainte-Pélagie, a far worse prison. A day or two after the execution of the Girondins, she was transferred to the Conciergerie, through which

THE CONCIERGEFRIL, PARIS, 1792.—From Gaton's
Views in Paris, 1803

there was now no exit except through the Tribunal Révolutionnaire and the gates of death. She was not permitted to see her young daughter, her only child, who remained with her in Paris when her husband fled. If she really wrote the last part of her *Mémoires* which were published under her name (the fact has been doubted, and with some appearance of reason), she consoled herself in her misfortune by comparing her life and conduct to that of the flower of Roman republicans, by vaunting the purity and patriotism of her party and the wisdom of her husband's or her own administration, and by uttering rhapsodies against the Mountain, and Pache, and all the ultra-Jacobins, without expressing any penitence for political or other faults committed; without bestowing one word on the fate of the king, or even upon the fate of the queen, a woman and a mother like herself, without in fact admitting that her party had committed any fault except that of being over-lenient, and too mild, generous, and confiding. She was tried by the revolutionary tribunal on the 8th, and was guillotined on the 9th of November. Astronomer Mayor Bailly was executed the day after Madame Roland. There followed in the long death-dance republican generals who had been defeated by

the enemy; public servants who had incurred suspicion; and journalists who had not used the liberty of the press so as to please Robespierre and the Jacobins. Political theorists and experimentalists of the most opposite views and parties were guillotined together; heads that had never thought alike meeting in the same sack which received the loppings of the guillotine; and fierce political antagonists, who could scarcely have met in life except to tear each other to pieces, being deposited in the same grave, with one layer of quicklime (their common winding-sheet and only shroud) to consume them all together.

During the two months of November and December, 126 persons were condemned by the revolutionary tribunal, and executed by that great revolution-professor, Citizen Samson. Not a man or woman was brought before the court but was condemned, and after condemnation not one was pardoned or even reprieved. The Parisians' appetite for blood seemed truly to grow with what it fed upon: the place of execution was the commonest place of rendezvous; the executions, as most exciting, were the most popular exhibitions of the day; women and children, as well as men, ran eagerly to them, and, unless the weather was exceedingly cold or exceedingly rainy, the Place de la Révolution, which continued for many months to be the principal slaughter-house, was constantly crowded. Nor was this crowd composed solely of the rabble and faubourg sans-culottes. As the property of all who were condemned was confiscated, the guillotine was an effective instrument even in finance. Thus Barrère is said to have remarked facetiously, that the guillotine was an excellent mint—that they coined money in the Place de la Révolution!

Those who had been ministers under the Gironde were pursued with still more fury than those who had held office under the precious La Fayette constitution. Clavière, the Genevese minister of finance, whose wife was said to have rallied and recovered from a consumption from her enthusiastic joy at his promotion,¹ escaped the guillotine by committing suicide in his prison on the 8th of December; his poor wife poisoned herself two days after, and their only child, a daughter, fled penniless to Geneva. The convention passed a law that the property of those who killed themselves, either before or after trial, should be confiscated to the republic, even as if they had been regularly condemned and executed.

Before the year ended, the legislators of Paris voted that there was no God, and destroyed or altered nearly everything that had any reference to Christianity. Robespierre, who would have stopped short at deism, and who would have preserved the external decencies, was overruled and

intimidated by Hébert and his frowzy crew, who had either crept into the governing committees, or had otherwise made themselves a power in the state. The way, however, was made plain and easy to Hébert by the preceding labours of the philosophers; by the rapidly-growing unbelief of the Parisians and the majority of town-dwelling Frenchmen; by the contempt for a long time cast upon everything that was old, and by the cool and deliberate proceedings of the convention itself. All popular journalists, patriots, and public bodies, had begun dating *First Year of Liberty, or First Year of the Republic*; and the old calendar had come to be considered as superstitious and slavish, as an abomination in the highest degree disgraceful to free and enlightened Frenchmen. Various petitions for a change had been presented; and at length the convention had employed the mathematicians Romme and Monge, and the astronomer Laplace, to make a new republican calendar for the new era. These three philosophers, aided by Fabre d'Eglantine, who, as a poet, furnished the names, soon finished their work, which was sanctioned by the convention and decreed into universal use as early as the 5th of October. It divided the year into four equal seasons, and twelve equal months of thirty days each. The five odd days which remained were to be festivals, and to bear the name of *Sans-culottides*. Thiers calls this national festival of five days at the end of the year a beautiful idea, and says that the name of sans-culottides, which belongs to the times, is not more absurd than many other names which have been adopted by different peoples. The term scarcely needs translation: Mr. Carlyle renders it into English by "Days without Breeches," and it means that, or the "Days of the Breechless." In leap years, when there would be six days to dispose of, the last of those days, or Sans-culottides, was to be consecrated to the revolution, and to be observed in all times with all possible solemnity. The months were divided into three decades, or portions of ten days each, and, instead of the Christian Sabbath, once in seven days, the *décadi*, or tenth day, was to be the day of rest—which Thiers, who admires, or pretends to admire every part of the new calendar, thinks a very excellent arrangement. The decimal method of calculation, which had been found so convenient in money and in weights and measures, was to preside over all divisions: thus, instead of our twenty-four hours to the day, and sixty minutes to the hour, the day was divided into ten parts, and the tenth was to be subdivided by tens, and again by tens to the minutest division of time. New dials were ordered to mark the time in this new way; but, before they were finished, it was found that the people were puzzled and perplexed by this last

¹ Dumont

alteration, and therefore this part of the calendar was adjourned for a year, and the hours, minutes, and seconds were left as they were.

In the abolition of religious worships (*l'abolition des cultes*) Hébert was abundantly assisted by his official superior Chaumette, procureur of the commune; by L'Huillier, procureur of the department; by nearly all the notables of the commune, and present leaders of the Cordelier Club; by the majority of journalists and pamphleteers, and by the orator of mankind, Anacharsis Clootz, whose madness had not diminished in the midst of the increasing insanity of others. But the fierce atheism of these men (it was fiercer, more intolerant and persecuting than any religious bigotry) must, like the cruelty of the pro-consuls or commissioners in the departments, have been powerless and ineffectual, or only effectual in bringing about their immediate overthrow and destruction, if the people had not been prepared for the reception of their doctrines. It is in vain attempting to throw the bloody crimes and monstrous follies of the revolution upon a few scapegoats; the crimes and follies were *national*, and the great body of the people must bear the weight of them. Another great labourer in the vineyard of atheism was Fouché. This man was a native of Nantes, and had there been educated for a priest. While *en mission* in the department of L'Allier, he, as member of the convention, took upon himself to regulate and reform the public burying-grounds, which he and his guillotine-man were filling at a rapid rate; and, knocking down the cross and the text from Scripture which stood over the gate of a cemetery, he set up a statue of Sleep, to intimate that death was but an everlasting sleep. Fouché's device was considered pretty and poetic, and, before the convention, or the commune of Paris, which was the great active agent in this new reformation, legislated or decreed upon the subject, the example was followed in various

parts of the country. Where they could not readily obtain statues in stone or wood, the people satisfied themselves with inscriptions, painted in large black letters, such as "Death is Sleep," "Here one Sleeps," "Death is an eternal Sleep," &c.¹ Chaumette, who took in hand all the cemeteries of Paris, and entirely changed their appearance, was a sentimental atheist, who was wont to say that he should like to inhale the soul of his father in the sweet breath of flowers. Anacharsis Clootz was a political atheist, who considered religion as the only obstacle to the establishment of an universal republic, and of the worship of pure reason all over the earth. In his eyes deism was as detestable as Catholicism, and a God was as much out of place in a republic as a king. There was, he said, no God but the people; the God-people could not kneel before its divine self—could only worship pure and immortal reason. Therefore, as he told the convention (not without applauses from house and gallery), the sooner they put their God among the *ci-devans*, among the things which had been, but were no more, the better for France, the better for all mankind.

Little need be said of the course of this year's war in other parts of the globe. In the East Indies, Pondicherry, and all the other French establishments, were seized by the British without the slightest difficulty; and the republican flag disappeared from that continent. In the West Indies, Tobago was taken by us; but we failed for the present in an attempt on Martinique. The French planters of Sto. Domingo, suffering from the terrible insurrection of the negroes, and the not less terrible tyranny of the commissioners sent out by the national convention, implored our protection, and received English garrisons.

¹ At the restoration of the Bourbons in 1814, traces of these inscriptions were visible in many parts of France. When the bigoted atheists were outvoted, they had been merely covered with a little plaster or whitewash, and this covering had fallen off, and had left the letters beneath visible.

CHAPTER XXXVI.—CIVIL AND MILITARY HISTORY.—A.D. 1794.

GEORGE III.

Parliament opened—The royal speech recommends the continuation of war with France—Counter-proposals of the opposition in parliament—Resolution adopted to continue the war—Debate on the subsidiary treaties with foreign powers—Arrests of British revolutionists—Suspension of the habeas corpus act—Lord Howe's naval victory over the French on the 1st of June—Affairs of Corsica—Proceedings of Paoli—The Corsicans place themselves under the protection of England—The emperor and King of Prussia engrossed with the partition of Poland—Selfish bargain of the Prussian king for British subsidies—Proceedings of the allied armies in the Netherlands—Successes gained over them by the French—The French occupy the whole of Austrian Flanders and Brabant—Their successes on the Rhine—The Austrians and Prussians retreat before them—The Duke of York attempts to protect Nimeguen—He is attacked and compelled to retreat—The French take Nimeguen and Maestricht—The war of Spain against France—Reverses of the Spaniards—Successes of the French armies in Italy—Quarrels of the factions in Paris—The Jacobins divided into Hébertists and adherents of Robespierre—The atheistic spirit of Hébert and his party—Robespierre's attachment to theism—Suppression of the Hébertists—Robespierre's chief opponents executed—His proposal in favour of a national creed—It is adopted—Robespierre's grand *fête* for the installation of the "Supreme Being"—He officiates as the high-priest of the new faith—Explanation of his extravagant conduct—Particulars of the *fête*—Robespierre's conduct on the occasion—Offence given by it to his colleagues—His declamations against them—Symptoms of his decaying influence—Increasing executions—Four revolutionary tribunals established in Paris—Their merciless proceedings—Conspiracy against Robespierre—His indecision—His last appearances in the convention and Jacobin Club—His continued irresolution—Attack made upon him in the convention—The uproar and confusion of the members—Robespierre's fruitless efforts to obtain a hearing—He is arrested—Fruitless attempt for his rescue—Attempts of Robespierre and his associates to commit suicide—They are conveyed to the guillotine—Conduct of the mob at their execution.

ON the 21st of January, when the British parliament met, the speech from the throne and the arguments of ministers urged the necessity of continuing the war with an increase of vigour, inasmuch as the wild and destructive system of rapine, anarchy, and impiety, which the French had adopted, had displayed itself fully to the world, and made it more than ever impossible to think of treating with such an enemy. On the other side the opposition urged that the constant failures of the armies of the coalition, and the victories and triumphs of the French republicans, rendered the prosecution of the war hopeless and ruinous; and that, as we must recognize their government and negotiate with it at last, the best thing we could do would be to acknowledge it and treat with it at once, leaving the other powers of Europe to follow their own course.

On February the 2d, the minister laid before the house an account of the supplies necessary for the prosecution of the war, and the ways and means for raising them. On this occasion he stated the interior strength of the kingdom at 140,000 men, and the foreign troops in our pay at 40,000. The total of the requisite supply he calculated at nearly twenty millions; and the ways and means included some new taxes, and a loan of eleven millions. The double taxation to which the Roman Catholics had been long subjected was liberally cancelled.

On the 17th of February the Marquis of Lansdowne introduced a motion for an address, praying his majesty to declare immediately his readiness to enter into a negotiation with France. This was negatived by an immense majority, the numbers being 103 against only 13. Other motions met with no better success; and parliament and the country called for a vigorous prosecution of the war as the only means of preserving our honour and safety.

The subsidiary treaties concluded with the princes of the coalition were a subject of discussion in parliament; and, on March the 6th, Mr. Grey moved in the House of Commons for an address to the king, for the purpose of expressing their concern that his majesty should have formed an union with powers, whose apparent aim was to regulate a country wherein they had no right to interfere. In the subsequent debate, and in a debate in both houses consequent upon a message from the king, informing them of a treaty concluded with the King of Prussia, by which a larger subsidy was stipulated with that monarch for carrying on the war, many observations were made by the opposition relative to the objects and prospects of the contest, and the small confidence to be placed in subsidized powers who were chiefly attentive to their own interests. Ministers, however, were supported by the usual majorities.

At this juncture a quarrel arose with the United States of America, who objected to our right of search and our laws of blockade. If they

had been strong enough they would have joined the French republicans, and have declared war against us; but as their national navy was as yet in embryo they sent over Mr. Jay to negotiate, and the quarrel was compromised for the present.

Some sentences for political offences and clubbism had been passed, the most important being those in Scotland against Messrs. Muir and Palmer, who had been transported to Botany Bay; but the government was still in a state of suspicion and alarm, which the tone of some of the clubs was not calculated to remove. In the month of May it was resolved to pursue some of the principal members of the Corresponding Society and the Society for Constitutional Information in London; and in the month of May, Thomas Hardy, Daniel Adams, the Rev. Jeremiah Joyce, private secretary to Earl Stanhope, and tutor to his son, Lord Mahon, John Thelwall, a political lecturer, the celebrated Horne Tooke, and three or four others, were committed to the Tower, charged with high treason. On the 16th of May, Pitt produced to the house the report of a committee of secrecy, and upon this foundation demanded, as necessary to the salvation of the country from internal revolution, the immediate suspension of the habeas corpus act. Nor did the great majority of the house consider the demand dangerous, irrational, or excessive. Burke maintained that it was the best means of preventing the vast and imminent dangers with which we were menaced; Windham said that, if these evils could not be averted by the laws in being, other laws more stringent must be framed; and the suspension bill was carried through all its stages in the shortest time possible, and by overwhelming majorities. This was the last session that Burke sat in the House of Commons, and some of the last words of that philosophical statesman were words of warning to the country to beware of the fate of France. The king prorogued parliament in person on the 11th of July, congratulating the lords and commons on the glorious victory obtained over the French at sea, off Ushant, on the 1st of June, and the acquisitions made in the East and West Indies, and exhorting them to firmness, notwithstanding the successes of the French in the Netherlands.

The dawn of the 1st of June disclosed to Admiral Lord Howe the French about three or four miles to leeward in order of battle, under an easy sail. They had twenty-six line-of-battle ships, while the English had but twenty-five, the *Audacious*, seventy-four, Captain Parker, having separated in a shattered condition. In the size of their vessels, in their aggregate number of guns and men, and in their weight of metal, the French had a considerable superiority. Lord Howe immediately stood towards them. Being

abreast of them at about seven in the morning, he wore to the larboard tack, while the French waited his approach in the same position. Having made the necessary arrangements in his

RICHARD, FIRST EARL HOWE. — From a print after Gainsborough.

line for opposing his large ships to the large ships of the enemy, bethinking himself of a good English proverb, he lay-to, and intimated by signal that there was time for the men to breakfast before going into action. At about half-past eight he made the signal for the fleet to close, to pass through the French line and engage them to leeward, van to van, rear to rear, every ship engaging her opposite in the enemy's line. A little after nine o'clock the action became general in the centre. After behaving manfully for about an hour, the French admiral Villaret-Joyeuse gave way and stood off to the northward, and was followed by all the ships in his van that could carry sail. He left ten of his ships, almost all of them totally dismasted, to the windward, nearly surrounded by the English. Seven of these ships of the line soon struck their flags, and were taken possession of by our sailors. One of them, the *Vengeur*, filled and went down in deep water almost as soon as the English flag was hoisted on her. The number of killed in the British fleet was 279, of wounded 877. But the carnage on board the more crowded French ships was far more dreadful. In the six captured ships which remained afloat, the killed were 690, the wounded 580. Above 300 were supposed to have gone down with the *Vengeur*. The number of prisoners removed is stated at 2300. Several of Lord Howe's captains, more anxious for prize-money than for hard fighting,

scandalously misbehaved themselves; but still, with every deduction, "The Glorious First of June" was a day honourable to the British navy—was a most seasonable victory, proper to keep up the national spirit, and to lead to greater exploits hereafter.

It is impossible to comprise in our narrative all the frigate fights, or even the contests between small squadrons, which took place in these first years of the war. There was a variety and inequality in the spirit displayed in some of these numerous engagements; but, in general, the superiority of the English, as sailors and combatants on their own element, was maintained and enhanced; while many of the actions showed a combination of skill, coolness, and bravery, which will never be surpassed. These engagements took place in the Channel, on the coast of France, in the Mediterranean and Archipelago, in the East Indies and in the West; for the French had ships enough to show in all the seas, and in some places they had for a time a decided superiority of force. During the whole of the present year the British lost only one ship of the line, the *Alexander*, seventy-four, and she did not surrender until she had sustained the assault of three French ships of the line for two hours. Nothing was more evident than that the spirit of our officers and men was incomparably higher than it had been during the American war.

A curious triumph attended our arms in the Mediterranean, where Corsica, the native island of the man who was so soon to be the master and despot of France and arbiter of Europe, annexed itself to the British crown. The cruelties committed by the French, under Louis XV., in their subjugation of the island, were of too recent a date to be forgotten by a very brave but very revengeful people. To the Corsicans the French settlers were aliens in blood, in language, in manners, in interests, in everything; and a very large part of the population, including all the mountaineers and most of the peasantry, were incensed at the changes introduced into the isle, and the disrespect shown to their priests since the revolution. At the dawn of that mighty change, which deluded so large a portion of mankind with false and extravagant hopes, many of the better educated Corsicans fondly believed that their country would be improved and rendered happy by the political reforms in progress at Paris, and, by remaining a portion of the French empire, a realized Utopia. In 1789, on the motion of Mirabeau, in the constituent assembly, all the Corsican patriots, who had bravely fought against the French twenty years before, for the independence of their country, and who had been living in exile ever since, were recalled with honour, and invited to concur in the new order of

things. Pasquale de Paoli, who had gallantly fought the Genoese for twelve years before they ceded the island by an iniquitous treaty to Louis XV., who had been a sort of king or president under the title of "General of the Kingdom and Chief of the Supreme Magistracy of Corsica," who had afterwards struggled hard with the French, and defeated them in more than one terrible battle, was the most eminent of all these recalled Corsican exiles. He had passed nearly the whole of his exile, from the year 1769 to the year 1789, in England, living in familiar intercourse with the noblest, the most enlightened, and best of our countrymen. Every English reader is acquainted with him as the friend and frequent companion of Dr. Samuel Johnson, who held him in high estimation. With habits almost become English, Paoli repaired to Paris in the autumn of 1789: he was received with acclamations in the assembly, and in their hall swore fidelity to France and the new and unfinished *monarchic* constitution. He was presented to Louis XVI., who made him lieutenant-general and military commandant in Corsica. After being entertained in Paris by the patriots and popular idols of that day, he proceeded to his native island, where he was received with enthusiasm, and placed at the head of the national guards that were then raised or in process of being raised in Corsica. He acted faithfully towards the constitutional monarchy so long as it existed; but when the Girondists and Jacobins united and destroyed that government, to which equally with himself they had all promised and vowed fidelity, when they had set up an anarchical republic, and destroyed or proscribed all those friends who had brought him back, he separated himself from the French party, and began to concert measures with the old Corsican patriots. He was presently denounced to the convention, who placed his name on their lists of proscription. He assembled his countrymen, explained his danger and their own, held up to execration the cruelty and impiety of the French, and was forthwith appointed general-in-chief and president of the council of government. Paoli knew that the island was not strong enough to defend itself against France; his predilections made him look towards England; and, as soon as war broke out between this country and France, he put himself in communication with our government, and with the English commanders cruising in the Mediterranean. Lord Hood, who commanded the Mediterranean fleet, instantly gave him some assistance; and at the appearance of a few English ships the insurrection became general, and the French were driven out from all the places they held, with the exception of San Fiorenzo, Calvi, and Bastia. This was in the sum-

mer and autumn of 1793, when the mother of Bonaparte and all of that family who remained in the island fled in sad plight for Marseilles, to call upon the triumphant Jacobins there for succour and for vengeance upon Paoli and the English. Thanks to the activity, skill, and gallantry of Captain Horatio Nelson, Bastia, or the French in it, surrendered on the 22d of May. Calvi was reduced on the 10th of August. The representatives of the Corsican nation unanimously voted the separation of Corsica from France, and its union to the crown of Great Britain.

The management of the great armies of the coalition on the Continent was, by many degrees, worse and more inexcusable than during the preceding year. The rising of the Polish patriots under Kosciusko distracted more than ever the attention of the emperor and the King of Prussia, and induced his Prussian majesty to send a large army into Poland to secure the territories which had been allotted to him in the last partition, and to set up a pretension to more. Frederick William went into Poland to take the command of his army there, and the Duke of Brunswick, dissatisfied with his conduct, and discouraged by the bad termination of two campaigns, threw up the command of the Prussian army and its contingents on the Rhine. The King of Prussia even authorized some secret negotiations for a separate peace with the national convention, and, when these manœuvres became known, he frankly intimated that he would abandon the coalition unless he were retained by a liberal subsidy. A bargain—as bad a one as ever was struck—was concluded in the month of April: £2,200,000 was to be paid to his Prussian majesty, who was to furnish an army of 62,400 men; the money to be provided by Great Britain and the States-general of the United Provinces (the only subsidizing powers in Europe), but not in equal proportions, for Great Britain was to pay more than five times as much as the Dutch. A great part of this subsidy went to Poland, where Frederick William remained. As more and more troops were required in that country, his army on the Rhine fell short of the stipulated number; and the gentlest thing that can be said of the conduct of this latter Prussian army in this year's campaign is that it was loose and spiritless.

In the Netherlands, where Austrians, English, Dutch, and Hanoverians were to fight together, the campaign scarcely opened under better auspices; a great many of the Dutch, both officers and men, were lukewarm or democratic. The Duke of York quarrelled with the Austrian commanders, and refused to serve under General Clairfait. It was at length adjusted that if the Emperor Francis should personally assume the supreme command, the duke would serve under

him; and accordingly the emperor repaired to Brussels in April, whence he proceeded to the army. The siege of Landrecies was soon after commenced. Several attempts for its relief by the French were defeated with great loss on their part, and the place was obliged to surrender; but in the meantime Pichegru had forced the encampment of Clairfait, and had taken Courtrai and Menin. General Jourdan, in the beginning of March, entered the province of Luxemburg, where he was opposed by the Austrian general Beaulieu. On April the 17th, Jourdan made an attack upon the Austrian lines, which, after a conflict of two days, he carried. In May, the French attacked the army under the Duke of York near Tournai, and were repulsed with loss. They afterwards marched in great force from Courtrai against Clairfait, whom, after a very obstinate engagement, they put to the rout, and followed across the Sambre. A variety of other well-fought actions ensued, attended with much slaughter on both sides; but upon the whole, the forces and the confidence of the French seemed to increase. Jourdan was engaged in the siege of Charleroi, when, on June 26th, a general attack was made on his posts by the allies on the plain of Fleurus. Its result was the total defeat of the assailants, who retreated in confusion as far back as Halle; and the success of this day decided that of the French for the remainder of the campaign. Charleroi fell; and some time before, General Moreau, after defeating Clairfait, made himself master of Ypres. Bruges submitted to the victors on June 24th. The Duke of York found it necessary to retreat to Oudenarde, thus leaving Tournai exposed, which came into the possession of the French without resistance. The duke then drew back to the vicinity of Antwerp, where he was joined by Lord Moira with 10,000 British troops originally intended for the support of the royalist Vendéans.

Ostend being left without any garrison was taken by the French. Throughout the Belgic provinces the people, if not decidedly jacobinized, were furious against their old masters the Austrians. Ghent opened its gates to the republicans on the 5th of July, and on the 9th of that month the Prince of Coburg was compelled to abandon Brussels. On the 15th of July the French took Louvain, after obtaining a victory over General Clairfait. Antwerp surrendered on the 23d, and thus the whole of Austrian Flanders and Brabant fell under the French dominion. Shortly after the Austrians were driven from Liège and its territories. Moreau advancing into Dutch Flanders, reduced Cadsandt and Sluis.

Early in the year, while the German potentates were disputing with each other, and discouraging, in many ways, the army on the Rhine,

which stood in need of every encouragement after their unfortunate campaign of 1793, the French advanced, and took the fort of Kaiserslautern, the town of Spire, and several other towns and fortresses. Adhering to the routine of long winter-quarters, and to the principle that armies were not to take the field until the season of snow and frost was over, the German commanders had no forces on foot at all equal to contend with the republicans; nor was it until the month of May that they got a-field in earnest. The Prussians, who did not exceed 50,000 effective men, were now commanded by Count Marshal Möllendorf. Besides this force there was an Austrian army on the Rhine of about the same strength, some small contingent forces furnished by the lesser circles of the empire, and the emigrant army of Condé, which was still 12,000 strong—*upon paper*. Towards the end of May, Möllendorf, taking them by surprise, drove the French out of their entrenchments at Kaiserslautern, with serious loss, and took a good many of their guns. But from this time till the beginning of July, when the republicans were greatly reinforced, the Prussians and their allies did nothing of the least consequence. With a superiority of numbers which gave them the assurance of success, the French, who were moreover cheered by the intelligence of the successes obtained in the Netherlands, and the news of the battle of Fleurus, sought out Möllendorf, and on the 12th of July began a battle which was desperately maintained, at different points, during four whole days. On the night of the 15th, when both sides had suffered tremendous loss, the allies made a hasty retreat. The imperialists crossed the Rhine, and the Prussians retired down the left bank of that river to Mayence. Neither of these armies was of any further use during the remainder of this campaign. A territory sixty miles in length was abandoned to the republicans, who marched to the easy reduction of Trèves, and then poured down in great numbers to the Netherlands, to help to finish the war there, and after that to conquer Holland; for there was no intention of stopping short at the Scheldt and Roer, as Dumouriez had done in 1792.

The Duke of York assisted the hereditary Prince of Orange in covering the United Provinces; but their force was miserably insufficient: the democratic party was again on tiptoe, corresponding with the French, giving every encouragement and assistance in their power to those liberators; and the Dutch army, infected by the same principles, or disheartened by toilsome retreats and many discomfitures, was, in more senses than the military one, *demoralized*. Masses of men were thrown upon the retreating columns of Clairfait, who, after standing another battle,

left Juliers and Aix-la-Chapelle to Jourdan. Clairfait rallied once more, and fought a battle, or a succession of battles, which lasted from the 29th of September to the 3d of October; but this was the last effort his exhausted army could make, and his continued retreat left Cologne open to the French. Bonn and other towns on the left bank of the Rhine, in the electorate of Cologne, submitted to the conquerors. These places were defenceless or weak; but Coblenz, a dependence of the electorate of Mayence, had been strongly fortified and contained a considerable garrison; yet here, too, scarcely any resistance was made; the imperialists retired to the other side of the river, and the republicans took possession of the place with exceeding great joy; for it had long been the head-quarters of the emigrant princes and nobles—the home of royalism and counter-revolutionism. Worms and several other towns threw open their gates. With the exception of Mayence, the French remained absolute masters of every place on the left bank of the Rhine between Landau and Nimeguen. On the Maes the strong fortress of Venloo had been allowed to be taken by a *coup de main*; and Bois-le-Duc, from which an obstinate resistance was expected, was surrendered by its Dutch garrison after a very short siege. The Duke of York, now stationed near Nimeguen, was cut off from all hope of reinforcement from Germany; for if the allies had meant to support him, which they certainly did not, they could not have sent their troops to him without making a circuitous march. He resolved, however, with such force as he had, to cover that important place, the possession of which by the French would greatly facilitate their advance into the heart of Holland. On their side the republicans resolved to drive him thence, hoping, by a decisive blow, to compel him and his English troops to retire from the defence of the United Provinces. To this end they attacked the duke on the morning of the 19th of October with 60,000 men, and compelled him to retreat from his covering positions. As the duke, however, took up another position which equally prevented their investing Nimeguen, they attacked him again, with still greater numbers and fury, on the 27th of October, and finally compelled him to withdraw entirely, and leave the town to the chances of a siege. As Nimeguen was exceedingly strong by situation, and well garrisoned, it was expected that it would prove an exception to the general rule, and make a vigorous defence; but there were traitors within its walls in intelligence with the French, and the place was allowed to be surprised and carried a very few days after the Duke of York's retreat. Nearly at the same time Kleber, after a siege of only five weeks' duration, obtained possession of the formidable fortress of

- Maestricht, which was garrisoned by 8000 Dutchmen and Germans in the pay of the States-general, and which was abundantly supplied with

French fortress of Bellegarde was recovered in September, and in October, Dugommier began to pour his columns into Catalonia.

THE CASTLE OF NIMEGUEN, on the river Waal, with the Bridge of Boats by which the British Army crossed the river—From a drawing by Captain Fyers, 1809

provisions, stores, and all things necessary—except fidelity and courage. The Duke of York, with the wreck of his army, retreated across the Waal and the Rhine, and stationed himself at Arnheim in the province of Gelderland, with but a faint hope of stopping the progress of Pichegru, who had been appointed by the convention to complete the conquest of Holland.

The Spaniards seemed to have spent their strength and spirit in their Roussillon campaign of the preceding year. Their finances had long been in a ruinous condition, and at present they husbanded such resources as they could command, from a belief, which other powers shared in, that the sway of the Jacobins was drawing to a close; that public opinion fermenting in France would soon pronounce itself against the promoters of anarchy; in short, that a reaction was on the point of breaking out and that the salutary crisis must be hastened by the first check the French might experience in this campaign. They have, however, been censured too severely; for, after all, they kept their banners on the soil of the republic some time longer than any other power, and they fought on when the most terrible reverses were befalling the armies of the coalition on the side of Italy, on the Rhine, and in the Netherlands. The brave Spanish generals, who had repeatedly beaten the French in 1793, were carried off by sickness and death, or were removed by court intrigue. Early in April the republican general Dugommier succeeded in weakening the Spanish centre; and on the 1st of May he drove them out of their fortified camp at Boulon. Many reverses followed this disastrous expulsion. The

valley of Bastan, and at Saint-Jean-Pié-de-Port.

On the side of the Alps there was hard fighting all through the year, the army of the King of Sardinia, assisted by Austrian troops, manfully contending to keep the French republicans out of Italy. Forts were taken and retaken; mountain passes were carried and evacuated by the French; sanguinary combats took place among rocks and precipices, and on the crests of mountains covered with eternal snow; parts of the country were jacobinized; grave errors were committed by the court of Turin; the neutrality of the republic of Genoa was disregarded by the invaders; dense columns were marched through the Genoese territory to turn the position of the Sardinians and Austrians, and to attack the weakest part of Piedmont; and by the end of September the French, conducted by Dumorbion, Massena, Laharpe, Napoleon Bonaparte, Saliceti, and Albitte, established themselves on the edge of the rich Italian plain which is irrigated by the Po. Nothing more was done this year; but the republicans had done much; the bulwarks of the Alps and Apennines were in their hands, the road was opened into Italy, and an excellent basis laid for future operations. It had taken them three years, enormous sums of money, and prodigious sacrifices of life to achieve these great objects; but the work was done at last.

In Paris, meanwhile, the different factions had waged a fiercer war upon one another than that which the armies had carried on in the field. No sooner were the Girondists exterminated than jealousies and deadly hatreds broke out among the victorious Jacobins themselves. Hébert be-

came the head of a party which put itself in direct opposition to Robespierre. These Hébertists were for some time all-powerful in the commune, exceedingly popular in Paris, and with all the extreme sans-culottes; they shared in the executive power by holding places in the *salut public* and in others of the governing committees; they had the 10,000 men of the *armée révolutionnaire* of Paris completely at their bidding, Ronsin, the general of that army, being one of the chiefs of their party; and in the convention they for a season could command a majority of votes—a fact which first made Robespierre determine that that legislature should be purged anew, and that the Hébertists should be treated like the Girondists; but, as Hébert and his friends were so powerful, it was necessary to proceed against them slowly and with extreme caution. In installing atheism and the worship of the goddess of reason, the Hébertists well knew that they were declaring mortal war—a war without quarter—against Robespierre, who by speeches and by writings, by declarations repeatedly made both in the convention and in the Jacobin Club, had pledged himself to the support of a pure deism, and who (if any one thing is clear in his mysterious character) was really a determined and fanatical deist. With bitterness of soul he had yielded for the moment to the preponderance of Hébert, Chaumette, Clotz, and that atheistical herd: but he believed that a large portion of the French people still retained a respect for Christianity; that a still larger portion, though rejecting all revealed religion, clung to the belief of a God and to the hope of the immortality of the soul; and he nicely calculated that the strength of these opinions would come to his aid in his death-strife with Hébert. The battle was chiefly fought in the clubs, the Jacobins promising and vowing that they would stand by Robespierre now and for ever. On the 13th of March all the leading Hébertists were arrested; they were condemned on the 24th, and nineteen of them were guillotined in the afternoon of that day. It seems to be universally allowed that this was the most spiritless batch that perished during all the reign of terror. Ronsin, however, consoled himself with saying that Robespierre and his friends would soon perish in the same manner.

Having thus disposed of Hébert and his obscene crew, the incorruptible immediately directed his destructive energies against Danton, who had been guilty of gross corruption, and who had lost even his orator courage and audacity. On the night of the 30th of March, Danton, Camille Desmoulins, Philippeaux, Lacroix (Danton's brother-in-law and plunderer in Belgium), and several others, were seized. One of them took corrosive sublimate and so died, but Danton

and fourteen more of them were executed on the 5th of April, only twelve days after the execution of the nineteen Hébertists. On the 13th of April the widow of Hébert, the fair young widow of Camille Desmoulins, General Dillon, and sixteen others perished on the same scaffold. In the course of this month of April some 200 heads fell under the guillotine knife, and in the whole month of May the number of lives sacrificed in the Place de la Révolution reached the fearful amount of 324. Among the more distinguished victims that perished between the middle of April and the end of May were D'Espréménil, the old parliamenter and the hero of the earliest stage of the revolution; Chapelier, once the popular president of the constituent assembly; the venerable Malesherbes, who had so nobly defended Louis XVI., and who was now condemned and executed, together with his daughter and his granddaughter, his sons-in-law, the noble Lamoignons and Châteaubriands; Lavoisier, the eminent chemical philosopher; the Marchioness de Crussal, and the Princess Elizabeth, the innocent, amiable, ever-exemplary, and almost angelic sister of Louis XVI.

All this blood was poured out to the accompaniment of long drowsy harangues about the necessity of public morality and republican virtue. In presenting one of his most terrible reports, Saint-Just had moved that morality and virtue should be declared the order of the day—a vote which the convention passed unanimously. Robespierre, since the fall of Chaumette and Clotz, and all that gang, had repeatedly declared that atheism was so foul a thing that it could not have been thrown into France except by Pitt; that there could be no security even for republican virtue unless they voted the existence of a God, or of some Supreme Being, and the immortality of the soul. At first there seemed, at least in the convention, a pretty general disposition to sneer at both these dogmas, as unworthy of the enlightenment of France, and as tending to revive the old superstitions; but when Robespierre and Saint-Just, Couthon and others of that party, held up atheism as the greatest of all the crimes of which the Hébertists and Dantonists had been guilty, proclaimed it to be an importation from England, and intimated that its propagators and abettors must expect nothing less than that a virtuous republic would take off their heads; these mockers all took the cue, learned the short and easy lesson, and professed themselves (what Saint-Just and Robespierre really were) determined and fanatical deists, and implicit believers—without any revelation, but by the light of reason alone—in the soul's immortality. The reformed *commune* assembled in the *Hôtel-de-Ville* (which in Chaumette and Hébert's time had been the high altar of the goddess of reason, and very

Vatican of the atheist world, the place whence all the destroying, desecrating bulls had emanated) now sent up a deputation and an address to represent to the august representatives of the people, "whose policy was wholly founded on virtue and morality," "whose sublime meditations were directed exclusively to the happiness of mankind," that it was at length time "to proclaim those useful opinions, disfigured by fanaticism, the natural idea of the existence of a God, and the consoling notion of the immortality of the soul." These virtuous municipals declared that Hébert's goddesses of reason were more abominable even than the old superstition and the priests of the Catholic church; and they petitioned that the inscription put upon all churches, "TEMPLE CONSECRATED TO REASON," should be obliterated, and its place supplied by the words "TO THE SUPREME BEING." The deputies, the representatives of the French people who had so recently made their profession of faith to the goddess of reason, who had so lustily declared that a God or a king was alike incompatible with a republic, now voted by acclamation all that Robespierre proposed. The mother society, too, instantly voted and adopted the new profession of faith. It was even proposed in the Jacobins to banish every man from the republic that did not believe in the divinity; but Robespierre thought it expedient to reject this proposition.

A grand *fête*, for the overthrow of the goddess of reason and the installation of the Supreme Being, was decreed for the 8th of June. David the painter, who had got up so many pomps and ceremonies, and who last summer had arranged that festival and made that statue to mother Nature, before which handsome Héault de Sechelles, now headless and buried deep in quicklime, had made libations of pure emblematic water, and prayed his pagan prayer, presented a programme and plan for this festival voted to the Supreme Being — an elaborate production, a conceited, pedantic conglomerate of execrable taste, which revolts the mind more than Hébert's atheistical masquerades, but which the legislators adopted with unanimity, as they now adopted everything that was moved or sanctioned by Robespierre. As if intoxicated by his success and power, and the praise and incense that surrounded him, Robespierre, who had hitherto played the retiring, modest part, resolved to officiate as high-priest to the divinity he had got decreed. Long historical doubts, and speculations ingenious but interminable as to the motives and objects of this Apollyon of the revolution, may be settled by the simple assumption, warranted by a hundred facts, that he was, from first to last, insane — possessed by a reasoning madness of the worst kind, a maniacal vanity, which grew and in-

creased with his successes and the facility he found in bending a frantic nation to his will. No other hypothesis will explain his character and his doings; no researches among contemporary evidence will ever explain or reconcile half the facts of his public life; in him, many a circumstance which has been set down as a mystery, deep, unfathomable, becomes simple enough if considered as a freak of madness. On the morning of the *fête*, as he looked out from one of the windows of the Tuileries upon the immense multitude assembled or assembling, and especially upon the crowds of elegantly dressed women that ran to this novelty, as to everything else that was new and showy, he gesticulated, acted, and spoke in a frantic manner. In a universal frenzy such as reigned in Paris his insanity is scarcely so apparent; but it seems to us that Masaniello, on that day when he triumphed over the Spaniards and rode on the beautiful charger before the cardinal-archbishop and the viceroy, in scarlet raiment and with gold chains round his neck, was not madder than Robespierre on this day of the festival à l'*Être Suprême*. He had dressed himself in a splendid manner; his hair was frizzled and powdered; he carried in his hand a brilliant bouquet of flowers mixed with ears of wheat; for the first time his countenance was irradiated with joy; but the joy was mingled with pride and triumph, and everybody remarked his moral intoxication. The celebration took place in the Tuileries gardens. Under the creative genius of David a mound or monticule, surmounted by hideous statues of Atheism and Anarchy, made of combustible materials, and by a pure white incombustible statue of Wisdom, had risen in the garden. The deputies of the convention followed Robespierre, who walked quite alone and several yards ahead of them, to this mound, where he was to *pontifier*, or play the pontiff. The spectators honoured the great man with many applauses, and shouted most joyously, the day being uncommonly fine and exhilarating. But some satirical sallies and murmurs were heard amidst the crowd from men who preferred the goddess of reason to his *Être Suprême*, or who were irritated at his unwise glaring departure from the lines and levels of equality. "Only see," said one, "he wants to make himself a god!" "Or the high-priest of this *Être Suprême*," said another. "Yes," cried a third, applying to him one of the grossest of epithets, "not satisfied with being our master, he wants to be our god!" Even the convention, which had been so timid and submissive, betrayed symptoms of discontent; nay, several of his old partizans and present colleagues in the committees either put on a sullen countenance, or plainly expressed in coarse and

energetic words their disgust not merely at his pomp and pride, but at the whole celebration, and especially at his *Etre Suprême*. Barrère, Collot d'Herbois, Prieur, and Carnot seemed greatly dissatisfied; Billaud-Varennes, and the principal members of the committee of general security—Vadier, Amar, and Vouland—were fanatics in atheism, and disposed to be excessively jealous of all such public honours or distinctions as those the Incorruptible was now assuming. Bourdon de l'Oise was equally disgusted, and, being a man of a rough temper and tongue, he abused the whole performance; while Tallien, Fréron, and other Montagnards, more quietly sneered at it. David handed Pontiff Robespierre a lighted torch; the pontiff, after delivering an oration in honour of the Supreme Being and the French republic, set fire to the pasteboard statues of Atheism and Anarchy, which, as they blazed, ignited a veil or screen which concealed the statue of Wisdom. It was intended that the last-named divinity should burst upon the eye in all its pure original whiteness; but in the combustion of Atheism and Anarchy, and the canvas screen, it got sadly smoked, and when poor Wisdom appeared she was as dingy as a blackamoor, and this was considered as a very bad omen! Robespierre, standing forward in his sky-blue coat and white silk waistcoat embroidered with silver, then delivered a second discourse, which was not audible to the multitude, but which announced that atheism, "the monster which kings had vomited on France," was now annihilated; and which concluded with a prayer to the Supreme Being. "*Avec ton Etre Suprême*," said Billaud-Varennes, "*tu commences à m'embêter*—With thy Supreme Being thou beginnest to stupefy me." A very large portion of the spectators indisputably entertained the same notion as Billaud. In the end the *fête* was considered as a miserable failure, even by such as preferred Robespierre's *Etre Suprême* to Hébert's *Déesse de la Raison*. The celebration certainly hastened the fall of Robespierre. On the 9th of June, the very day after the *fête*, he went to the committee of *salut public* and ranted and raved against all those who had misconducted themselves at his great celebration. He called them the impure remains of the parties of Hébert and Danton—self-indulgent, corrupt, men destitute of every virtue, whose *moderation* was only a portion of a conspiracy, whose heads ought to fall. Billaud-Varennes and Collot d'Herbois now ventured to dispute with him over the council table, and the dispute became so loud and violent that a cautious member of the committee thought it expedient to shut all the windows. Billaud said that the ceremonies of yesterday had made a very bad impression on the public mind; that

the people thought all this fuss and ceremony about the *Etre Suprême* and the immortality of the soul, superstitious and counter-revolutionary. Robespierre said he would soon show them that his intention was to make the revolution go on faster and farther than it had hitherto gone; and in his wrath he uttered words which might very well be construed into a threat of the guillotine against every one of them. Moreover, for some time past, he had been rendering the guillotine unpopular by sacrificing true *sans-culottes*. All manner of men, and of women too, were handed over by the revolutionary tribunal to Samson and his assistants; the poorest and most essentially sans-culottic classes now began to figure on the scaffold—a pretty sure sign that Robespierre's death-dance could not last many months longer. Ex-nobles, aristocrats, respectabilities, men and women who had cast off their rags and become rich and luxurious in the revolution, the *citizens* of Paris could see perish with pleasurable emotions and joyous cries about liberty and equality; but the case was altered when they saw the bleeding heads of journeymen tailors, sempstresses, cobblers, carters, and other poor artisans and labourers, held up with increasing frequency as the heads of traitors and conspirators. This convinced them that poverty and obscurity would no longer be a safeguard—this made them think of their own necks.

In order that trials and executions might move at a quicker pace, Robespierre now proposed that there should be four revolutionary tribunals at Paris instead of one; that the punishment, in every case, should be DEATH, and that the power of sending persons to trial before these tribunals should be given to the two committees of *salut public* and *sureté générale*, to the individual representatives employed on missions, and to the public accusers. As a climax of atrocity, it was proposed that if the tribunal should possess either *material* or *moral* proof of guilt, it should be relieved from the necessity of hearing *witnesses*; and that no counsel or advocates should be allowed to prisoners, *because* calumniated patriots would find their best defenders in the patriot jurors, and conspirators could have no claim to any indulgence!

But the strangest part of the story of this decree of the 22d Prairial, or 10th of June, is, that Robespierre, after getting it carried, made no visible use of it, and from that moment ceased attending the committees. His enemies in those committees, who had dreaded that the decree was to be the instrument of their own destruction, were left to employ it against others, and awful was the use that they and the revolutionary tribunal made of it. In the course of forty days that the framer of the decree absented himself

from their council, *eleven hundred and eight* victims were tried according to the new forms, and executed, in Paris alone! The committee men, however, and all the other enemies of Robespierre, who felt, as every party or faction had done in France, that they must destroy or be destroyed, laboured hard to make the world believe, even in the presence of their own bloody pranks, that Robespierre and his colleagues Saint-Just and Couthon were the only cruel men in France. Both parties employed their spies and secret agents. Those of the committees gave their employers alarming accounts of lists of proscription drawn up by Robespierre; those who were employed by Robespierre made reports quite as alarming as to the intentions and preparations of the committees. By degrees it began to be reported that Robespierre's perruquier, in dressing his hair, had caught sight of his death-list—that some of the committee men themselves, who had not yet broken with the Incorruptible, had discovered by some lucky chance or other that he had drawn up such a list, and that their own names were in it—that Robespierre himself, overtaken by wine, which he rarely drank at all, had blabbed—and that, in short, it was perfectly well-known that he had set down the names of forty individuals, members of the Mountain, committee men, &c., who were to form the first batch, but not the last.

As early as the beginning of July, Henriot, who had now the command of the national guards, had intimated that he was fully prepared to strike a blow for Robespierre, and to make a *coup d'état* like that which he had managed last year, when the convention was purged of the Girondins; other friends, partizans, or colleagues, who were so identified with Robespierre, that they must either conquer with him or die with him, urged him to be up and doing, or to give the signal and let them act for him with the Parisian artillery, muskets, and bayonets; but the Incorruptible hesitated, faltered, and most wretchedly paltered about respect for the laws, and the propriety of doing the business in a calm and constitutional manner; and it was not until the return of Saint-Just from his mission to the army of the north, that he began to gird himself up for his last wrestle. "Only *dare*," said Saint-Just. "That one word contains all the secret of revolutions!" But still Robespierre could not *dare* in this style; and instead of settling himself in the Hôtel de Ville, and calling out Henriot and his cannoners at once, he allowed several days to pass, and then re-appeared in the convention, from which he had absented himself so long that the deputies had lost the habit of fear. He found courage where he expected none, and insult and defiance from men who had crouched

and trembled before him. Cambon gave him the lie direct to his face. Billaud-Varennes, Panis, Bantable, Charlier, Thirion, Amar, all followed in this onslaught, while not a voice except that of the paralytic Couthon was raised on the side of Robespierre. The trimming middle party declared against the dictator. Humiliated, discouraged, but not yet giving up the game for lost, Robespierre passed over from the convention to the Jacobin Club. Here his spirit was revived by an enthusiastic reception. "I have seen to-day," said he, "that the league of the wicked against me is so strong that I cannot hope to escape it. I shall die without regret!" "You shall not die!" cried the Jacobins. "There is nothing to fear!" Henriot, Payan, Dumas, Coffinhal, and others, surrounded him, declaring that they were all ready to act. Henriot, alluding to his exploit of last year, said, "Courage, Robespierre! the cannoners of Paris are steady, and I still know the road to the convention!" When Saint-Just had joined Robespierre in the Jacobin hall, Payan, procureur of the commune, a man of action rather than of words, proposed that they should go forthwith and arrest their enemies, who were all assembled in the committee rooms of the Tuileries. Nothing would have been more decisive, nor could anything have been much easier to do, for there was only a weak guard at the palace, and that guard would that night have obeyed the orders of Henriot rather than those of the committees. But Robespierre shrunk from the decisive step, thinking that the committees and the convention ought to be purged with the same medicine, and precisely the same doses as had been administered to the Girondins. That night, while Robespierre was doing nothing, his adversaries treated and negotiated with the leading patriots of some of the sections, and even tampered with the terrible Parisian cannoners, upon whose guns must depend the final decision of the tremendous conflict that offered no hope of quarter to the defeated party.

On the following morning—the 9th Thermidor, or 27th of July—the combatants met betimes in the convention. Tallien led the attack against the Incorruptible, and there was soon an universal shouting of "Down with the tyrant!" "Death to the triumvirs!" Barrère moved, and the house voted, that the convention should be declared in permanent session, and that a decree of arrest should be issued against the enemies of the country. Saint-Just, one of the triumvirs, stood motionless and pale; Couthon, another, sat looking at his paralytic limbs silently, or ejaculating "Triumvir, indeed!" Only Robespierre struggled—and desperately did he struggle—with the impending doom. He ran to and fro, foaming at the mouth like a tiger taken in the toils. He tried to speak

from his place, he climbed to the tribune, he rushed to the table of the house—to the president's chair; but Collot rang his bell until it seemed to crack, and speech or word they would allow him in no place. This was but the measure he had often meted out to others. Vadier, Bourdon de l'Oise, and Tallien again, all fell upon the fallen dictator; but not as a terrorist, not as a man of blood, not as the perpetrator of wholesale judicial massacres, not as the hand which day after day touched the springs of the guillotine (for these, his accusers, had been his associates, the accomplices of his worst crimes; they had carried out his system during his secession from the government, they had made the guillotine play with more than a quadruple speed, and they did not mean that it should rest yet, or cease its labours with the Incorruptible and his *ournée*): Bourdon de l'Oise accused him of defending from the guillotine several heads; Vadier taxed him with having endeavoured to *save* the enemies of the people, and with having interfered with Fouquier-Tinville to *suspend the execution of conspirators*! But they spoke of the fate of Danton, and of the guilt and horror of sacrificing one's colleagues;—in short, they explained, as clearly as words could do it, that this was a personal quarrel between him and them, and that Robespierre had been guilty of none but venial offences until he entered into this quarrel. "President of assassins," shrieked the Incorruptible, "I demand speech of thee for the last time!" By this time Collot was exhausted by his exertions—by that almost incessant bell-ringing—and vacating the presidential chair, he was succeeded in it by Thuriot, who hated and feared Robespierre as much as Collot did, and who now told him that he could not be heard. Robespierre's mouth foamed no longer; his tongue seemed to cleave to his dry palate, his voice to die away in the throat. "The blood of Danton is choking him," exclaimed Garnier de l'Aube. This remark made him recover voice and courage, and he exclaimed indignantly, and with a terrible truth, "Danton! Is it, then, Danton you would avenge? Cowards! Why did you not defend him?" But Thuriot, with a fresh arm, rang the bell, the house drowned their recollections, and kept up their courage by renewed vociferations, and Louchet demanded an instant decree of arrest against Robespierre. In the brief space of time five decrees of arrest were passed, and Robespierre, his younger brother, Couthon, Saint-Just, and Lebas were conveyed to five several prisons.

It was now five o'clock in the afternoon; and the assembly rose for a couple of hours, in order that the members might dine. Henriot now collected some of the terrible Parisian cannoneers, and harangued the patriot mob, telling them that

the traitors in the convention had voted the arrest of the best and only true patriots remaining in that assembly. But, going to the committee rooms of the convention with only two or three aides-de-camp with him, Henriot was arrested himself, and corded and bound like a common felon. In the meanwhile the council-general of the commune, being still steady to Robespierre, ordered that he and his four friends should be instantly liberated, that the tocsin should be sounded, and the barriers closed. Within an hour after this Henriot was set at liberty by Coffinhal, who burst into the Tuileries, sword in hand, being followed by about 100 fanatic Robespierists. In a trice the commandant-general Henriot was again on horseback; but he continued to act like a madman, and was believed to be drunk with brandy. The five prisons to which the five great men had been carried were situated in distant parts of Paris, and their keepers were not equally alert in obeying the orders of the commune; but by eight or nine in the evening Robespierre, his brother Augustin, Saint-Just, and Lebas were at perfect liberty, and sitting in deliberation with the council of the commune; and Couthon joined them somewhat later in the evening. They called upon the Jacobins, who had declared themselves in permanent session; they sent round commissaries to the different sections, none of which had rushed to arms so eagerly as in former times; and they instructed Henriot to collect his Parisian cannoneers, and point their guns against the Tuileries, wherein some of the members of the convention had re-assembled. But Henriot continued to do his part miserably; the triumvirate stayed where they were, and their enemies gained over some of the Parisian cannoneers and a considerable portion of the national guard and of the mob. Upon this the convention grew bolder; and while more members flocked to take their seats in the Tuileries, others of them went among the troops and the men of the faubourgs. Intelligence was soon brought in that several of the best sections were arming and marching for the defence of the representatives of the people; that the pupils of the school of Mars were shouting "Down with Robespierre!" and that the cannoneers outside, instead of obeying Henriot's orders to let their grape-shot fly on the hall of the convention, were turning the mouths of their guns the other way, forcing the commandant-general and his plumed staff to gallop off for the Hôtel de Ville. Hereupon the members in the house all vociferated, "*Hors la loi! Hors la loi!*" and Barrère, who had been working in that sense, presently presented a decree of outlawry against Henriot, the Robespierres, Saint-Just, and the rest. This was voted instantaneously, together with an order to

silence the tocsin and prevent the closing of the barriers. At last, as night was giving place to morning, Leonard Bourdon, who had put himself at the head of several battalions, undertook to lead them to the Hôtel de Ville, and there seize the outlaws and bring them to the convention, dead or alive. At his approach, the cannoneers whom Henriot had placed in the Place de Grève for the defence of the Hôtel de Ville, wheeled round their guns and pointed them against that edifice. Henriot, who had been consulting within, and assuring the outlaws that their triumph was secure, that the cannoneers were steady, and the section battalions coming, ran out into the Place to declaim and harangue, to implore, threaten, and cajole; but it was all in vain—he could not make them turn their guns again—he was threatened with some of their bitter grape—he rushed back, ran upstairs to the great council-chamber of the commune, and announced that all was lost. “Villain! and thy cowardice is the cause!” roared Coffinhal, a strong man made stronger by despair, who, as he uttered the words, seized light Henriot round the waist, and in the next instant hurled him out of an open window. The ex-commandant-general fell upon a dunghheap, or as others say, into an open sewer. The younger Robespierre, mounting one or two stories higher, threw himself head foremost out of a window; Lebas shot himself effectually with a pistol, and fell dead; Saint-Just clasped a knife or dagger in his hand, but made no further use of it; Couthon crept under a table, and with a weak hand and blunt weapon inflicted one or two insignificant wounds on himself; Robespierre put a pistol into his mouth to blow out his brains, but in pulling the trigger he changed the direction of the piece, and the ball broke his under jaw, and went through his cheek, without touching any vital part. When Leonard Bourdon burst into the room, followed by some gendarmes (himself, according to some accounts, including his own, being disguised as a common gendarme), Robespierre was sitting bleeding on a chair, with a knife in his hand; Couthon was lying under the table as though he were dead; the municipal officers were throwing off their scarfs, and apparently preparing for flight. One or two pistols were fired by the gendarmes, and then all the conspirators quietly submitted to be taken and bound. Henriot, badly wounded, disfigured, and covered with filth, was discovered in the foul place where he had fallen; Augustin Robespierre was also found alive, though with limbs broken and a skull fractured. Some of the armed people, who were now crowding into the council-cham-

ber, and running over every part of the vast building, dragged out Couthon by the heels from under the table, and proposed throwing his carcass into the Seine; but hereupon he opened his eyes, and gave them to understand that he was not yet dead, nor so much as dying. The wounded were put upon brancards or stretchers, and shouting “Victory! victory!” Leonard Bourdon conducted them to the Tuileries. By this time it was between three and four o’clock in the morning. At four o’clock in the afternoon, after suffering insults, outrages, and tortures, which proved that those who triumphed were as ferocious as those who fell, Robespierre, his brother Augustin, Saint-Just, Couthon, Henriot, and sixteen others were put in carts at the Conciergerie to be carried through the busiest streets of Paris to the Place de la Révolution. The carts were followed by a countless multitude, and the windows and house-tops are said to have been more crowded than ever they had been before. Jestings and laughing, filthy puns and quodlibets, were mixed with dire curses, shrieks, and anathemas. During a halt, a band of women, formerly his own *tricoteuses*, or furies of the guillotine, executed an infernal dance round his cart, with clapping of hands and other demonstrations of joy. On arriving in the Place de la Révolution, they laid him down on the ground at the foot of the scaffold, for he was to be executed last of the twenty-one, and he could not stand—indeed, he too was now almost dead—his face was livid, his eyes were sunk in his head. At the fall of each head the countless multitude shouted and waved hats and caps, and they shouted the loudest when Samson held up the heads of Saint-Just and Couthon. At last Robespierre’s turn came; for the axe had clanked down twenty times, and there remained none alive but he. As his ghastly figure and well-known sky-blue coat (now torn, and streaked and clotted with blood) slowly emerged to the surface of the scaffold, there was another universal roar of voices, and a still more enthusiastic waving of hats and caps. Samson tore off his coat, brutally wrenched the foul linen bandage from his jaw; the broken left jaw fell, and then a horrible cry or scream proceeded from him, being the first sound of lamentation or suffering he had been heard to utter since his arrest. This fearful cry was still ringing in the air, when the heavy axe, wet with the blood of his brother and his friends, clanked down once more. Samson held up the frightful head; the spectators shouted and applauded for several minutes, and then went away *singing*. It was towards seven o’clock in the evening of the 10th Thermidor, or 28th of July.

CHAPTER XXXVII.—CIVIL AND MILITARY HISTORY.—A.D. 1794—1795.

GEORGE III.

Events preceding the third partition of Poland—Anarchy of the Polish government—Character of Thaddeus Kosciusko—His previous history—His return from exile—Premature outbreak of the Polish insurrection—Kosciusko heads the insurrection—His victory at Racławice—The Russians driven out of Warsaw—Various successes of the Polish insurgents—The Russian and Prussian armies unite against them—The Poles defeated—Suwaroff leads a Russian army into Poland—He defeats the Polish insurgents—His sanguinary capture of Warsaw—The whole country divided among the three invading powers—Changes in the British cabinet—Crown prosecutions of British revolutionists—Trials of Thomas Hardy, Horne Tooke, &c.—Their acquittal—Trial of Robert Watt in Edinburgh for high treason—His execution—Opening of parliament—Royal speech recommending a continuation of the war—The resolution adopted by a large majority—The suspension of the habeas corpus act continued—Plan for augmenting the naval service—Debate on the subsidies given to foreign powers—Additional burdens imposed for the war—Demands of the opposition for a peaceful negotiation with France—Marriage of the Prince of Wales with Caroline, Princess of Brunswick—Parliamentary arrangement for the discharge of his debts—The Dutch declare for the French republic—The British and Hanoverian army in Holland defeat the French at the Waal—Inadequacy of their medical and commissariat departments—Sufferings of the British troops in Holland—They are compelled to retreat—They embark for England—The Dutch colonies captured by the British—The King of Prussia makes a treaty with France—Spain follows the example—The Grand Duke of Tuscany negotiates with France—Treaties of Britain with foreign powers against France—A French fleet sent to drive the English out of Corvica—It is defeated by Admiral Hotham—Naval victory of Lord Bridport over the French off Port l'Orient—An Austrian army compelled to capitulate to the French—Pichegru attempts to reduce Mayence—He is driven back to Manheim—Jourdan driven back by Clairfait—Defeat of the French by Clairfait at Mayence—Reverses of the French on the Rhine—They are unsuccessful in Italy—The royalist war of the Vendée suppressed—Internal proceedings in France—Precautions of the convention to maintain order—Death of the dauphin.

BEFORE returning to the home affairs of England, a few words must be said concerning the third partition of Poland, that deed which in its perpetration had weakened the armies of the coalition employed against France, and which, in its moral effects, threw a black cloud over the reputation of kings at a crisis when it ought to have been kept bright and spotless, and cast even a shade of obloquy over all who were attached to established governments. Among the much-divided Polish nobility, whose dissensions, jealousies, mad ambition, and political immorality had kept their country distracted and weak, in a confusion and anarchy worse than what had obtained in the old feudal days of Europe, while all its neighbours had been growing in strength and improving in organization and administration, was Thaddeus Kosciusko, of an ancient but not wealthy family of Lithuania; a man whose bravery, humanity, and patriotism are equally indisputable, but whose abilities, whether as a general or a statesman, are liable to some questioning. In the dearth of truly great men in modern times, and in their enthusiastic and laudable admiration of his gallantry and entire honesty, the Polish patriots have been wont to attribute more greatness and genius to the gallant soldier than ever belonged to him (his amiable and generous

qualities they could scarcely exaggerate); but at the same time it is but fair to state that, even had Kosciusko been as great and able a man as he is represented, it may be doubted whether he would have succeeded in his grand enterprise of driving out the three great powers from his native country—a country, for the most part, open and ill-calculated for defensive war, and most of the strong places in which were occupied by Russia, Prussia, and Austria. Kosciusko, in his early life, had resided a considerable time in France, studying the science of war. While yet a very young man, he had volunteered to accompany La Fayette to America: he served for some time as aide-de-camp to Washington, and his services to our revolted colonists had obtained for him the rank of a general officer, and, after the war, a pension from the United States. The school or schools in which he had studied had given him a preference for republican institutions, but he had no excessiveness or extravagance in his political opinions, and seems to have agreed that the government best suited to his country would be a representative monarchy, in which the aristocracy should have its due share and influence. With some of the patriot nobles who had adhered to the constitution of 1793, and had gallantly fought the overwhelming forces of the Empress Catherine, Kosciusko had fled into Saxony. From Dresden and Leipsic these

unhappy exiles corresponded with their friends who remained at home under the harsh rule of Russian ministers and Russian generals, and concerted with them the means of attempting one struggle more for the independence of their native country. What followed is variously told, according to the predilections of party or of private friendship: some accounts state that the fugitives and exiles, anxious to regain their homes, precipitated the plan; others state that the patriots who remained in their country, suffering under the insolence and arrogance, and oppressions of the czarina's agents, who were instructed to drive matters to extremity, were the more impatient and imprudent party: one thing is perfectly clear—the plan *was* precipitated, and the insurrection broke out at an inauspicious moment, and before half the preparations it was really in their power to make had been made in Poland. After attacking some Prussian troops, Madalinski reached Cracow towards the end of March, and raised the standard of independence, which attracted fewer of the common people than the patriots had expected. Kosciusko arrived from Saxony a day or two after; he had no troops to bring, but his fame, and the magic of his name, made the standard of independence more attractive, and brought numbers of enthusiastic young men of the higher and middling classes to join the thin ranks of the patriotic army.

Early in April, Kosciusko marched from Cracow, at the head of 4000 men, who were for the most part armed with scythes and other agricultural implements; yet when he encountered, at Racławice, a village on the road between Cracow and Warsaw, an army of 12,000 or 13,000 men, he thoroughly defeated it after a bloody battle of five hours' duration. This success immediately brought him a considerable accession of strength; and some of the nobles, who had hitherto been wavering, began to repair to his standard. On the 17th of April the Polish garrison of Warsaw, about 4000 strong, unfurled the banner of independence, attacked the Russian troops in the town, about 8000 strong, gained possession of the arsenal and magazines, and distributed arms and ammunition to the populace. After some murderous and long street-fighting—it lasted, with slight intermission, for two days and two nights—the Russians were driven out of Warsaw, with the loss of more than 4000 men in killed and prisoners. On the 23d of April, Kosciusko's countrymen, the Lithuanians, burst into insurrection at Wilna, and after a sanguinary contest, drove the Russian garrison out of that capital city. At this juncture Frederick William, who, but for Poland, might have doubled or even trebled his army on the French frontier (being aided by the liberal English subsidy), marched 40,000

Vol. IV.

Prussians into the palatinate of Cracow. This force effected a junction with a large Russian corps, and within a few days his Prussian majesty arrived and put himself at the head of his army. Towards the end of May, Kosciusko, with 16,000 regular troops and about 10,000 volunteers and armed peasants, marched away from Warsaw to defend the city of Cracow. On

THE COLUMN OF SIGISMUND, WARSAW.—FROM
L'Un vers Pittoresque

the 5th June, he fought the united Prussians and Russians at Szezakaciny, and was defeated with the loss of 1000 men. Three days after this affair another Polish corps was defeated and almost annihilated at Chilm; and on the 15th of June the ancient city of Cracow, the fountain-head of the insurrection, surrendered to the King of Prussia, after a short siege.

The Emperor of Germany observed a strict neutrality down to the end of June, but on the last day of that month he announced his intention of sending an army into Little Poland—"to prevent," said his manifesto, "the danger to which the frontiers of Galicia might be exposed, as well as to insure the safety and tranquillity of the other states of his imperial majesty." An Austrian army presently crossed the frontiers, meeting with no opposition, and offering no molestation to any of the Poles. The united armies of the Prussians and Russians, counting in all 50,000 men, of whom 40,000 belonged to his Prussian majesty, advanced from Cracow upon Warsaw, which city had been hastily fortified at the commencement of the insurrection. The besiegers suffered great losses, and on the night of the 5th of September the King of Prussia beat

a sudden retreat from Warsaw, leaving his sick and wounded and a good part of his baggage behind him. Meanwhile a Russian army, led by the formidable Suwaroff, was advancing. It was met by Kesciunsko on October 10th, and a bloody engagement ensued, which ended with the entire defeat of the Poles, of whom half were killed or made prisoners: their brave general was severely wounded and taken captive. Suwaroff, after the victory, marched to Warsaw, and assailed it as he had done Ismail. The Russians, forcing their way after an obstinate resistance into the suburb of Praga, put to the sword all whom they met with, and it is computed that 20,000 perished in this horrid massacre. The fate of Poland was now decided. The independence of the country had really been gone long before, but now its name as a nation was blotted out, the co-partitioners resolving to appropriate every inch of the country to themselves, to govern it by their own laws, and to treat the whole of it as conquered territory. It was not, however, until the 24th of October, 1795, that this last partition treaty was finally settled; and certain minor arrangements between Prussia and Austria, touching the palatinate of Cracow, were not settled till the 21st of October, 1796. The unhappy Stanislaus Augustus, who had never been a king except in name, was obliged to go to Grodno, and there sign a formal but empty and invalid act of abdication. He accepted an annual pension of 200,000 ducats from the three partitioning powers, who further promised to pay his debts.

The British parliament opened on the 30th of December, but before proceeding to its debates a few interesting circumstances which had occurred since the prorogation must be briefly noticed. In the month of July some important changes in the cabinet took place. The old Whig or Portland party, the ornament and strength of which had been Burke, formed a coalition or junction with the ministry, whom, ever since the alarming progress of the French revolution, they had backed and supported against the new Whigs or Foxites. The Duke of Portland received the order of the Garter and the office of third secretary of state; Earl Fitzwilliam was made president of the council, and, in December following, Lord-lieutenant of Ireland; Earl Spencer became lord privy-seal, and, in December, first lord of the admiralty (an office which was thought to have been rather incompetently filled by Pitt's elder brother, the Earl of Chatham, who now took the privy seal); Mr. Windham, who prided himself on being the political pupil of Burke, became secretary-at-war, in lieu of Sir George Yonge; Loughborough, who had identified himself with this party, had already been for some time lord-chancellor.

Notwithstanding the bad success which had in England attended the crown prosecutions, the government resolved to proceed against some other conspicuous members of political societies. On the 6th of October the grand jury of Middlesex returned true bills against Thomas Hardy, John Horne Tooke, John Augustus Bonney, Stewart Kyd, Jeremiah Joyce, Thomas Wardle, Thomas Holcroft, John Richter, Matthew Moore, John Thelwall, Richard Hodgson, and John Baxter, for high treason. Hardy, who had been secretary and a very active functionary to the Corresponding Society, was the first put upon his trial, which took place before Lord Chief-justice Eyre (a judge, even for his time, much given to hanging), Lord Chief-baron Macdonald, Mr. Baron Hotham, Mr. Justice Buller, Mr. Justice Grose, and others of his majesty's justices, &c., under a special commission, at the Old Bailey. He was charged with nine overt acts of high treason. But it was made to appear that, however imprudent or illegal might have been some of the means they had proposed, the sole object of Hardy and his associates was a sweeping parliamentary reform. This reform would have thrown the constitution under the feet of the democracy; but the thing had not happened, nor was it likely to happen: the demagogic strength was contemptible, and a humane jury shrunk from the horrible penalty attendant on a conviction for high treason. The trial lasted eight days, ending in a verdict of acquittal.

The trial of Horne Tooke, which next followed, and which commenced on the 17th of November, occupied six days, and was made remarkable by the perfect self-possession, the wit, the acuteness, and the dialectics of the accused, and by the quality of the persons he summoned as witnesses, among whom were the Duke of Richmond and Pitt himself. The jury, on the 22d of November, and at a late hour of the evening, brought in a verdict of not guilty.

On the 1st of December, Bonney, Joyce, Kyd, and Thomas Holcroft, the well known dramatic writer, and the author of one of the most interesting fragments of autobiography that exists in our language, were put to the bar; but the attorney-general stated that, as the evidence adduced on the two last trials and the evidence which applied to the prisoners was the same, and as, after the best consideration, those persons had been acquitted, he would submit to the jury and the court, whether the prisoners should not be acquitted also: and that for this end and purpose he would not trouble them by going into evidence. The lord chief-justice told the jury that, as there was no evidence, they must, of course, find the prisoners not guilty; and the jury gave them a formal verdict accordingly. On

the same day Thelwall was brought to the bar, and, it being assumed that there was evidence against him of a nature different from that which had been produced against the rest of the indicted, his trial was allowed to go on. It occupied four days, and also terminated in a verdict of acquittal.

In Scotland, however, there was one political trial that was followed by an execution. On the 14th of August, Robert Watt, late citizen of Edinburgh, and an embarrassed tradesman, was brought to the bar charged with eighteen overt acts of high treason. After having been employed as a spy, this wretched creature, feeling, as he said, that "his mind changed in favour of reform," had planned how to seize Edinburgh Castle, the post-office, the banks, &c.; and had distributed seditious papers among some of the troops. The imbecility of his plans, the nullity of his means of execution, and the small number and mean condition of his proven accomplices, ought assuredly to have saved him from capital punishment. These accomplices were a poor schoolmaster or usher, a half-starved weaver, a cabinet-maker, and *three* others equally unwarlike, and apparently just as poor. But Watt was hanged, and then beheaded at the west end of the Luckenbooths, on the 15th of October.

On the assembling of parliament (on the last day but one of the year), the speech from the throne, delivered by the king in person, insisted on the necessity of a vigorous prosecution of the war, and represented the resources of the French republic as in a state of rapid decline. It openly avowed, what there was no possibility of concealing, that the disappointments and reverses which we had experienced in the course of the year's campaign were great; but it maintained that there was no ground for despair; that France was exhausted by the unexampled efforts she had made, and that everything which had passed in the interior of that country had shown the progressive decay of its resources and the instability of every part of that violent and unnatural system. The desperate condition of Holland and the United Provinces, which the Duke of York had vainly endeavoured to defend against the overwhelming force of Pichegru, was frankly admitted; and his majesty informed the houses that the States-general had been led, by a sense of present difficulties, to enter into negotiations for peace with the party now prevailing in that unhappy country, France. The debates which followed on the address were very warm, but the ministerial majorities were immense, being in the upper house 107 against 12, and in the lower house 246 against 73. Mr. Canning, who was fast rising into reputation, particularly distinguished himself in these debates. He urged that our failures on the Continent had been oc-

casioned by the misconduct and desertion of our allies; that the fall of Robespierre and the subsequent changes in the French government—changes which left untamed the rage for conquest—did not warrant this country to attempt a treaty of peace: that a pacification with that republic at present would bring so little security, that no diminution of our fleets and armies could possibly ensue, and our expenses must remain as great as though we were actually at war.

A.D. 1795. On January the 5th, a motion by Mr. Sheridan for a repeal of the

act suspending the habeas corpus, gave rise to a prolonged debate. Sheridan's motion being negatived, the attorney-general moved for a bill to continue the suspension; and this was finally carried in the commons by 203 against 53. The debates in the lords had a like issue.

On the 7th of January ministers called for an augmentation in the number of seamen and marines, stating that the service of the year, to be properly conducted, would require 85,000 sailors and 15,000 marines. In order to raise the deficient number expeditiously, and without the harshness and violence of impressing, Pitt proposed that a certain number of men should be furnished by each merchant ship on clearing out, in proportion to its tonnage; and that every parish in the kingdom should be made to contribute one man; and, after a few alterations, this plan was adopted.

By this time it was visible that, besides the United Provinces, both Prussia and Spain were on the point of breaking with the coalition, and concluding separate treaties with the French republic. Austria, too, our only steady ally, was in want of money, and thought herself entitled to call upon Great Britain for a supply. She did not, however, demand a subsidy, as the King of Prussia had done, but only a loan; and, whatever mistakes her generals had committed in the field, she had, unlike Prussia, made great and costly exertions in the common cause. On the 4th of February, Pitt delivered a message from the king, stating the earnest intention of the Emperor Francis to make still more vigorous exertions in the next campaign, but intimating, at the same time, the urgent necessity of a loan of £4,000,000 sterling, on the credit of the revenues arising from his imperial majesty's hereditary dominions. It was impossible for the opposition not to take notice of and denounce the foul misapplication of the subsidy granted to the King of Prussia; that money, as we have stated, had been chiefly employed, not on the Rhine or the Moselle, but on the Vistula—not against the common enemy the French, but against the hapless and almost helpless Poles. Sheridan, Fox, and others dwelt upon this iniquitous transac-

tion, and argued that the emperor was not more trustworthy than his Prussian majesty. The motion for complying with the emperor's demands was, however, carried by the usual great majority.

On the 23d of February, the minister, in opening the budget, made a statement of the entire force required for the service of the year; it amounted to 100,000 seamen in all, 120,000 regulars for guards and garrisons, 56,000 militia, 40,000 regulars for Ireland, and the West Indies and other colonies, besides fencibles and volunteers, foreign troops in British pay, and embodied French emigrants. The supplies demanded for these immense forces were £16,027,000. To this sum was to be added £200,000 annual subsidy to the King of Sardinia, whose strength and resources were nearly exhausted, and who would have required a subsidy of £2,000,000 to enable him to reconstruct and increase his army and fortresses. There were also sundry deficiencies in taxes, &c., to be made up at home, so that the sum total required by the chancellor of the exchequer, including the interest on the debt, somewhat exceeded £27,500,000. In order to make up this amount some new duties were imposed upon tea, coffee, raisins, foreign grocery and fruits, foreign timber, insurances, writs and affidavits, hair-powder licenses, &c., and, to increase the receipts of the post-office, the privilege of franking letters was somewhat abridged. To the outcry raised against these additional burdens Pitt replied by triumphantly reciting the extraordinary increase of the national commerce, which in 1794 had exceeded what it had ever been, even in the most flourishing year of peace.

In both houses the opposition made repeated efforts to drive the government into negotiations with the French republic, which they represented as much improved from what it had been during the reign of terror, which was true; and as well disposed to renounce conquest and propagandism, which was false. Lord Grenville urged in reply that there was still no government in France deserving of the name; that everything in that country was in a state of transition and change; that there was no power or party or body of men with whom we could safely or creditably negotiate; and he very justly observed that, though the guillotine had become less active in Paris, the reign of terror and tyranny was far from being over.

Mr. Canning had strong grounds for his assertion as to the alarming state of affairs and opinions in Ireland: that country was every day approaching nearer to the verge of open rebellion; but we reserve the narrative of events for the moment when the mask was thrown off and the sword drawn, in order to compress in one clear

view the circumstances which preceded, accompanied, and followed that unhappy outbreak.

On April the 8th, his Royal Highness the Prince of Wales was married to Caroline, Princess of Brunswick, daughter of the Duke of Brunswick. On the 27th of that month a message from his majesty was delivered to the House of Commons, recommending the settling upon the prince and princess a provision suitable to their rank and dignity. His majesty at the same time expressed great regret in informing the house that such settlement could not be beneficial, if means were not provided to extricate the prince from the incumbrances under which he laboured to a large amount; but he said that he had no idea of proposing the payment of his royal highness's debts in any other manner than by appropriating a part of his income, and the revenues of the duchy of Cornwall, to that purpose. Mr. Pitt having moved for taking the king's message into consideration, long discussions ensued in both houses on the subject, which were closed by an act passed on the 27th June, settling on the prince an annual revenue of £125,000, together with the rents of the duchy of Cornwall, estimated at £13,000. Out of this income, £73,000 was appropriated to the discharge of his debts, under the direction of commissioners appointed by parliament, and regulations were made to prevent the accumulation of new debts.

On the same day (the 27th of June) the session was closed by the king in person, who expressed his hope "that the present circumstances of France might, in their effects, hasten a return of such a state of order and regular government as might be capable of maintaining the accustomed relations of peace and amity with other powers;" but he also said that our main reliance must be on our naval and military forces.

Long before this the wretched remnant of the fine but small and ill-commanded army we had sent to the Netherlands and the northern frontiers of France was collected in barracks at home, or drafted off to other quarters of the world. The Dutch democratic party—who had done their utmost to facilitate the progress of the French, and discourage, thwart, and disorganize the forces which their stadtholder, the Prince of Orange, had collected after the fall of Nimeguen, and the retreat of the Duke of York behind the Waal—openly declared themselves everywhere for friendship and alliance with the Gallican republic, and for the entire abandonment of the old connection with great Britain, and the forced connection with Prussia.

Early in December, 1794, the Duke of York returned to London, leaving the command of the British and Hanoverian troops to Count Walmoden, a Hanoverian nobleman, said to be closely,

though illegitimately, connected in blood with the royal family of England. Walmoden, and the general officers under him, seem to have been fully possessed of the old notion that war was not to be waged in winter, and to have slept over the fact that in the north of Holland, the frost was often severe enough to convert the canals, and all the smaller rivers, into solid highroads, capable of bearing any weight that men could put upon them. The troops were in cantonments here and there, when, in the middle of December, after one or two nights of very hard frost, the French crossed the Waal on the ice, drove in the few videttes that were on the alert, and carried all the posts in the Isle of Bommel. But on the 30th of December, General Dundas, who was serving under Walmoden, advanced rapidly from Arnheim with only 8000 men, almost entirely British infantry, and drove the French, in spite of their vast superiority of number, and the batteries they had thrown up or taken possession of, back beyond the Waal, with a considerable loss in men, and the loss of several pieces of cannon. This affair was in the highest degree honourable to the stanch infantry of Britain; but it could be of little service to the common cause, for Pichegru soon collected a force of 200,000 men; the people of the country continued to favour the French; and the British army, with a miserable, and in part fraudulent commissariat, with an equally bad medical staff, was totally unprovided with most of the requisites indispensable in their hard and trying circumstances: the sick and wounded had neither medicines nor able surgeons to attend them; and often wanted food, covering, and proper places of shelter to receive them. The indignation of the army was the greater as it was perfectly well known that the government had provided, with a lavish hand, for all their wants, as far as money, orders, and injunctions could provide for them, and that a variety of those comforts needed by the soldiery in a cold, inhospitable country had been furnished by private patriotic subscriptions raised throughout England. The standing orders of the army, and the orders of the day issued by the Duke of York, were humane, clear, and altogether excellent; but unfortunately there was generally not only a want of an active superintendence over the execution of these orders, but also a want of knowledge and method in our officers as to the means of carrying them into execution. Moreover, Britain had not at that time any very numerous body of able well-trained surgeons to draw upon, and the pay offered was scarcely sufficient to tempt good surgeons into the service. Both on the medical staff and in the commissariat a great many French emigrants and other foreigners were employed *pro tempore*; and, although there

is no cloaking the iniquity of some of our own native-born subjects, it is easy to understand that most of these foreigners kept only in view the making of as much money as they could during the campaign. The medical department was improved more rapidly; but we never had anything like a good, honest, effective commissariat, until Sir Arthur Wellesley (the Duke of Wellington) was intrusted with the command of our forces in Portugal; and half of our military failures, and a very large portion of the excess in expense of all our expeditions, are attributable to this one great want. When the Duke of York quitted the army, and came home, matters became much worse, and the acts of cruel neglect and of peculation more flagrant and barefaced.

Five days after the French had sustained their unexpected and inglorious defeat at the hands of General Dundas, Pichegru crossed the Waal upon the ice with an enormous force. It became evident that nothing but a hasty retreat could possibly save the remains of the British army; and, after spiking their heavy cannon and destroying all the ammunition they could not carry off, they retired towards the Lech on 6th January. They were attacked on the 11th in a defile between Arnheim and Nimeguen by 70,000 men, but they nobly fought through and made good their retreat. Their sufferings from the cruel winter weather, from the inhospitality of the inhabitants, and from the incessant attacks of the French, were as great as ever army sustained; but the unconquerable fragment reached the mouth of the Elbe and embarked at Bremen for England. Our ally the stadtholder arrived in this country long before them, and as a fugitive; for the democrats at the Hague had made common cause with the Jacobin invaders, and had threatened destruction to the whole house of Orange. Thus Holland remained to France. But our ministers speedily took measures for preventing the wealth of the Dutch colonies from flowing to Paris, and before the close of the year the Cape of Good Hope, and all the places the Dutch held in the island of Ceylon, together with Chinsurah, Malacca, Cochin, Amboyna, and Banda, were taken possession of, with scarcely any resistance, by British troops. Other plans of easy execution were arranged for the seizure of the Dutch colonies in the West Indies and on the coast of South America; so that it was made evident that the Batavian republic would soon lose all those foreign possessions and plantations which had once poured a continuous stream of wealth into the United Provinces.

Such, for a long time, had been the equivocal conduct of the King of Prussia, that it excited little or no surprise, when, in the spring of this year, he concluded a separate treaty with the

French, whom he had been the first of all the coalition to assail. By this treaty, which was definitely settled at Basle, in Switzerland, on the 5th of April, the king ceded to the republic all the Prussian territory on the left bank of the Rhine. In secret articles or overtures the pride and cupidity of the court of Berlin were flattered by prospective aggrandizements at the cost of its old enemy and rival, Austria; and perhaps England's best and steadiest ally—as Frederick William had been so often represented to be by our ministry—already anticipated the rounding of his dominions by the occupation and sovereign possession of Hanover.

A link of the chain once broken, other links of the coalition were soon snapped asunder. Spain was exhausted by the efforts she had made; the Walloons in her service had all deserted to the enemy; the republican columns again threatened to advance even to the gates of Madrid; and, dismayed and discouraged, and urged on by a strong French party, Godoy, the royal favourite and prime minister, humbly sued for peace. A definitive treaty was signed at Basle on the 22d of July. Even as Prussia had done, the proud monarchy of Spain, with its Bourbon sovereign, fully recognized the French republic, and engaged to a reciprocity of friendship and good understanding. The French republic restored all the conquests she had made in the Spanish peninsula, and agreed to accept as an indemnity all the Spanish part of the island of San Domingo. Spain recognized the Batavian republic which the French had set up in the United Provinces, and stipulated that the same peace, amity, and good understanding should take place between the King of Spain and those allies of the French republic as between his majesty and the French. As a testimony of amity to his Catholic majesty, the French republic agreed to accept his mediation in favour of the King of Portugal, his relatives and allies the King of Naples and the Infante Duke of Parma, the King of Sardinia, and the other states of Italy; and also to accept his majesty's good offices in favour of other belligerent powers that should apply to him in order to enter into negotiations with the French government.

In the hopes of saving himself from the republican armies, which now almost pressed upon his frontiers, the Grand Duke of Tuscany had negotiated with France. This treaty with a prince of the house of Hapsburg, the near relative of the emperor, flattered the pride of the republicans; but it was otherwise of little importance to the interests of the coalition, while it was quite certain that it would be of no benefit to Tuscany, which would be overrun by the French just as soon as it suited their purpose to

overrun it. Overtures were made through Spain to detach the King of Sardinia and the King of Naples from the league; but the first of these sovereigns was heroically true to his treaties and obligations; and the second, though much less firm, rejected the propositions for the present.

The court of Sweden and the Protestant cantons of Switzerland recognized the French republic, and its dependency, the nominal independent Batavian republic; and, in consequence of the defection of Prussia, the Landgrave of Hesse-Cassel, and even George III., in his quality of Elector of Hanover, were compelled to engage to furnish no more troops to the emperor. Although our diplomatists had not been idle, they had but little to set off against the breach of treaties committed by Prussia. Ever since the commencement of the war strenuous efforts had been made to bring into the coalition the Empress of Russia: that sovereign had professed the greatest detestation and a scarcely credible dread of the French revolution and of its principles and propagandists. Though she had at one time been the correspondent and professed friend of D'Alembert, Diderot, and others of the French philosophes, whose writings had helped to make the present state of things in France, and to furnish the principles and dogmas upon which that democracy was acting, she had now put her interdict upon the introduction of all new French books into her not very literary dominions; had expelled a number of Frenchmen from St. Petersburg, and had made difficult the entrance of any individuals of that nation except royalists and emigrants; but, having a tolerably clear foresight that Russia had little to gain by becoming a party to the war in the west of Europe, she declined becoming an active member of the coalition. But at last she was induced to consent to a treaty of defensive alliance with Great Britain. This treaty, though not publicly announced or noticed in the British parliament till the next session, was concluded and signed at St. Petersburg on the 18th of February. To draw still closer the bonds which united us to the Emperor of Germany, a separate treaty of defensive alliance was concluded with him also, and was signed at Vienna on the 29th of May. Each power guaranteed to the other all its dominions, territories, &c., and engaged to succour its ally without delay in case of any attack. Added to these treaties with high Christian powers and crowns imperial—treaties which meant little more than that Russia might require the assistance of an English fleet, and Austria an English subsidy, there was, towards the close of the year, a treaty or agreement with the infidel and piratic Dey of Algiers! This last piece of diplomacy originated with Sir Gilbert Elliot, the viceroy of George III.'s

new and transitory kingdom of Corsica, who wished to gratify a people whom he had in many instances disobliged and irritated.

The French had fitted out all the ships in dock or on the stocks at Toulon which Sir Sidney Smith had failed of destroying; some other vessels had stolen round by the Straits of Gibraltar from Brest; and on the 28th of February, Rear-admiral Pierre Martin quitted the outer harbour of Toulon and took the sea with fifteen sail of the line, six frigates, and three corvettes—a force which he believed to be superior to our Mediterranean fleet under Vice-admiral Hotham. The Frenchman had positive orders to engage Hotham if he met him, and to drive the English out of Corsica: he had a powerful body of troops on board, and was accompanied to sea by the conventional deputy and commissioner Letourneur, who was to look to the proper execution of the orders which the convention had given. On the 13th of March the English came up with this fleet between Genoa and Corsica. Admiral Hotham had thirteen sail of the line and four frigates, and he had been joined by a Neapolitan seventy-four and two frigates of the same flag. The French would have borne away, but were prevented by accidents: in the end, after losing two ships of the line with 420 soldiers on board, they succeeded in escaping to Toulon.

On the 23d of June, Admiral Lord Bridport, with fourteen ships of the line and eight frigates, gave chase, off Port l'Orient, to a French squadron of twelve ships of the line and eleven frigates, and engaging them close in shore, where they were assisted by their own batteries, he captured three ships of the line, and greatly damaged the others, which with difficulty escaped into port.

Many encounters of detached ships took place in various parts of the world, and were generally to the advantage of the British. In the West Indies we were rapidly conquering all the French and Dutch islands, and annihilating the trade of our enemies.

The conflict of armies on the European continent, in which our troops had no share, may be briefly related. The old Austrian general Bender, on the retreat and dissolution of the grand army of the coalition, threw himself into Luxemburg with some 10,000 men. The republican government at Paris was certainly less active and energetic in war than it had been in the days of Robespierre and Saint-Just. Although Bender was entirely isolated and cut off from all succour, it was the 7th of July before he was reduced to capitulate, and then he and his numerous garrison were allowed to retire to Germany, upon condition of not serving against the French till exchanged. With the exception of Mentz, or Mayence, the republicans were now masters of

the whole of the left bank of the Rhine, and of the estuaries through which the Rhine flows into the North Sea, from Holland to Strasburg; and there was nothing on the right bank of that river to disturb this their *natural* frontier, except Mannheim, and a few other weak places. In the month of August, Pichegru, the conqueror of Holland, undertook the reduction of Mayence, which was occupied by imperial and Austrian troops: as preparatory steps, he crossed the Rhine, captured Düsseldorf, and occupied Mannheim. The emperor had kept his promise to England of making a great effort for this campaign; and old Wurmser, esteemed one of the best of his generals, was now advancing with a good army to effect a junction with Clairfait, succour Mayence, and drive the French from the left bank of the Rhine. Pichegru detached a division to prevent this junction: the division put a part of the Austrians to the rout; but, while the French were engaged in plunder, Wurmser's excellent cavalry advanced in full force, threw the French into confusion, and drove them back to Mannheim. General Jourdan, who had followed Clairfait at the end of the last campaign from the Netherlands, came up to co-operate with Pichegru in the reduction of Mayence, and, crossing the Rhine, he established himself on the right bank opposite to the town, to cover the siege and assist in it. There was another urgent reason for Jourdan's movement: he had exhausted the country where he had been quartered during the winter, the treaty with Prussia forbade him to levy military contributions within the marked line of neutrality; and, Mayence being once reduced, he must push forward towards the heart of Germany to find food and forage for his army. Clairfait, who had been strongly reinforced early in the spring, made a rapid and skilful advance, took Jourdan by surprise, obliged him to decamp hastily and leave part of his artillery behind him—harassed him by continually skirmishing with his rear until he reached Düsseldorf, and there re-crossed the Rhine. Clairfait then threw a considerable part of his army across the river into Mayence, in spite of the French lines drawn around that place. On the 29th of October, Clairfait ordered a general attack on the French lines: part of the garrison of Mayence made a sortie with the fresh columns that had been thrown into the place; and, while these forces, divided into two columns of attack, fell upon the lines in front and turned one of their wings, a flotilla of gunboats ascending the river began to cannonade the French in their rear. The whole plan of attack was beautifully conceived, was admirably executed; and, if Clairfait had only brought over all his forces from the opposite bank and risked them all in

this one great enterprise, nothing but a miracle could have saved the French army from entire destruction. As it was, the Austrians drove the republicans from their fortified lines with a terrible loss, captured their battering-train and most of their field-pieces, separated them into two divisions, and obliged one to retreat northward, while the other fled southward. The pride and confidence of the French were sadly damped; but if Clairfait had acted in force upon their retreating, disorganized columns, he might not only have annihilated them, but have cut off two other *corps d'armée* that were advancing by different lines of march towards Mayence. On the opposite side of the river old Wurmser, who was quite strong enough to have contended with Pichegru, without the aid of that large part of his army which Clairfait had left on the right bank, obtained many advantages over the republicans (who never properly recovered from the beating they got from his cavalry), gained by a simultaneous attack the bridge of the Necker, and drove Pichegru within the walls of Mannheim. After the retreat of Jourdan, and the flight of all the French forces from the lines of Mayence, neither Mannheim nor any other spot on the right bank of the river was a proper abiding-place for Pichegru: after strengthening the garrison, he quitted Mannheim, recrossed the Rhine, and was allowed to effect a junction with Jourdan. Wurmser, who would have done better if he had followed Pichegru with his own and all the troops which Clairfait had left on that side of the river—by rapidity of movement he might have rendered the passage of the Rhine a desperate or most costly affair to the retreating general—sat down before Mannheim, which did not surrender until the 22d of November. Wurmser then formed a junction with Clairfait, and the two presently recovered the whole of the Palatinate, and of the country between the Rhine and the Moselle. The successes of the Austrians emboldened them to form the project of penetrating once more into Luxemburg, the loss of which weighed heavily on the emperor's heart. They made preparations to this intent, but were, as usual, slow in collecting and concentrating the necessary troops; and Jourdan and Pichegru advanced along the Rhine by forced marches, and kept them in check. Some obstinate and sanguinary encounters took place; but the winter was now setting in with great severity; both republicans and imperialists were much exhausted by a campaign which had commenced very late in the season, but which had been exceedingly active and fatiguing while it lasted; and it was thought expedient to agree to an armistice, which was not to be broken by either party without ten days' previous notice, and during which both

belligerents were to confine themselves strictly to the positions they actually occupied.

On the side of Italy, where the French had gained such important advantages in the preceding campaign, their army, all through the spring and summer, was much neglected: the Austrians and Sardinians, or Piedmontese, now assisted by some troops from the south of Italy, comprising some brigades of Neapolitan cavalry that behaved very well, collected such a force in the passes of the Maritime Alps and the Apennines as gave them a decided superiority. Almost all that the republicans tried to do was to keep possession of the posts they had gained in 1794: and even some of these posts they lost; and they must have lost many more if the allies had been less sluggish and irresolute. Nelson, who had been detached with a small part of a fleet to co-operate with Devins, and who served on the coast of Nice, sometimes at sea, sometimes on land, doing soldiers' work (and much better than most soldiers did it), was driven almost frantic by the sluggish pedantic movements of the Austrian general to whom his Sardinian majesty had mainly intrusted the salvation of his kingdom.

The pacification of La Vendée, effected during this year, was of inestimable advantage to the French republic: it stopped a drain of blood more copious than any that had flowed in her exterior wars, and enabled her to liberate a large army from a most wearying service, and to employ it next year beyond her frontiers against her foreign enemies. It also reduced to despair the royalists in all parts of France, and, coinciding with the fall and discredit of Jacobinism, and the altered tone and system of the government, it reconciled not a few of the royalists to the convention, or to its successor, the directory. The reverses and frightful slaughter which the Vendéans had sustained at the end of 1793 had not prevented their rising again. Impelled by the fierce spirit of revenge, and goaded to desperation by the cruelties of Carrier, Rosignol, and the "Infernal Columns," they began early in 1794 to collect again in arms, and to make themselves formidable to the republicans, who had fondly believed that they were all but extinct. England gave but a stinted assistance to these unfortunate royalists, whose spirit expired with the death of their brave leader Charrette, who was taken prisoner and shot by the republicans. According to General Hoche, who finished the contest, the war of the Vendée cost the lives in all of 100,000 Frenchmen, and not a fifth part of the male population of the country was left alive.

In other parts of France the year 1795 was a red year. Though the guillotine was comparatively inactive in Paris, and though in that city the reaction against the terrorists was not very

sanguinary,' the retaliation was of a ferocious kind in many of the departments, and in some of the great towns of the south, murders and massacres were committed by the royalists and Girondins upon the overthrown Jacobins, almost as atrocious and as extensive as any that they had perpetrated during the reign of terror.

At Toulon the ultra-Jacobin party were treated with the same inhumanity that they had meted out to the royalists in 1793. The worst proceedings of the Parisian Septembrizers were imitated and repeated upon different objects; and, taking the whole of the south, the quantity of blood spilled must have been prodigious, for slaughters or assassinations were committed in every town, in every village and hamlet; and this fury of revenge raged, at intervals, for months, and even for years.

The Jacobin Club in the Rue St. Honoré was now closed for good. Billaud-Varennes, Collot d'Herbois, Thuriot, and thirteen other revolutionary chiefs, were thrown into state prisons, or were transported to the pestiferous swamps of Guiana.

The victory of the Thermidorians, as the party called themselves, who had overthrown Robespierre and the measures he had adopted, secured by degrees the dominion of the middle classes. The terrible Parisian cannoneers and gendarmes, who were too closely connected with the poorer inhabitants of the capital and its faubourgs, were

dissolved and completely disarmed; and a regular camp, with artillery constantly in battery, was established in the Tuileries gardens, under the windows of the convention, and a strong garrison of troops of the line was cantoned in and round Paris; and, finally, the entrance to the galleries of the convention was closed to the mob, who had made so fearful a use of their privilege.

While these things were doing, and while the Thermidorians and restored Girondins were riding rough-shod over the prostrate democracy, that hapless boy the dauphin, whom the royalists now fondly called their king, expired in the Temple, in the twelfth year of his age. He had been slowly dying for many months, but it was on the 20th Prairial, or 8th of June, that he was released from his sufferings. Reports were spread that he had been poisoned—idle reports—for the close confinement, and the affliction, and the frightful usage he had undergone, were more than sufficient to account for his death, and must have killed him long before if his constitution had not been a very strong one. Mousieur, the eldest of the dauphin's uncles, now assumed the title of king; and, in a religious ceremony which took place at the head-quarters of the emigrant army of Condé, the Prince of Condé pronounced the ancient formula: "Louis XVII. is dead; long live Louis XVIII."

CHAPTER XXXVIII.—CIVIL AND MILITARY HISTORY.—A D. 1795--1796.

GEORGE III.

The committee of eleven produce a new constitution for France—Its two chambers and their functions—The constitution accepted—Parties opposed to it—Their armed revolt in Paris—The suppression of the revolt committed to Napoleon Bonaparte—His decisive military arrangements—He defeats and scatters the insurgents—The five French directors—Discontent in London with the war—Political meetings in London—Unpopularity of the king at this crisis—Parliamentary bills for the protection of the king's person and prevention of seditious meetings—Motions for peace with France—They are unsuccessful—Publication of Burke's *Letters on a Regicide Peace*—Hopeless prospect of peace at this period—Lord Malmesbury sent to Paris with terms of accommodation—Their arrogant rejection by the directors—British acquisitions in the West Indies—Elliot's blundering vice-royalty in Corsica—Its termination—The British troops evacuate Corsica—The French attempt an invasion of Ireland—Their armament dispersed by a storm—The French resolve to invade Germany and Italy—Germany invaded by Jourdan and Moreau—Their advance and progress—Repeated defeats of Jourdan by the Archduke Charles—Jourdan driven back across the Rhine—Moreau compelled to retreat—The French invasion of Italy intrusted to Napoleon Bonaparte—His advance into Italy—His rapid successes—Summary of Bonaparte's first Italian campaign—His victories at Fombio and Lodi—Demands of the directory upon Bonaparte for money—His proceedings to satisfy their demands and maintain his troops—His victories over the Austrians under Beaulieu, Wurmser, and Alvinzi—The battle of Arcole.

HE committee of eleven, appointed to prepare organic laws, and modify and make fit for action the constitution of '93, soon produced a very new and a very different constitution; and this was accepted

and decreed by the purged convention on the 22d

of August. These philosophical statesmen had been brought at last to recognize the necessity of two houses or chambers; and therefore there were to be two elected chambers—one of ancients,

¹ The moderation of the Thermidorians in the capital has, however, been much overrated. Five days after the execution of Robespierre, no fewer than 10,000 new arrests had taken

or seniors, to be called *CONSEIL DES ANCIENS*, and to consist of 250 members, of the age at least of forty full years; and one of juniors, to be called *CONSEIL DES CINQ CENTS*, and to consist of 500 members, all of the age of thirty years at least. All the powers of legislation were to be divided between these two elective chambers or councils; and there was to be no third estate, or president,¹ or any other authority with the faculty of confirming or rejecting laws. As if to place the two councils in a state of direct antagonism and perpetual collision, the *cinq cents* were to have the sole right of proposing and discussing decrees and laws, or *seul l'initiative et la discussion des lois*; and the *anciens* were to have the sole right of confirming or rejecting the decrees and laws—their negative being made as absolute as any royal veto. The committees of government were to be suppressed; and the executive power, separated from the two councils, was to be vested in a directory consisting of five members, who were all to be elected by the two councils.

Assuming that the revolution could only be defended by the men that made it, and that this new constitution could be made to march properly only by its authors, the convention issued two supplementary decrees, importing that two-thirds of the present members must remain or be re-elected; and that for this time the active citizens sitting as electoral assemblies should only have free choice of one-third; and that, in default of the re-election of those two-thirds, the convention should fill up the vacancies themselves.

On the appointed day, the constitution was accepted and ratified by the townships of France, the primary assemblies voting with overwhelming majorities for a thing they neither understood nor had examined. Oaths again volleyed through France—oaths to live or die by this glorious republican charter. But in Paris a very mixed opposition instantly began to show itself; for each party had hoped to gain something by a new election, and now there was to be only the third of an election! Ultra-Jacobin republicans, men who continued the party or the principles of Romme, Ruhl, and Bourbotte; the shuffling middle men of the convention, who never knew what party to be of, and who were of all parties by turns; the constitutional monarchists, and the disguised ultra-royalists, all joined in shouting usurpation; in declaring that the supplementary

decrees plainly showed that the ruling conventionalists were determined to preserve their tyrannical power at all hazards—that they wanted to perpetuate themselves. Section Lepelletier beat to arms; and during the whole of the 12th Vendémiaire, or the 4th of October, a committee sat in the convent of Filles St. Thomas, in the Rue Vivienne, surrounded by guards with fixed bayonets and muskets primed, and calling upon all the sections to arm and fight for the freedom of election, and the overthrow of a set of greedy, ambitious, blood-thirsty usurpers. With a consternation as great as that of the section, the convention ordered Menou, the general of the interior, to march, disarm, and disperse the conspirators. Menou marched accordingly, and with a considerable force; but he was brought to a dead halt in the Rue Vivienne by seeing the muzzles of muskets protruding from every door, gateway, and window, and by hearing a terrible chorus of most resolute shouts; and after hesitating for a few minutes, during which a good many of his volunteers skulked away, he returned speedily to the convention, who deprived him of his command, and ordered him under arrest as a traitor. Next they named Barras as a proper man to take the command of the troops, and put down the insurrection. Barras had acted in this capacity before, and particularly on the critical night when Robespierre was extinguished in the Hôtel de Ville; but Barras, though he had served under the old régime, was no soldier, and had a decided aversion to exposing his own person; and this time most people thought that there would be hard fighting. Some deputies very opportunely thought of Napoleon Bonaparte, the young officer who had contributed so materially to the taking of Tonlon, and who had since distinguished himself in the war of Nice and the Maritime Alps. This adventurous young officer, who had owed his promotion to the rank of brigadier-general of artillery to the younger Robespierre, with whom he had lived in the closest intimacy, had fallen into disgrace, had been dismissed the army, and had even suffered a short imprisonment after the revolution of the 9th and 10th Thermidor, being then evidently judged by the Thermidoriens to be a decided ultra-Jacobin and Robespierriest. After lying under arrest for a fortnight—which time, it is said, he chiefly occupied in studying the map of Upper Italy—he had been liberated by the convention, and had been allowed to serve out the remainder of the campaign of 1794; but ever since the spring of the present year he had been in Paris vainly soliciting employment. He had been offered the command of a brigade of infantry in the Vendée, but that appointment he had refused. He had entertained some thoughts

place in Paris alone for imputed terrorism. The same measures were applied to the rest of France, and generally the prisons were filled by new political offenders faster than they were emptied of the old ones. This could not have been done if pains had not been taken previously to disarm all the *poor or true sans-culottes*.

¹ "If we admit a president," said Faublas Louvet, who was again figuring as a lawgiver, "some day a Bourbon might be elected to that office."

of going to Constantinople, and entering into the service of the sultan. At the critical moment—on the night of the 12th Vendémiaire—when Menou was dismissed, he was sitting in the gallery of the house. He was well known to Carnot, Tallien, and other members of the convention, as a man of head and of action; and it is added that either Carnot or Barras himself said, "I have the very man we want for this business: it is that little Corsican officer, who will not stand upon ceremony!"

The young brigadier was instantly called before the committee of cinq cents; and after some hesitation and considerable embarrassment, he consented to accept the command under Barras, and to do all the needful work. There was no time to lose. He sent Adjutant Murat to secure and bring up all the artillery which had been removed from the Tuileries to the camp of Sablons. Murat, with such men as he could most speedily collect, made a rush for the spot; section Lepelletier, with the same intention, was already in motion for the camp; but the brave and rapid son of the innkeeper and postmaster of Cahors got there first, and made sure of the guns. These were only guarded by some twenty men: a few minutes and Murat would have been too late. While the convention sat in permanent session through the night, Bonaparte quickly drew his lines of defence round the Tuileries, and along the adjoining quays on the north bank of the Seine. He had about 5000 regular troops under arms, and the 1500 or 1800 patriots of '89; but his main reliance was upon the cannon, which he loaded with grape-shot and placed at the head of the various avenues through which the insurgents must advance. He sent 800 muskets, with ball cartridge, into the convention, with the hope that the honourable members would make good use of them in case of extremity—a proposition which is said to have made the honourable members look very grave. Betimes in the morning of the 13th Vendémiaire—the 5th of October, and the anniversary of the march of the Parisian mob to Versailles—the sectioners were in motion; but many of the national guards did not answer the call to arms; several of the sections were altogether backward, and long delays ensued. At length, about the hour of noon, section Lepelletier seized the church of St. Roch, and drove in some pickets near the Pont Neuf. Then there was another pause, which lasted till near four o'clock in the afternoon, Bonaparte wisely waiting to be attacked, and his adversaries hesitating as to how it was to be done, or waiting for more force. Having been anticipated by Murat at the camp of Sablons, they had no artillery—apparently not so much as a single gun; the number of their national guardsmen is variously stated at 20,000,

30,000, or 40,000. They were commanded, or at least headed, by General Danican, a brave officer of noble birth, General Duhoux, the Count Maulévrier, and Lafond de Soule, who had belonged to the garde du corps of Louis XVI. When section Lepelletier first came in sight of the conventional troops, they waved their hats, and intimated by other signs and words that they wished to fraternize. Women with dishevelled hair ran between the two armies, crying "Peace! peace!" But none of these appeals made the smallest impression on the men that manned the guns; for things were not now as they were on the 10th of August, 1792, when the cannoneers stationed to defend the Tuileries turned, at the first call of the insurgent people, the mouths of their guns against the palace. A little after four o'clock a part of the sections began to move in several columns along the quays and the Rue St. Honoré. As soon as they were within musket-shot, they were ordered to disperse in the name of the law; they answered by discharging their muskets, and thereupon Bonaparte's gunners opened a murderous fire of grape-shot and canister. The effect was instantaneous and decisive, for, although some desperate men returned to the charge once or twice, and attempted to carry the guns, the mass of those who had come into action ran from the open ground under cover of the houses and churches, and into the side streets where the cannon shot could not reach them. The party which had occupied the church of St. Roch attempted to maintain themselves, although their position lay exposed to the fire of the artillery: it was here that the greatest number of lives were lost, but when about 200 had fallen the post was evacuated. A few hundred that clustered about the Théâtre de la République were dislodged by a few shells. According to Bonaparte's own account, the fighting, which had not properly begun till half-past four, was all over by six. Faint attempts to erect barricades in the streets were defeated by rapid movements; and the scattered and panic-stricken insurgents, being followed into their several sections, were disarmed during the night. The victory was complete; the ill-combined sectioners, who would soon have turned their arms against each other if success had attended them, could never rise again. The victors, though not very moderate in their vengeance, were incomparably less sanguinary than any triumphant party had hitherto been.

The house now formed itself into an "Electoral National Assembly," to complete in its own bosom the two-thirds—that is, to name themselves the members that were to remain, and the members that were to go out to make room for the third who had been elected by the people, or by their electoral colleges. Next, they divided them-

selves, according to their several ages, into "Council of Ancients" and "Council of Five Hundred;" and all this being done, they proceeded to elect out of their own body or bodies the five directors. The directors thus chosen were Sièyes, La Réveillère-Lepeaux, Rewbell, Letourneur, and Barras. They were to preside in rotation, each for three months at a time; and he who presided was to keep the great seals and sign for the whole directory. Every year one-fifth of this directory was to be renewed; that is, one director was to retire annually, and make room for a new one. By this rapid rotation all the leading members of the convention might hope to be directors in their turns. A military guard and a sort of civil list were conferred upon them, and the palace of the Luxembourg was appointed for their residence. Sièyes, out of antipathy and hatred to his colleague Rewbell, or through calculation, or perhaps out of a vain desire to show that, if his perfect constitution did not work quite so well as its admirers had anticipated, it was because those intrusted with its execution did not perform their duty ably or honestly, very soon resigned, and was succeeded by Carnot. Except La Réveillère-Lepeaux, all these first directors had been Montagnards and ultra-Jacobins.

Notwithstanding the confident predictions of ministers in the last session of parliament, the dearness of bread and general scarcity of provisions had increased in Great Britain, and the poorer classes had certainly suffered severe privations ever since the beginning of the year. The successes of the French, and the defections from the coalition, together with some harsh practices used at home for recruiting the army, had to some extent rendered the war unpopular. The common council of the city of London passed, by a vast majority, a petition for peace, wherein was contained a severe criticism on the origin and conduct of the war, and Southwark and various other cities and boroughs followed this example. Counter-addresses were indeed procured by ministers, but their tone was thought to be but faint and languid. The political societies took advantage of the prevailing discontents, and laboured hard to give them growth and increase. At the end of June a numerous meeting was held in St. George's Fields to petition for annual parliaments and universal suffrage. A riot was apprehended, but the day passed over with nothing worse than some very bad speeches. The harvest, however, had been very abundant; bread was becoming comparatively cheap, and the worst cause of alarm was gradually subsiding by the month of October. On the 26th of October the London Corresponding Society called a general meeting in the fields between Islington and Copenhagen House. The multitude that as-

sembled was vaguely computed at 50,000; but it was a fine day, and it appears that the majority of those present were merely seeking a little amusement. The speeches, delivered by three professional demagogues, were excessively violent; but again there was no rioting. Ministers had, however, taken the alarm, and had convoked parliament for an unusually early day.

On the 29th of October, as the king was going down to the House of Lords to open the session in person, he was surrounded by a numerous mob who hooted and groaned at his majesty, and clamorously demanded peace, the dismissal of Mr. Pitt, and cheaper bread. As the state coach came opposite to the ordnance office, then in St. Margaret Street, a pebble or a marble thrown by a vigorous hand, or a ball discharged from an air-gun, went through one of the glasses and passed between the king and Lord Westmoreland, who was in the coach with him. On going back from the house to St. James's Palace, his majesty was again hooted and pelted.

In the meanwhile the speech from the throne had made the most of the check which the French had received from the Austrians on the Rhine. It also said that the ruin of their commerce, the diminution of their maritime power, and the unparalleled financial embarrassments of the French seemed to have induced them to have some wish for peace; and it gave the assurance that any disposition on their part to negotiate for a general peace, on suitable terms, would be met on the part of his majesty with an earnest desire to give it the fullest and speediest effect.

On the 6th of November, Lord Grenville introduced in the House of Lords a bill "for the safety and preservation of his majesty's person and government against treasonable and seditious practices and attempts." And on the same day a bill was brought into the commons by Pitt, "for the prevention of seditious meetings." These bills, which went to restrict the right of the people to assemble for petitioning the crown and the legislature, and for discussing political subjects, were warmly opposed in all their stages and in both houses as violent and unnecessary encroachments on popular liberty and the privileges granted or acknowledged by our constitution, but they were both carried by majorities even larger than usual; for many men, without any rational link, had chosen to connect the meeting in the Copenhagen Fields with the outrages offered to the king; and others were of opinion that the unchecked harangues of the Thelwalls and Hodsons, the Binnses and the Gale Joneses, might lead the people into excesses. In this frame of mind the majority would probably have voted the bills in perpetuity; but it was thought proper to limit their duration to three years.

On the 8th of December a message from the king was delivered to both houses, stating that the present order of things in France would induce his majesty to meet any disposition for negotiation on the part of the enemy with an earnest desire to conclude a treaty for a general peace; and that his majesty hoped that the spirit and determination manifested by his parliament, added to the recent and important successes of the Austrian armies, and to the continued and growing embarrassments of the enemy, might speedily conduce to the attainment of this great object.

After the Christmas recess, Mr.

A.D. 1796. Grey, in the commons, made a motion to bind the country to a peace, complaining that, contrary to general expectation, the ministry, in lieu of opening negotiations, were making preparations for continuing the war. Pitt said that there was a sincere desire of peace if it could be obtained on honourable terms, but that the country could not break her faith with the allies that remained true to her, or consent to any arrangement which should leave the French in possession of Belgium, Holland, Savoy, Nice, &c.; and he added, that it was for ministers to determine when and how negotiations should be opened. Mr. Grey's motion was negatived by 190 against 50.

On the 10th of March the same honourable member moved that the house should resolve itself into a committee to inquire into the state of the nation. In his speech he dwelt upon the enormous expenses and the hopeless prospects of the war. Within the last three years £77,000,000 had been added to the national debt, and the country was less able to endure taxation than before. The opposition committed a political error in constantly repeating that England was ruined and never could compete with France; and Pitt bitterly accused them of taking pains to encourage the French to assume the arrogance of dictating the terms of peace. Mr. Grey's motion was negatived by 207 against 45. A few weeks later, on the 6th of May, he moved a long series of resolutions on the misapplication of the public money; but the order of the day was also carried against this motion by a majority of 209 to 38. On the 19th of May the session was closed by a speech from the throne, which expressed the happy effects experienced from the provisions adopted for suppressing sedition and restraining the progress of principles subversive of all established government.

In the course of the summer, Burke, to persuade or to shame a part of the country out of its fears, and to prove that there was more danger in treating with the French than in fighting with them, published the two first of his celebrated *Letters on a Regicide Peace*. These two letters, the last of his writings he lived to give to the

world, and the two others that were published after his death, are to be classed among the most splendid efforts of his great mind. The war had been conducted on a very different system from the one he had proposed; but the monstrous errors which had been committed did not make him despair of the final result, provided only a check could be given to that despondence which had seized upon many minds, and which the opposition were inculcating and promoting. "To a people," said he, "who have been once proud and great, and great because they were proud, a change in the national spirit is the most terrible of all revolutions!" Nevertheless Pitt considered himself obliged to continue some overtures which had been made to Barthelemy at Basle. Mr. Wickham asked whether the directory were desirous to negotiate with Great Britain and her allies on moderate and honourable conditions, and would agree to a meeting of a congress for this purpose. Barthelemy replied, that the directors sincerely desired peace, but must positively insist on keeping Belgium, or all the Austrian dominions in the Low Countries, as they had been formally annexed to the French republic by a constitutional decree which could not be revoked. Moreover, at the very same time the directors were fostering and entertaining at Paris a number of Irish revolutionists, and were contemplating a grand expedition to Ireland to co-operate with our rebellious subjects, and to convert that country into another small dependence. Nay, to such length had matters gone, that in the preceding month of June the directory had concluded a treaty with Wolfe Tone, Arthur O'Connor, and Lord Edward Fitzgerald, the leaders of the Irish revolutionists, who had smuggled themselves over to Paris for that purpose; and, though all unknown to his lordship, a copy of that secret treaty was lying not many yards from the spot where they, in October, pretended to enter upon a pacific conference with the noble English envoy.

In the autumn, not, we believe, with the slightest hope of bringing the negotiation to any admissible end, our government actually applied for passports for an ambassador and suite to go to Paris. "Thus," says Thiers, who can still chuckle over the matter, "the English aristocracy were reduced to sue for peace to the regicide republic! . . . This striking proceeding on the part of our most implacable enemy had something glorious in it for our republic!" As Thiers feels now, even so felt (but only much more intensely) the republicans then. The step raised their presumption and confidence by many degrees: it was a gigantic *faux-pas* in politics, from which the trumpet tongue of Burke ought to have warned every statesman, every Englishman;

its effects were likely to be as mischievous as all the blunders united which had been committed in the conduct of the war; but the opposition had driven for this, and Pitt had thought it necessary to prove to the nation that a peace with France was not attainable. Lord Malmesbury and his numerous retinue arrived in Paris on the 22d of October. The five kings of the Luxemburg (the directors were fast assuming a very regal state) appointed their minister of foreign affairs to confer with his lordship, who proposed mutual restitution of conquests as the fundamental principle of a treaty. The directors intimated that England had better treat by and for herself, and leave her allies to shift for themselves. When the mock negotiations, which were enlivened on the part of the French by many insolent sallies, had lasted six or seven weeks, Lord Malmesbury, in reply to a haughty message, told the directors that there could be no further negotiations; and on the next day, the 19th of December, his lordship was told that his further presence in Paris was totally unnecessary, and that he and his suite must take their departure within forty-eight hours. Rejoicing in the opportunity of insulting a lord, the low-bred directors added, that a common courier could do the business as well as he, if the English government were disposed to accept the conditions of the republic. They were encouraged by the victories of Bonaparte in Italy, and stimulated by the difficulty of providing for their military population if peace should be established.

Persevering in their old system, the English government sent out some large reinforcements to the West Indies. We had already more sugar colonies than we needed, and most of the French and Dutch colonies were wretchedly unhealthy (charnel-houses to the British troops that were sent to them); but the managers of the war are entitled to the benefit of the doubt, whether, without actual possession of the French islands, we could have kept our own in anything like a tranquil and thriving state.

By this time Sir Gilbert Elliot had made the island of Corsica too hot for him and the small English force there; he had entirely alienated the affections of the islanders, and had quarrelled with nearly all the English officers about him: he had so disgusted General Sir Charles Stuart, that that brave and high-minded man had sent in his resignation and returned to England. After driving the venerable Paoli (without whom the English would never have been there, nor Sir Gilbert have been made a viceroys) into an obscure retirement in the interior of the country, he had driven him, in his extreme old age, into another exile, by sending him an intimation that he must immediately leave the island. The Cor-

sican peasantry began to turn their arms against the English, the French party raised their heads, and it was evident that some great effort would be made from the opposite continent to assist them. So effectual was this hostility that our government transmitted orders for the evacuation of the island. On the 8th of October, Spain was driven by the French to declare war against Great Britain; and she had fitted out a fleet to co-operate with the republicans some time before this. But for the wonderful intelligence, decision, and gallantry of Captain Nelson, Sir Gilbert Elliot would have passed from his viceregal government to a French prison. But, threatening to bombard the town about their ears, the commodore imposed respect on the revolutionary committee of thirty who had taken upon them the government of the island, and sent their guards scampering out of the town; and quietly commencing the embarkation on the 14th of October, he saw that work completed on the 19th, just as the great Spanish fleet was coming in sight of Cape Corso. All private property was saved, and our public stores, to the value of £200,000, were gotten safely on board. On the very next day the French troops, who had been pushed over from Leghorn, and who had landed at Cape Corso under cover of the Spanish ships, marched into the citadel of Bastia only one hour after the rear of the British had spiked the guns and evacuated it. Nelson was the last man that left the shore: having thus, as he said, seen the first and the last of Corsica. He had captured forts and fortresses, fighting on land better than our professional soldiers; and after quitting the island he fought a most gallant action at sea with some of the Spaniards.

The most important operations of the French navy were connected with a descent upon Ireland. On the 17th of December, a fleet, numbering forty-three sail, of which seventeen were of the line, succeeded in getting out of Brest. On board were 25,000 men, choice infantry and cavalry, who had been tried in the war of the Vendée; a great quantity of field artillery, ammunition, and stores of every description; a good many spare muskets and bayonets to put into the hands, and some red liberty night-caps to put upon the heads of the Irish patriots, or insurgents, or rebels. The fleet was commanded by Vice-admiral Morand de Galles, Rear-admirals Richery, Nielly, and Bouvet; the commander-in-chief of the army was Hoche, a young sergeant in the gardes Françaises when the revolution began. Fearful of encountering our Channel fleet, separated by a storm, and navigating with confusion and rashness, this fleet and army suffered greatly, and did nothing. Seven or eight of the ships entered Bantry Bay; but the troops on board

could not venture to land. One ship of the line had already gone down with 1400 people on board; other vessels foundered or were driven

BASTIA, ISLAND OF CORSICA.—From a drawing on the spot by Capt Percy Fraser, 1792

on shore; and the remainder soon made all the haste they could to return to Brest. Of forty-three sail, thirty-one arrived in port in bad condition—seven had been captured by the British.

On the Continent the republicans had been more successful, though even there their fortunes were chequered—Carnot, as one of the five directors, now entirely monopolized the war department. Under his auspices, but not at his original suggestion—for the idea, obvious in itself, had occurred to Dumouriez, Moreau, Pichegru, Napoleon Bonaparte, and 100 officers besides—it was resolved, early in the year, to attack Germany and Italy at the same time, in order to divide the emperor's forces; and, in case of the complete success of both the attacking armies, that of Italy was to move through the passes of the Tyrol or of Carinthia, effect a junction with the army of Germany in Bavaria, or farther on in the hereditary states of Austria, and then the two were to advance upon Vienna, and impose the terms of peace there. Pichegru, who had fallen out of favour with the directory, was superseded by Moreau, and this able general, and Jourdan, who had been foiled and beaten by Clairfaut the preceding year, undertook the Ger-

man part of this great plan. Jourdan, who had 63,000 foot and 11,000 horse, driving back some Austrian corps from the ground they had conquered on the left bank of the Rhine at the end of the last campaign, invested the renowned fortress of Ehrenbreitstein, on the right bank of that river, immediately opposite to Coblenz. The emperor's brother, the Archduke Charles, who had taken the command of Clairfaut's army, which now amounted to about 70,000 foot and 20,000 horse, advanced rapidly with a part of it to the Rhine, defeated one of Jourdan's divisions under General Lefebvre, and forced Jourdan to relinquish his siege, and take up other positions.

But while the archduke was thus occupied by Jourdan, Moreau, who had about 72,000 foot and between 6000 and 7000 horse, dashing across the Rhine at Strasburg, some 150 miles higher up the river than Coblenz, captured, on the 24th of June, the fortress of Kehl, and after a series of victories advanced towards the heart of Suabia, his progress being facilitated by the rapid drafts made upon the army of his opponent, old General Wurmser, to reinforce the emperor's armies in Italy.

When the campaign opened Wurmser had not 60,000 foot to oppose to Moreau's 72,000, but his cavalry was superior in number, as in nearly every other quality—he having at one moment upwards of 20,000 horse. At one draft 25,000 men were withdrawn from Wurmser's army, and sent through the Tyrol into Italy; and in a short time the veteran general himself was obliged to hurry to the defence of Lombardy. On the 26th of June, the archduke, with the mass of his forces, marched up the Rhine in order to check Moreau. Jourdan, thus disembarassed, re-crossed the Rhine, and, finding nothing to oppose him except a small army of imperialists under Wartensleben, he pushed forward, and, after a series of skirmishes rather than battles, took Frankfort, Würzburg, and other towns. Moreau kept advancing on nearly a parallel line, his army and Jourdan's, *en échelon*, presenting a front which extended more than sixty leagues. It was by the imperative order of Carnot that the two armies thus spread themselves in order to turn both wings of the imperialists. The Archduke Charles perceived the error, and, narrowing his own front, and gradually bringing nearer to a converging point the separate forces of Wartensleben and Wurmser, he slowly retreated, fre-

¹ A week or a fortnight before the Brest fleet sailed, our ministers ought to have been fully aware of its destination. Early in December, an American vessel, laden with 20,000 stand of arms and cannon, was taken by an English man-of-war, on the shrewd suspicion of being bound for Ireland, which she unquestionably was. "She was a good emblem of American peace. Her name was the *Olus Branch*, with a covered cargo of arms."—Letter from Lawrence to Burke, in *Epistolary Correspondence of the Right Honourable Edmund Burke and Dr. French Lawrence*. Our American kinsmen had made very strenuous efforts to revolutionize Ireland on their own account during their war of independence, and now a very numerous party of them, partly through spite but more through the love of lucre, were willing to assist the French.

quently disputing the ground, but determined not to hazard a battle until his retiring forces were all brought so near to each other that he might fall with a superior force either upon Jourdan or upon Moreau. As the French advanced triumphantly, and with the appearance of so little opposition, some of the contingent corps, who, on the whole, behaved indifferently, quitted the imperial army and disbanded, and several of the states of the empire sued to the directory for a separate peace, which they obtained upon condition of paying enormous contributions. Still extending his front, and moving over a good deal of the ground which our great Duke of Marlborough had traversed in his Blenheim campaign, Moreau captured Ulm and Donauwörth on the Danube, and was preparing to

opposite side of the Rhine. In his retreat Jourdan had lost 20,000 men, and nearly all his artillery and baggage. Moreau, who was too far away to the right to render any assistance to Jourdan, could neither advance nor maintain himself where he was, on the Bavarian frontier: he therefore began his famed retreat, which lay through the Black Forest, on the 25th of September. Moreau had still 70,000 men, who had suffered no serious disaster. The imperial general Latour, who was nearest at hand to follow him, had not above 24,000 men; and some scattered corps did not join his standard with sufficient rapidity to enable him to contend successfully with the republicans. Latour, pressing too close on Moreau's rear, sustained a defeat on the 2d of October at Biberach. The republicans got safely through the valley of Hell and the whole of the Black Forest; but when they reached the banks of the Rhine they found the victorious Archduke Charles ready to meet them, with a force equal, or perhaps somewhat superior to their own. Moreau, at the end of his too much praised retreat, found himself compelled to fight two battles, and both battles were to him defeats. On the 19th of October he was beaten at all points, at Emmendingen; and, on the 20th, in spite of his formidable position among the rocks and cliffs of Schliengen, he was beaten again; and nothing but a violent storm, and the pitchy darkness of the night and the roughness of the ground, which prevented the splendid Austrian cavalry from acting, enabled him to get his disheartened columns to the safe side of the Rhine.

The Archduke Charles had saved Germany, but, owing to the invasion of Jourdan and Moreau on this side, the much smaller republican army of Italy had subdued all the north of the Italian peninsula. The command of this smaller army, which took the field much earlier than the army or the two armies on the Rhine, was given to the aspiring young man who had "killed the people for the regicides" on the critical 13th Vendémiaire, and who had since then married Madame Josephine Beauharnais, a native of Martinique, widow of Vicomte Alexandre de Beauharnais, who had served as a general in the republican armies, and who had been guillotined during the reign of terror, which had also consigned his fair relict to a prison. This very graceful captivating woman was linked in a close friendship with the fascinating Cabarus, who now bore the name of Tallien, the daring man who had been the first to beard Robespierre in the convention, and who, in consequence of that deed, had obtained a large share of political power and patronage. The Beauharnais was also exceedingly intimate with Director Barras,

ARCHDUKE CHARLES OF AUSTRIA — From a print after Kreutinger

cross the river Lech into Bavaria, and thence to move onward to the defiles of the Tyrol, on the Italian side of which the republican army was at the moment completely victorious, when, on the 24th of August, the Archduke Charles, who had gathered some reinforcements in the valley of the Danube, and who had rapidly executed his admirably designed movements, fell upon Jourdan with a superiority of force, and completely defeated him at Amberg. The Austrian prince then followed the fleeing republicans to the Maine, and gave them another tremendous beating, on the 3d of September, at Würzburg. Still pressing on the rear of the republicans, who fell into a miserably disorganized state, he defeated them again on the 16th of September, at Aschaffenburg, and drove them with terrible loss to the

¹ Victor Hugo, "*C'est lui*."

and enjoyed the friendship or patronage of other powerful individuals. It was unfair to say that the young Corsican owed his appointment to this marriage; but it would be unreasonable to doubt that Josephine contributed to it. It was Barras and Carnot that proposed to give the command of the army of Italy to Bonaparte, as the fittest man for it, and the other three directors, after some hesitation, assented. He arrived at head-quarters, at Nice, on the 26th of March. He found the disposable forces amounting to about 50,000 men, but badly provided and in a wretched state of indiscipline. The combined army of the Austrians and Piedmontese amounted to 60,000—in Bonaparte's reckoning to 75,000 men—and was now under the command of Beaulieu, a gallant veteran. It was stretched along the ridge of the Apennines, at the foot of which the French, as in the preceding campaign, were advancing. Not waiting to be attacked, Beaulieu descended from the heights, and on the 11th of April he met the advanced guard of the French at Voltri, near Genoa, and repulsed it. At the same time D'Argenteau, who commanded Beaulieu's centre, traversed the mountains of Montenotte to descend upon Savona, and thus take the French in flank. But when more than half his march was completed, D'Argenteau met a French division of 1500 men, who threw themselves into the old hill redoubt of Monteleghino, which in a manner shut up the road of Montenotte. The fate of the campaign, and perhaps the then young republican general, lay within that old redoubt. D'Argenteau attacked it three times with all his infantry, but Colonel Rampon maintained the post; and this gave time to Bonaparte to march round by night by an unguarded road to D'Argenteau's rear; and, before Beaulieu, who was on the left, or General Colli, who was on the right with the mass of the Piedmontese troops, could come up to his support, D'Argenteau was defeated, and driven in disorderly retreat beyond Montenotte. The young republican general had now pushed into the valley of the Bormida, between the two disjointed wings of the allied army. Beaulieu and Colli hastened to repair this disaster, by re-establishing their communications; but Bonaparte was too quick for them, and by two attacks, one at Millesimo on the 13th of April, the other at Dego on the 14th, Colli and the Piedmontese army were completely separated from the Austrians, and Provera, with an Austrian division of 2000 men, was obliged to lay down his arms. On the 15th, a mistake committed by Wukassowich nearly retrieved the fortune of the allies; that general with 5000 Austrians came suddenly from Voltri, where Beaulieu had been victorious over the French, ran upon Dego, where he expected to

find his countrymen, but where, instead, he found Massena, with a division of the French army, little prepared for any attack. Wukassowich made a brilliant charge and scattered the French division; but General Laharpe came down with reinforcements, and Bonaparte himself, dreading the fatal consequences of a defeat in his rear, hastened to the spot with still more troops. Then, after the most heroic conduct, Wukassowich was obliged to retire. As the republicans debouched through the valley of the Bormida into the rich plains of Piedmont, Beaulieu retreated in good order to the Po, to defend the emperor's Milanese territories, leaving Colli and the Piedmontese army to shift for themselves. Bonaparte instantly turned against Colli, who had taken post on the western declivities of the Apennines at Ceva, drove him from that post, followed him to Mondovi, dislodged him there, and pursued him beyond Cherasco. Betrayed by part of his army who had been proselytized, and now badly served by the rest, pressed by a superior force, and looking in vain for aid from Beaulieu, Colli at length retreated to Carignan, close to Turin. By this time all the provinces of Piedmont south of the Po were open to the republican invaders, the capital itself was almost at their mercy, and the resources of the country were consumed. Vittor Amadeo sued for a truce, which Bonaparte granted in consideration of having the key-fortresses of Cuneo and Tortona put into his hands. The directory soon after extended the truce into a treaty of peace, which his Sardinian majesty paid for by delivering up all the other Piedmontese fortresses and all the passes of the Alps, and by ceding to the French republic for ever Savoy, Nice, and some Alpine tracts of country. The poor old king did not long survive this ruinous peace, dying broken-hearted on the 16th of October. Immediately after concluding the truce Bonaparte marched against Beaulieu, drove him from the Po, beat him in a sharp battle at Fombio, between Piacenza and Milan, and made him fall back upon the river Adda. The Austrian general occupied the town of Lodi and its bridge across the Adda, which last he defended with a numerous and excellent artillery; but, with that want of *ensemble* or compactness which attended nearly all the operations of all these generals, he stationed his infantry too far off to be able properly to support the artillery. On the 10th of May, Bonaparte, after a terrific conflict, carried the bridge of Lodi, when, as he said himself many years afterwards, the idea first flashed across his mind that he might become a great actor in the world's drama. Beaulieu, with an army now demoralized and panic-stricken, made a faint attempt to defend the line of the Mincio;

but, after throwing a garrison into Mantua, he withdrew behind the Adige into the Tyrol. On the 15th of May, Bonaparte made a triumphal entrance into Milan, where the French had many converts and partizans. All Lombardy was now at the feet of the conqueror except Mantua, and that fortress was soon blockaded. And now began a system of plunder—a plundering of friends and foes and helpless neutrals—which had never yet been equalled.

The troops were to be supported, the officers were to be enriched by the spoils of Italy; and the five directors at the Luxemburg were incessantly calling upon the general for money—money—more money. Bonaparte himself says, that, besides clothing and feeding, and abundantly paying his army, he remitted to them 50,000,000 francs during his first Italian campaign. Until the emperor should send another army, there was absolutely nothing in Italy to offer any valid resistance to these insatiable plunderers. Wherever resistance showed itself on the part of the desperate Italian people, it was quenched in blood. The fair city of Pavia was for a night and a day given up to plunder, debauchery, and every species of violence and crime. Villages were burned together with those who dwelt in them. Advancing southward, Bonaparte showed how the republicans respected neutrality by overrunning Tuscany, taking possession of Leghorn, putting a garrison in it, seizing and selling by auction the English, Portuguese, and other goods found in the warehouses of that great free port, and commanding the native merchants to deliver up all property they had in their hands belonging to any enemies of the French republic. The next to be plundered were the states and possessions of the poor old helpless pope; and about this work the unbelievers went with great zest. On the 18th of June, a marauding column entered Bologna, and at once laid hands on the Monte di Pietà. Another division entered Ferrara and did the same. Pius VI. despatched envoys to sue for terms, and on the 23d of June, Bonaparte granted an armistice at the following price.—15,000,000 francs in cash, and 6,000,000 in provisions, horses, &c., &c.; a number of paintings, ancient statues, and vases, and 500 manuscripts to be selected out of the Vatican library by commissioners sent from Paris; the cession of the provinces of Bologna and Ferrara, the cession of the port and citadel of Ancona, and the closing of all the Papal ports to the English and their allies.

Bonaparte was recalled from this easy and profitable work by intelligence that Wurmser was coming against him with part of the imperial army which had retreated before Moreau. The German veteran descended from the valley of

Trento with from 50,000 to 60,000 men. Blind as ever to the fatal consequences of dividing his forces, Wurmser split his army into two, moving himself with the larger half along the eastern shore of the Lago di Guarda, and sending Quosnadovich with the other division along the western bank. Bonaparte, who had raised his blockade of Mantua, and concentrated his forces, instantly threw their entire weight upon Quosnadovich, crushed him at Lonato, drove him back into the mountains, and then, turning quickly round, faced old Wurmser with a force now nearly double that of the Austrians; and, in two bloody battles fought near Castiglione, on the 3d and 5th of August, the dull, but brave old man was defeated, and driven back into the Tyrol, with the loss of his artillery and several thousand men. Bonaparte followed him up the lower valley of the Tyrol, defeated an Austrian division on the 4th of September, and entered as a conqueror into the city of Trento. Descending the valley of the Brenta, Wurmser again entered Italy and advanced to Bassano, where he was joined by some reinforcements from Carinthia. But his active young opponent followed close upon his rear, and all that the veteran could do was to throw himself into the important fortress of Mantua with some 18,000 men, the wretched remnant of his army. It was the 14th of September when Wurmser got within the walls of the Virgilian city. By the end of October, as the snows were beginning to whiten the ridges of those Alps, two fresh Austrian armies were descending into Italy.

But, again, these two armies, instead of being united in the mountains, out of the reach of the enemy, and then poured down on the plain as one torrent, were allowed to come dribbling in different directions, and to get into the presence of the French divided and far apart. Marshal Alvinzi descended from Carinthia upon Belluno with 30,000 men, while Davidowich with 20,000 men moved down from the Tyrol. The two armies united would hardly have been a match for Bonaparte, who could bring at the least 45,000 men into action; but as it was arranged, they had between them to traverse nearly one-half of the breadth of Italy before Alvinzi and Davidowich could join at the appointed spot, between Peschiera and Verona, whence they were to march together to Mantua, where Wurmser was to be released, and the general with the Sclavonic name moved at a snail's pace. With the mass of his forces Bonaparte rushed to meet Alvinzi, and gave him battle at Le Nove on the 6th of November; but, instead of defeating him, he himself sustained a terrible repulse, and retreated next day towards Verona to pick up the shattered columns of Vauboise, who was retreating

before Davidowich. Contrary to expectation, Alvinzi, overcoming every obstacle, reached the heights of Caldiero, in front of Verona. But, instead of finding Davidowich there, he learned that that sluggard, or arch-traitor, had been reposing himself for ten blessed days at Roveredo, between Trento and the Lago di Guarda, and was still there or far away in that neighbourhood. Thus left to himself, Alvinzi was attacked, on the 12th of November, by Bonaparte, who attempted to dislodge him from Caldiero. This proved fruitless; the Austrians stood on those heights like rocks, and after considerable loss the French were compelled to retreat again into Verona. For a moment the young Corsican's heart failed him; but he soon roused himself, and, marching quietly out of Verona in the night of the 14th of November, and moving rapidly by a cross-road that ran through a marshy country, he got close to Villanova, in the rear of Alvinzi. The Alpone, a mountain stream, almost dry in some seasons of the year, ran between the French and Villanova, and was traversed only by the narrow stone bridge of Arcole. Bonaparte made a rush at the bridge, but found it defended by two battalions of Croats and Hungarians with some artillery. Three times the French column attempted to storm it amidst a shower of grape-shot and musketry, and three times reeled back with terrific loss, many of the men ran away along the narrow causeway which led up to the bridge and plunged into the marshes for safety. Bonaparte himself was thrown from the causeway into a marsh, and was very near being taken, for the Croats and Hungarians rushed across the bridge and swept everything before them. A charge of French grenadiers drove back the enemy, and extricated their general when he was up to his middle in mud and water, and almost surrounded. By this time Alvinzi had changed his front, and advanced from the heights of Caldiero, upon which the battle became general. It

lasted for three days, and was by far the hardest fought in all these Italian campaigns. If Davidowich had been at hand with only half of his 20,000 men, or if old Wurmser, leaving Mantua to take care of itself, had come up while Bonaparte was sacrificing his best men in obstinate and fruitless efforts to carry the bridge of Arcole, or when the French army was divided, one part on one side of the Alpone and the rest on the other side, the invaders must have been exterminated. But so bright an hypothesis was not to be realized by Austrian generals, or by any other generals for many a year to come. Undisturbed in flanks and rear, Bonaparte fought on, with a terrific loss to his own army; and yet, after all, he did not carry the bridge of Arcole. The attacks of the 15th were renewed on the 16th. On the 17th the Corsican general threw a bridge over the Alpone, and sent Angereau across to advance along the left bank, with a strong column to take the defenders of the bridge in flank. Angereau succeeded in his object and gained possession of the village of Arcole. Alvinzi then made his retreat upon Vicenza and Bassano, where he took up his winter-quarters. The French estimate his loss at 4000 in killed and wounded, and as many in prisoners; they do not state their own loss, but it must necessarily have been immense.

On the same day that Alvinzi began his retreat from the left bank of the Adige, Davidowich, as if waking from a drunken sleep, came blundering down by Ala to the right bank of that river, and entered the Italian plains between Peschiera and Verona; but Bonaparte, who had now nothing else to do, turned against him with his superior and victorious forces, and presently drove him back to Ala, to Roveredo, and the steep hills that overhang the Tyrol pass. Thus ended what was not incorrectly called the *third* Italian campaign of the year 1796; and thus Bonaparte had beaten successively Beaulieu, Wurmser, and Alvinzi.¹

¹ The year 1796 was signalized by the complete execution of the formal and final partition of Poland, after the compulsory abdication of Stanislaus on the 25th of November, 1795. Of this deed, the chief political crime of modern Europe, a great writer says—"Thus fell the Polish people after a wise and virtuous attempt to establish liberty, and a heroic struggle to defend it—by the flagitious wickedness of Russia—by the foul treachery of Prussia—by the unprincipled accession of Austria—and by the short-sighted as well as mean spirited acquiescence of all the nations of Europe. Till the first partition, the sacredness of ancient possession, the right of every people to its own soil, were universally regarded as the guardian principles of European independence. They gained strength from that progress of civilization which they protected and secured; and the violation of them seemed to be in a great degree precluded by the jealousies of great states, and by the wise combinations of the smaller communities. Confederacies were formed long wars were carried on, to prevent the dangerous aggrandizement of states by legitimate conquest. To prevent a nation from acquiring the power of doing wrong to others was the great object of negotiation and war. These principles were just and wise, as the preservation of the balance of power was in truth the only

effective security of all independent nations against oppression. But in the case of Poland a nation was robbed of its ancient territory without the pretence of any wrong that could justify war without even those forms of war which could bestow on the acquisition the name of conquest. It was an attack on the balance of power, the great network of national independence itself. It is a cruel and bitter aggravation of this calamity, that the crime was perpetrated under the pretence of the wise and just principle of maintaining the equilibrium—as if that principle had any value but its tendency to prevent such crimes—as if an equal division of the booty bore any resemblance to a joint exertion to prevent the robbery. But in truth, the equality of the partition did not hinder it from being the very worst and most dangerous disturbance of the balance of power. It left the balance between three powerful states as it was before; but it destroyed the balance between the strong and the weak. It strengthened the strong and it taught them how to render their strength irresistible by combination. In the case of private highwaymen and pirates, a fair division of the booty leads, no doubt, to the harmony of the gang and the safety of its members, but renders them more formidable to the honest and peaceable part of mankind."—*Sir James Mackintosh*.

CHAPTER XXXIX.—CIVIL AND MILITARY HISTORY.—A.D. 1796—1798.

GEORGE III.

Meeting of parliament—Debate on the budget—Difficulties of the Bank of England—Remedial measures of parliament—Mutinies in the fleets—Proceedings of the mutineers—Mutiny of the Channel fleet at Portsmouth—Mutiny at Sheerness—Richard Parker, its leader—Suppression of the mutinies—Naval victory of Jervis off Cape St. Vincent, and of Duncan off Camperdown—Caricature invasion of Britain by the French—The war in Italy—Successful operations of the French—Bonaparte's advance into the Venetian dominions—Venice occupied and revolutionized by the French—Bonaparte's negotiations with Austria—Peace of Campo Formio between France and Austria—Its terms—Revolutionary movements in Paris—Reaction of the French royalists against the directory—Bonaparte interposes in behalf of the directory—Their power restored and their opponents banished—Re-assembling of parliament—Symptoms of revolt in Ireland—Sympathy of the Irish with the French revolution—They adopt the example—The chief Irish revolutionists and their proceedings—Their negotiations with the French directory—Detection of their conspiracy—Apprehension and death of Lord Edward Fitzgerald—The Irish revolutionists break out into open revolt—They are defeated and suppressed—General Humbert arrives from France to their assistance—He is defeated and compelled to surrender—Defeat of a French squadron bound for Ireland—Colonel Coote's unsuccessful attack on Ostend—Capture of Minorca by Admiral Duckworth—St. Domingo abandoned by the British troops—Aggression of France upon Switzerland—The Swiss defeated—The French enter Berne—Oppression of the Papal government by the French republicans—Revolt in Rome—The French troops take possession of the city—They depose and banish the pope—They revolutionize Piedmont—Bonaparte embarks for the conquest of Egypt—Malta surrenders to him—The French army arrives at Alexandria—Battle of the Pyramids and defeat of the Mamelukes—Nelson's pursuit of the French fleet—His signal victory over it at Aboukir Bay—Its total destruction—Turkey declares war against France—Encouragement afforded by Nelson's victory at Aboukir Bay—Russia in alliance with Britain against France.

SOON after the close of the last session, the British parliament had been dissolved by proclamation. The new parliament assembled on the 6th of October, 1796, and was opened by a speech from the throne, in which his majesty repeated his anxious wish for an honourable peace, and announced the intended fruitless and degrading mission of Lord Malmesbury to Paris. Allusion was also made to the success of our arms in the East and West Indies, and to the brilliant campaign of the Archduke Charles. The usual addresses passed without a division.

On the 7th of November, Pitt opened the budget. The money required by ministers was £27,945,000. Among the ways and means they proposed was a new loan of £18,000,000. There seemed to be, on the whole, a good English spirit in the house. Whatever Pitt said that was animating, as to the courage and resources of the country, and our capability of achieving the safety of Europe, our own glory and permanent advantage, was well cheered: but Fox, on the other hand, was heard in dead silence when he endeavoured to attribute the zeal shown in the new loan, called the loyalty loan, to a desire of peace.¹ It had been stated by Pitt, in his speech on opening the budget, that ministers had made an advance of £1,200,000, to the hard-pressed

emperor. On the 13th of November, Fox triumphantly moved "That his majesty's ministers, having authorized and directed, at different times, and without the consent and during the sitting of parliament, the issue of various sums of money for the service of his imperial majesty, and also for the service of the army under the Prince of Condé, have acted contrary to their duty, and to the trust reposed in them, and have thereby violated the constitutional privileges of this house." Pitt took up good ground, by admitting that it was an irregular act which he had hazarded, knowing his responsibility, but not doubting his duty; that he had had only a choice of difficulties, from the exigencies of our ally on the one side, and from the public panic, on account of the scarcity of specie at home, on the other. When Pitt sat down, the Hon. Charles Bathurst Bragge, treasurer of the navy, moved an amendment upon Fox's resolution, to the effect that the advance to the emperor, "though not to be drawn into precedent but upon occasions of special necessity, was, under the peculiar circumstances of the case, a justifiable and proper exercise of the discretion vested in his majesty's ministers by the vote of credit, and calculated to produce consequences which have proved highly advantageous to the common cause, and to the general interests of Europe;" and this was carried by a majority of 285 to 81.

The precipitate return of Lord Malmesbury

¹ Dr. French Lawrence to Burke. — *Epistolary Correspondence.*

from Paris was followed, on the 26th of December, by a message from the king to parliament, in which his majesty declared that the rupture of the negotiation did not proceed from the want of a sincere desire on his part for the restoration of peace, but from the excessive pretensions of the enemy, which were incompatible with the permanent interests of this country and the general security of Europe.

A.D. 1797. During the last year the directors of the Bank of England had several times represented to the chancellor of the exchequer their inability of supplying his rapid and increasing demands. The dread of an invasion had, moreover, produced a run upon the bank for specie, and certain opposition pamphlets and journals had done their best to increase this panic, as a likely means of overthrowing Pitt; not bearing in mind that it might have overthrown the country as well. On the 9th of February, the bank directors informed Pitt that to comply with his new request of making a further advance of £1,500,000 as a loan to Ireland, would most probably force the directors to shut their doors. In this alarming state of affairs, the privy council, on Sunday, the 26th, sent an order prohibiting the directors of the Bank of England from issuing any cash or specie in payment, till the sense of parliament could be taken, and measures be adopted for supporting public credit. This decisive step was announced to parliament on the next day by a royal message; and the subject was immediately taken into consideration by both lords and commons. The opposition testified as much glee as a noted smuggler is said to have done at seeing the old Custom-house on fire. This must crush the cold proud minister, who prided himself most of all on his financial ability, or nothing would. Fox exultingly gave notice that he should feel it necessary to move an inquiry into all the past transactions between the bank and the minister, and said several things very proper to keep up the panic, and destroy what little credit there was left at that moment. Sheridan, Whitbread, and others made motions with the same animus. Ministerial motions were carried in both houses for appointing by ballot a secret committee to examine into the affairs of the bank. In the meanwhile the bank was authorized to issue small notes. The secret committee soon reported that there was a clear balance or surplus belonging to the bank, of £3,826,890, exclusive of a debt from government of £11,666,800; that the bank had lately experienced a drain of cash, owing to the prevalence of alarm; that, as this alarm might continue, the bank might be deprived of the means of supplying the cash necessary for the exigencies of the public service; and that there-

fore it was proper to continue the measures already taken, for such time and under such limitations as should seem expedient to parliament. The commons having resolved themselves into a committee of the whole house to take this report into consideration, Pitt moved for a bill to continue and confirm for a limited time the restriction of the issue of specie by the Bank of England; and, after various clauses had been added, chiefly by ministers themselves, this bill was passed. The bank was to be authorized to issue specie to the amount of £100,000 for the accommodation of private bankers and traders; and saving and except to the army and navy, who were to be paid in cash, bank notes were to be a legal tender to all. The government immediately guaranteed a further loan of £2,000,000 for our ally the emperor.

While parliament was sitting mutinies broke out in the fleets, which gave far greater alarm than the bank suspending cash payments. For some time discontents had prevailed among the seamen, the principal subjects of which were the miserable smallness of their pay and of the Greenwich pensions, neither of which had been augmented since the reign of Charles II.; the very unequal distribution of prize-money, which gave almost everything to the admirals and superior officers, leaving next to nothing to the petty officers and the crews; the excessive harshness and severity of the discipline, and the haughty and tyrannical behaviour of many of the officers. Within three days, at the beginning of the month of March, Lord Howe, who still held the chief command of the Channel fleet, but who was then at Bath for the benefit of his health, received four petitions, from the *Royal George*, *Formidable*, *Ramillies*, and *Queen Charlotte*, soliciting the interposition of his lordship, as the seamen's friend, with the admiralty, in order that the seamen might in their turn experience an act of munificence like that which had been shown to the army and militia, in the provision made for an increase to their pay, and for their wives and families. Lord Howe, considering their tone rather mutinous, submitted the four petitions to Earl Spencer, the head of the admiralty, and wrote to the port-admiral, Sir Peter Parker, and to Lord Bridport, who was holding the command of the Channel fleet under him (Earl Howe). Sir Peter and Lord Bridport replied, that the petitions (three of which seemed to be in the same handwriting) were the work of some ill-disposed person; and in consequence of this reply, both Lord Howe and Earl Spencer thought that no danger was to be apprehended. But on the 12th of April the board of admiralty were startled by Sir Peter Parker, who reported that intelligence had been communicated to him of a regular plan, concerted, some time before, by the seamen,

to take the command of the ships from their officers, which plan was to be carried into execution on the 16th of April. Instantly orders were given by telegraph from London to Portsmouth for the fleet to proceed to sea. But, when Admiral Lord Bridport made the signal to prepare for sailing, the seamen mounted the rigging, instead of going to the capstan, and gave tremendous cheers—cheers of defiance. This astounding act was followed by others still more decisive: the men took all command from their captains and officers; they appointed “delegates,” two from each ship, who met in council in the great cabin of the *Queen Charlotte*, Lord Howe’s flagship; and there they wrote and issued orders to all the seamen of the fleet to take oaths of fidelity to the cause. By the 17th every man was sworn. They put on shore a good many officers whom they accused of oppression, keeping the others on board as prisoners or hostages; but at the same time they passed resolutions to maintain order and sobriety, and to pay all due respect to the officers on board from whom they had taken the command. To strike terror, ropes were then reeved (the sailors’ preparation for hanging) at the fore-yardarms of every ship, but they found no occasion to use this tackle, except for ducking minor offenders. There is no denying or concealing the fact—the men had been ill-paid, ill-fed, shamefully neglected by the country which depended upon them for its all, and in many instances harshly and brutally treated by their officers, and belly-pinched and plundered by the pursers. But not a drop of blood was spilled, nor, after the landing of the obnoxious officers, was there so much as an insult offered. Punishments were inflicted on all who got drunk, or misconducted themselves in any way. The mutineers allowed all frigates with convoys to sail, in order not to injure the commerce of the country. The thirty-two delegates drew up and signed a petition to parliament and another to the admiralty; their language was respectful, and their demands were very far from exorbitant. Government was now in an extremity of alarm. The board of admiralty was transferred to Portsmouth, and a kind of negotiation was entered upon with the mutineers. After some discussion it was notified to the sailors that their demands were complied with, and that it was expected that all would return to their duty. The delegates, however, declared it to be the general resolution that nothing could be agreed to which was not sanctioned by parliament, and guaranteed by the king’s proclamation; and one of the admirals having used menaces on the occasion, the mutiny bore a more hostile aspect than before. At length, Lord Bridport went aboard, hoisted his flag, and acquainted them that he brought

with him a redress of all their grievances, and the king’s pardon; the consequence of which was that obedience was immediately restored.

From April 23d to May 7th the fleet remained in due subordination, when a fresh mutiny broke out, on a suspicion among the sailors that the promises made to them would be violated. Lord Howe, whose influence in the navy was greater than that of any other person, then went down, and his addresses and assurances having fully satisfied their minds, they were again reduced to order. In all these measures the seamen lying at Plymouth concurred. On May 8th, the ministry laid before the House of Commons estimates for the augmentation of pay to the seamen and marines of the navy, the sum of which was stated at £436,000. Mr. Pitt, in moving for this grant, deprecated any discussion in the house of the case, and hoped that it would pass its judgment by a silent vote. The opposition, however, urged that the ministers had been culpably negligent in not having applied to the house sooner on the business, and a motion of censure to that purpose was made; it was, however, negatived, and a bill for the increase of pay in the navy, with a clause for continuing the pay to wounded seamen till cured, passed into a law. At the demand of the sailors, who charged them with oppression and tyranny, one admiral (Colpoys), four captains, twenty-nine lieutenants, seventeen master’s mates, twenty-five midshipmen, five captains of marines, three lieutenants of marines, four surgeons, and about thirteen petty officers, were withdrawn from the service, and others appointed to fill their places.

While these things were transacting in Portsmouth, a fresh mutiny broke out at Sheerness. At first it gave little alarm, as it was reasonably calculated that the terms which had satisfied Lord Bridport’s ships, and which were to be extended to all ships and fleets whatsoever, would satisfy the mutineers at Sheerness; but great was the consternation when, on the 20th of May, many of the ships lying at the Nore, and soon afterwards nearly all of those belonging to the North Sea fleet, hoisted the red flag, chose two delegates from every ship, and went much farther than their precursors had done, by electing a president, who styled himself “President of the Floating Republic.” This mutiny was, in fact, altogether different from the other; and it was met in a very different spirit by all classes on shore. The Portsmouth men had demanded nothing but a redress of long-accumulated and crying grievances; in the midst of alarm the sympathy of the nation went along with them; but these madmen at the Nore had been perverted by some floating demagogues, and had no grievances left to complain of, and no demands

to make but such as were ridiculous, or incompatible with the service; and, like so many other half or wholly jacobinized classes of men, they knew not what they were aiming at. It appears that their chief perverter was the very aspiring man they had elected for their president. This was Richard Parker, a native of Scotland, and at one time a little tradesman of Edinburgh, who had ruined his affairs by a too close attention to politics, and who had then abandoned his wife, and entered on board a man-of-war as a common sailor. The man had some education, and he had frequented debating clubs and reforming societies until he concealed himself an orator and a statesman. Under his direction a committee of twelve was appointed in every ship; and these committees decided upon all affairs, and upon the merits of the respective delegates. There were some minor arrangements, which showed how attentive a student Parker had been in the school of the Edinburgh clubs. On the 20th of May the delegates delivered "A Statement of the Demands of the Sailors," peremptorily insisting upon compliance as the only condition upon which they would return to their duty. This mutiny was the more alarming, as the position of the ships enabled them to establish an effectual blockade of the port of London. Two vessels laden with stores and provisions they seized and appropriated. The conduct of the Foxite opposition, who had done great mischief during the previous mutiny, by delaying the minister's bill in favour of the seamen, was at this present crisis unpatriotic in the extreme. On the 26th of May, when the mind of the country was wholly occupied and agitated by the daring conduct of Parker and his delegates, Mr. Grey rose in the House of Commons to move for a *sweeping reform in parliament*. He was seconded by Erskine, and supported by Sir Francis Burdett, Sir Richard Hill, Sir William Dolben, Mr. Smith, Mr. Pollen, Mr. Fox, the great leader, and others of his party. The vast majority of the house testified their disgust at the time chosen for agitating such a question, and the motion was smothered by a vote of 258 against 93. Not a man of the defeated party could have had the shadow of a hope that the motion would pass; but now they pretended to be driven to despair by its rejection, and by the numbers and obstinacy of the Pittites; and Fox and most of his friends instantly seceded from parliament, declaring their attendance there useless; retired into the country, and hoisted as it were the black flag of despair to the English people, or to the, at that time, very limited portion of the nation that was eager for a reform of the House of Commons. Some of the seceders returned to their seats, and attended occasionally to their parliamentary duties; but none of them

returned during Parker's mutiny, and from this time till the month of February, 1800, Fox spoke only three or four times in the house.

The members who remained at their posts behaved with becoming spirit, and imparted additional firmness to the government. The buoys at the mouth of the river were taken up, batteries were erected alongshore for firing red-hot shot, and a proclamation was issued declaring the ships in a state of rebellion, and forbidding all intercourse whatever with them. Fierce dissensions now broke out among the mutineers, who became sensible that their fellow-seamen in the other fleets and the whole nation were against them. For some time they had been sick of Parker's long speeches, and had deprived him of his presidency. On the 4th of June, the king's birthday, the whole mutinous fleet, to prove its loyalty, fired a royal salute and displayed all the gay colours and flags usual on such occasions, the red flag being struck during the ceremony on board every ship except the *Sandwich*, where Parker was. A day or two after this, several of the ships deserted the rebels, who pointed their guns at them, but did not fire, and went for protection either up the Thames or under the guns of Sheerness. In those that remained, the well disposed rose upon the determined rebels, and many wounds were given and some few lives lost. By the 13th of June the bloody flag had disappeared from every mast-head; and on the following morning the crew of the *Sandwich* carried the ship under the guns at Sheerness, and gave up ex-President Parker to a guard of soldiers, who carried him on shore. Parker was solemnly tried, and was hanged at the yard-arm of the *Sandwich* on the 30th. A few of the delegates were executed shortly after, some of the ring-leaders were flogged through the fleet, and others were left under sentence on board prison-ships; but the general good behaviour of our fleets at sea, and Admiral Duncan's victory off Camperdown, gave an excellent occasion for the exercise of royal mercy, and in October a general pardon was proclaimed. The mutiny at the Nore, which had madness for its origin and nothing but mischief for its end, was thus put down with (for the times) a very small sacrifice of human life. From the other mutiny may be dated the most rapid improvement in the management and condition of our sailors, with a proportionate improvement in the discipline and spirit of the men and the gallantry of their officers.

On the 20th of July the king prorogued parliament.

"The year of mutinies" was not altogether an inglorious year to the British navy. On the 14th of February the late Mediterranean fleet, under Admiral Sir John Jervis, fell in, off Cape St.

Vincent, with the great Spanish fleet, just come out of Cadiz under the command of Don José de Cordova, who had recently superseded Langara. The Spaniards had twenty-seven sail of the line, the English only fifteen; but the greater part of the Spanish crews were about equally destitute of seamanship and spirit; and Nelson, who was in himself worth a whole squadron of line-of-battle ships, was with Sir John Jervis, and executed all the daring and really brilliant part of the action. By breaking the line, by battering and boarding, four Spanish ships of the line, including one of 112 guns, were taken, and all the rest were driven into Cadiz and there blockaded. The news of this opportune victory reached London at the time of the panic caused by the state of the Bank of England, and had a great effect in reviving the national spirit. Sir John Jervis was made Earl St. Vincent, and Nelson a knight of the Bath.

On the 11th of October Admiral Duncan, with sixteen sail of the line, attacked a Dutch fleet of eleven sail of the line and four 56-gun ships, which had stolen out of the Texel during a storm, and which was on its way to join the great French fleet at Brest. The Dutch admiral, De Winter, his officers and crews, fought their ships in a very different style from the Spaniards—fought them like brave men and excellent sailors—like worthy descendants of those who had so long disputed with us the empire of the seas. Their inferiority of force was very considerable, and the only particularly glorious part of the action, on the side of the British, was the daring way in which they ran between the Dutch line, close in-shore, and the dangerous coast; thus setting an example which Nelson afterwards followed at the battle of the Nile. After a most obstinate combat, and a terrible loss in killed and wounded on either side, Admiral de Winter struck; and eight ships of the line, two 56-gun ships, and two frigates, remained as trophies of victory to the British; but they were little more than trophies, being maddled in their hulls like sieves, and otherwise so cut to pieces as to be nearly all incapable of repair. This victory off Camperdown excited a rapturous joy at home. Duncan was very properly elevated to the peerage. In the meanwhile, in the month of July, misled by incorrect intelligence, Nelson with a small force had made a very unfortunate attack on Santa Cruz, in the island of Teneriffe, which had ended in the loss of his own right arm and of the lives of some 200 of his men.

Before proceeding to the war on the Continent, we must mention a strange expedition of the French to the English coast, which occurred during the money-panic. On the 20th of February four vessels, three of them old French fri-

gates, came to anchor in the Bristol Channel off Ilfracombe. They had troops on board, but no attempt was made to land there, as the North Devonshire volunteers presently lined the coast. The ships stood over to the Welsh coast, and there, in a bay near Fishguard, the troops were disembarked. They advanced into the wild country of Pembrokeshire, apparently without knowing whither they were going. The alarm was spread rapidly; the Welsh collected on every hill and in every valley to oppose them; and more than 3000 men, including 700 well-trained militia, with Lord Cawdor at their head, marched directly against the invaders, who, without firing a shot, laid down their arms and surrendered as prisoners of war. There were 1400 of them, without artillery, but well supplied with ammunition. The men were in rags, and looked more like felons escaped from prison, than soldiers.

In order to strengthen the armies in Italy, the victorious Archduke Charles had been left weak on the Rhine. He recovered Fort Kehl at the beginning of the year; but Moreau, strongly reinforced, again reduced that important fortress, and defeated the Austrians in a great battle in the month of April. Nearly at the same moment Hoche, who commanded on the Lower Rhine, defeated General Krey; and other French divisions were again advancing into the heart of Germany, when their march was suspended by the intelligence that the emperor was negotiating for a peace with Bonaparte.

Both the young republican general and the old Austrian marshal had received reinforcements during the winter. Alvinzi, as early as the month of January, took the field with 50,000 men, intending not merely to relieve Wurmser, but also to drive the French from the whole line of the Adige; but he again divided his forces; was defeated at Rivoli on the 14th of January; and after General Provera, who had surrendered with 2000 men the year before, had surrendered with a division of 5000 men now, old Wurmser, being reduced to extremities for want of provisions, was obliged to capitulate in Mantua.

The pope was unable to pay the enormous contributions demanded from him. After the surrender of Mantua the French overran the greater part of the Papal States, scattered with a few shots some 6000 or 8000 very unwarlike troops in the pope's pay, took possession of the city and port of Ancona, and at Tolentino dictated new and still harsher conditions of peace to the helpless head of the Catholic church. By this time Austria had poured another army to the frontiers of Italy, and had given the command of it to the Archduke Charles. But this last Austrian army was composed almost entirely of raw recruits, and of the disheartened fragments of the forces of

Beaulieu, Wurmser, Davidowich, Alvinzi; and the archduke, instead of being left to his own genius and ready resources, was checked and embarrassed by the aulic council at Vienna. On the other side, the French, already superior in numbers, were flushed with victory; and General Bernadotte, who had quitted the army of the Rhine, joined Bonaparte with 20,000 men. After sustaining some terrible defeats in the month of March on the Tagliamento, the archduke retreated slowly and in admirable order towards Vienna, in the hope of receiving reinforcements from that capital and from Hungary, and of drawing the French into the hereditary states, where a population enthusiastically devoted to the emperor would be sure to rise *en masse* and attack them on their flanks and rear. The campaign was not hopeless; the archduke was full of confidence and ardour; the French, who had violated the continental territories of the republic of Venice, were apprehensive of an attack on their rear from that quarter. General Laudon was pouring through the valleys of the Tyrol with another Austrian division, was driving back the French detachments on the Upper Adige, and was almost on the edge of the plains of Lombardy. Bonaparte was full of anxiety; but, disguising this feeling, and suddenly pretending to deplore the horrors of war, and to be anxious, merely for humanity's sake, for a peace, he wrote a very flattering letter to the archduke, calling him the saviour of Germany, and representing England as the only power in Europe that had an interest in continuing the war. The archduke referred him for an answer to Vienna. Bonaparte was now at Judenburg, in Upper Styria, about eight days' march from Vienna; but notwithstanding the successes of Moreau and Hoche, there was no republican army in the valley of the Danube to co-operate with him, he had many streams to pass, and several dangerous defiles before him, and behind him the Lombard-Venetians, though without any aid from their timid, contemptible government, were actually rising in insurrection, it being reported among the people, who had many wrongs to avenge, that the French army had got inclosed in the mountain passes of Carniola and Styria, and would inevitably be compelled to lay down their arms.

The French, on their first advance into the Venetian dominions, and many months before any popular insurrection was heard of or thought

of, had made up their minds to overthrow that aristocratic republic, to appropriate all its territories on the Continent, together with the city of

THE GRAND CANAL AND DOGE'S PALACE, VENICE.—FROM PIOUT'S CONTINENTAL ANNUAL

Venice itself, seated on its hundred isles, to keep all this as an affiliated or dependent republic, or to barter it away (after having well plundered it) for territory elsewhere and other advantages.¹ In a secret article to the preliminaries Bonaparte now agreed to give the neutral state of Venice to Austria in compensation for her losses. This done, Bonaparte hurried back to the Adige, took a sanguinary vengeance for some disgraceful excesses which had been committed by the people of Verona and its neighbourhood, sent his propagandists into the city of Venice, to excite a mad democratic party into insurrection against the doge and the aristocrats by promising them liberty and equality, and by setting up the tree of liberty under the shadow of the winged lion in the square of St. Mark; roused the people to rebellion in Bergamo, Brescia, and other towns, got possession of the castles and other fortified places by pretending that he meant merely to keep them until a free, democratic, and essentially independent republican government could be settled by delegates and representatives of the people (in all these deeds a body of Poles, who had been so recently duped, betrayed, and then beaten out of their own country, were active and zealous co-operators with the French); introduced surreptitiously troops into Venice, and next, with something plainer than words, told the doge and the senate that the people must have a new constitution and form of government, and that they must resign; which the equivocating, heartless cowards did in the month of May. Bonaparte then took possession of the arsenal and docks,

¹ The correspondence of Bonaparte, published by Panckoucke fully establishes this fact which is proved by a mass of other evidence equally incontrovertible.

with all their stores and all the ships of war; a provisional government of the required democratic form was established, and the democratized people insulted their pusillanimous, degenerate nobles with impunity, sang the "*Ça ira*" with the French soldiery, and danced round the tree of liberty in the square of St. Mark in an ecstasy, and down to the last moment, without any foreboding that they and their country were to be given up to the hated rule of the Austrian Kaiser. At the same time, but with much less deception and difficulty, Genoa was democratized and affiliated. The shuffling senate and aristocracy of that once proud republic had hoped to preserve themselves by their neutrality, and their secret co-operation with the French; but one fine day in June the democrats of the city hoisted the red nightcap, and told them that their government was no longer compatible with the improved notions of the times. Four millions of livres were wrung from the principal nobility, and sent to the five kings at the Luxemburg; a French garrison took possession of the city, and of the mountain fortifications which gird it; and all who gainsaid what was done were put under arrest, while the peasants who attempted to defend their native mountains and their homesteads were tried by martial law and shot.

All this while negotiations were going on, and the young republican general was browbeating the Austrian diplomatists, now hinting that he might have gained much more for France by continuing the war, and now threatening to shatter Austria like a potsherd. As England was now clearly to be left in the war without a single ally, Pitt, as early as the month of June, intimated to the directory a willingness to enter into a new negotiation. The directors, who had taken up and echoed Bonaparte's note that France loved peace, agreed to the opening of conferences at Lisle. In the beginning of July, Lord Malmesbury repaired to that city, and continued there exchanging useless notes and receiving many insults until the middle of September, when he was ordered to quit the place within four and twenty hours. Again, as we believe, Pitt was driven into a humiliating negotiation without any expectation of concluding a treaty; and again the French, while pretending to negotiate and to blame the insincerity of the English cabinet, were stirring up insurrection and civil war in Ireland.

On the 17th of October the definitive treaty of peace between France and Austria was signed at Campo Formio, near Udine. The emperor ceded to France all the Netherlands, and the left bank of the Rhine, with Mayence, the great outpost and bulwark of Germany; he gave up, nominally to the natives, but virtually to the French, all

that he had held in Lombardy, acknowledging the independence of the Milanese and Mantuan states, under their new name of the "Cisalpine Republic;" and he consented that the French republic should have the Ionian Islands, which then belonged to Venice, and the Venetian possessions in Albania. The French republic, on its part *consented* (which was the word) that the emperor should take and keep Venice, and its territory in Italy as far as the Adige, together with Istria, at the head of that sea, and all Venetian Dalmatia, on the opposite side of the Adriatic. The Venetian provinces between the Adige and the Adda were to be incorporated with that political phantom, the Cisalpine republic. The emperor, who, in the case of Venice, had admitted the principle of taking neutral or friendly states as compensations from an enemy, was also to have an increase of territory in Germany at the expense of Bavaria, and his feudatory and relative by marriage, the Duke of Modena, was to have the Brisgau. Modena, Massa, Carrara, and all the Papal provinces of Bologna, Ferrara, Ravenna, Faenza and Rimini, as far as the Rubicon, were declared to be annexed to the Cisalpine republic aforesaid. Tuscany, Parma, Rome, and Naples were left to their old governments and monarchic institutions; but, except Naples, they were all in complete subjection to France and her liege vassals the new Italian republicans, who never ceased promoting plots and conspiracies against the said established governments. From these manoeuvres Naples itself was certainly not exempted.

Numerous turmoil, conspiracies, and changes had taken place in Paris. In 1796 the Montagnards and Jacobins made a terrible effort to recover the power they had lost; but their deep conspiracy was detected at the moment it was about to break out by the vigilant directors, who had organized a very complete system of espionage and treachery; and Gracchus Babeuf, betrayed by one Grisel, a brother-conspirator, was arrested by night, and all his papers, containing every particular of the plot, were found and seized. Forthwith all the chiefs of the conspiracy, as Vadier, Amar, Choudieu, Drouet (the hero of Varennes), Rosignol (whose name in the Vendée was "Devil"), Ricord, and a great many others, were captured. There was an attempt made to liberate them and arrest the directors; but it failed, and Gracchus Babeuf and Darthé were condemned to death, the rest to deportation. On hearing their sentence, Babeuf and Darthé stabbed themselves with concealed daggers; but, not doing the thing effectually, they were both carried to the scaffold in a half-dead state, and guillotined. These men were about the last of the honest fanatics of the revolution, and they left behind them few or none but selfish time-servers,

or men prepared by want of principle, or want of courage, to conform to the course of events, be it what it might, and to submit to that military despotism which was already forging for France. Before the trial and execution of Babœuf, which did not take place till March, 1797, the royalists in their turn began to conspire against the directory and the so-called republic. Two or three men, said to be secret emissaries of Monsieur, or Louis XVIII., were apprehended in January, and accused of attempting to seduce the soldiers in the camp at Grenelle. In the month of March, when the elections came on for one-third of the legislature, some of the ancient noblesse were returned; and these decided royalists soon formed a powerful coalition, in absolute opposition to the directory. In May, they were even strong enough to get General Pichegru elected president of the council of five hundred, and Barbé-Marbois president of the council of ancients. If Pichegru was not a royalist before, the depriving him of his high command in the army had made him one now: Barbé-Marbois was a warm and honest constitutional royalist. In the same month when, in conformity with Sièyes' last constitution, one of the directors went out, Barthelemy the diplomatist, who was also by this time suspected of royalism, was brought in to fill up the vacancy. Loud outcries were raised against the extravagance, corruption, and profligacy of the directional government; the full liberty of the press, so often promised, was demanded by the royalists; peace—peace even with England—was recommended, some of the severest of the decrees against the emigrants and nonjuring priests were actually revoked, and the coalition were evidently making considerable progress, when Director Barras secured the services of the astucious Talleyrand by making him minister for foreign affairs, and then appealed to General Bonaparte and the victorious army of Italy. Bonaparte hereupon despatched Angereau, one of the most devoted and most daring of his satellites, to Paris, with terrible addresses from the army of Italy, which were evidently Bonaparte's own compositions. "Tremble," said one of these significant addresses, "tremble, royalists! From the Adige to the Seine is but a step—tremble!" Besides sending army addresses, Bonaparte sent a few more millions of livres.

To overawe the two councils, numerous de-

tachments of troops were marched into Paris. Everything announced that a *coup d'état* or another revolution was at hand. Carnot hated royalty and royalists; but he hated three of his colleagues in the directory—Barras, Rewbell, and La Réveillère-Lepeaux—quite as much; he was enraged too at the tone of "that little Corsican," and, though he did not league himself with his new brother-director Barthelemy, or with the coalition in the legislature, he refused to co-operate in the energetic measures proposed by Barras and Rewbell. Therefore it was they determined that Carnot, that rabid republican, should be treated even as a royalist, and classed with Barthelemy in the *Dies Iræ*. The legislature, on the motion of Pichegru, decreed the immediate arming of the national guards, and the removal of the regular troops which had been brought into the capital or stationed around it. But Pichegru hesitated; others were all for acting according to law or the new constitution; and, while they were thus deliberating, Bonaparte's own Angereau took the command of the troops of the line in and round Paris, put some more grape and canister into their guns, and with 12,000 men, and forty pieces of artillery, surrounded the Tuileries, and stepped in to execute the order of the triumvirate—Barras, Rewbell, and La Réveillère—and arrest all their enemies. Pichegru, Willot, General Ramal, and about sixty other members of the legislature, were instantly arrested and transferred from the Tuileries to the Temple, charged with high treason. The triumvirate had also proscribed Carnot and Barthelemy; the first of these personages concealed himself, and afterwards escaped, but Barthelemy remained to be condemned and deported, or transported with his party. Fortunately, the Parisians had become sick of blood, and "deportation" was all the mode.¹ The proprietors, editors, and writers of forty-two journals (collectively an immense number) were also condemned to deportation to French Guiana. It was laid down as good, free, republican law, that for the future the directory should have the power of suppressing whatsoever journals, or newspapers, pamphlets, and books, it might think fit. Some cargoes of the deported were shipped off for the pestiferous settlement in South America; but a good many of them remained on the French coast, in prison or under strict police surveillance in the Isle of

¹ Few narratives of human suffering are more affecting or so full of harrowing details as the *Journal ou Témoignage de l'Adjudant Général Ramal, Commandant de la Garde du Corps législatif, &c., l'un des Déportés à la Guyane, &c., Leipzig, 1799*; and *Déportation et Naufrage de J. J. Aymé, ex législateur, suivis du Tableau de vie et de mort des Déportés, à son départ de la Guyane*, published at Paris without a date. Ramal escaped with Pichegru and some others in an open boat, and after much risk and suffering having reached, first the Dutch and then the British possessions in South America, went from Demerara to London

and Hamburg. Aymé escaped in a United States merchant vessel, and narrowly missed being lost on the coast of Scotland, near Fraserburgh, having been driven back from the Catgath by a storm of long continuance and great severity. The sufferings of the deported, which extended over so long a period, and were so many, began from the moment of their arrest, and from that moment they seem to have been treated with a systematic brutality that leaves little doubt that the object of their persecutors was to kill them by a slow death, while they got credit for humanely saving them from the guillotine.

Rhé. Merlin de Douai, a timid, submissive lawyer, and François de Neufchâteau, a man of letters, a writer of republican odes, and as servile as Merlin, were put into the directory to fill up the places left vacant by Barthelemy and Carnot. Such was the revolution or *coup d'état* of the 18th Fructidor.

The British parliament re-assembled on the 2d of November. The speech from the throne dwelt on the excessive pretensions of the French; the failure of the negotiations at Lisle, the flourishing state of trade and the revenue, our naval victories and our new conquests in the West Indies; and it once more recommended those vigorous exertions which alone could make peace attainable. As Fox and other great orators of the opposition continued in their secession, there was little interest in the very slight opposition offered to the addresses, or in any of the debates which followed during the session. The army and navy estimates were smoothly passed, and, as a beginning, supplies were voted to the amount of £25,500,000. Among the ways and means adopted was the trebling of all the assessed taxes.

A.D. 1798. At the end of April, when the sword of rebellion was all but drawn in Ireland, the minister demanded further supplies to the amount of more than £3,000,000. The money was voted with little opposition, as was a new increase of taxes to meet it. As the storm thickened in the west, as the Irish were fleeing to arms in all parts of the country, and as the French were not merely preparing to co-operate with them in the heart of that island, but also threatening to invade England with 100,000 men, a bill was readily passed for allowing men in the supplemental militia to enlist into the regular army; and another bill soon followed to enable his majesty to provide more effectually for the security and defence of the realm, and to indemnify persons who might suffer in their property by such measures as it might be thought necessary to adopt. The alien bill was revived, and the suspension of the habeas corpus act was renewed or prolonged.

Discussions on the state of Ireland were stopped by ministers and their majorities, as being only dangerous at so critical a moment. On the 29th of June the king prorogued parliament, with a good, manly, English-sounding speech, in which honourable testimony was borne to the public spirit of the nation.

Not less through the faults of the governed than through the faults of the governors, Ireland had never enjoyed any continuance of tranquillity, not merely since the Reformation, which introduced the capital, embittering difference of religion, but not even since its first connection with England in the 12th century. Since the period of the American war, when the Irish volunteers

were allowed to arm themselves, the turbulence had greatly increased. Generally speaking, the period from 1778 down to 1798 had been one of concession to the Irish Roman Catholics, who formed about seven-tenths of the population. Whilst the American revolutionary war lasted, and for some years after it ceased, the disaffected Irish took their inspiration from the other side of the Atlantic, and in many instances closely imitated the proceedings of the Americans. But, as soon as the eruption of the great volcano commenced in France, they fixed their eyes on that pillar of fire as that which was to lead them through night and darkness, and waves more perilous than those of the Red Sea, to the glorious light of day, and to regions more blessed than the Promised Land. From that moment the French revolutionists became the models of the leaders of the Irish reformers, some of whom, at a very early stage of the revolution in France, contemplated nothing less than a revolution in Ireland, and went over to Paris to be indoctrinated into the modes of making it, and to bargain for the *disinterested* assistance of the French. At the beginning of 1793, or almost immediately after the declaration of war against England, the ruling party in France (then Jacobin-Gironde) despatched a secret agent to Ireland to confer with the leaders of the Society of United Irishmen, and to offer them the aid of French arms for the liberation of their country. This emissary brought a letter of introduction to Lord Edward Fitzgerald, who had been dismissed from the English army for having frequented the Jacobin Club at Paris; for having been one, with Thomas Paine, and men of that stamp, at a great public dinner at Paris, where the most revolutionary and jacobinical speeches were delivered, and the hope expressed that England as well as Ireland, would soon be revolutionized *à la Française*. Soon after that unlucky dinner, he became acquainted with Madame de Genlis, and married her Pamela—her own illegitimate daughter by the Duke of Orleans, or Philippe Egalité.

In 1794, when the reign of the Jacobins and of terror was at its height, another secret emissary came over from France to Ireland. This individual, a subject of the king, an Irishman by birth, and a Protestant clergyman by profession, was the Rev. William Jackson. He conferred with Wolfe Tone, and many others of the Irish revolutionists, and repeated the promises of the French to assist them "in breaking their chains." This Jackson was arrested in Dublin soon after his landing, and was tried and condemned for high treason: but he made no confessions, he left government in the dark as to the extent of the conspiracy, and he escaped a public execution by committing suicide. A stop was put to

further concessions; and in Ireland, with at least as much reason as in England, every attempt at reform or change was reprobated. Wolfe Tone, who had fled to America, found at Philadelphia his friend Hamilton Rowan, who had also escaped from justice, a Dr. Reynolds, and other Irish patriots who had made their own country too hot for them. Hamilton Rowan (formerly the friend and guide of Muir), introduced Wolfe Tone to Citizen Adet, the minister or ambassador of the French to the American republic; and a negotiation for invading Ireland by a French army was opened forthwith. Tone himself tells us that he consulted at every step with Dr. Reynolds, Hamilton Rowan, and James Napper Tandy; that, being at length supplied with some money by Keogh, Russell, and other United Irishmen in Ireland, and furnished with a letter to the committee of *salut public* by Citizen Adet, he sailed for France to conclude his treaty there. He arrived at Havre-de-Grace on the 1st of February, 1796, and found that the French "are a humane people, when they are not mad," and that he liked them, "with all their faults, and the guillotine at the head of them, a thousand times better than the English." On arriving at Paris he was received by Carnot, and by General Clarke, then a sort of secretary-at-war, and afterwards the notorious Duke de Feltre, who told him that General Hoche should sail for Ireland with an irresistible army as soon as the directory could raise money to hire and equip transports.

The directory expressed an anxiety to see some agent or agents from the United Irishmen of a more exalted condition and of better known name and character. Lord Edward Fitzgerald, brother to the then Duke of Leinster, and Mr. Arthur O'Connor, nephew of Lord Longueville, and said to be lineally descended from Roderick O'Connor, King of Connaught, readily accepted the mission at the request of the chiefs of the United Irishmen. They left Dublin at the end of May, 1796, Lord Edward being accompanied by his French wife. They took London in their way; and during their short stay in that city Lord Edward dined at the house of an opposition peer, in company with Fox, Sheridan, and several other distinguished Whigs of the Fox party. From London the secret negotiators proceeded to Hamburg, where they began to treat with a French agent; and from Hamburg they went to Basle, and through Barthelémy negotiated with the directory. They were informed that an army for Ireland would soon be ready, and that Hoche would have the command of it. After a month's stay at Basle, O'Connor went into France to confer with Hoche, and to finish the negotiation; and Lord Edward returned to Hamburg, talking on

the road with his chance fellow-travellers in what appears to have been the most rash and puerile style. Hoche, having full powers from the directory, very soon concluded the treaty with O'Connor, and pledged himself that the expedition should sail in the course of the autumn. Lord Edward and O'Connor soon returned to Ireland; but Tone remained to come over militarily with Hoche and the French army. The fate of the expedition has been already narrated. Wolfe Tone went with it to Bantry Bay, running two narrow and terrible chances—the one of being taken and hanged, the other of being shipwrecked and drowned. He, however, got back safely to France, spent some months at the head-quarters of the army of the Sambre and Meuse, employing himself principally in attempts to corrupt the British soldiers and sailors that were prisoners of war in France, with a view of embarking them with the next invading army; for neither abroad nor at home in Ireland was the notion given up of another invasion. The winds of heaven had scattered the late armament, but another might be more successful. In the course of the spring of 1797, the chiefs of the United Irishmen, thinking it expedient to have a resident ambassador at Paris, despatched thither a Mr. E. J. Servins, with powers to act as their accredited minister, and with instructions to negotiate, *if possible*, a loan of £500,000 sterling. In the course of the summer "the Irish executive" sent over Dr. McNeven on a special mission, which was to urge the directory to hasten their preparations. The directory, who were then on the point of sending an ambassador to Lisle to meet Lord Malmesbury, and delude the English with a feigned negotiation for peace, told the doctor that they would soon be ready, and that the Batavian republic would have the honour of taking the lead in the invasion of Ireland with the fleet collected in the Texel. But that fleet, which could not get ready or would not venture out to sea until the month of October, was annihilated, as we have seen, off Camperdown. In the month of February of this present year, 1798, a most pressing letter was addressed by the so-called Irish executive to the French directory, urging them to send immediate succour, and stating that the people of all classes throughout Ireland then regimented, and partly armed, amounted to little less than 300,000 men. Talleyrand positively assured their agent at Paris that an expedition was getting ready in the French ports, which should certainly sail in the month of April. On the 28th of February, Lord Edward Fitzgerald's friend, Mr. Arthur O'Connor, Quigley or O'Coigley, an Irish priest, and Binns, an active member of the London Corresponding Society, were arrested at Margate, as they were on the point of

¹ Wolfe Tone's own *Diary*, published by his son.

embarking for France. A paper was found on the priest, addressed to the French directory, and earnestly inviting an invasion of *England*, which, it was calculated, would prevent our sending troops into Ireland. This paper, and the trial which followed, put government in possession of many important secrets; but a great deal had been unravelled before this time. Quigley, the priest, who died protesting his innocence of treason, and who really appears to have been less deeply engaged in the conspiracy than any of them, was found guilty, and was executed on Pennenden Heath; O'Connor was remanded on another charge of high treason, and Binns was acquitted. Some arrests were forthwith ordered at Dublin, and some more papers were found in a printing-office—the office where O'Connor had been publishing a revolutionary journal, called the “*Press*.” But much completer revelations were now about to be made, by one of the chief revolutionists. Several obscurer members of the Association of United Irishmen had played false before; but the great secrets of the society were not intrusted to such as those; and the government was anxiously looking for some higher and more fully informed traitor to that cause, when a Mr. Thomas Reynolds, who had *Esquire* written after his name, and who lived in what was called a *castle*, who had been deep in all the plots and intimate with most of the leading plotters, who was the nominal treasurer of a county and the appointed colonel for a regiment of the insurgent army, pretending that the United Irishmen were going much farther than he, in his innocence, had ever anticipated, and that his love of the constitution and the integrity of the empire induced him to betray his friends, but in reality being hard driven by debt, and filled with the hope of an immense reward, divulged all that he knew to a friend of government, and undertook to render further services to enable or assist the government to counteract the whole plan. A warrant from the secretary of state's office was forthwith placed in the hands of Major Swan, a magistrate for the county of Dublin, who, on the 12th of March, repaired to the house of Mr. Oliver Bond (a merchant, and one of the principal conspirators), where there was to be a great meeting, attended by thirteen sergeants in plain clothes, and by means of the pass-words—“Where's M'Cann? Is Ivers from Carlow come?” obtained admission to the meeting, and arrested all such persons as were there assembled. Dr. M'Neven, who had been on the special commission to Paris, Emmet, Sampson (both barristers), and Lord Edward Fitzgerald, were not at the meeting; but separate warrants being issued against them, M'Neven and Emmet were soon apprehended: Sampson fled to England, was

seized at Carlisle, and brought back to Dublin, but Lord Edward Fitzgerald concealed himself in Dublin and the neighbourhood, and was not discovered till the 19th of May. It appears that, on the part of government at least, the search after him had not been very active, and that, on account of his noble family and his numerous friends, his escape would gladly have been connived at. But seemingly he never contemplated escaping, but employed himself all the time he was under hiding, in arranging how the insurgents were to rise and march upon Dublin. He had fixed the 23d of May for the general rising. On being surprised, lying on a bed in the house of one Murphy, on the evening of the 19th, he behaved more like a madman than a hero, savagely shedding blood without the slightest hope of fighting his way out, for the house was surrounded by pickets, and a numerous and steady garrison were under arms in the streets of Dublin. When Major Swan entered the garret and showed his warrant, he sprung up like a tiger. Swan to stop his attack, fired a pocket-pistol at him, but without effect. A soldier now entered, and at that instant Lord Edward ran at Swan with a dagger which had been concealed in his bed. Mr. Ryan, a magistrate, next entered, armed only with a sword-cane, and presently received a mortal wound from Lord Edward's dagger. Major Sirr, the active town-major who had been setting the pickets, next rushed into the room, where he found Lord Edward, a very tall and powerful man, struggling between Swan and Ryan, Ryan being on the ground weltering in his blood, but still clinging, like Swan, who was also bleeding and wounded in several places, to his adversary. Major Sirr, threatened by the bloody dagger, took a deliberate aim, and lodged the contents of a pistol in Lord Edward's right shoulder. A number of soldiers followed Sirr up stairs, and, after a maniacal struggle, Lord Edward was disarmed and bound, carried to the castle, and thence to Newgate. Ryan died of his wounds on the 23d of May; Lord Edward died of his wounds, or fever brought on by them and his anxiety of mind, on the 5th of June; Swan recovered from the frightful gashes he had received.

In spite of the fall of Lord Edward, who was to have been their commander-in-chief, and in spite of the flight or arrest of every member of the directory or executive, the Irish flew to arms in various places on the appointed 23d of May. On the 24th they made an abortive attempt on Naas, Carlow, and some other towns. But on the 25th an army of 14,000 or more pikemen, headed by a Father John Murphy, marched to Wexford, defeated part of the garrison that sallied out to meet them, killed all the prisoners they took, and terrified the town of Wexford into

a surrender on the 30th. Encouraged by these and other trifling advantages, the rebels made a rush at New Ross, took part of the town, began to plunder and drink, got for the most part very drunk, and were then driven back by General Johnson, leaving 2600 of their number behind them in killed, wounded, and dead drunk. At the news of this success of the king's troops at New Ross, a body of the insurgents stationed at Scullabogue, massacred in cold blood more than 100 Protestants they had taken prisoners. These and similar atrocities prevented the Presbyterians of the north from rising, and gave to the insurrection the old character of a Popish rebellion and massacre. But the best of the Roman Catholics presently came forward to express their abhorrence of the whole rising, and to offer their assistance to government in suppressing it. After a few other fights or skirmishes, General Lake

but his life was spared on condition of disclosing all he knew respecting the rebellion—a condition he accepted, with the proviso that his information should not affect the lives of his fellow-prisoners. Arthur O'Connor, M'Neven, Emmet, Sampson, and the rest, were merely banished. In the month of August, when the flames of rebellion seemed completely extinguished, three French frigates, eluding the vigilance of our fleets, reached Killala, and threw on shore 900 troops of the line, commanded by General Humbert. A small number of the Roman Catholic peasantry of the country joined him, and Humbert proceeded rapidly to Castlebar. There he encountered General Lake, with a force superior in number, but consisting chiefly of Protestant yeomanry and militia. Lake was beaten, and in his retreat lost six guns.

From Castlebar, Humbert marched eastward into the very heart of the country, expecting to be joined by all the men of Connaught, if not by all the Papists of the island, but finding, wherever he advanced, that the mass of the people slunk him and his soldiers as though they had brought the plague with them. About seventeen days after his first landing, Humbert was beaten by the advanced guard of Lord Cornwallis, who was marching against him with troops of the line; and on the 8th of September, being entirely surrounded, the French laid down their arms and became prisoners of war. To keep up the ferment and suspicion, and to oblige England

VINEGAR HILL ¹—From a view by Anthony Sinnot, 1801

attacked, on the 21st of June, the fortified position at Vinegar Hill, carried it with a frightful loss to the insurgents, who never rallied again, and then retook Wexford and Enniscorthy. Lord Camden was now recalled from the lieutenancy of Ireland, and succeeded by Lord Cornwallis, who brought with him a general pardon (with a very few exceptions) to all who submitted. Of the leading conspirators who had been taken, only four—M'Cann, Byrn, and two brothers of the name of Sheares, the sons of a banker at Cork—were executed. Bond was condemned to die ;

to maintain a large force in Ireland, the French, within a month after the surrender of Humbert, ordered a squadron of one ship of the line and eight frigates, with troops, arms, and ammunition on board, to choose a favourable moment for getting to sea, and then to proceed to Ireland at all hazards. This armament actually reached the western coast of Ireland; but Sir John Borlase Warren, with his squadron, met it there, and gave a very good account of it, capturing the ship of the line and three of the frigates.² On board the French ship of the line was seized Wolfe Tone, who had not improved his very lax morality during his residence at Paris, and whose deeds, words, and writings had placed him beyond the liberally extended verge of mercy. On his trial, he pleaded his commission of a brigadier-general in the French army as a bar to punishment for all trea-

¹ This hill lies on the north bank of the river Slaney, close to the town of Enniscorthy. It rises with a gentle swell from the plain until it becomes very steep on all sides, and ends in a craggy summit crowned with the ruins of a windmill. At the declivity of the hill there is a vast pit, in which the bodies of the slain were deposited to the number of 500. The south side of the hill next Enniscorthy was for some yards covered with the bones of men and animals bleached by the weather.—*Gentleman's Magazine*.

² Eventually three more of the frigates were taken.

sons, present or past; but he was condemned to die the death of a traitor; and, finding that the sentence really meant hanging, he cut his throat in Dublin jail to escape the ignominy of the gallows.

In the month of May, while parliament was sitting, a spirited attempt was made to interrupt the preparations for invasion on the coast of Belgium, and to destroy the sluices, gates, and basin of the Bruges canal at Ostend. Captain Home Popham, with a small squadron having on board a body of troops commanded by Colonel Coote, sailed from Margate Roads, bombarded Ostend, and landed about 1000 men at a short distance from that town. The soldiers blew up the sluices, destroyed a good many vessels, and did all the work they were sent to do in very quick time; but on returning to the beach to re-embark, they were prevented by the fury of the wind and surf; and, being next day hemmed in by an immense force, Coote found himself under the necessity of surrendering, after he had lost about one man in every ten.

An expedition to Minorca was more successful, and gave us possession of an excellent port, which our Mediterranean fleet much needed. In the autumn Admiral Duckworth's squadron landed in Addaya Bay, in the island of Minorca, a land force of about 800 men, commanded by General Sir Charles Stuart. Assisted by a hot fire kept up by Duckworth's smaller craft alongshore, Stuart defeated about 2000 Spaniards, drove them from post to post, attacked them in some entrenchments, and easily compelled the governor to surrender the whole of the island by capitulation.

In the West Indies orders were received from ministers to abandon that large portion of St. Domingo which we had reduced at the invitation and with the aid of the French planters, but which we could not retain without a constant, terrible sacrifice of human life. General Maitland entered into a compromise with Toussaint l'Ouverture, formerly a slave, but now chief of the revolted negroes and the founder of a sort of negro republic, who engaged to respect the lives and properties of all the European and creole planters and inhabitants that might choose to remain. In the month of May all that were left alive of our troops were withdrawn; and towards the end of the year some French troops, who had maintained their ground in some strong places, shipped themselves off, and left Toussaint in undisturbed possession of the best part of St. Domingo.

The fate of Switzerland was decided in the spring of this year. The unprovoked aggression of the French was hardly more infamous than the means they employed. They began by complaining of the permitted residence of Mr. Wick-

ham, the English envoy, and they next demanded his expulsion. To remove this ground of quarrel Mr. Wickham was recalled by his own government. The directory then ordered the French troops to take possession of Basle, and almost as soon as this was done they sent a strong division under General Menard into the Pays de Vaud, a dependency of the aristocratic canton of Berne. Menard was received as a liberator by all the democrats and sans-culottes among the Vaudois, who, like all the French-speaking portion of the Swiss, had been stirred up by French propagandists and French books. These people had some reasons to complain of the pride and oppression of their Bernese rulers; but, to get rid of these minor evils, they threw themselves and the whole of Switzerland at the feet of the Gallic republic. Aided and assisted by these unworthy half-Swiss, the French republicans proceeded to subdue, slaughter, or scatter the thorough German-speaking Swiss, who mustered some 26,000 troops, but chiefly militia. The French army under Brune consisted of 45,000 disciplined practised troops; and reinforcements were sent to him from time to time. On the 5th of March the Swiss fell upon Brune, who was advancing to Berne, defeated him with terrible loss, and drove him back for several miles on the road to Freyburg. But the odds were too great, the country was too much disorganized; the brave General d'Erlach, who commanded a part of the Swiss army, was defeated at another point, and was afterwards murdered on the road by some infuriated Swiss soldiers and peasants, who had been artfully led by the French to believe that they had been betrayed by their own commander. On the 6th of March, Brune in greater force repeated his attack, and a wavering on the part of the Swiss troops was followed by a most sanguinary defeat. More than 100 officers—the pride of the Bernese nobles—were killed on that dreadful day. After this victory Brune, unopposed, entered the city of the Fighting Bear—that bear “that once gave fearful strokes with his paws.”¹ The treasure, the well-stored arsenal, and nearly all the property, private as well as public, were seized by the conquerors. The plunder was soon extended over all parts of Switzerland, and the brave mountaineers who attempted to defend their homes were massacred as traitors or rebels. The liberty for which William Tell had fought and bled was now annihilated by these new Gallic republicans, who had professed to give liberty and equality, and an augmented happiness to all mankind!

The Swiss were not the only people in Europe that felt the hollowness of the friendship of the French during this eventful year. The Belgians

¹ The Gugler's Song, or the Song of Victory of the Bernese, written in 1876.

were so harassed by military conscriptions that they broke out into insurrections in five departments—insurrections which added the loss of blood and life to that of money and goods. In Italy the people of the so-called Cisalpine republic were made to sigh and groan for the blessings they had enjoyed under their old governments. Rome was made the seat of anarchy and woe. In order to raise the money required from it by the treaty of Tolentino, the Papal government was obliged to drain the pockets of its subjects. This created violent discontents, which were fermented by a strong French or revolutionary party, who recommended, as a proper remedy for every evil, the destruction or expulsion of the old pope with all his hierarchy, and the setting up of a *Roman republic* under the immediate *protection of the French*. The family of the fortunate Corsican general had risen as he rose; his elder brother, Joseph Bonaparte, was no longer in the commissariat, but in the diplomatic department, being at this time ambassador at Rome, with instructions to change the state of that government without appearing to take any active part with its disaffected subjects. Joseph, who loved his ease, and respected the ease and comfort of others, had no zeal to co-operate with the Roman reformers and demagogues. To excite him to more activity, or in order that they might act for him, the five kings at the Luxembourg sent to Joseph two fiery republican generals: one was General Duphot, who had had the chief management of the overthrow and change of the ancient republic of Genoa; the other was General Sherlock, who was descended from an Irish family, and who testified an earnest desire to date the era of the new world, not from the birth of Christ, but from the birth of the French republic. As soon as these two men arrived, the Roman democrats became uncommonly bold and turbulent. They insulted the pope's guards, and even the pope himself when he showed himself in public. This roused the common people, the true sans-culottes of Rome, who had no French political sanctuities about them, but who were devout, superstitious, attached enthusiastically to their pontiff and their priests. On the 28th of December (1797) after the Roman democrats had hoisted the tricolor flag, and shouted "Down with the pope, and up with the Roman republic!" an encounter took place, in which Duphot was mortally wounded by a shot from a carbine. Several of the democrats were killed in the same way, and a greater number wounded. As soon as he was able, Joseph Bonaparte, with his suite, fled to Florence, calling the poor old pope the assassin of Duphot. The directory, who had long wanted some such occasion, sent orders to General Berthier to march instantly to Rome with a

large body of troops. With nothing to oppose them, the French and 4000 Poles, under Dombrowski, advanced into the States of the Church; Loretto, with its holy house, was sacked; Osimo was plundered and burned; and on the 10th of February, Berthier drew up his forces on the Roman hills, and planted his guns as if to bombard the city. The terrified cardinals who formed the government signed a capitulation, in which they gave up the castle of St. Angelo,¹ and nearly everything else. On the same day the pope's garrison was turned out of the castle, and the French entered it; and Cervoni, the Corsican, took possession of all the principal posts in the city. On the morrow Berthier made his triumphal entrance into the capital of the ancient world. Four days after—the 15th of February, and the anniversary of the day on which the reigning pontiff, Pius VI., who had now reigned for twenty-three years, had first put on the triple crown—the democrats of Rome assembled in the Campo Vaccino, the ancient Forum, erected a tree of liberty with the tricolor and the red night-cap at the top of it, renounced for ever the government of priests, aristocrats, or kings, and proclaimed that, by the will of the Roman people, the ancient republican form of government was restored. A wretched constitution, badly translated into Italian from the French, was presented next day to Berthier for his approval, without which they knew full well the thing could not live for an hour. The French general gave his approbation, but only conditionally. When these farces were played out, the spoliation commenced. As a beginning, immense contributions were demanded, and as security for the prompt payment of them, four cardinals and a number of the principal lay nobles were seized and thrown into the castle of St. Angelo. Berthier, having some delicacy of feeling, some respect for venerable age and fallen dignity, which made him shrink from the task himself, sent the Corsican general, Cervoni, to the Vatican to tell Pius VI., in the name of the French republic, that he must recognize the new Roman republic, lay down his temporal authority, and quit his palace. A commissioner or commissary of the directory, who had come to look after the plunder, finished what Cervoni had begun, by telling Pius that by will or by force he must leave Rome within forty-eight hours. The aged pontiff replied that he could not resist violence, but that his people would see and remember that he was torn from them by force. On the 20th of February he was seized in the Vatican, and put into a coach with two or three faithful ministers; and, escorted by a regiment of French cavalry, he was whirled rapidly out of Rome and along the northern road which leads

¹ A view of the castle of St. Angelo is given in vol. i. p. 775.

to Tuscany. He was allowed to take up his residence in Siena, where he was closely watched as a state prisoner.

Shortly after these troubles at Rome, popular insurrections, fomented by the French and the democrats of Genoa, or the new Ligurian republic, broke out in Piedmont; and the new King of Sardinia was compelled to admit a French garrison into Turin, and all the citadels which he had hitherto retained. Thus that fine country became virtually a province of France.

Bonaparte, after a rapid inspection of the French coasts and of the so-called "Army of England" stationed near them, had returned to Paris to undertake the command of another army destined for no less an object than the conquest of Egypt, which country, it was calculated, would not merely supply to France the loss of her West Indian colonies, but also enable her first to annoy, and afterwards to invade the British possessions and dependencies in the East Indies. Bonaparte's fame as the conqueror of Italy, or rather of the Austrians in Italy, was an additional inducement; and 30,000 men, chiefly from the army of Italy, assembled with wonderful enthusiasm at Toulon, to sail, whenever the opportunity should offer, for Alexandria and the mouths of the Nile. The secret of the expedition was well kept from the enemies of the republic; a continuance of violent winds drove the English blockading fleet from those waters; and on the night of the 19th of May, Bonaparte, with a vast fleet of men-of-war and transports, put to sea and sailed up the Mediterranean. On the 9th of June the fleet arrived before Malta, the capture of which important island was included in the plan adopted by the directory. The knights of the order of St. John of Jerusalem, who had held Malta ever since the days of the Emperor Charles V., had not acknowledged the French republic; but not a few of those noble knights entertained French notions or had sold themselves to French interests. Hompesch, the grand master, a weak old man, was bullied and terrified by these traitors; and, instead of manning the works of La Valetta, which might have defied the whole French fleet and army for months—whereas every moment was precious to them, and full of apprehension, for they knew that the British fleet would soon be after them—he returned a miserable answer to Bonaparte's summons to surrender, and actually capitulated on the 11th, the date fixed by the republican general. After plundering the churches and the alberghi and other establishments of the order, and thereby collecting no inconsiderable quantity of gold and silver, Bonaparte re-embarked on the 19th for Egypt, leaving General Vaubois and a garrison to take care of Malta. As the French fleet sailed by the island

of Candia, it passed near the English fleet, but without being seen by it; for a thick haze favoured the invaders, and prevented their utter annihilation, with the destruction or captivity of all the troops, and of Bonaparte himself, by Nelson. On the 29th of June the French came in sight of Alexandria; and on the following day the troops landed within three miles of that city, without any opposition, but with such haste and confusion, produced by the dread lest Nelson should be upon them, that a considerable number were drowned. The town of Alexandria was easily taken. From its ancient walls Bonaparte issued a proclamation to the inhabitants of Egypt, telling them that he came as the friend of the sultan, to deliver them from the oppression of the Mamelukes, and that he and his soldiers had a particular respect for God, the prophet Mahomet, and the Koran. On the 7th of July he moved from Alexandria to Cairo, marching over burning sands, where the French troops suffered greatly and murmured not a little. On the 21st, on arriving in sight of the great Pyramids, they saw the whole Mameluke force, under Murad Bey and Ibrahim Bey, drawn up at Embabeh. Battle was joined almost immediately. The "Battle of the Pyramids," as the affair was called by the French, was easily won: such of the Mamelukes as escaped destruction retreated towards Upper Egypt; and two days after Bonaparte entered Cairo without resistance. Here he assembled a divan, or council of the principal Turks and Arab chiefs, to whom he promised the civil administration of the country. While he was thus engaged at Cairo, Nelson disturbed his visions by destroying the fleet which he had left near Alexandria. The British hero had returned up the Mediterranean without any instructions from his government, and without any certain knowledge of the French expedition. He was unfortunately without frigates to scour that sea, and he was thus, as it were, compelled to grope his way in the dark. The first news he got of Bonaparte's movements was that he had surprised Malta. Instantly he bore away for that island; but some days before he could reach it the French were gone, and he could find no one to tell him whither. Making, however, a shrewd guess, he sailed for the mouth of the Nile, and arrived off Alexandria on the 28th of June. But no French fleet was there, and although it was so near at hand, he could learn nothing of its whereabouts. He shaped his course to the northward for the coast of Caramania, and then steered from thence along the southern side of Candia. It was here he so nearly touched the objects he was seeking. Baffled in his pursuit, he crossed the Mediterranean, and returned to Sicily. He had sailed 600 leagues with an expedition almost incredible;

his flag-ship, the old *Vanguard*, was nearly strained to pieces; but as soon as he could re-victual and take in fresh water, he turned his

proW again towards Egypt On the 28th of July he entered the Gulf of Coron in the Morea; and there for the first time he received certain intelli-

gence that the French had been seen about four weeks before steering between Candia and the coast of Egypt Then setting every sail that his ships could possibly carry, he stood over once

more for the mouths of the Nile, grieving for the time which had been lost, and wishing it had only been his fate to have tried Bonaparte upon a wind The British fleet, consisting of thirteen seventy-

THE BATTLE OF ABOUKIR — from Denon's Egypt.

four's, one fifty-gun ship, and a brig of fourteen guns, at about ten in the morning of the 1st of August, again got sight of Alexandria and its harbours, now crowded with ships. At four in the afternoon, Captain Hood, in the *Zealous*, signalized the enemy's fleet at anchor in Aboukir

Bay. Nelson, who had scarcely taken rest or food for some days, ordered dinner to be served, and at half-past five signal was made to form in line of battle, abreast and astern of the admiral. At a little before six they were rapidly approaching the enemy, whose force comprised one ship of

120 guns, three of eighty, and nine of seventy-four, moored in compact line of battle, describing an obtuse angle, close in with the shore, flanked by gun-boats, four frigates, and a battery of guns and mortars on an island in their van. Nelson no sooner perceived the enemy's position than his plan of attack was formed. Where an enemy's ship could swing, there was room for a British one to anchor; and he therefore determined to station his ships on the inner side of the French line. At about twenty minutes past six the French opened their fire on the two leading British ships. The guns on Aboukir Island also fired at the ships as they rounded the shoal, but ceased as the ships became closely engaged, to avoid striking the French van. The *Culloden*, seventy-four, Captain Trowbridge, unfortunately grounded on a ledge of rocks, and could take no part in the action. The *Vanguard*, Nelson's flagship, with six ensigns flying in different parts of the rigging, lest any should be shot away, was the first that anchored, within half pistol-shot of the *Spartiate*, the third ship in the enemy's line. By seven o'clock eight of the British fleet had anchored, and were in close action with the enemy. At half-past nine or thereabouts five of the French van had surrendered; the *Orient* was in flames, and at about ten o'clock blew up with a tremendous explosion. Nelson had received a severe wound in the head; but in the confusion, to the astonishment of every one, he appeared on the quarter-deck, and immediately gave orders that the boats should be sent to the relief of the enemy; and many of the *Orient's* crew were saved by our boats, or dragged into the lower parts of British ships by British sailors. The brave French admiral, Brueys, was dead. Among the many hundreds who perished was the Commodore Casa Bianca and his son, a brave boy, only ten years old. They were seen floating on a shattered mast when the ship blew up. The dreadful shock stayed the fury of battle: for full ten minutes not a gun was fired on either side. The French ship *Franklin* was the first to recommence, but was soon silenced, and struck her colours. At midnight the only French ship whose guns continued in active play was the *Tonnant*; but, her masts being shot away, she ceased firing, and, by veering cable, took up a station in the rear, and another interval of silence ensued. As the day broke the battle recommenced between four of the French ships and two of the English, soon assisted by two others. The French frigate *Artemise* fired a broadside, and then struck her colours, and soon afterwards blew up. The four French line-of-battle ships, and two frigates, kept dropping to leeward, and were almost out of gun-shot of the British that had anchored to attack them. Two of these

ships ran themselves on shore; and, after an exchange of a few distant shots, struck their colours. The others got under weigh and escaped—only one of our fleet, the *Zealous*, being in a condition to make sail after them. Of the thirteen French ships of the line eight had surrendered, one had perished, two had escaped, and two were on shore with their colours flying, one of which soon after struck, and was taken possession of, and the other was set fire to by the crew, who escaped on shore—making eleven line-of-battle ships lost to the French. The British loss, in killed and wounded, was 895; Westcott, of the *Majestic*, was the only captain who fell: 3105 of the French, including the wounded, were sent on shore by cartel; and 5225 perished. The victory was complete. "Victory," said Nelson, "is not a name strong enough for such a scene." He called it a conquest.

The destruction of the French fleet, which was announced far and wide by bonfires kindled by the Arabs along the coast and over the whole land of Egypt, left Bonaparte with only such stores and military materials as he had succeeded in bringing with him, and shut him out from all communication with France.

The sultan now issued an indignant manifesto, declaring war against France for invading one of his provinces in a time of peace and pretended amity. he called upon the pachas of Syria to collect their forces; and he prepared to send from Constantinople an army for the recovery of Egypt. On the 22d of September the people of Cairo, who had hitherto been quiet, puzzled and bewildered at the French doings, burst out into insurrection, and killed a good many Frenchmen in the streets. The insurrection was put down by a dreadful massacre.

In Europe the victory at Aboukir, or the "Battle of the Nile," as it was called, produced an immediate and an immense effect, reviving in every country the drooping spirits of the anti-Gallican party, and filling England from end to end with transports of joy and triumph. From Egypt, Nelson returned to Naples, where he found that King Ferdinand was collecting a numerous army with the view of driving the French from Rome and from Tuscany; that the congress at Rastadt had been virtually broken up; that the emperor was arming, and a new coalition forming against the French, who, by their conduct at Rome, in Switzerland, and in other countries, had broken the conditions of the treaty of Campo Formio. Nelson's achievement, and the absence of Bonaparte, who, it was expected, would never find his way back to Europe, were the two grand circumstances of encouragement to this new coalition.

¹ The two line-of-battle ships, and one of the frigates, were afterwards taken by the British squadron in the Mediterranean.

In the month of November the island of Gozo, separated from Malta by a narrow channel, capitulated to a detachment of Nelson's squadron. Malta itself was closely blockaded.

The British parliament assembled on the 20th of November. The speech from the throne congratulated the country on the hopes of new alliances, by which it might be anticipated that the common enemy of nations would be humbled and repressed. This alluded more particularly to Russia. The Czarina Catherine had died of apoplexy in November, 1796, and had been succeeded by her son Paul. At first, anxious doubts had been entertained whether, as usual in despotic countries, the successor would not pursue a line of foreign policy directly opposite to that of his predecessor. It was known that tempting overtures had been made to him by the French;

and Bonaparte's invasion of Egypt, by embarrassing the sultan, and obliging him to send an army down the Archipelago, would probably leave the frontiers of European Turkey in a weakened state, and even possibly lay open the road to the Balkan pass and to Constantinople, the grand object of Russian ambition. But Paul had now engaged to respect existing treaties, had contracted a close alliance with Great Britain, and had engaged to take an active part in the war against the conquering republic, upon condition of receiving from Great Britain £112,000 per month, during a campaign of eight months, for the pay of troops.

The estimated supplies for the ensuing year were put at £29,272,000; and Pitt presented a new plan for raising a considerable part of them by an INCOME TAX.

CHAPTER XL—CIVIL AND MILITARY HISTORY.—A. D. 1799—1802.

GEORGE III.

Resolution of parliament to unite Ireland with Britain under one legislature—Movements of the Austrians to drive the French out of Italy—The French occupy and revolutionize Naples—Austria and Russia combine against France—Successes of the Austrian armies over the French, and of the Russian army under Suvaroff—The French almost driven out of Italy—Expedition of the British and Russians against the French in Holland—The Duke of York appointed their commander—Utter failure of the expedition—Bonaparte's career in Egypt—His unsuccessful siege of Acre—Defeat of the Turks by the French at Aboukir—Unpopularity of the French directory—Bonaparte resolves to return to France—His safe arrival—His intrigues in Paris to depose the directory—He forms a new government, of which he is first consul—His overtures to England for peace—War of the British in India—Tippoo Sultan's measures for expelling the English from India—The British army under General Harris marches against him—Tippoo besieged in his capital—The city taken and Tippoo slain—Assembling of parliament—Its proceedings—Aversion of the Irish parliament to the union with Britain—The union effected—Bonaparte's satisfaction at the rejection by Britain of his proposals for peace—His preparations to invade Italy—His march across the Alps—His victory over the Austrians at Marengo—Fruits of the victory—Successes of the French under Moreau—His victory over the Austrians at Hohenlinden—Austria submits to humiliating terms—Malta surrenders to the British—Desultory war proceedings of the British government—Motions in parliament—Its session closed—Opening of the first imperial parliament—Pitt retires from office—His designs for Catholic emancipation—Effect of the proposal upon the king—Construction of the Addington administration—Its first proceedings—Hostile movements of the Emperor Paul of Russia against Britain—His death—Armed neutrality of the three northern powers against Britain—It is dissolved by Nelson's naval victory at Copenhagen—The French army in Egypt capitulates—The capitulation rejected and the war renewed—Expedition of Sir Ralph Abercromby to Egypt—His landing at Aboukir—His victory over the French at Alexandria—Death of Abercromby—Difficulties of the French army in Egypt—Its surrender—Hostilities of the French in Spain and Portugal—The peace of Amiens.

HE regular army was slightly increased; 120,000 men, including marines, &c., were voted for the navy; the volunteers and yeomanry cavalry had risen from 5000 to 30,000 men; and the militia, a portion of which had done good service in Ireland, was now about 85,000 strong.

A plan for uniting Ireland under one legislature with Great Britain, as Scotland, to her inestimable advantage, had been united to England

nearly a century ago, had been discussed and seriously entertained before the breaking out of the late unhappy rebellion; but that event had made the necessity of such a union more apparent. On the 22d of January, a royal message to both houses recommended the consideration of the most effectual means for defeating the design of our enemies to promote a separation between the two kingdoms. It was agreed by an immense majority that the question should be considered on the 31st. On that day, Pitt proposed certain re-

solutions as the basis for the measure; and his motion, that the house should go into committee on these propositions, was carried by 140 against 15. After some long and warm debates, the resolutions, with some slight amendments, were agreed to, and sent up to the peers. After equally warm debating in the upper house, a joint address to the king was agreed to, presenting the resolutions as a proper basis for the union. And here, as far as regarded England, the matter rested for the present year. On the 12th of July the king prorogued parliament.¹

The court of Vienna had formed a close alliance with the czar; and in the autumn of the preceding year Russian troops had begun to collect on the frontiers of Austria, while a great army of the German empire was assembling between the rivers Inn and Lech. One great object proposed was to drive the French out of Italy, where, through the folly of King Ferdinand, who had begun too soon, or through the slowness of the Emperor Francis, who had begun too late, they had been allowed to overrun the kingdom of Naples, and to drive that Bourbon court into Sicily. General Mack, who had passed from the Austrian into the Neapolitan service, had miserably conducted a very bad army; and after entering Rome in triumph, had been thoroughly beaten by General Championnet. On the 21st of December, King Ferdinand and his family embarked in Lord Nelson's flag-ship, and set sail for Palermo. Championnet took possession of Naples on the 23d of January. Royalty was abolished; and the country in Europe least fitted for such institutions was converted into a republic under the name of *REPUBBLICA PARTENOPEA*.

It was while Naples was thus falling so easy a prey to the French, that her Austrian and Russian allies began collecting on the other side of the Alps. The French negotiators at Rastadt, after demanding from the Emperor of Germany the dismissal of the Russian troops, declared the congress to be dissolved. A republican army forthwith pressed the siege of the fortress of Ehrenbreitstein,

which was obliged to capitulate at the end of January. Jourdan then crossed the Rhine once more, and established himself in Suabia. The directory, however, did not declare war against the Emperor Francis until the month of March, when Jourdan advanced towards the Danube; but again the Archduke Charles met this unlucky republican, and after defeating or weakening him in several rapidly succeeding engagements, he drove Jourdan back over the Rhine in April. Nearly at the same time, the Austrian generals Bellegarde and Hatze recovered the Grison country which had been invaded, drove the French from the St. Gothard, and poured into Switzerland, where General Massena occupied a strong position in front of Zurich. In the meanwhile, another fine Austrian army had taken the field with old General Melas for its commander. Melas, pouring through the Tyrol towards the end of March, drove all the French outposts before him, entered Upper Italy, cleared all the left bank of the Adige, and obliged Scherer, the unpopular and very inferior general whom the directory had appointed to the supreme command of their army of Italy, to retire beyond the Mincio in great confusion. Moreau, who had a much higher reputation, took the command, but only to be beaten like Scherer. On the 18th of April, when Melas was driving Moreau before him, the famed Suvaroff came up with some 50,000 Russians, joined the Austrians, and assumed the chief command of both armies. On the 27th of April, the battle of Cassano decided the fate of the Cisalpine republic, the people of which were almost everywhere in open insurrection against the French and the native democrats whom they had set up as a government. The citadels of Brescia and Peschiera surrendered to the allies, Mantua was closely invested, and Suvaroff entered Milan in triumph. Moreau continued his hasty retreat towards Genoa, hoping to be able to guard the barrier of the Apennines, and to be joined there by Macdonald, with the army of Naples, whom he had pressingly summoned to his assistance. Leaving

¹ "The whole history of the Irish insurrection and union forms not a parallel but a contrast to the Jacobite conspiracies, and the union between England and Scotland. In Scotland, the Tory principles of a few great families and national pride united some powerful interests, even in a country where the people were Presbyterian, in favour of a Roman Catholic prince. In Ireland, a sense of suffering and deep resentment for the persecution of ages connected the great mass of Catholics with a democratical republic yet reeking with the spoils of a Popish establishment. The Scotch Jacobites often held back from the expectation of a more favourable season, and their leaders generally demanded greater succours than the French court was willing or able to grant. The Irish Catholics, on the contrary, were goaded into premature hostility before their northern countrymen were ready to co-operate, or their foreign succours had arrived; and thus a dread of being overwhelmed by too large a force from their allies having produced delay and disunion among them, led to a detection of their designs and to the loss of their best opportunity. The union was the chief source

of disaffection in Scotland, and one of the great causes of the two rebellions of 1715 and 1744. On the other hand, the insurrection in Ireland was the chief cause of the union, by furnishing the English government with both the means and the pretext for accomplishing a measure which in no other circumstances could have been attempted. These consequences of his undertaking and its discomfiture, Lord Edward Fitzgerald never lived to witness. His early arrest was a fatal blow to the whole design of the insurrection; for though his abilities were not of the first order, nor even equal to those of some engaged in the same cause, yet he combined advantages of birth, education, and personal character, which would have enabled him to reconcile, better than any other man, the jarring materials of which the conspiracy was composed. He, too, could have directed their military operations, if not with consummate skill, at least with less ignorance and rashness than characterized all their wretched efforts in the field. He had been educated in the army, and was exceedingly beloved by those with whom he served."—Lord Holland, *Memoirs of the Whig Party*, vol. i. p. 105.

a small garrison in the castle of St. Elmo under the command of Colonel Mejean, and advising the Neapolitan democrats to defend that helpless infant, their three-months-old republic, Macdonald, on the 7th of May, began his rapid march from Naples, got out of the kingdom (not without sustaining considerable loss from some daring royalist partizans), traversed the Roman states and the whole of Tuscauy, reached the river Trebia, and, being joined by General Victor, ventured to face the Russo-Austrian army. But after fighting for three days on the banks of the Trebia in the neighbourhood of Piacenza, he was crushed by Suvaroff, and, fleeing thence towards the pass of the Bocchetta, he joined Moreau with what was only a fragment of his army. Before Macdonald's arrival, Moreau had drawn some reinforcements from Nice and Genoa, and had made some entrenchments on the declivities of the Apennines, and in the entrance of the Bocchetta pass behind the Piedmontese town of Novi. Dissatisfied with Moreau, the directors now sent Joubert to take the command-in-chief of the army. Joubert stationed himself on the same heights behind Novi which Moreau had occupied, and improved and extended his field-works. But, being attacked in that formidable position by Suvaroff on the 16th of August, Joubert was most thoroughly beaten, and was killed in the action by a cannon-ball, and the miserable wreck of the French army which survived his fall left nearly all their artillery behind them, and fled like sheep over the mountains and through the pass towards the city of Genoa. Shortly after this victory, Suvaroff quitted the Apennines and struck across the Alps to make head against Massena, who had resumed the offensive, and marching from Zurich, had defeated the Russian corps of General Korsakoff, who had arrived in Switzerland to relieve or co-operate with General Bellegarde and the Austrians. There was some fearful fighting among the precipices and ravines of St. Gothard, which the French had again occupied. Suvaroff swept the republicans back, and opened his way into the heart of Switzerland; but the Austrian general, who had engaged to form a junction with him, was nowhere to be seen; and Korsakoff was too far separated, and too weak, to move to meet him. This obliged Suvaroff to turn aside towards the Lake of Constance and the frontiers of Germany. He was interrupted in his march by Massena; but, fighting and retiring, halting and fighting again, he attained his object, and effected a junction with Korsakoff, though with an army sadly diminished. Leaving the French once more absolute masters of Switzerland,¹ the

two Russian generals marched away to Augsburg, where they received orders to lead back all their troops to their own country.

The Neapolitan kingdom was recovered in the course of the months of June and July by Cardinal Ruffo, with an army of wild Calabrians, by a motley force of English, Russians, Portuguese, and Turks, and by Lord Nelson and his squadron. A detachment of Nelson's squadron, under Commodore Trowbridge, blockaded the French garrison in Civita Vecchia, the pope's seaport town near the mouth of the Tiber. The French soon capitulated, as did also a small garrison which had been left by Championnet in the castle of St. Angelo at Rome. The Papal government was reinstated; but to restore the old pope was impossible—Pius VI. was dead. His successor, Pius VII., was named by thirty-five cardinals, assembled at Venice under the protection of the Austrians, but his election was not completed until the month of March, 1800. Long before the close of the year hardly anything was left to the French in Italy except Genoa.

When Suvaroff was carrying everything before him in Italy, and when the French seemed fully occupied by the wars in that country and in Switzerland and Germany, the Emperor Paul sent another Russian force to co-operate with the English in an attack on the French in Holland. It was, however, the month of August before this armament was ready. An army of 30,000 men, of which 17,000 were Russian and the rest British, was collected on the Kentish coast. On the 13th of August, Sir Ralph Abercromby, who was intrusted with the first division, consisting of 12,000 troops, embarked in transports and in the squadron of Admiral Mitchel, who was to join the fleet of Admiral (now Lord) Duncan, then cruising in the North Sea. The fort of the Helder was immediately abandoned by its garrison; Abercromby landed there; the Texel was occupied by our fleet—the Dutch fleet surrendering or hoisting the Orange flag. General Brune, with a mixed army of French and Dutch, 25,000 strong, attempted to dislodge Abercromby, who was left for a whole month in a very critical situation; but his inferior force stood its ground manfully, and Brune was repulsed with considerable loss. At last, on the 13th of September, another and a stronger division of the Anglo-Russian army arrived, bringing, unfortunately, with it the Duke of York to take the command-in-chief of the whole. From this moment nothing went well; and, after fighting several battles honourable to the troops, but rather disgraceful in point of generalship, his royal high-

French into Germany. He fought several battles with varying success; but, in the end, he once more drove the invaders to the other side of the Rhine.

ness was fain to conclude a convention (on the 17th of October), by which it was agreed that the English and Russians should be allowed to re-embark without molestation; and that, as the price for that favour, 8000 prisoners of war, French and Batavians, taken before the present campaign, and now detained in England, should be released.

Eight days before this convention or capitulation by the Duke of York, Bonaparte arrived in France. In the month of February he had

A STREET IN CAIRO.—From Hay's Sketches of Cairo

quitted Cairo with the intention of conquering all Syria. Crossing the desert with 10,000 men, he took Gaza, stormed Jaffa, and swept onward like the Man of Destiny, until he came under the old crumbling walls of Acre. This place, the key of Syria, was defended by the Pacha Djezzar, a very cruel but very resolute old man; by Colonel Philippeaux, an emigrant royalist, and an able officer of engineers, who at one time had been Bonaparte's schoolfellow; and by the brave and alert Sir Sidney Smith, who not merely brought two ships of the line close in-shore to maul the besiegers, but also lauded some of his sailors and marines. After spending sixty days before the place, making seven or eight assaults, and losing 3000 men, the French raised the siege of Acre, and on the 21st of May they began their

retreat. On the 14th of June, Bonaparte re-entered Cairo. During his absence, General Desaix, ascending the Nile, had driven the remnant of the Mamelukes from Upper Egypt, and beyond the cataracts of Assouan; but this expedition had no other importance than that of affording the French artists and *savans* the opportunity of visiting the monuments of Thebes, Denderah, and other ancient places. In July, Bonaparte, with nearly his whole army, was called down to the coast—to the point where Nelson had annihilated the French fleet—for a Turkish army of 18,000 men had landed at Aboukir. On the 25th of July a terrible battle took place on the sandy coast. The Turks fought with admirable courage; but their irregular, undisciplined, unformed masses could not stand long against masses of French that were even in number nearly equal to their own: 10,000 of them perished, by shot, bayonet, or in the sea, where they threw themselves in the hopes of reaching their ships. Soon after this battle of Aboukir, Bonaparte began to make secret preparations for getting back to Europe. If, as some have suspected, one strong inducement which led him to quit France at a critical moment, and embark on this wild Egyptian expedition, had really been to allow the five kings at the Luxemburg time and opportunity to disgust the French people with their profligacy and ineptness, and to prove how essential he was to French victory and conquest by or through the failures of the other republican generals, he had most completely succeeded in his object. Letters from his brothers Joseph and Lucien, and from his numerous friends in Paris, informed him that Italy was lost; that the French armies were being beaten everywhere; that the directors were quarrelling among themselves—were intriguing and quarrelling with the two legislative councils; and that the people, whose rage for liberty and equality was now merged in military pride and a passion for conquest—with those good things which the conquests of rich countries bring with them—seemed heartily sick of directory, ancients, and cinq cents, and ripe and ready for another revolution.

Two small frigates which lay in the harbour of Alexandria were made ready for sea; and on the 23d of August, leaving behind him his army, now reduced to 20,000 men, and taking with him his favourite officers, Murat, Lannes, Berthier, Marmont, and three of the *savans*, he embarked secretly in one of the frigates, and set sail for France. Though happy to escape the comfortless life in Egypt, most of those who went with him expected to be stopped on their passage, and carried prisoners of war to England; but the extraordinary fortunes of the man favoured him

still, and, without being pursued, or even seen by any of our ships, he landed in the Gulf of Fréjus, to the eastward of Toulon, on the 9th of October. He had been in Paris two days, pri-

sican officer, after listening, in two or three private conferences to the persuasive tongue of Talleyrand, and to splendid offers of honours and riches, agreed to give up the last shred of his pretended republicanism, and to remove all opposition by sending in his resignation. The two directors, who remained to support the present constitution and resist a military dictatorship, were Gohier and Moulins, a couple of incapables. The council of ancients were easily persuaded of the necessity of a new constitution; but a great majority of the council of five hundred vowed that they would die for the constitution they had got. On the 19th Brumaire, or 10th of November, just one month and a day after Bonaparte's landing at Fréjus, the business was finished by Murat and a detachment of grenadiers with levelled bayonets; the council of five hundred was cleared in a trice; most of the members jumped out of the windows—not one of them stayed to die. On that night all the ardent republicans were proscribed; three provisional consuls (for the government was now to be consular) were appointed—and who so fit to be consuls as Abbé Sièyes, Roger Ducos, and Napoleon Bonaparte? On the following day the rising general took up

privately consulting with chiefs of parties and officers of the army, before the directors knew of his arrival. Augereau, who had fought by his side at Arcole, who had surrounded the Tuileries with troops and artillery, and had purged out two former directors and all the refractory members of the legislature, on the 18th Fructidor, 1797, and who was now ready to do whatsoever Bonaparte might command, was one of the first to wait upon him. In the course

of a few days Talleyrand gave his counsels the benefit of all his craft and ability. Abbé Sièyes, though now one of the directors himself, had made the notable discovery that his last constitution was a great deal too democratic; had conceived a mortal hatred to his brother-director Barras, whom he accused of downright Jacobinism and sans-culottism; and was now ready to co-operate with the ambitious general, duping himself into the absurd be-

lief that Bonaparte would remain in allegiance to him and to another perfect constitution which he had, all ready, in his portfolio. Roger Ducos, another of the directors, yielded to circumstances. Even Barras, the early patron of the young Cor-

commanded the forces, and superintended both the internal and foreign departments of the state.

¹ In the foreground are the remains of a Roman amphitheatre, and in the distance, entering the port of the town, are seen the two frigates that brought Bonaparte back to France.

Left perfectly free to choose his own two satellites, Bonaparte would have retained Sièyes; but the ex-abbé preferred taking the place of senator, with the yearly salary of 25,000 francs, and the royal domain of Crosne in the park of Versailles. Cambacérès and Lebrun, who had both been brought up to the law, were appointed second and third consuls. Roger Ducos was also put into the senate. The first consul very soon removed from the Luxemburg to the palace of the Tuileries, where he lived with royal state. He now wrote to the King of England, as one sovereign writes to another, expressing a wish for peace, but without stating any conditions. George III., who could scarcely do otherwise, gave the epistle to his secretary for foreign affairs, to answer it. Lord Grenville addressed his reply, not to the first consul, but to Talleyrand, now the French minister for foreign affairs. Talleyrand replied, Lord Grenville rejoined, and there the matter ended. Our opposition orators attached great importance to the overture, which was the hollowest of all that had been made, for the first consul was preparing at the moment to recover Italy, and was determined to keep Switzerland, Savoy, Nice, Belgium, Holland, and all the German territories on the left bank of the Rhine.

In the course of this year Tippoo Sultaun was destroyed. To recover what he had lost in the last war, he had sent an embassy to Cabool to bring the Afghan tribes down into India; he had negotiated or intrigued with the Nizam of the Deccan, and with other native princes; and, towards the end of 1797, he had sent two ambassadors to the Isle of France to propose an alliance with the French republic, and to request an immediate supply of troops (30,000 or 40,000 men, Tippoo thought, would be sufficient) to enable him to expel the English from every part of Hindoostan. The governor of the Isle of France, who was daily expecting a visit from the English, had no troops to spare; but he forwarded Tippoo's letters to Paris, and allowed his two ambassadors to enrol about 150 Frenchmen, "the refuse of the democratic rabble of the island," some of whom were lying in jail at the time. But, when the moment came for embarking nearly one-half of these desperadoes refused to go to conquer India. Some sixty or seventy of them, however, arrived at Mangalore, and thence proceeded to Tippoo's capital. As soon as Bonaparte had arrived in Egypt he had despatched a letter to Tippoo requesting him to send a confidential person to Suez or Cairo, to confer with him and concert measures for the liberation of India; but it appears doubtful whether this epistle ever reached the sultan. The embassy to the Isle of France—the arrival of Frenchmen at Seringapa-

tam (but not their number)—the intrigues set on foot in various parts of the country—and the fact that Tippoo was rapidly increasing his army—all became known to the government at Calcutta. The Earl of Mornington (afterwards Marquis Wellesley), who was now governor-general, determined to anticipate the sultan; and, after demanding explanations which were never given,

GENERAL LORD HARRIS —From a portrait by Davis

his lordship sent General Harris into the Mysore country with 24,000 men, and called up General Stuart with the Bombay army of about 7000 men, to co-operate with Harris. General Harris, moreover, was joined at Vellore by a strong British detachment serving with the nizam, and by some regiments of sepoy which the nizam had raised, and which were officered by Englishmen. Harris entered the Mysore territory on the 5th of March (1799), and moved straight on for Seringapatam, reducing all the forts in his way. General Stuart's advance was attended with greater difficulty, and with some loss, for he was encountered by the main army of Tippoo. On the 27th, when Harris was within two days' march of Seringapatam, he found the active sultan drawn up to oppose him. In the action which ensued Colonel Wellesley (the late Duke of Wellington) particularly distinguished himself; and it was his regiment, the 33d, that decided the affair. Tippoo then retreated, and threw himself with his whole army into Seringapatam, the fortifications of which had been improved and increased since General Abercromby's attack in 1792. On the 5th of April, General Harris took up ground for the siege; and on the 14th he was joined by General Stuart with the Bombay army. Until the 17th of April, the

time was employed by General Harris in surmounting the obstacles by which the approach to the walls was guarded; but these being happily overcome, chiefly through the gallant conduct of General Baird and Colonel Arthur Wellesley, the siege of Seringapatam commenced in earnest. A detachment of the Bombay army, commanded by Colonel Vaughan Hunt, drove the enemy from their posts near the village of Agrar, on the north side of the Cauvery, and established themselves in the ruins of an old redoubt and village, by which they could enfilade the enemy's entrenchment on the south side of the river; and about the same time, a nullah, called the Little Cauvery, which afforded 600 yards of cover from the fire of the town, was secured and used as a shelter for the British troops, and the engineers' tools and materials. On the evening of the 27th an attack was made on the enemy's post on the front and right of the British line, and was conducted by Colonel Wellesley with great skill and complete success. The post thus gained was of the utmost importance, as it furnished the ground where the breaching batteries were to be erected; and, aware of its value, Tippoo made a desperate attempt to regain it, by an attack on it from the guns of the fort, and from the stone bridge, but without success, as the troops in possession gallantly maintained the orders they had received to keep it to the last extremity. This was the last vigorous effort of Tippoo; he felt that the deadly circle was closing upon him; his subsequent resistance became more feeble and confused, and he was only constant to his single purpose—which he had recognized as his inevitable destiny—to find a grave among the ruins of his capital. Every obstruction being cleared away, and all got in readiness for the decisive assault, this important duty was committed to Major-general Baird, a hero whose daring and chivalrous character was admirably adapted to such a service. He was instructed by Harris to make the capture of the ramparts his first object. For this purpose he was to divide his force into two columns, the one to move along the northern rampart, and the other along the southern, until both should join on the east face, thus making the whole round of the ramparts before descending into the town. To conceal this arrangement also, as well as to insure its effect, the different corps were moved silently to the trenches during the night, and arranged according to the order in which the attack was to be made on the following day. And, indeed, in the worn-out condition of the British army, not only decisive but instant exertion could not be delayed a day longer. To Captain (afterwards Sir John) Malcolm, who asked his commander why he looked

so thoughtful, Harris sternly replied, "We have serious work on hand; don't you see that the European sentry over my tent is so weak from want of food and exhaustion, that a sepoy could push him down: we must take this fort, or perish in the attempt."

The attack that sealed the fate of Seringapatam and its lord was made on the 4th of May. During the whole previous night the British batteries had kept up a heavy fire upon the breach, to prevent its being repaired, and on the morning it was reported by the chief engineer to be practicable. One o'clock was the hour appointed for the assault; and, as it struck, the voice of Baird was heard like a trumpet exclaiming, "Now, my brave fellows, follow me, and prove yourselves worthy of the name of British soldiers!" They rushed across the river under a heavy fire of rockets and musketry from the fort; they ascended the glacis and the faussebraye, and reached the summit of the breach, where they planted the British colours. The ramparts were scaled; and, like two trains of gunpowder simultaneously kindled, two streams of red uniforms ran along the northern and southern ramparts in a destructive circle, bearing down or sweeping before them every obstacle, until they had reached the prescribed point of reunion. And still as they went along their progress was indicated by the British colours, which were planted in rapid succession upon the cavaliers that yielded to their onset. It was on the left attack that the greatest resistance was experienced, for here Tippoo was present in person to cheer on his troops, and retard the progress step by step of his successful assailants; but, although he was animated with the courage of despair, and at the head of those who had promised to die with him, they were struck down and slain in thousands; for Tippoo had murdered his British prisoners who had been captured during the siege, and their living comrades were drunk with revenge. But resistance ceased when the two divisions joined on the eastern rampart, and at the same time the slaughter terminated. When the havoc had abated, and the city was won, the sultan was nowhere to be seen; and, until his fate was ascertained, the conquest of Seringapatam would prove but an uncertain advantage. Even his family were ignorant of what might have befallen him; and, although a report had been brought to his killedar that he had been shot, and was lying dead under one of the gateways, neither the family nor that royal major-domo dared to open the palace gates without the sovereign's permission. After much negotiation and delay, the result of jealous eastern etiquette, the palace officials threw open the gates that the royal mansion might be examined, and, with the two princes who had been formerly the

captives of Cornwallis, aided the victors in the search for the body of Tippoo. At a gateway on the north face of the fort which was covered with hundreds of the slain, an exploration was made by torchlight, and from among the heap of dead they at last found and brought out the object of their search. The eyes of the dead king were still open, and his body was so warm that they

SERINGAPATAM North-east View.—From DILLY'S NARRATIVE.

thought he was still alive, but, on examining further, they found that his heart had ceased to beat, while three wounds in the body and one in the temple from a musket-ball were more than enough to insure his destruction. In an hour and a half his glory and life had departed—his capital and his kingdom had passed into other hands. On the following day, his body was interred in the grave of his father with military honours; and a storm of thunder and lightning that signalized the rites of sepulture, and destroyed several Europeans and natives, appeared as a characteristic and befitting close to his vindictive, sanguinary character and tempestuous career.

On the death of Tippoo Sultan, submission became the sole proceeding of the vanquished; only two days after, his sons and chiefs acknowledged the rule of their conquerors, and this example was speedily followed over the whole kingdom of Mysore. The rule of the tyrant had been so oppressive to his own subjects, that the dominion of foreign masters was welcomed as a most grateful relief, and the Mysoreans, instead of bewailing their late sovereign and their own defeat and subjugation, sat down to eat, drink, and be merry. A conquest so rapidly achieved, and followed by a submission so cordial, could not be otherwise than highly gratifying to the hero by whom it had been achieved, and we find General Harris thus alluding to both circumstances in a letter to Sir W. Medows:—"In seven months' absence from Madras, we not only took the capital of that enemy, who, you observe, should never have been left the power of being troublesome,

but marched to the northern extent of his empire, and left it in so settled a state that I journeyed from the banks of the Toombudra, 300 miles across, in my palanquin, without a single soldier as escort, except, indeed, at many places, the polygars and peons of the country, who insisted on being my guard through their respective districts. This was a kind of triumphal journey I did not dream of when setting off. The Almighty has been wonderfully bountiful to us. A conquest so complete in all its effects has seldom been known, and certainly in my respect left me nothing to ask." In consequence of these successes, British India, instead of being invaded, was much enlarged, and was enabled to send an armament across the ocean and up the Red Sea, to assist in driving the French invaders out of Egypt.

The British parliament was assembled as early as the 24th of September, when the government entertained sanguine hopes of success for the Anglo-Russian army in Holland. A bill was instantly introduced to facilitate the reinforcing our regular army by allowing three-fifths of the militia of each county to enlist in the regulars for service within Europe, and it was passed into a law on the 4th of October.

A. D. 1800. After the recess the sense of parliament was shown by divisions which took place on an address to the king in approbation of the conduct pursued towards the first consul. In the lords there were seventy-nine votes for the address to six against it, and in the commons 260 to 64. "As a sincere lover of peace," said Mr. Pitt, "I will not sacrifice it by

grasping at the shadow, when the substance is not within my reach." On the annual motion for renewing the act for suspending the habeas corpus bill, there was a very stormy debate, but the measure was carried by the usual majorities. The attempt of the maniac, Hadfield, on the 15th of May, to shoot the king in Drury Lane Theatre, led to the insertion of two additional clauses in the insanity bill, by which the privilege of bail allowed to alleged lunatics was considerably abridged, and the personal safety of the sovereign, which had been so often endangered by the attempts of insane individuals, was specially consulted. The scarcity of corn continued to excite serious alarm, and a committee of each house was appointed to consider of the most effectual means for remedying that distress. These committees neither brought any great store of knowledge to the subject nor displayed any great fertility of invention.

At first the Irish parliament testified no great willingness to accede to the union. The resolutions which had passed the British parliament in 1799, excited a terrible storm in Dublin and other towns; but it was observed that a large proportion of the Roman Catholic party, who had suffered most by the late rebellion, preserved a sullen neutrality. When the Irish commons debated the address proposed by ministers in answer to the speech from the throne, in January, 1799, it was carried by a majority of only one vote. Yet, on the 15th of January, 1800, a motion made in the same house to declare their disapprobation of an incorporating union was negatived by a majority of forty-two, the numbers being 138 against 96. On the 5th of February, the whole plan of the union was detailed by Lord Castlereagh, then principal secretary for Ireland. After some more vehement debates the whole plan of the union was approved by the same parliament which the year before had all but rejected it *in toto*; and on the 27th of March the two Irish houses agreed in a joint address, informing his majesty that they considered the resolutions of the British parliament as wisely calculated to form the basis of an incorporation of Great Britain and Ireland into one kingdom; that they had adopted them as their guide, and now felt it their duty to lay before his majesty the resolutions to which they had agreed, and which, if they should be approved by the two Houses of Parliament of Great Britain, they were ready to confirm and ratify, in order that the same might be established for ever by mutual consent of both parliaments. On the 2d of April, this address, together with the resolutions, was laid before the British parliament. The three first resolutions were finally carried without opposition; and, all proceedings both in Ireland and in England relative to this great

national measure being concluded in the month of June, the act of union received the royal assent on the 2d of July. On the 29th, parliament was prorogued.

Bonaparte tells us himself that the answer from London filled him with secret satisfaction, as war was necessary to maintain union and energy in the state, which was ill organized, as also to maintain his own influence over the imagination of the French people. But notwithstanding this secret satisfaction, he, in public, pretended to be greatly grieved, and in a proclamation to the French people, he complained of the obstinate hostility of the English; and called upon the French to furnish men and money in order to acquire peace by force of arms. Giving the command of the army of the Rhine to Moreau, the first consul assumed the direction of the army of Italy. Having made a demonstration of assembling an army at Dijon, in Burgundy, where he never collected more than a few thousand men, mostly raw recruits or old invalids, Bonaparte secretly directed a number of regiments from the interior of France to assemble in Switzerland, in the town of Lausanne and along the Lake of Geneva. The Austrians, lulled into security, continued their operations against Genoa, and on the side of Nice, recovering the greater part of that maritime country, and menacing the old French frontier beyond it. On the 13th of May, the first consul himself appeared at Lausanne, and prepared to march, with about 36,000 men and forty pieces of cannon, up the Great St. Bernard. His left wing, 15,000 strong, under Moncey, was ordered to cross the Alps by the pass of St. Gothard, while, on his right, 5000 men under Turreau were to cross at Mont Cenis, and 5000 more, under Chabran, were to pass by the way of the Little St. Bernard. The march was attended with the greatest difficulty, lying for the best part of the way among rocks and precipices and eternal snows. The cannon were dismounted, put into the hollowed trunks of trees, and dragged by the soldiers; the carriages were taken to pieces and carried on mules, or, slung upon poles, were borne upon men's shoulders. The powder and shot were packed into boxes of fir-wood, which were carefully lashed on the backs of mules, while every mule, nearly every sturdy peasant in those Alps was hired or pressed into the service. On the 16th of May, Bonaparte's vanguard under Lannes descended from the Great St. Bernard into the beautiful Piedmontese valley of Aosta, being closely followed by the other divisions. On the 17th, Lannes drove in a detachment of Austrians, who were as much astonished at the appearance of the French in that quarter as if the enemy had descended from the clouds. The consul then pushed forward, driving several Aus-

trian divisions before him, for the Ticino, on the banks of which river he was to be joined by Moncey, Chabran, and Turreau, who had passed the barrier of the Alps by easier roads. On the 2d of June, Bonaparte entered Milan without any opposition, and was there joined by some of his divisions. On the 5th of June, after his soldiers had eaten their shoes and the leather of their knapsacks, Massena gave up Genoa to the Austrian general Ott and Admiral Keith. More than a week before this event, Melas, the commander-in-chief of the Austrian army, advised of the descent of the first consul into Italy by so unexpected a route, retraced his steps through the Nissard country and the territories of the Genoese republic, being followed by Suchet, who had been contending almost hopelessly on the old frontier line of France.

With considerable rapidity the old Austrian concentrated his scattered forces at Alessandria, a well-fortified town in the open plain of Piedmont. Marching to meet Melas, Bonaparte crossed the Po at Piacenza, drove back Melas's advanced guard, and took up a position in the plain of Marengo, on the right bank of the insignificant river Bormida, and close in front of Alessandria. On the very next day, the 14th of June, Melas came out of Alessandria, crossed the Bormida in three columns, and attacked the French. For a long time the Austrians carried everything before them; and at four o'clock in the afternoon the battle seemed lost to the French, who were retiring on all points, and in considerable disorder. Melas, oppressed with age and infirmities, exhausted by the fatigues he had undergone, and fondly fancying the victory to be secured, quitted the field and returned to Alessandria. He was scarcely gone ere his advancing and victorious column was suddenly confronted by a fresh French division under General Desaix, and was presently afterwards charged in flank by a mass of heavy cavalry commanded by the younger Kellermann. But for the opportune arrival of Desaix and Kellermann, the main army of the first consul was clearly ruined; and nothing but the extraordinary luck of the man, and some new blunder or torpidity on the part of the Austrians, could have allowed him to recross the Alps otherwise than as a fugitive. But now his fleeing column rallied; and the Austrians, who had fought hard all day, allowed their column to be broken; General Zach, Melas's second in command, was taken prisoner with nearly all his staff; a panic arose, and horse and foot fled back in confusion towards the Bormida, the cavalry in their frantic haste riding over the infantry. The Austrian official report stated their total loss in killed, wounded, and prisoners at 9069 men and 1423 horses. The French stated their own loss

at only 4000, and that of the Austrians at 12,000. But it has been proved that the loss of the French must have been much greater. Desaix, who had saved them, was shot through the heart at his first charge. He had arrived from Egypt only a very few days before, and had made all possible haste to join the first consul. Neither during the battle nor in his preceding campaigns in Italy had old Melas shown any want of judgment or of firmness; but after his defeat, and when he came to negotiate, it seemed as if his eighty-four years had indeed reduced him to a second childhood. Perhaps, however, the Austrian and Italian diplomatists who now gathered around him may be more answerable than he for the pusillanimous, imbecile (or it may be treacherous) throwing up of a game which was not yet lost—of a great game, where the stake was little less than the whole of Italy. Even after his serious reverse, Melas might have collected in the field from 40,000 to 50,000 men; General Ott had thrown a great force into Genoa, and most of the fortresses were well garrisoned. Yet, by the armistice concluded on the 16th of June, the Austrians gave up Piedmont and the Genoese territory, with all their fortresses, including Alessandria, which might have stood a long siege, and the superb Genoa, which had only been taken from the French eleven days before this disgraceful armistice, after a very protracted siege and at an enormous expense. The French were to keep all Lombardy as far as the river Oglio. In return for all these immense sacrifices old Melas was allowed to withdraw his troops to the line of Mantua on the Mincio. Having established a provisional government in Genoa, and another in Turin—although here the King of Sardinia, Charles Emmanuel, was shut up in the citadel of his capital—Bonaparte returned to Paris, where he made a triumphal entrance on the 3d of July.

The French army on the Upper Rhine, under Moreau, had been scarcely less successful than the army of Italy. Moreau crossed the Rhine on the 25th of April; and, after defeating the Austrians under Kray in several engagements, he penetrated to Ulm. As soon as he was apprised of the first consul's successes beyond the Alps, he crossed the Danube, drove the Austrians from an entrenched camp, overran a great part of Bavaria, captured Munich, the capital, and pressed upon the frontiers of the emperor's hereditary dominions. The armistice concluded in Italy did not extend to Germany; but Bonaparte ordered Moreau to accede to the request of the Austrians for a truce till the month of September. The Russian czar, instead of assisting his imperial brother, now seemed disposed to join the first consul. Conditions or overtures of peace,

such as became an ambitious conqueror, were now tendered by Bonaparte; but Austria refused to treat without England, and France demanded an armistice by sea as a preliminary to the negotiations with England. The object of this last demand was as transparent as air; the French garrison in Malta, and the French army in Egypt, seemed on the point of surrendering to the British, and the first consul wanted to send reinforcements to those countries during the naval armistice. But the armistice was instantly refused by the British government, and hostilities were recommenced by land and by sea, the Emperor of Germany and the King of Great Britain reciprocally binding themselves not to conclude a peace the one without the other. At the word given by Bonaparte from Paris, three French armies put themselves in motion nearly at one and the same moment. The army of Italy, now under General Brune, drove the Austrians from the Mincio, and beyond the Adige and the Brenta, and advanced to within a few miles of Venice. Macdonald, with another army, occupied the passes of the Tyrol, being prepared to reinforce either Brune in Italy or Moreau in Germany. Moreau himself directed the heads of his columns towards Salzburg and Vienna. He was met, near Haag, by Archduke John, the younger brother of his old adversary, as brave but not so skilful a general as the Archduke Charles. A battle took place, which was decidedly favourable to the Austrians; but, hazarding a general engagement, on the 2d of December, at Hohenlinden, between the rivers Iser and Inn, the Archduke John was thoroughly defeated and driven from the field with the loss of 10,000 men. Moreau, advancing, occupied Salzburg, and the road to Vienna seemed almost open, not only to his army, but also to the armies of Brune and Macdonald. In this terrible condition the Emperor Francis was compelled to sue for a separate peace, and the British government obliged to release him from the terms of his alliance. An armistice was concluded on the 25th of December; and the treaty of peace, called the "Treaty of Lunéville," was signed on the 9th of February, 1801. It ratified all the conditions of the treaty of Campo Formio, and included several new articles very humiliating to the house of Austria. The emperor was to retain possession of Venice, but Tuscany was taken away from the Grand-duke Ferdinand, and bestowed upon Louis, son of the Duke of Parma, who had married a Spanish princess—the first consul, who had need of her further assistance, thinking it proper to give some recompense to Spain for her past services, and for the serious losses her fleet had sustained in encounters with the British. The emperor again acknowledged the independence of the Cis-

alpine and Ligurian republics, renouncing all right or pretension to any part of those Italian territories; and a new and extended and more advantageous frontier was drawn for the Cisalpines, the line of the Adige being taken from the point where that river issues from the Tyrol down to its mouth on the Adriatic. Piedmont, which lay awkwardly between the Cisalpine and Ligurian republics, was for the present left to his Sardinian majesty Charles Emanuel, whose fortresses and cities were occupied by French troops, whose subjects were in a state of revolt, and whose authority scarcely extended beyond the walls of the citadel of Turin, into which he had been compelled to throw himself with his family and a few faithful adherents. Through the mediation of the Czar Paul, the King of Naples obtained a peace shortly after, agreeing to close all his ports against the English, and our only remaining allies the Turks.

Through the timidity of the court of Naples, which became a perfect panic after the battle of Marengo, the supplies of corn and other provisions which had been drawn from Sicily for the use of our Mediterranean fleet, and of our forces blockading the French in La Valetta, had been interrupted for many months before King Ferdinand obtained the brief respite of this treaty of peace; and, instead of starving out the French, our forces and the poor Maltese, who co-operated with us to a man, were in great danger of being starved away themselves; but at last, after a blockade which had lasted for more than two years, the island of Malta was surrendered to the British troops, commanded by Major-general Pigot, on the 15th of September. The work ought to have been done sooner, but the prize was truly great, though it could be valuable only to the power that held the dominion of the seas.

Except in the services which Admiral Lord Keith had rendered at the useless reduction of Genoa, there was little more deserving of attention in any of our military operations during this unhappy year. Absurd and apparently contradictory orders had been sent out by our government—by the admiralty and by the secretary of state—to the land and sea officers in command. General Pulteney was sent with six battalions to Lisbon, as the Spaniards were threatening an invasion of Portugal; General Abercromby, who had been beating about the Mediterranean, the Straits of Gibraltar, and the part of the Atlantic nearest to them, with 15,000 soldiers cooped up in crowded transports, now fancying he was to be called upon one expedition, and now upon another, did at last receive positive information that he was to be employed in Egypt; but the year was now spent; and it was the middle of December ere the armament got so far as Malta.

The scarcity of grain and season of dearth still continued at home, depressing the national spirit, which, during the whole year, had scarcely a glimpse of victory or of glory to cheer it. The city of London and other places presented petitions to the king in the month of October, implor-

VALLETTA, ENTRANCE TO THE GREAT PORT

ing him to convene the parliament. That assembly, which had taken but paltry means to relieve the distress during the last session, met on the 11th of November.

After sundry attacks rather on the foreign policy of ministers than on their spiritless conduct and undeniable mismanagement of the war, a motion was made, on the 1st of December, in the commons, by Sheridan, for an address to his majesty, earnestly to desire him to enter into separate negotiations with France for a speedy and *honourable* peace. This being negatived by 156 against 35, Mr. T. Jones, on the 10th of December, moved an address to implore his majesty to dismiss his present ministers. This was rejected by sixty-six against thirteen. Supplies were voted for three lunar months only. For the service of the navy 120,000 men, including marines, were granted, from the 1st January to the 1st of April, 1801. On the last day of the year the king closed the session of parliament, notifying that the time fixed for the commencement of the union of Great Britain and Ireland necessarily terminated their proceedings; and that the IMPERIAL PARLIAMENT (as the united parliament was to be called) was appointed to meet on the 22d of January, 1801.

A.D. 1801. On the 22d of January the first Imperial Parliament was opened by commission. The former members for England and Scotland continued, according to the provision in the treaty of union, to form part of the House of Commons; and Mr. Addington was re-elected speaker. The king did not meet this parliament till the 2d of February, when all the members had been sworn, and other preliminary matters arranged. In his speech from the throne, after adverting to the happy accomplishment of the union, and to the unhappy course of events on the Continent, which had forced his allies to abandon him, he announced that a fresh storm was gathering in the North; that the court of St. Petersburg had already proceeded to commit outrages against the ships,

property, and persons of his subjects; and that a convention had been concluded by that court with the courts of Copenhagen and Stockholm, the object of which was to renew their former engagement for establishing, by force of arms, a new code of maritime law, inconsistent with the rights and hostile to the best interests of this country.

In consequence of these hostile movements of Russia, preparations were forthwith made for sending that British fleet into the Baltic, which, together with the death of the insane czar, put so speedy an end to this northern coalition; but before the tremendous battle of Copenhagen, and also before the brilliant success of the Egyptian expedition (the only army expedition of all that Pitt had planned that was successful), the premier of seventeen years' standing retired from his post. While recommending and urging on the union, he had flattered the Irish with the hope that that grand measure would be the best means of obtaining the abolition or very great mitigation of the penal and disabling laws affecting the Roman Catholics; and two anonymous but authoritative papers (one known to proceed from himself, and the other from Lord Cornwallis) had been circulated among the leading Irish Roman Catholics, and were supposed to have had no small influence in removing the obstacles which stood in the way of the union. Before committing himself thus deeply and decisively he ought to have ascertained whether the strong religious scruples of George III. would allow him to redeem his pledge. When the question was first mooted (apparently in a council held towards the middle of January of the present year), the king's objections were found to be insurmountable. At the levee on Wednesday, the 28th of January, the king said to Dundas, "What is this that this young lord (Castlereagh) has brought over, which they are going to throw at my head?" Lord Castlereagh had brought over some plan of Catholic emancipation. The king continued, "I shall reckon any man my personal enemy who

proposes any such measure!" After a short but very painful correspondence, his majesty, expressing his cordial affection for Mr. Pitt, and his high opinion of his talents and integrity, agreed to accept the resignation which the minister had tendered.

It soon became known that the king had intrusted the formation of the new cabinet to Mr. Addington, now speaker, who was the son of Pitt's father's favourite physician, Dr. Addington, and who had been brought forward in public life by the Pitt family and connections. On the 10th of February, Lord Darnley rose in the upper house to move for an inquiry into part of the conduct of the existing administration. Lord Grenville then stated, in the most downright manner, that the failure of their intentions in favour of the Roman Catholics had induced them to resign their places, which they now held only till their successors should be appointed. At the earnest request of several peers, who knew the real state of the king, Lord Darnley agreed to postpone his motion. On the same day a letter was read in the commons from Addington, tendering the resignation of his office of speaker, on account of his majesty's declared intention of appointing him to a situation incompatible with that post. When this letter had been read, Pitt rose to state that he had his majesty's commands to inform the house that they were to proceed in due season to the election of another speaker, and, in order that time might be had for consideration, he moved an adjournment till to-morrow. The adjournment was agreed to. On the 14th of February it was publicly announced that the king was confined to the house by a *severe cold*, and on the 16th the bulletin declared that he was affected by a fever; but it appears now to be fully proved that his majesty was suffering under a return of his former indisposition, brought on by anxiety and agitation of mind—an agitation occasioned principally, if not entirely by the Catholic question and the resignation of Pitt. On the 16th, the order of the day for the house to resolve itself into a committee of supply being read, Mr. Harrison rose to oppose it. At the moment, he said, when the house was called upon to pass a vote for so large a sum as £28,000,000, there was no ostensible person at the head of affairs, on whom responsibility could be fixed, for the proper use and application of the money. Sheridan, Whitbread, and others, supported Harrison; but his motion was negatived after some long debates, by an immense majority; and on the 18th of February the house resolved itself into a committee of supply. The sum required amounted altogether, for Great Britain and Ireland, to £42,197,000. The house, having agreed, after some slight alterations, to the re-

solutions upon the budget, Pitt on the 14th of March resigned, to the regret and perhaps to the dismay of a great majority in both houses. He was accompanied in his resignation by Dundas, Earl Spencer, Lord Grenville, and Windham. Almost the last words that Pitt delivered in the house as prime minister were words full of hope and confidence; he felt convinced, he said, that the British fleet would, with one blow, shatter the coalition of the North.

As soon as the serious nature of the king's indisposition was made known, a new regency bill was expected. Fox quitted his pleasant retirement at St. Anne's Hill, came up to London, and presided over a meeting of the Whig club, where he deprecated any public allusion to the king's malady, and declared that, still despairing of the House of Commons, if he re-appeared there, it should only be to support Mr. Grey's motion for an inquiry into the state of the nation. But all the time Fox stayed in town he was surrounded by speculating, hopeful visitors, who would not divest themselves of the expectation that he would soon be prime minister to the regent, or to George IV. These hopes were, however, damped, by reports that the old king was rapidly recovering, and they were altogether extinguished on the 12th of March (two days before Pitt's final withdrawing), when the physicians announced that his majesty was well, and that no more bulletins would be issued. Fox returned to St. Anne's Hill, and his friends to the opposition benches. The new ministry now installed in office consisted of Addington, first lord of the treasury and chancellor of the exchequer; the Duke of Portland, president of the council; Lord Eldon, chancellor; Earl St. Vincent, first lord of the admiralty; the Earl of Chatham, master general of the ordnance; Lord Pelham, secretary of the home department; Lord Hawkesbury (eldest son of the Earl of Liverpool), secretary for foreign affairs; Lord Hobart, secretary for the colonies; Viscount Lewisham, president of the board of control for the affairs of India; Charles Yorke, secretary-at-war, &c.

Under the new cabinet bills were passed for continuing the act for the suppression of rebellion, and for the suspension of the habeas corpus act in Ireland, which country still remained in an uneasy, turbulent state; and, a select committee of the House of Commons having reported rather alarmingly on the existence and proceedings of certain political societies in Great Britain (particularly one in London, entitled the United Britons), the suspension of the habeas corpus was continued also for England and Scotland, and an act for preventing seditious meetings was revived. Parliament was prorogued, not by the king in person, but by commission, on the 2d of July.

As early as the 15th of April, intelligence had

been received in London of the astonishing success of our attack at Copenhagen, and of the death of the Emperor of Russia. Various circumstances had converted Paul from an ally into the bitterest enemy of Great Britain, but the weightiest of them all was the disappointment of his irrational expectation of obtaining possession of the island of Malta. Above 300 British vessels were seized, and the captains and crews of them were hauled on shore, put into irons, and sent into the interior of the country, not without threats of undergoing the horrors of the knout, and of the Siberian exile. By another proclamation this madman ordered that all the English goods and effects whatsoever on shore should be sequestered and sold forthwith. A few of his creatures congratulated him on the glory of standing at the head of the great northern confederacy; but the nobility and landed proprietors, who were incensed by a hundred other freaks, and by the incessant operation of a capricious and horrible tyranny, saw nothing but the annihilation of the trade of Russia in this quarrel with England, and nothing in the continuance of such a system of government but destruction to themselves and total ruin to the empire.

Sweden and Denmark were unfortunately too ready to join Paul, and to work out the purposes of the French. The Danes, in particular, had persisted, ever since the beginning of the war, in carrying French goods and articles contraband of war, and had resisted or eluded the search wherever they were able so to do. As soon as Paul proposed his armed neutrality, they joined it enthusiastically, and commenced making immense preparations.

The confederacy of the three northern powers, under the influence of France, against England's naval supremacy, would soon have become formidable, if extraordinary efforts had not been made to crush it. With this view a fleet was despatched from Yarmouth Roads, on the 12th of March, consisting of eighteen sail of the line, and a num-

ber of frigates and smaller vessels, under the command of Admiral Sir Hyde Parker, with Vice-admiral Lord Nelson as his second. The Russian, Swedish, and Danish effective force in the Baltic was estimated at more than forty sail of the line; but deficiency in naval tactics (on the part of the Russians and Swedes), it was presumed, would neutralize this numerical superiority. As negotiation was preferred to war, the Hon. Mr. Vansittart was embarked with full powers to treat. He left the fleet in the Scaw, and proceeded in a frigate with a flag of truce to Copenhagen, but returned unsuccessful from his

mission, which only served to stimulate the Danes, and give them time to augment their means of defence. Nelson disapproved of distant negotiation; he said "the Dane should see our flag every moment he lifts up his head," and he urged the necessity of instant decision; but the pilots magnified the dangers of the expedition, and more days were dissipated in inactivity. At last, on the 30th of March, the British fleet proceeded into the Sound, and about mid-day anchored between the island of Hveen and Copenhagen.

The whole fleet of Denmark was thence

seen stationed in the road of Copenhagen, and flanked by very powerful batteries, some floating and some on land. The wind did not serve for an attack until the 2d of April; but then, at day-dawn, Nelson made for the Danes, and soon began one of the most memorable of his battles. At about an hour after noon the fire of the Danes slackened, and before two o'clock it had nearly ceased. Nelson then, sure of success, and regretting the loss of so many brave men, sent a proposal for a truce to the Prince-royal of Denmark, and shortly after went on shore himself for the purpose of adjusting the terms of conciliation. At this moment, the whole of the Danish line to the southward of the Crown Islands, consisting of seventeen sail, were sunk, burned, or captured. Nelson repeatedly declared that no men could have behaved with more bravery and steadiness than the Danes;

HORATIO VISCOUNT NELSON — From the portrait by L. F. Abbot

that the battle of Copenhagen was the most dreadful affair he had ever witnessed; that this was the most difficult achievement, the hardest-fought battle, the most glorious result that had ever

who had occupied Hamburg, evacuated that great trading city; the navigation of the Elbe, and of the other German rivers which had been closed, was re-opened to our flag; and Frederick William

III. of Prussia—who had succeeded his father Frederick William II., in November, 1797, who continued in vassalage or subservience to the French, and who had seized not only the independent trading city of Bremen, but also the whole of the electorate of Hanover, the hereditary dominion of George III., where he had levied contributions, and acted as a conqueror and sovereign—engaged to give up both these acquisitions, and to withdraw his troops within his old frontiers after certain amicable arrangements should be completed.

The fate of the French army in Egypt was sealed about a fortnight before the battle of Copenhagen. In the year 1800 General Kleber, after losing the fortress of El-Arish, and retreating before a Turkish army commanded by the grand vizier, and essentially aided by an English squadron under Sir Sidney Smith, found himself under the necessity of agreeing to evacuate Egypt. On the 24th of January, 1800, a treaty was concluded at El-Arish between the Turks and the French, and confirmed by Sir Sidney Smith, who had received no instructions to that effect either from his commander-in-chief, or from the government at home. By the conditions of this treaty the French army was to be allowed to return to Europe unmolested. Pitt's ministry, naturally averse to permit the arrival of such reinforcements to Bonaparte, then contending or about to contend with the Austrians in Italy, and with the imperialists in Germany, sent out orders to Lord Keith not

graced the annals of our country. The result was the dissolution of the coalition, the battle being aided by the death of the Czar Paul, who had been strangled at St. Petersburg on the 24th of March, nine days before the great battle had been fought at Copenhagen. He was reported to have died of apoplexy, and the intelligence of his death was tardily communicated to the neighbouring countries. His son and successor Alexander very soon released the British merchants and mariners, and entered into friendly communications with Lord Nelson, who had ascended the Baltic. On the 17th of June a convention was signed at St. Petersburg by Lord St. Helens and the Russian ministers. Sweden and Denmark acceded to the same terms, which included a more explicit definition of the right of search, and of the law and principles of blockade, together with a limitation of articles considered as contraband of war to those of real military and naval stores, ammunition, &c. The Danish troops,

to ratify any such convention as that of El-Arish. Hostilities recommenced immediately, and on the 20th of March, Kleber routed the undisciplined, disorderly army of the grand vizier. But at this critical moment the Moslems of Cairo rose in insurrection, murdered many of the French that were in that city, and drove the rest of them into the citadel. Instead of following the fleeing vizier, Kleber was obliged to return to Cairo. After some sanguinary conflicts, and many atrocities committed on both sides, the insurgents were obliged to capitulate. Kleber was engaged in the very hopeless task of restoring order and tranquillity, when, on the 13th of June, he was stabbed by an Arab. He was succeeded by General Menou. The French were, however, enabled to maintain themselves in Egypt until the arrival of the British army under Sir Ralph Abercromby; and in the interval four French ships of war and some fast-sailing transports escaped our cruisers, ran into the mouth

of the Nile, and lauded important succours of troops and ammunition.

By the 1st of January, 1801, the fleet under Admiral Lord Keith, which carried this small but excellent army, had all come safely to anchor in the Bay of Marmorice, on the coast of Karamania, one of the finest harbours in the world. Here the troops were kept waiting for some time for horses which had been promised from Constantinople to mount the cavalry, and for other necessaries, some of which arrived very slowly, and some not at all. During the stay of the army in Marmorice Bay, it was joined by two more regiments of dismounted cavalry; and a sloop of war arrived in the harbour, which had a few days before captured a French brig, having on board a general officer and 5000 stand of arms for the army in Egypt. The horses for our cavalry at last arrived; but they were such sorry beasts, that the English dragoons were ashamed to mount them or take charge of them, and every commanding cavalry officer solicited rather to

serve with his corps as infantry. About 200 of these half-starved, diminutive, galled steeds were, however, kept for the cavalry, and about fifty for the artillery, the remainder being shot, or sold for a dollar a-head.

General Moore, who had been sent to examine the grand vizier's army, stationed at Jaffa, returned with the melancholy intelligence that it was weak as to numbers, without discipline, and infected with the plague; so that its co-operation offered no apparent advantage. At the same time it was ascertained that the French force in Egypt was far greater than had been supposed: it had been calculated that, through disease, battle, assassination, wounds, and other casualties, the army under Menou had been reduced to 13,000 or 14,000 men, whereas it was now found that, through reinforcements they had received, and some hundred of auxiliaries they had raised, the French were more than 30,000 strong, having with them above 1000 pieces of cannon. When Abercromby had received all his reinforcements,

ALEXANDRIA.—From Denon's Egypt

he could not muster more than 15,330 men, including 996 sick, 500 Maltese, and all kinds and descriptions of people attached to an army except officers:—the effective force, therefore, could not be, at the highest computation, above 12,000. It was resolved, however, to wait no longer, and the fleet on the 23d of February weighed anchor, and set sail in a gale of wind. On the 2d of March the whole fleet anchored in Aboukir Bay; the men-of-war riding exactly where the battle of the Nile was fought.¹ From the 2d to the 7th of March the state of the weather prevented any operations in boats; but, on the afternoon of the 7th, the weather moderating, Sir Ralph Abercromby and Sir Sidney Smith went in boats to reconnoitre the coast, and fix upon the best place for landing the troops. On the following morning some gun-vessels and armed launches were sent forward to clear the beach, 5500 soldiers were put into the boats, and at a given signal a simultaneous dash was made for the shore. Though rapidly, the boats advanced in perfect order, the soldiers sitting between the seats close together, with unloaded arms. When the boats

came within range, fifteen pieces of ordnance from the opposite hill, and the artillery of Aboukir Castle, opened upon them with round and grape shot; and on advancing still nearer, musket-balls were showered upon them. The British soldiers huzzaed occasionally, but never attempted to return a shot. Numbers of the soldiers were killed and wounded; some boats were sunk, some turned aside to save the drowning men, but the mass of them rowed steadily forward, until they touched the strand, when the soldiers with wonderful rapidity got all on shore, and General Moore, drawing them up in line, gave the welcome word to load. Some of the English guards were roughly handled by a division of French cavalry before they could form; some loss was sustained in ascending the sand-hills which rose above the beach; but in less than half an hour those heights were carried, and the French fled, leaving all their field-pieces behind them. Advancing against the French, who took post on the ridge of heights between Aboukir and Alexandria, Sir Ralph Abercromby, with sailors dragging the artillery through a deep and burning sand, came to an indecisive action on the

¹ See plan at page 107

13th of March, and had a horse killed under him. On the 19th, Fort Aboukir capitulated; and on the 20th, General Menou having arrived from Cairo, the whole of the French disposable force was concentrated at Alexandria. The British forces now occupied excellent positions near the ground where they had fought on the 13th. About three o'clock in the morning of the 21st, when all was quiet, the report of a musket was heard at the extremity of the British left: this was followed by the report of a cannon; scattered musketry succeeded, and then the roar of two more guns was heard. Early as it was, our men were all under arms; but it was still dark, and although some streaks of gray were perceptible in the eastern horizon, the morning seemed slow to break. Menou had hoped to take the British by surprise, but they were on the alert. The attack soon became general, and the fighting more terrible than any the French had hitherto met with. Menou's cavalry was literally destroyed; and after a long and obstinate contest, the infantry was completely routed with a terrible loss. A corps which, like nearly all the regiments now under Menou, had formed a part of the conquering army of Italy, and which in its pride had taken the name of "The Invincible," was almost annihilated. Our triumph was clouded by the loss of the brave old Abercromby, who was mortally wounded in the battle during a charge of the French cavalry. Regardless of the hurt, which he thought was a slight one, he continued to superintend the conflict to its close, and died on board Lord Keith's flag-ship on the evening of the 28th.

The consequences of the three victories we had obtained were of the utmost importance: the French were daunted by an unexpected resistance; the Arabs, who had witnessed fighting such as their fathers had handed down to them no tradition of, flocked into the British camp with abundance of provisions; the remnant of the splendid Mameluke cavalry soon began to re-appear in Upper Egypt; and even the quiet spiritless fellahs thought of resenting the wrongs and insults they had sustained from the French soldiery. The French at Aboukir soon surrendered: in a few days the capitan-pacha's fleet anchored there, and landed 5000 or 6000 Turks; and the grand vizier, who had been dozing at El-Arish, began to rouse himself. General (afterwards Lord) Hutchinson succeeded to the command of the British army, which was reinforced in the month of April by 3000 men. Rosetta and Fort Julien were taken from the French about the middle of April. Alexandria, into which Menou had retired, was almost insulated from the rest of Egypt by General Hutchinson, by cutting through the embankments which served to retain the waters of the

Aboukir lake, and by inundating the dry bed of the ancient Lake Mareotis; a British flotilla ascended the Nile, capturing the convoys of pro-

GENERAL SIR RALPH ABERCROMBY —From a print by B. B. Tolazzi, after Hoppner.

visions destined for the French, and carrying several works which had been erected on the banks of that river. The grand vizier was crossing the desert, and troops from India were expected to be soon at Suez. Leaving General Coote to maintain the lines before Alexandria with 6500 men, General Hutchinson proceeded to Ramanieh, where the French had collected 4000 men, who had dug entrenchments and raised batteries. Having driven the enemy from this important post, Hutchinson proceeded still farther up the Nile towards Cairo, which the grand vizier was approaching in an opposite direction. Before he could effect a juncture with the vizier's army, the French sallied out of Cairo and attacked it; but so spiritless had they become in their adversity, that 5000 disciplined republicans, with twenty-four pieces of artillery, allowed themselves to be repulsed by a most irregular Turkish army. Cairo was soon invested; and, on the 27th of June, General Belliard capitulated. The French, who issued out of Cairo, exceeded 13,000 in all: they left behind them 313 heavy cannon and 100,000 lbs. weight of gunpowder. At this moment the Anglo-Indian army, under Major-general Baird, was ascending the Red Sea. Baird, who had sailed from Bombay on the 7th of April, with about 2800 British, 2000 sepoys, and 450 of the East India Company's artillery, reached Jeddah on the Red Sea, on the 17th of May, and was there joined by an English division from the Cape of Good Hope, consisting of the 61st regiment, some squadrons

of light horse, and a strong detachment of artillery. On the 8th of June, Baird reached Kosseir, and commenced landing his troops; but it was the month of July before his van division began to cross the burning deserts which lie between the Red Sea and Egypt; and, before he could unite his forces at Cairo, Menou capitulated upon the same conditions as Belliard, and Egypt was cleared of the French.

In the month of March the court of Madrid, considering that it could only stop French invasion by submitting in all things to the will of the first consul, declared war against Portugal; and towards the end of April a Spanish army, commanded by Godoy, the Prince of the Peace, invaded the Portuguese provinces. In June the court of Lisbon purchased a treaty of peace (the treaty of Olivenza), by yielding some territory to Spain, and by engaging to shut their ports against the English. Bonaparte refused to concur in this treaty, and sent a French army, 25,000 strong, through Spain, to attack Portugal. The Spaniards not merely allowed the passage of these Frenchmen, but gave them every countenance and assistance they could. The French soon invested Almeida, and menaced both Lisbon and Oporto. The helpless Portuguese could do little beyond imploring English succours in troops, ships, and money. Some £300,000 and some ships were sent; but our government thought it could spare no more troops than the three or four regiments that were already in the country. During these contests, however, an expedition was sent from England to take possession of the island of Madeira, in order to secure it for Portugal. As the negotiations for peace with Britain, which had been secretly renewed in the course of the summer, were now drawing to a conclusion, and as the French generals were gratified by enormous donations or bribes, the operations of the invading were soon suspended; and, by a definitive treaty, concluded at Madrid in the last days of September, Bonaparte agreed to withdraw his troops and respect the independence and integrity of Portugal—the court of Lisbon, on their part, agreeing to confirm to Spain all the territory which had been ceded by the late treaty of Olivenza; to make over to France one-half of Portuguese Guiana; to shut all the ports and roads of Portugal, in Europe, against all British vessels until the conclusion of peace between France and Britain; to nullify all preceding treaties and conventions with Britain; to treat France, in all matters of commerce, as the most favoured nation, &c. By a more secret article the Portuguese court paid immediately 20,000,000 francs to the French republic.

The naval war became very languid, the French and Spanish fleets not venturing out of port, and

their detached squadrons putting to sea only in the absence of the English. Admiral Saumarez, however, succeeded in coming up with an united French and Spanish squadron which was stealing from the Mediterranean to Cadiz; and, after failing in an attack at Algesiras, beat it on the 12th of July in the Straits of Gibraltar. Two Spanish ships, of 112 guns each, took fire, and blew up, and a Spanish seventy-four was taken.

On the 1st of August, Admiral Lord Nelson, with a flotilla of gun-boats and other small vessels, stood over to the coast of France to reconnoitre the preparations said to be making for the invasion of England. On the 4th he made an experimental attack upon the flotilla which lay at the mouth of Boulogne harbour. He sunk two floating batteries and destroyed a few gun-boats which were outside the pier. But on the night between the 15th and 16th, going right into the harbour, he was repulsed with considerable loss.

Many circumstances now rendered the first consul really eager for some short suspension of hostilities with Britain. The Addington administration, which had started as a peace ministry, agreed to preliminaries, which were signed on the 1st of October. The Turkish sultan and the young Czar Alexander treated with the first consul, and there was a grand interchange of compliments and of promises, which were never meant to be kept. In the month of November the Marquis Cornwallis went over to France as ambassador plenipotentiary. From Paris, where he was received with the greatest honours, and with the very lively joy of a part of the population, his lordship repaired to Amiens, the place appointed for holding the conferences. The discussions, in which Cornwallis had to contend with Joseph Bonaparte and the wily Talleyrand, were prolonged beyond expectation, and were several times all but broken off in anger and with mutual defiance. Great and reasonable jealousies were excited by the use the first consul made of the suspension of hostilities, which had followed the signing of the preliminaries in October, in sending out the French fleets; but at last, on the 27th of March, 1802, the definitive treaty of peace was signed at Amiens.¹

¹ Of the war that was now supposed to be concluded, but which in reality was only intermitted for a time, the eloquent Robert Hall speaks thus:—"The war in which so great a part of the world was lately engaged, has been frequently styled a war of principle. This was indeed its exact character, and it was this that rendered it so violent and obstinate. Disputes which are founded merely on passion or on interest are comparatively of short duration; they are at least not calculated to spread; however they may inflame the principals, they are but little adapted to gain partisans; to render them durable, there must be an infusion of speculative opinions; for corrupt as men are, they are yet so much the creatures of reflection, and so strongly addicted to sentiments of right and wrong, that their

CHAPTER XLII.—HISTORY OF RELIGION.

A.D. 1763—1802.

Political change of the high-church party to modern Toryism—Their advantages in the change—Controversy on subscriptions to church confessions—Blackburne's publication of the Confessional—Bill in parliament for relief from subscription—It is defeated—Bill for the relief of dissenters from subscription to the Thirty-nine Articles—Claims of Arians and Socinians for exemption—Their claims rejected—Relief subsequently granted to dissenters—Complaints of dissenters against the corporation and test acts—Their removal proposed—Unsuccessful appeals to parliament on the subject—Demand of several sects for relief from religious disabilities—Demands of the Roman Catholics—Success of their application—Bill for checking the growth of monastic institutions in Britain—Debate in parliament on the subject—Defeat of the bill—Sabbath observance bills brought into parliament—Their rejection—Revival of the national religious spirit during this period—Manifestations of change and improvement—Agency of Methodism in producing the change—Growth and progress of Methodism—Its early trials and persecutions—The Calvinistic Methodism originated by Whitefield—The Arminian Methodism of Wesley—State of the parties at their death—Progress of Wesleyan Methodism—Commencement of divisions in the party—Introduction of Moravianism into England—Origin of the sect—Its principles—Its principal distinctive forms—Its progress in England—The Swedenborgians—Account of Emanuel Swedenborg—His strange revelations—Their progress in England—Tenets of the Swedenborgians—Indirect effect of Swedenborg's writings on religious society in England—Church of Scotland—Secessions occasioned by the exercise of patronage—Instance of its evil in the case of St. Ninians—Deterioration of doctrine in the preaching of the clergy—Intelligence and soundness of the people—Design to abrogate subscription to the Confession of Faith—Dr. Robertson resigns the leadership of the church—Continued contentions on patronage—Measures of the moderates at the close of the period.

WITH the accession of George III. a new phase was to be exhibited in the political character of the Church of England. The Hanoverian dynasty was fixed upon the throne, and the cause of

Jacobitism was hopeless. There was no longer the chance of a reaction in favour of the Stuart family, which was considered all but extinct; and the zeal which it could formerly kindle, had already subsided into mere tea-table talk or traditional remembrance. It was natural that, with this depression, the high-church fervour of a former age should undergo a similar abatement, and accordingly, the clergy in general were content to accommodate themselves to the new royal succession, and the principles on which it was established. To contend for the supremacy of the church, to stickle about nonjuring principles, to draw distinctions between the king *de jure* and

the king *de facto*, and to pray for the restoration of an abdicated sovereignty that had forfeited its rights and foregone its claims, were obligations which neither duty, nor interest, nor even common sense any longer demanded. It was an absolute necessity, therefore, as well as a point of wisdom, that the high-church party should abandon their Jacobitical distinctions and proud hierarchical claims, which could no longer find countenance and support, and adapt themselves to the new state of things. And this they accordingly did, by exchanging Jacobitism for modern Toryism. They still, indeed, advocated the divine rights of royalty, but it was for the reigning king; and the supremacy of the church, but the church as now established, with a Hanoverian sovereign for its head. Thus the high and low church parties, although still distinctly separated, were at one in their common aim to preserve both church and state in their present settled condi-

attachment to a public cause can rarely be secured, or their animosity kept alive, unless their understandings are engaged by some appearances of truth and rectitude. . . .

"When we apply these remarks to the late contest, we can be at no loss to discover the source of the unparalleled animosity that inflamed it. Never before were so many opposing interests, passions, and principles, committed to such a decision. On one side an attachment to the ancient order of things, on the other a passionate desire of change; a wish in some to perpetuate, in others to destroy everything; every abuse ascribed in the eyes of the former, every foundation attempted to be destroyed by the latter; a jealousy of power shrinking from the slightest innovation, pretensions to freedom pushed to madness and anarchy; superstition in all its dotage, impiety in all its fury—whatever, in short, could be found most discordant in the principles or

violent in the passions of men, were the fearful ingredients which the hand of divine justice selected to mingle in the furnace of wrath. Can we any longer wonder at the desolations it made in the earth? Great as they are, they are no more than what might be expected from the peculiar nature of the warfare. When we take this into our consideration, we are no longer surprised to find that the variety of its battles burdens the memory, that the imagination is perfectly fatigued in travelling over its scenes of slaughter, and that falling, like the myrtle star in the Apocalypse, upon the streams and the rivers, it turned the third part of their waters into blood."—*Reflections on War*, a sermon preached 1st June, 1802. If this could be said of the first period of the war, how much more was it applicable, particularly in regard to variety of battles and scenes of slaughter, the second, from 1803 to 1815!

tion; and for this purpose, they opposed alike the encroachments of Popery on the one hand, and the aggressions of dissenterism on the other. Nor was the compliance and conformity of the high-churchmen without its reward. The Toryism which obtained the ascendancy in the earlier part of the reign of George III. found in this portion of the church the strongest support of its principles, and bestowed in return the largest share of its patronage upon high-church candidates and expectants. Thus, while numerically they had been the stronger of the two parties, they were now politically the stronger also.

The chief disturbance that was given to this peaceful state of things, arose from the question of the necessity of particular creeds and confessions, and the obligation of ministers to subscribe to them. This ground of debate, founded upon the requirement of subscription to the Thirty-nine Articles, was of large and varied extent, owing to the sense in which the subscribers understood these articles, and the various doctrines they might be pleased to build upon them. In this way, not only Calvinistic and Arminian, but even Unitarian sentiments had been preached by ministers of the church, who either had not found these opposed to the articles, or who had made a mental reservation in their favour while subscribing. In consequence of these divergencies it had often been asked, Why require subscription at all, when the articles are subscribed with so many different meanings? and debates had been held, and pamphlets written, to prove that such tests were useless, and ought to be abrogated. At last, the great contest was brought to an issue by the publication of a work in 1766, called "The Confessional; or a full and free inquiry into the right, utility, edification, and success of establishing systematical confessions of faith and doctrine in Protestant churches." Although published anonymously, it was well known to be the production of the Rev. Francis Blackburne, rector of Richmond, in Yorkshire, and archdeacon of Cleveland, in his day an eminent polemical author, while the vigorous style of "The Confessional," and the daring principles it advocated, excited general attention. The scope of the work was to plead for the extinction of such subscriptions altogether, from the inconveniences and inconsistencies with which they were attended; and thus to cast down the pale of every church, whether established or dissenting, and throw all into an uninclined common. It is evident that such a proposal would be as obnoxious to the smallest sect as to the National church itself, and that the outcry raised against it would be from every quarter alike. This, indeed, Blackburne seems to have felt; and as if dismayed at his own audacity, he limited his ostensible demand to

the omission of three out of the eight declarations demanded of a minister on his ordination. He was not to be required to declare, that he thought himself called to the ministry by Jesus Christ; that he would minister the word and sacraments "as this church and realm hath received the same," and that he would reverently obey his ordinary and other superiors in the church. Blackburne's proposals thus modified were acceptable to many of his brethren; he became the head of a party; and in 1772, a petition was sent from it to parliament with 250 signatures, of which 200 were those of clergymen, craving for relief in the matter of subscription, &c. The debate which it occasioned extended to the following session, but the motion was lost by a majority of 159 to 67. By this rejection, the heretical tendencies of several, both Arian and Socinian, who sought to identify themselves with the Established church, were kept in check, and their hopes disappointed.

Although thus so signally defeated on one field, however, these parties only shifted their ground to renew the trial upon another. It was now not as conscientious churchmen, but as aggrieved dissenters that the Arians and Socinians were to return to the charge. Among the old restrictions upon the dissenting ministers and teachers which the act of toleration had not removed, was subscription to the Thirty-nine Articles, although in these such accommodation had been made to the dissent of the day, that Puritan scrupulosity could submit to them. But the old Presbyterian spirit of England had in a great measure faded into Arianism and Socinianism, and as such, continued to compose a large and influential portion of the dissenterism of England. This modified subscription to the Thirty-nine Articles, indeed, was now seldom enforced; but it still continued unrepealed, and might at any time be used against any unfortunate dissenting minister who had made himself obnoxious to the ruling powers. Accordingly, two months after the failure of Blackburne's petition, a bill was brought into parliament for "the further relief of his majesty's Protestant subjects dissenting from the Church of England," while the demand seemed so reasonable, that the bill found many advocates among the firmest supporters of government. The second reading was carried in the commons, but on the bill being carried to the House of Lords, it was rejected by an overwhelming majority. It was shown, indeed, in the course of debate, that this movement was not the act of the dissenters as a body, but of a minority of them—that this minority consisted of those who were not recognized by the other dissenting communities as Protestants, or even as Christians—and that the bill "was nothing else

than one for the public preaching of Arianism, Socinianism, any schism, any heresy, that any fanatic or incendiary may advance." On the following session of 1773, the bill, with several amendments, was once more brought before parliament; but on this occasion the orthodox dissenters were on the alert to oppose it both by remonstrance and petitions, and foremost among these dissidents were the Wesleyan and Whitefieldian Methodists, now risen into consequence as an influential body, but not yet avowed dissenters from the Established church. Although the bill passed again through the commons, it was as formerly rejected by the lords. As it was a hard measure that the sound-believing portions of dissenters should suffer for the perversities of the heterodox, and the many be involved with the few, a separation and distinction was made in favour of the former six years afterwards, when a motion was made in parliament "to consider of granting further relief to Protestant dissenting ministers and schoolmasters." On this occasion, the university of Oxford interposed, and obtained that the following declaration should be given by every one who shared in the benefit of the relief: I, A. B., do solemnly declare that I am a Christian and a Protestant dissenter; and that I take the Holy Scriptures, both of the Old and the New Testament, as they are generally received in Protestant countries, for the rule of my faith and practice." With this qualification, the dissenters were relieved from the subscription of the Thirty-nine Articles. Less than this, indeed, the government could scarcely have conceded, after the relief that had been granted to the Roman Catholics in the previous year (1778), by which the penalties and disabilities imposed upon them in 1699 for the "further preventing the growth of Popery" were removed. The terrible price exacted for this last concession has been already mentioned in our account of the anti-popery riot in Edinburgh in 1779, and the Lord George Gordon riot in London in 1780.

After having obtained the desired relief, by which their ministers and teachers were permitted to exercise their functions irrespective of the Thirty-nine Articles, the dissenters remained quiet for several years. But when this exemption had been for some time enjoyed, the pressure of their remaining burdens began to be more keenly felt, and none more so than the corporation and test acts of the reign of Charles II. By these statutes no person could be eligible to any municipal office, or could hold any office of profit or trust under the crown, without qualifying himself by taking the sacrament of the Lord's Supper according to the ritual of the Church of England. The dissenters might also reasonably hope

for relief from these restrictions, when they remembered that this benefit had been extended in 1779 to the Roman Catholics of Ireland. Their appeal was accordingly brought into parliament in 1787, by a motion for the House of Commons to resolve itself into a committee for the consideration of the test and corporation acts, with a view to their removal. All that the dissenters desired in this, it was stated, was only the restoration of their civil rights, not an aggression upon the rights and revenues of the Established church. It was also argued against such a religious test, that the same law which required every person receiving a commission in the army or government office to take the sacrament of the Lord's Supper, compelled every clergyman to administer it to the applicant, let the character of the latter be as worthless as it might. The motion, however, was rejected by 176 against 98. In 1789, after the subject had been at rest for two years, it was again brought into parliament by Mr. Beaufoy, member for Yarmouth, the original mover, who pointed out with equal eloquence and truth the disabilities under which the dissenter laboured through these disqualifying statutes:—"No office under the crown, though your sovereign may invite you to his service—no commission in the army, though the enemy may be marching to the capital—no share in the management of any of the commercial companies in the kingdom, though your whole fortune may be vested in the stocks—shall be yours. From the direction of the Bank of England, from the direction of the India Company, from that of the Russia, the Turkey, the South Sea Companies you are entirely debarred; for if you should accept any share in the management of these companies, or any office under the crown, or any military employment, you are within the penalties of the statutes." The measure was again defeated, but on this occasion only by a majority of 122 against 102. For the third time the motion for the repeal of the test and corporation acts was brought forward in 1790, and on this occasion by Mr. Fox. But the alarm which the French revolution had occasioned, the menaces with which it had denounced both regal and ecclesiastical rule, and the sympathy of Fox and his party with the revolutionists, made the demand for repeal more hopeless than ever. Neither was the cause at all benefited by their statements as to the loyalty and harmlessness of dissenters, and its right to full political emancipation, when the proofs adduced consisted chiefly of extracts from the writings of Priestley and the Unitarians. On this occasion the motion was defeated by a majority of 189.

An era of religious liberty had now commenced which was characterized by the demand of vari-

¹ Speech of Dr Newton, Bishop of Bristol.

ous sects for emancipation from the several disabilities under which they were placed. This spirit, which the impulse of the French revolution had awakened, but which a better Christian feeling was directing in the right course, could see no longer the necessity of prohibitions that had been devised in an age of violence and danger, or the propriety of depriving whole communities of their political rights in consequence of their religious belief. Mere toleration was felt to be a stinted privilege, especially by those sects who were separated from the church by little more than a few external forms; and, until the close of the present period, the public religious movements were chiefly the demands of different bodies for a more perfect freedom than had hitherto been allowed them. Such was the bill to prevent the vexatious prosecution of the Quakers for their conscientious non-payment of tithes, which was lost; that for the abolition of the test and corporation acts in its application to Scotchmen in England, which was also lost; and the bill for the relief of the pastors, ministers, and lay persons of the Episcopal communion in Scotland, which passed with little discussion. Even the Unitarians were not behind among these classes of applicants, and a bill was moved for the removal of those old statutes of 1641, which denounced the holders of such doctrines with capital punishment, and which now, though reduced to a dead letter, were still enough, it was alleged, to keep up the popular odium with which the whole party was branded. It is certain, however, that this dislike the Unitarians themselves had greatly helped to strengthen by their violent attacks on church and state, and loud landations of the French revolution. The motion in their favour was brought forward by Mr. Fox; but the debate, characteristically enough, lapsed into a keen attack upon, and defence of the French revolution itself, under the smoke of which the unfortunate bill disappeared and was lost.

But of all such attempts at deliverance from penalties and restrictions on the score of religion, none were of greater importance, through their future bearings and effects, than those of the Roman Catholics. The Lord George Gordon riot had left behind it a feeling of national shame and a readiness to make reparation. The sufferings of the Popish clergy in France at the revolution, and the helpless plight of those who fled to our shores and besought our sympathy and protection, had awakened a favourable relenting towards the church for which they were considered as martyrs and confessors. It had never been the use and wont of this most politic of religious institutions to be blind to such opportunities or slow to use them, and the present crisis seemed favourable for its purpose. It went warily to

work, however, and in its own ambidexterous fashion. Knowing that the word "Papist" was an abomination, a large portion of the English Romanists assumed to themselves the name of "Protesting Roman Catholics," as if they were already half Protestants; and they advanced their claims under a disavowal of those particular doctrines with which they had been charged since the Reformation, and for which they had been the objects of constant watchfulness and dislike. They did not hold that princes excommunicated by the pope might be lawfully deposed and even murdered by their subjects. They did not hold that no faith was to be kept with heretics. They did not believe that political or moral obligations could be dissolved by priestly absolution. These doctrines, whether held by the Papists or not, they, as Protesting Roman Catholics, utterly disclaimed and abhorred. Being thus so well fitted for exemption and worthy to obtain it, a bill was brought into parliament on the 21st of February, 1791, "to relieve upon conditions and under restrictions, persons called Protesting Catholic Dissenters from certain penalties and disabilities to which Papists, or persons professing the Popish religion are by law subject." All that was claimed in their behalf for the present was, the same relief which had been granted in 1782 to the Papists of Ireland, but with the proviso that this should be understood only as the first instalment of something more to be demanded, and something better to follow. And their demand was granted upon their swearing the same abjuration oaths which were imposed upon their co-religionists of Ireland. Thus their previous disabilities were removed, with the exception of their non-admission to seats in parliament or high offices of state, the prevention of their schoolmasters from educating Protestant pupils, and their disability to establish schools in the privileged cities of Oxford or Cambridge. In return, they had only to renounce by oath the doctrines they had always professed to repudiate—that no faith should be kept with heretics; that excommunicated kings might be deposed and murdered; and that the pope or any other foreign power had any jurisdiction temporal or civil within the realm of Great Britain. On the following year (1793) the same immunities were granted to the Roman Catholics of Scotland as a necessary consequence.

So much having been obtained in the removal of Roman Catholic disabilities, the contest was allowed for a long season to go to rest, only that it might be renewed in fitting time, and with greater vigour. In the meantime, the growth and strength of Popery for such a final conflict, by the silent establishment of convents and monasteries, had been going onward for some years

unchecked. This, also, was one of the consequences of the flight of the French ecclesiastics to Britain at the revolution. Those refugees who had been monks or nuns, on reaching the land of safety, had resumed their former mode of life, so that four monasteries and seventeen nunneries already existed in England. In consequence of their poverty, they had also opened schools connected with their institutions, through which they were enabled to carry on the work of proselytism among the children of the neighbourhood; and parliament, by voting money for the relief of the destitute emigrants, might find that it was unwittingly supporting these conventual establishments, and promoting the increase of Popery in England. These circumstances were brought before parliament in May, 1800, by Sir Henry Mildmay, who moved two resolutions on the subject:—"1. That it is the opinion of this committee, that the temporary residence in this kingdom of certain monastic societies should be permitted, subject to the provisions of an act passed in the 31st of his present majesty; and that the admission of any new members into such societies should be prohibited; and that the names and numbers of the persons belonging thereto should be annually returned to the court of quarter-sessions of the county in which they reside. 2. That all persons undertaking the public education of youth in the Romish faith, should also return annually to the court a list containing the names and number of their pupils, together with the names and places of abode of their respective parents; and that a power be given to magistrates appointed by the quarter-sessions to inspect such institutions at pleasure." On the 5th of June, a bill founded upon these resolutions was brought into parliament, and the arguments with which it was encountered were in the exaggerated vein of that new spirit of religious liberality which had not yet found its proper measure; the old extreme dread of Popery had rebounded into its opposite of extreme confidence and toleration. Monks, it was alleged, might as well live in their institutions without labour, as country gentlemen upon their estates; and nuns might be as usefully occupied at the convent board, as aged spinsters at the card-table. If the established clergy were afraid of Popish conversions, let them prevent the evil by more zealous and effective preaching. It was attempted to be shown, also, that the numbers of these monastic establishments were much less than had been stated; that the reports of their conversions among Protestants were nothing but boastful assumptions on the one hand, or false alarms on the other; and that their schools were only for the benefit of their own people, and not for the purposes of proselytism. The bill, however,

passed through the House of Commons, and a first and second reading in the House of Lords, where it met with little opposition. But when the motion was made for committing it, the arguments of Bishop Horsley completely turned the scale, and procured its rejection without the house going into a division. He argued, that from the small number of the professed, and the scantiness of their funds; from the strictness of the laws already existing, and the authority of the crown to declare the forfeiture of all properties and estates bequeathed for the support of such establishments, there could be no danger—that they would be powerless for the present, and must at no distant period die out from lack of nourishment. Speaking of the nuns, he added in the same tone of fearless confidence and contemptuous pity: "My lords, if any ten or twenty, or a larger number of these ladies should choose to take a great house, where they may live together as they have been used to do all their lives, and lead their lives according to their old habits—getting up in the morning and retiring at night at stated hours, dining upon fish on some days of the week, upon eggs on others—I protest I can discover no crime, no harm, no danger in all this; and I cannot imagine why we should be anxious to prevent it." In this way, the monastic institutions were left to languish out their little day of existence and die of inanition. It was a new and fatal delusion of our statesmen, of which we are now reaping the fruits.

During these conflicts of the various sects not only for toleration but for something more, it is interesting to mark the indications that were given of a new and better perception of the importance of religion—the necessity of guarding its sanctions, and enforcing its public observances. A difference of opinion may be entertained as to the wisdom with which these undertakings were animated, but there can be none about their religious sincerity. The chief of these regarded Sabbath observance, now first introduced into parliament for a more improved legislation, and thenceforth to become a question of great public agitation. What may be called the evangelical party in religion—men who previously had no political recognition, but who now were numerous and influential enough to make their voices heard and be regarded—had long felt that the Sabbath was becoming less revered, and its obligations more openly and recklessly defied. They were alarmed to perceive in this, that the good old Puritan spirit had died out, and that the chief public distinction of the land as a Protestant country was following in its wake. The first appeal for parliamentary interposition was in March, 1794, when a Sunday bill was brought

into the House of Commons by Mr. Mainwaring; but it shared the general fate of the first of such attempts by a summary extinction. On the year following, another bill was brought before the house, proposing imprisonment in addition to the paltry fines that were still in force for Sabbath violation; but although supported by some of the ministers, it was also rejected. Undismayed by these defeats, the party, who would now be called the "Sabbatarians," made a third attempt in 1799, and on this occasion not upon generalities, but a particular and specific evil. In 1780, Sunday newspapers had been originated in London; the sale had been profitable and their number threatened to multiply, while to promote their circulation by a flimsy pretext, the leading article of these journals was generally of a religious character, while whole columns of secularities which followed, formed the staple and attraction of the broad-sheet. It was pointed out in the debate, that these sermons or sermonettes would serve as an apology to their readers for withholding their attendance on church, and that very soon the articles in question would be dropped from the Sunday papers as mere excrescences. The bill, which was introduced by Lord Belgrave, was "for suppressing the sale and circulation of newspapers on the Lord's-day;" and it proposed that the penalty for the sale of each copy, now amounting to 5s., should be raised to 40s.; that £20 should be the penalty of a whole day's issue, and that the mere fact of circulating such papers should be a breach of the peace, and punishable as such by the peace-officer, church-warden, or magistrate. The time was not yet ripe for such zealous legislation, and the bill was rejected at its second reading by a majority of forty to twenty-six. Enough, however, had been done to show that the general question had become too important to be suppressed; that in some one of its manifold forms it would again be subjected to the legislature; and that from the growing strength of its supporters it would be certain in the end to succeed.

In this rapid summary we have but touched upon the chief political events of the history of religion during the present period. But from their tenor it will be seen that a new spirit had been awoken and was already in active operation. The general apathy which had succeeded the revolution of 1689, and which had slumbered so peacefully under the two first Georges, was now interrupted by the reign of a religious king; and an era of revivalism, which had commenced in the arts and sciences over the whole empire of thought, had descended upon religion also, that the progress might be more universal and complete. That progress, indeed, was slow even throughout the latter part of the present

period; but it was only because it was a permanent influence, instead of a transient emotion, and that very slowness was the promise of a more perfect and lasting durability. The progress of this inner life would more fitly constitute the religious history of the age; but as it would demand an ample record of its own instead of a brief chapter, we have been obliged to confine our notice to a few salient points, by which that change is hinted rather than described. It is enough to allude to the general effects as they were manifested at the close of this period. The court profligacy which had been so rampant and unabashed since the reign of Charles II. had been rebuked, and was beginning to hide its head. A decent external behaviour, and in many cases a more thorough transformation, had begun to characterize our aristocracy, who had learned from the example of their sovereign that a decorous morality and an open religious profession are not incompatible either with high rank or courtly accomplishments. Statesmen were finding that the religious element was once more becoming a power in the government which it would be wise in them to study and necessary to respect. In the church, although distinguished for the present by no individuals of pre-eminent intellect, there was a marked improvement among the clergy, manifested by a more Christian strain of preaching, by closer attention to their professional duties, and by a more decorous, consistent conduct; so that fox-hunting, hard-drinking, and dissolute parsons could no longer hope to escape the condemnation of the public, or the punishment of their ecclesiastical courts. And though last not least, this happy change was manifesting itself in that sympathy for others which is the best evidence of genuine Christian principle, so that the broad foundations of those institutions were laid — missions, Bible societies, Sunday schools, and establishments for religious instruction and charitable relief—which were soon to become the most conspicuous characteristics of Britain in the nineteenth century. Mention has already been made of the influence of royal example in producing this beneficial change; but far beyond this, and of an earlier period, was the influence of a despised and persecuted sect which, like the ancient Christians, had conquered by endurance, and was rewarded by success. It will be seen at once that we refer to the Methodists, who had now risen into a very numerous and influential community. To them, therefore, and their congeners, it is necessary to advert for a more complete understanding of the religious progress of the present age.

We have seen already how unpromising was the general aspect of religion toward the close of the former period. The infidel spirit of France,

which had formed so important an element in effecting the revolution, had infused itself into the literature of England; and while its fruits were manifested among the higher classes by a general aversion to religion, and light flippancy of conversation upon its doctrines and restraints, they were evinced among the lower orders in loud denunciations of priest-craft, impatience of moral rule, and conspiracies for the overthrow both of throne and altar. The Puritan spirit, which in former periods had been so strong an embankment against this evil tide, seems already to have crumbled and melted away, while the church itself had substituted a cold and empty formalism for the zeal that had once inspired it with such earnest life and activity. It was well, in such a collapse, that reviving influences were at hand to impart a new life to the exhausted frame of the church, and the apathetic spirit of the community. And first of these was the despised Methodism of the eighteenth century, which had now become a great religious power, had stepped into the place of Puritanism itself, and was provoking by its new character and claims the inquiry as well as the opposition of many. It was impossible that the church could remain indifferent to a cause which, originating among its own members, and still professing to adhere to it, was yet so dissimilar in character and aspect to the communion of which it formed a part.

We briefly noted in a former chapter the commencement of Methodism under its two principal founders, George Whitefield and John Wesley, and the wonderful effects of their preaching. At the commencement of their career, no ordinary alarm was needed, and they raised it with such fearless earnestness that the general lethargy was shaken. As the number of their converts was speedily increased and their churches were multiplied, and as the spheres of their action were wide and apart, while their cause as yet was despised by those who were trained to the regular ministry, they were obliged to avail themselves of the aid of lay preachers; and this, which was at first a necessity, became afterwards a regular part of the institution of Methodism. However defective such teachers might be in learning and experience, it is certain that they were not found wanting in zeal and earnestness; and being themselves of the people, they were the better fitted to deal with the lower orders, of whom the ranks of Methodism were in the first instance chiefly composed. But it was impossible in the common course of events that such a cause should go on unchecked; it was an active aggressor against the established order, and therefore was met by resistance. At Bristol, a hostile mob assembled round the new places of worship opened by the

Methodists, and had to be dispersed by the magistracy. At St. Ives, Wesley himself, and a congregation which he had formed, were repeatedly assailed by crowds of rustics, who were stirred up by the rector, curate, and gentlemen of the district, so that many of the worshippers were wounded, and their preaching-house was razed to the ground. In London also and its neighbourhood, he and his followers were frequently pelted with showers of stones; and at one time the mob assailed, and almost succeeded in unroofing his chapel at the Foundry. Two Methodists, John Nelson and Thomas Beard, were sent into the army, at that time considered a sort of transportation, and for no other crime that could be alleged against them, but that they had been guilty of preaching. It is gratifying, however, to find that the magistrates of Middlesex were opposed to these mob outrages, and that when the persecuted Methodists of the rural districts were unable to obtain protection or redress from the country justices, they always found it on removing their cause to the Court of King's Bench. In Ireland, the hostility to Methodism was still more decided: one of the most eminent of its preachers, Charles Wesley, the brother of John, had a presentment lodged against him by the grand jury of Cork, as a person of ill fame, a vagabond, and a common disturber of his majesty's peace, with a petition that he might be transported; and the same charge, with a similar recommendation, was brought against several of his coadjutors. Encouraged by this countenance afforded by the magistrates, the mob broke loose, and scoured the streets both day and night, their leader proclaiming "Five pounds for a swaddler's head!"—for by this name the Methodists had begun to be distinguished in Ireland. These were but specimens of the hostility which the cause encountered not only in England and Ireland, but in Wales, in America, and the West Indies—in every place to which the enterprise of its first missionaries was directed. But their zeal was of that kind which rejoices in, as well as triumphs over, such difficulties, and Methodism derived new strength and increase from every storm that was raised to level it.

Of the two founders of Methodism, the first to find rest from his toils was George Whitefield, who died at Newbury, in New England, in September, 1770, at the age of fifty-six, after a life of constant action in Britain, alternated by seven voyages to America. Of a simple character and void of ambition, his great aim was to rouse the slothful, alarm the impenitent, and reform the godless, without seeking to form any distinctive sect; and when his purpose was accomplished, he left those whom he had awakened to adopt their own communion, whether it might be in the Es-

tablished church, or among the ranks of evangelical disenterism. The effects of his wonderful preaching were therefore to be found rather in the stimulus it afforded to the religious community at large, and the manner in which it permeated through church and chapel alike, than the number of his avowed followers; and nothing definite remained in this form at his death, but a few places of worship, which he had filled with large congregations. But to these were added the numerous chapels and college built by Lady Huntingdon; and the party thus formed was distinguished by the name of the Whitefield or Calvinistic Methodists, in distinction to the Arminian or Wesleyan. These titles will suffice to indicate their respective tenets, as well as the causes that kept them asunder notwithstanding their common aim. In their religious belief, those followers of Whitefield were identified with the old English Puritans, while the polity which they adopted was a blended system of Presbyterianism and Independency. Since the death of their founder, the Calvinistic Methodists have been chiefly found in our large towns, where they have chapels more numerous than those of any other denomination; but of late years they have been able to form congregations in the smaller towns and rural districts; and they have now two colleges or theological institutions for clerical education, one at Cheshunt, in Hertfordshire, and the other at Hackney, near London.

Of a very different character were the proceedings of the founder of the Wesleyans, who was born a religious legislator, who regarded himself from boyhood as one destined to some extraordinary work, and who, as soon as he had found followers, proceeded to secure them by rules and regulations that kept them apart, and distinguished them from every other community. His indefatigable career of travelling, preaching, and writing, was also continued unabated over a long extended life, so that before he died, his form of government was in complete operation, while his followers had gathered and grown into a numerous and influential community. At the time of his death, which was in March, 1791, when he had reached his eighty-eighth year, the number of members in connection with him in Europe, America, and the West India Islands, amounted to 80,000. All this, too, was nothing more than a promise of that remarkable increase of their community, which has continued to the present period. While Wesley lived, he exercised over them the authority of an irresponsible bishop, and assumed the complete control of those lay preachers whom he called to the office, and sent as missionaries over the whole kingdom, allowing them no greater scope than what he was pleased to measure out to them. "What, then, is my

power?" he asked:—"It is a power of admitting into, and excluding from the societies under my care, of choosing and removing leaders and stewards, and of receiving or not receiving helpers, and appointing them when, where, and how to help me." The same episcopal spirit is impressed upon all the governing portions of his complicated polity, for to the last he regarded himself as a minister of the Church of England, and his community as a portion of it, instead of a separate sect. But the results which ensued, although necessary consequences, were such as he had not contemplated. The Arminian stamp which he impressed upon its doctrines was not in accordance with the Thirty-nine Articles, and thus, Methodism must have been compelled, sooner or later, to acknowledge itself a dissent. The illiterate character, and, in some cases, the extravagant zeal of its preachers, excluded them from the clerical pale of the Establishment, and compelled them, in self-defence, to assume a clerical standing of their own. The Methodists were required by their founder to receive the sacred ordinance of the Last Supper either from the hands of the parish minister, or from those regularly ordained clergy who officiated in their chapels; but, since his death, they have avoided the parish churches, and received the communion in preference from their own ecclesiastics. In the same manner, when his death had deprived them of his all but pontifical authority, their form of government underwent a modification, and became what was considered a new species of Presbyterianism. By this change the conference became to Methodism what the general assembly is to the Church of Scotland; and their ministers assumed the power to admit members to their communion, and to the table of the Lord, by their own authority.

But the effects of Wesley's death were still more strikingly manifested in a secession which occurred soon after that event. In a former chapter allusion was made to the annual meetings of the conference, and to the authority which it exercised over the movements of the whole body. It was the supreme irresponsible power from whose dictates there was no appeal. But unlike the Scottish assembly, it was a self-elected oligarchy, consisting entirely of ministers, instead of a due admixture of lay representation; and its meetings were held and its decrees passed with closed doors, so that the people could have no voice in its proceedings. This was complained of as tyrannous and unscriptural, so that, at the conference held at Leeds in 1797, delegates appeared from many societies throughout the country, to complain of the evil, and demand redress. Their requests, which were nothing more than reasonable, and accordant with the feelings of

Englishmen, were, that the people should have a voice in the formation of their own laws, the choice of their own office-bearers, and the distribution of their own property—and these demands, as might have been expected, were refused. The remonstrants therefore seceded, and proceeded to form a party of their own upon more liberal principles. The result was a closer assimilation of their polity to that of Scottish Presbyterianism, in which the people were allowed to choose their officers, and appear by representatives at all their synodical meetings. Such was the first offshoot of Wesleyan Methodism, and they assumed to themselves the name of New Connection Methodists, and also of Kilhamites, from Mr. Alexander Kilham, their leader in the secession. Four other parties also have subsequently broken off on the same or similar objections, after the general cause had attained strength and numbers, and found time for internal debate and quarrel, but still adhering to the common leading principles of Wesleyanism, and therefore giving hopes of future reconciliation and re-union.

Connected with the origin of Methodism, was the introduction of the Moravians or United Brethren into England. With them Wesley became acquainted for the first time in 1735, and so much was he struck with their primitive manners and fervent piety, that in the then unsettled state of his mind he adopted their principles, and became one of the United Brethren. In this way, the incipient Methodism of England bade fair to be nothing else than a revived Moravianism adapted to its new country and people. But it was soon evident that a church of German growth was not suited to the English temperament, and that John Wesley and Count Zinzendorf could not co-operate in mutual peace and equality; and in spite of repeated attempts for a union between the two infant sects, they parted asunder, and each went upon its own way. It was in this manner, too, that the followers of Whitefield and Wesley had separated from each other as soon as they had sprung into existence. But even this contention, which was otherwise so much to be regretted, sufficed to animate the rival bodies with greater zeal, and incite them to double activity upon their common mission. A very short notice of this foreign church, which was now to be naturalized in Britain, is all that our limits will permit.

This sect of the Moravians originally consisted of three different classes or churches. The first of these claimed for itself a very early antiquity, going back nearly to the apostolic period, and considering itself as one of the witnesses of the true religion during the dark and middle ages, when as yet Protestantism had neither name nor distinction. The second class, who

after the Reformation became the followers of Luther, were identified with the Lutheran church. The third party were they who embraced the Calvinistic doctrines, and thus became connected with what was especially designated the Reformed church. As they were so much at one, however, in their common creed and character, as well as their Slavonic nationality, a union took place between the three parties, having for their connecting principle, "living faith, vital religion, love for the mutual communion of Christian brethren, and zeal which aims by united efforts to propagate the religion of Jesus." Upon these catholic principles an alliance was easy, of which, union, not incorporation, was the object, so that these classes still retained their old communion, whether Lutheran or Calvinistic. It was in this manner that they acquired the name of "*Unitas Fratrum*," or United Brethren. Their other title of Moravians, was derived from the migration of one of the parties to Moravia, where they established a settlement at Herrnhut, an estate of Count Zinzendorf. The count, who is generally supposed to have been the promoter and head of this union, was administrator of the Lutheran branch of this community. Among a people united by such terms of mutual forbearance, the principles of the three Christian communities, of which they were originally composed, are received with equal toleration. Thus, the ordination among them is by bishops or presbyters, according to the prevailing sentiment of the congregation, while both bishop and presbyter will receive from each other's hands the most solemn ordinances of religion without demur or controversy. But instead of possessing exclusively the government of the church, these bishops, as well as the pastors and deacons, are subordinate and subject to a college of elders, to whom the management of the church is intrusted. Over each of the three branches of the unity, is also appointed an administrator and honorary president, as its patron, to watch over its welfare and promote its interests. In this manner the Episcopalian and Presbyterian elements are combined in the polity of the United Brethren. But a third element, which formed the characteristic of the ante-Reformation Moravians, has also been admitted into the union, consisting of those forms which were supposed to be in accordance with primitive Christianity, and to have been handed down from the apostolic ages. The chief of these are the following:—They celebrate Easter-day at sunrise, and upon the burial-ground, when the minister begins with the sentence from Scripture, "The Lord is risen!" upon which the people reply, "He is risen indeed!" In imitation of the example of the Founder of our faith, they wash each other's feet once a year, each performing the office to

their own sex, previous to receiving the sacrament of the supper. At the sacrament, the minister officiates in a white surplice, and the communicants receive and eat the bread kneeling. Before its celebration, the minister exhorts the people to self-examination, and all the assembly kneeling down ask for absolution. A liturgy is used in public worship; and in baptism, three or five witnesses are present, who are frequently called god-fathers and god-mothers, and who lay their hands on the infant along with the minister, and pronounce with him the baptismal benediction. In their church courts, female elders are admitted, but they do not possess the right of voting. In great and doubtful questions before their synod, upon which they are unable to decide, they have recourse to the "lot," in imitation of the apostles on their selection of a brother in the room of Judas Iscariot. The Moravians are peculiarly strict in keeping the sexes apart, not only in every-day intercourse, but their meetings for public worship; they occupy different sides of the chapel, and are under the inspection of elders of their own sex. Marriage also, instead of being a private and personal affair, is made the business of the church; if no choice has previously been made, the elders assign partners for each other, but where a mutual affection has been formed, the consent of the elders is necessary for their union. The introduction of this remarkable church into England was chiefly owing to the visits of Count Zinzendorff, first in 1737, and afterwards in 1749, and to its connection with the rising cause of Methodism, although this friendly connection was afterwards exchanged for rivalry and contention. It was unfortunate for the Moravians of that period, that their religious language was so deeply tinged with pietism, and that their hymns and other productions, not excepting the writings of Zinzendorff himself, were filled with expressions in relation to divine love and holy ardour that were susceptible of the worst interpretations. Judged by this standard, the brethren were at first maligned in England as a sect of infamous sensualists, who combined the profligate principles of the old Familists of the commonwealth, with the licentious communist lives of the Anabaptists of Munster in the days of Luther. But a little acquaintanceship with these misjudged Moravians was sufficient to show, that their lives were as pure and primitive as their professions, and that their allegorical phraseology was rather an offence against the proprieties of taste than the principles of holiness and morality. Their cause took root in the British soil notwithstanding the outcry raised against it, and while they are not surpassed by any other sect in an upright consistent Christian rectitude of walk and conversation, they have taken the lead of others

in missionary enterprise, especially where it is connected with danger and self-denial. Of this, full proof has been especially afforded in their missions to the Indians of America, and to Greenland.

It would have been singular if, on the eve of a national religious revival, no distinguished heretic or mystagogue had appeared, to exaggerate the fervour of the coming change, and serve as a warning against excessive zeal and headlong innovation. And such a man was Baron Emanuel Swedenborg, a native of Stockholm, in Sweden, and born in 1689. His whole career was remarkable, and calculated to arrest inquiry. At the age of twenty he commenced public life by publishing a volume of Latin poetry; afterwards made a tour of several years through the principal countries of Europe; and finally betook himself to the study of physics and mathematics, his proficiency in which was attested by his numerous scientific works, that procured him an European reputation, the office of assessor in the metallic college of Stockholm, a patent of nobility, and membership in some of the principal scientific societies. But in spite of such pursuits, and the honours that crowned them, he threw all aside, and started upon a very different career, which he thus announced to the world:—"Whatever of worldly honours and advantage may appear to be in the things before mentioned, I hold them but as matters of low estimation, when compared to the honour of that holy office to which the Lord himself hath called me, who was graciously pleased to manifest himself to me, his unworthy servant, in a personal appearance, in the year 1743, to open in me a sight of the spiritual world, and to enable me to converse with spirits and angels; and this privilege has continued with me to this day. From that time I began to print and publish various unknown *arcana*, which have been either seen by me or revealed to me, concerning heaven and hell, the state of men after death, the true worship of God, the spiritual sense of the Scriptures, and many other important truths tending to salvation and true wisdom." In the revelations of these wonderful *arcana*, he announces that the spiritual world does not exist in space, but is immediately present, and present everywhere. "Of this," he says, "I was convinced, because I would there see Africans and Indians very near me, although they are so many miles distant here on earth; nay, that I could be made present with the inhabitants of other planets in our system, and also with the inhabitants of planets that are in other worlds and revolve about other suns. By virtue of such presence, not of place, I have conversed with apostles, departed popes, emperors, and kings; with the late reformers of the

church, Luther, Calvin, and Melancthon, and with others from distant countries." Being thus so well qualified to tell "the secrets of a world unknown," he proceeds to describe the spiritual existence, which, according to his account, is not only abundantly material, but sufficiently sensual even for the most unrefined. And there, he tells us, notwithstanding the want of space, "after death a man is so little changed, that he even does not know but he is living in the present world; that he eats and drinks, and even enjoys conjugal delight, as in this world; that the resemblance between the two worlds is so great, that in the spiritual world there are cities, with palaces and houses, and also writings and books, employments and merchandises; that there are gold, silver, and precious stones there." This is even upon a lower scale than the Paradise of Mahomet, or the Elysium of the Greeks, although the saving clause is added, that although in this spiritual world the same things exist as in the natural world, yet "in heaven such things are in an infinitely more perfect state."

The system of theology which was to be established by these revelations, if at all intelligible, can be best understood from Swedenborg's own words, as contained in his *True Christian Religion*:—"I was once raised up, as to my spirit," he writes, "into the angelic heaven, and introduced to a particular society therein; and immediately some of the wise ones of the society came to me and said, 'What news from earth?' I replied, 'This is new, that the Lord hath revealed *arcana*, which in point of real excellence exceed all the *arcana* heretofore revealed since the beginning of the church.' They asked, 'What *arcana*?' I answered, 'The following: 1. That in all and every part of the Word, there is a spiritual sense corresponding with the natural sense; and that the Word by that sense is the medium of conjunction between mankind and the Lord, and also of consociation with angels, and that the sanctity of the Word resideth in that sense. 2. That the CORRESPONDENCIES of which the spiritual sense of the Word consisteth, are discovered.' And the angels asked, 'Had the inhabitants of the earth no knowledge heretofore concerning correspondences?' I replied, 'None at all; and that the doctrine of correspondences had been hidden now for some thousands of years, viz., since the time of Job; that at that time, and in the ages before it, the science of correspondences was esteemed the chief of sciences, being the fountain of wisdom to man, because it was the fountain of knowledge concerning spiritual things, relating to heaven and the church; but that this science, by reason of its being perverted to idolatrous purposes, was so obliterated and destroyed by the divine providence of the Lord,

that no traces of it were left; that nevertheless at this time, it was again revealed by the Lord, in order to effect a conjunction of the members of the church with him, and their consociation with the angels.'"

To make known his new doctrine, and furnish the key to these correspondencies, the baron not only wrote many theological works, but visited as a missionary some of the principal cities of Europe, especially Amsterdam and London, and it was in the last of these that he died, A.D. 1772. That a man so distinguished by his scientific attainments, so upright in character, and indifferent to applause or influence, should have broached so wild a creed, and been so earnest in promoting it, would be perplexing, were we not informed, that about twenty years before he died, he was seized with a fever accompanied with delirium, and that it was after this period he became a religious clairvoyant and heresiarch. The result of his labours in England were, that a sect was established under the name of Swedenborgianism or the New Jerusalem church; that they have erected chapels in London, Bristol, Birmingham, and other parts of the British empire; and that not a few persons of talent and education, although they did not join the new cause, were yet so impressed by its eloquent mysticism and alluring revelations of the invisible world, as to form from them a modified system of their own, and become the propounders of new doctrines and interpretations. It was also alleged, that a numerous body of the clergy in England thought favourably of the opinions of Swedenborg, and privately adopted them, but without resigning their charges, under the idea that the baron had no intention to form a church, but had left every one to follow his own conscience. Besides England, Ireland, and Wales, numerous congregations of Swedenborgians were formed in France, Holland and Sweden, Russia, Poland and Turkey, the East and West Indies, and America.

The doctrines of the New Jerusalem church thus widely diffused, and subject to so many modifications, it would be difficult to particularize. But adopting for their standard the specimen exhibited by the English Swedenborgians, the following may be received as an outline:—Believing in one God, they hold, however, that he is no other than Jesus Christ; that he always existed in a human form; that in this divine person there is a real Trinity, consisting of his divinity, his humanity, and the operation of them both; but that this Trinity did not exist from eternity, but commenced at the incarnation. In this way they totally reject the principles of the Athanasian and Nicene creeds. Of the incarnation, they believe that Christ took upon himself a proper human or material body, but not a human soul; and

that he redeemed the world by subduing the hells or evil spirits, and regulating anew the heavens, so as to prepare the way for a new spiritual church; and that without such redemption no man could have been saved or angel retained in his integrity. Of the Scriptures, they believe that they are to be interpreted not only in a literal, but a spiritual sense, which extends over every part of the sacred writings except the Acts of the Apostles, and that this spiritual sense was unknown to the world until it was revealed to Emanuel Swedenborg. They hold that there are angels attending on men and residing in their affections; that temptations are a struggle between the good and the bad angels within a man, and that in this way God assists men under temptation, as of themselves they can do nothing. The doctrine of a divine influx from God forms a principal part of the Swedenborgian creed. According to it, there is a universal influx from God into the souls of men, and that this divine light on the spiritual world is like that of the sun in the natural world; that each man receives it according to his state, and that by the evil nature of the wicked these good influxes are changed into their opposites. Besides, we are subject to evil influences from the hells or evil spirits, as well as good ones from God and his angels, and all angels, whether good or bad, were originally men. At death the soul, instead of passing at once into heaven or hell, is sent to an intermediate state, called the world of spirits, where the good are purified from remaining evil, and the bad divested of what good they may retain; and on the third day after death man rises again in a substantial body, which was inclosed within his material body, and in this he lives as a man to eternity, whether in heaven or in hell. Such are the principal tenets of Swedenborgianism; and it will be seen at once that they are little fitted for the rough test of analysis or disputation: they are a sort of religious mesmerism that eludes both grasp and touch. Besides, they have settled all antagonistic controversies by the fiat of their master, whose knowledge was so supernatural and unerring. Arianism and Socinianism he stamped with utter reprobation. Calvinism fares no better, for he saw the Genevese reformer in the other world, still holding fast his opinions indeed, but doomed to expiate them in a sort of hell where there was little chance for repentance or change. As for Luther, Swedenborg found that he was admitted into heaven, but it was only in consequence of a posthumous conversion.

In England, and during the present period of our history, the cause of Swedenborgianism assumed an important aspect: its places of worship, which were called temples, were numerous, its liturgy was formed upon that of the English

church, and its ritual was performed by a splendidly attired priesthood, and with a pompous and captivating ceremonial. The religious works of Swedenborg, also, originally written in Latin, were translated into English, while a society formed in Manchester for their diffusion circulated not less than 16,000 copies in the course of a very few years. But this first blaze of success has not been durable—the New Jerusalem church has dwindled into an insignificant sect; and the chief effect of its principles is to be traced in their influence upon individual minds, their amalgamation with other systems of religious opinion, and the sects they have directly or indirectly germinated from the time of their first promulgation to the present hour.¹

The religious history of Scotland during this period continues to be distinguished by the one leading event which had formed its chief characteristic since the days of Queen Anne, or, to speak more correctly, since the period of James VI. This was the struggle against patronage in the presentation of church livings, which had ever been regarded by popular feeling as the great barrier to the church's liberty and independence. The struggle, as we have seen, had lately produced a secession from the church, which was growing into such strength and importance that it now could number 120 meeting-houses. But here the spirit of secession, instead of being stopped by conciliation, was only aggravated by renewed aggressions to a fresh act of vindication; and, in 1760, another departure occurred, by which a new body of dissent was formed similar to that of the Seceders. The event that occasioned it was the settlement of a minister in the parish of Kilconquhar by a decision of the General Assembly against the wishes and appeal of the parishioners. On this result, a number of them withdrew, and erected a new place of worship; their cause was adopted by three ministers, who formed themselves into a presbytery; and the new body, under the name of the Relief (meaning thereby a relief from the bondage of patronage), continued to grow in numbers and multiply their congregations as their predecessors of the Secession had done. As for the dominant party in the church, they too seemed relieved by these departures, if we might judge from their growing confidence and indifference to the popular will. The church courts were now effectually under their own control, and every murmur against them could be represented as the mere utterance of hostile discontent and dissenterism, instead of the voice of friendly warning or conscientious appeal.

¹ Bogue and Bennet's *History of the Dissenters; Short Account of the Honourable E. Swedenborg; Swedenborg's Universal Theology and True Christian Religion.*

One instance of these proceedings will more distinctly indicate their nature than any laboured disquisition. A minister of a small living had received a presentation to the larger and more lucrative parish of St. Ninians; but, while his call on the part of the parish was only signed by a few Episcopalians and non-resident heritors, 600 heads of families, sixty heritors, and all the elders except one were opposed to his admission. This was an opposition of unmistakeable significance, as well as strong enough to make itself heard; but, on the other hand, patronage would not yield a single jot of its supremacy. The consequence was, a tedious litigation of seven years before the church courts, during which long period the parish was without a minister. But, in spite of its persevering protests, the General Assembly in 1773 decided against it, and issued a peremptory command for the admission of the intruding minister; the presbytery that had joined the protests of the parish was to ordain him without delay; and, to punish its sympathy with the recusants, every member was to be present on the occasion. On the day appointed an immense crowd was assembled at St. Ninians, and the presbytery as culprits were compelled to go through the solemn work of induction. But when the usual questions should have been put to the intruder—when he was to be asked if the glory of God and the love of souls had really brought him here to undertake the work of the ministry over such a people, the moderator paused—he could not thus question him; but, instead of this, he endeavoured at such a solemn moment to warn him by a last appeal. Adverting to the long, confirmed, and all but universal rejection of the people, he thus addressed the eager expectant before the silent, awe-struck crowd:—"We are met here this day to admit you minister of St. Ninians. . . . If you should this day be admitted, you can have no pastoral relation to the souls of this parish; you will never be regarded as the shepherd to go before the sheep; they know you not, and they will never follow you. You will draw misery and contempt upon yourself; you will be despised, you will be hated, you will be insulted and maltreated. . . . What happiness can you propose to yourself in this mad, this desperate attempt of yours without the concurrence of the people, and without the least prospect of usefulness in this parish? Your admission into it can only be regarded as a sinecure, and you yourself as stipend-lifter of St. Ninians, for you can have no further relation to this parish. Now, sir, I conjure you by the mercies of God, give up this presentation; I conjure you, for the sake of the great number of souls of St. Ninians who are like sheep going astray without a shepherd to lead them, and who will never hear

you, will never submit to you—give it up; I conjure you by that peace of mind which you would wish in a dying hour, and that awful and impartial account which in a little you must give to God of your own soul and of the souls of this parish at the tribunal of the Lord Jesus Christ—give it up!" The astonished crowd turned their eyes upon the subject of this eloquent appeal, who briefly replied, "I forgive you, sir, for what you have now said—may God forgive you! Proceed to obey your superiors." Finding that all further remonstrance was hopeless, the other, omitting the usual forms, thus briefly concluded the induction:—"I, as moderator of the presbytery of Stirling, admit you, Mr. David Thomson, to be minister of the parish of St. Ninians, in the true sense and spirit of the late sentence of the General Assembly, and you are hereby admitted accordingly."

While such were the principles upon which the moderate party administered the government of the church, the spirit of their public teaching was undergoing a similar divergence from the stern Calvinistic standard to which they were pledged, as the representatives of the national faith. They, too, like their brethren of England, had caught the spirit both of the revived old systems of philosophy, and the scepticism of the new, and endeavoured to make theology conform to the one or the other, or to both, according to their individual predilections. On this account, their preaching at an earlier stage chiefly consisted of moral obligations, while the great Christian principle was left out. Human depravity and the necessity of redemption were overlooked as exploded doctrines, and faith was a word either wholly omitted, or invested with new significance. In this manner sermons were collapsed into ethical essays that might have been preached in any age or country, without the glory of martyrdom or even the stimulus of contradiction. But as the degeneracy went onward, this omission was too negative in its character to suit the aspiring spirit of the age; and accordingly, doctrines which the church had positively repudiated—Arminianism, Pelagianism, and finally Socinianism itself, were successively infused into the new theology. Thus had it been also with the English church, and the Presbyterianism of England. But happily for Scotland, the mass of the people were not dependent upon such instruction. Of them it might generally be said, that every man had not only a Bible, but was able to read it. They had their Confession of Faith, their Catechism, and their library of old theologians; and they had the remembrance of the struggles their country had sustained upon moor and mountain, in the establishment of the national church, and of their

kindred of the previous century who had suffered to the death for its sake. In all these advantages, their condition was different from that of the people of England, and therefore instead of implicitly following the spiritual guides who were imposed upon them, they were able to judge for themselves, and estimate the value of sound instruction. It was not wonderful, therefore, if at such a period especially, they were feverishly alive to their rights in the choice of a minister, and critical about the character of his preaching; nor could it well be otherwise than that the generality of the moderate clergy should be anything than acceptable to their flocks, that they should generally preach to listless auditors or empty pews, and that the bulk of the people should attach themselves to those ministers of the minority who adhered to the ancient standards of the reforming and covenanting periods.

As in all republican bodies, however free, there will be a recognized leader whom the majority consent to follow, and to whom a sort of monarchical or episcopal authority is voluntarily conceded, the General Assembly of the Scottish church was no exception to the common rule. The talents, literary celebrity, and moral worth of Principal Robertson, had naturally raised him to this enviable office; and under his administration, the law of patronage had been established, and the ascendancy of the high-church or moderate party secured. But such gratuitous obedience is the most difficult of coercion, and there are times when it will not only fall short of the necessary mark, but overleap the limits that have been assigned to it. And it was an excess rather than a short-coming in the zeal of his followers that constrained this Pericles of the Church of Scotland to resign his supremacy. It was daily becoming more irksome to the Arminian or half Socinian clergy to preach their dangerous theology with "bated breath," and be confronted at every turning with the Confession of Faith, and the watchful or rebuking eyes of their hearers; and the desire was now prevalent among many of the moderates to have the subscription to the Confession abolished. By accomplishing this, they might preach what doctrines they pleased without fear of censure or deprivation. This desire became too rampant for even the authority of Principal Robertson, and in 1780, he was fain to retire from the leadership, after having held it for twenty-two years. He contemplated it already as the chief question that was to be moved for years to come, the great controversy that was to agitate the succeeding generation; and in the very prime of his strength and influence he retired into private life, rather than incur the responsibility of such a trial. But the evil was happily averted at the outset, and by means

upon which he had not calculated. Several landed proprietors, on hearing of the proposed innovation, declared, that as soon as the signing of the Confession of Faith was abandoned, they would consider the connection between church and state at an end, and would therefore pay no more stipend. This check brought the innovators to a sudden pause, and there was no further word of non-subscription.

Dr. Robertson was succeeded in the management of the affairs of the Scottish church by the Rev. Dr. Hill, professor of theology in the university of St. Andrews. But although an able church leader, he did not possess the same commanding influence as his distinguished predecessor, which was partly owing to his residence in St. Andrews, instead of being able to watch the progress of events in the capital. The momentous question of patronage still continued to be agitated, and with increasing violence, while the growing strength of the evangelical party encouraged them to attempt a modification of the grievance. This was made in 1782, in consequence of overtures from several synods to the General Assembly on the subject. The call of the people, once thought as essential as the presentation of the patron himself in the appointment of a minister, had now dwindled into an empty, unregarded form; but it was hoped that its restoration to somewhat of its former importance, might act as a check upon the recklessness of patronage. The weight of these overtures was such that the moderate party were compelled to yield, although it was in seeming only, by the resolution, that "The moderation of a call in settling ministers is agreeable to the immemorial and constitutional usage of this church, and that it ought to be continued." Even this was much compared with the resolution of Dr. Hill, who moved that the overtures of the synod should be dismissed as unnecessary. But only two years afterwards (1784), this concession was rendered nugatory, by the rejection in the assembly of fresh overtures against patronage, which were tendered in the hope that the season of deliverance had arrived. On this occasion, Dr. Hill's motion was carried, that the overtures be "rejected, as inexpedient, ill-founded, and dangerous to the peace and welfare of the church." His success emboldened him to a further attempt. Since 1735-6, when petitions from the assembly for the removal of patronage had been found ineffectual, it had been the annual practice of the assembly to give its court of commission instructions to apply against the grievance, and petition for redress. These instructions, indeed, had latterly become an empty form, and the yearly appeal a dead letter; but still they remained as the remembrance of a violated right,

and a witness of the sense of the church that patronage was an evil, and ought to be abolished. It was now moved by Dr. Hill that the annual practice should be discontinued, and it was discontinued accordingly.

The further proceedings by which the Scottish church was distinguished during the remainder of this period, were characteristic of the party in the ascendancy, and the successes they had already gained. These particulars therefore may be briefly enumerated. Socinianism had made such progress, and become so bold among a portion of the clergy, that Dr. M'Gill, of Ayr, had the temerity to publish his *Practical Essay on the Death of Jesus Christ*, a work which, but for its exceeding dullness, Dr. Priestley himself might have fathered. But the attempt was too loud and daring to pass unnoticed, and a prosecution against the author, on account of the decided Socinianism of the essay, was carried through the church courts. And yet it was not until after tedious litigation and discussion, that the condemnation of the work could be obtained. The missionary spirit which was kiudling in England had also extended to Scotland, and in 1796 the General Assembly was overtured by the synods of Fife and Moray, to "take into consideration by what means the Church of Scotland might most effectually contribute to the diffusion of the gospel over the world." With this was coupled the petition for an act recommending a general collection throughout the church, to aid the several societies for propagating the gospel among heathen nations. But in the debate that fol-

lowed, it was argued that savages must be civilized before they could be converted—that as for the Hindoos, they were already so virtuous, that the attempt to convert might only corrupt them—and that all our resources for missionary exertion would be better expended upon the ignorant and irreligious at home. By these arguments, now so trite, but which at that time had the charm of novelty, the growing missionary spirit of the church was thrown out to the protection of isolated sects and societies. Owing to the great increase of the population, especially in trading districts, proposals for several years had been made for the erection of auxiliary churches under the name of "chapels of ease," where parish churches were found insufficient to accommodate the people; but after four years of delay, the General Assembly in 1798 succeeded in quashing the design.

But amidst such a state of ecclesiastical rule, the spirit of the people was not subdued nor their intelligence suppressed, and these repeated violations of the national religious feeling were now drawing to a close. This was the more inevitable, on account of the reaction which had occurred in England, the common principles of which were certain to be available in Scotland also. From these causes a change had already begun in the Scottish church, the development of which was manifested in the earlier stage of the nineteenth century. Under the succeeding period, therefore, the narrative of this desirable transformation will properly occur, as the subject of a separate chapter.

CHAPTER XLII.—HISTORY OF SOCIETY.

FROM THE ACCESSION OF GEORGE III. (1760), TO THE PEACE OF AMIENS (1802).

British commerce at the commencement of the period—Colonial exports and imports—Effects of the American war on our commerce—State of commerce after the close of the war—Failures of country banks—Commercial recovery—Its increase—Improvements in the machinery of manufactures—Application of steam—James Watt—Progress of the steam-engine—Invention of the spinning-jenny and mule-jenny—Effects of improvements in manufactures at the close of this period—Statistics of exported manufactures—Defective means of internal conveyance—Improvements in road-making and postal conveyance—Canals—Brindley and the Duke of Bridgewater—Improvements in agriculture—Account of farm and cottage life—Costums of the period—Old fashions discarded—Growing simplicity in dress—Female costume—Its chief characteristics—Effects of the French revolution on female costume and fashions—Style of living during this period—Households of the aristocracy—Servants—Meals—Amusements of the aristocracy—Gambling—Assemblies—The *festino*—Closer approximation of the higher and middle classes in public amusements—Blue-stocking clubs—Political and social clubs—Moral improvement of the higher and middle classes—Influence of royal example in effecting it—Influence of the press—Moral warning given by the French revolution—Remains of former immorality—Duels of the period—Boxing and horse-racing—Betting—Aversion of the Scots to wagers—Lingering superstitions of the period—Superstitious practices—State of living among the middle classes—Condition and practices of the lowest orders—Highway robberies—Continuing insecurity of city life—Street robberies—Thief-catchers—London burglars—Pickpockets, &c.—Insecurity of fashionable assemblies—Crimps and press-gangs—Smugglers—Mob outrages and riots—Trades' riots—Public executions—Displays of mob justice—Efforts of Methodism to reform the lowest orders—Operation of Sunday-schools—Necessity for emigration—Emigration interrupted by the American war—New inlets sought for it—Voyages of Captain Cook—His exploration of New Holland—Establishment of New South Wales as a penal settlement—Progress of the colony—Travel joined to nautical exploration—James Bruce and Mungo Park—Their travels in Africa—Progress of the fine arts—Innovations in English architecture—Their unsuitableness to the climate—Painting—Sir Joshua Reynolds—Sir Benjamin West—West's innovations upon the classical style of painting—Establishment of the Royal Academy—Its chief members at the commencement—James Barry—Painters of scenery—Romney—Hamsay—Copley—George Morland—Sculpture—English sculptors of the period—Banks—Nollekens—Bacon—Their principal productions and styles—Application of the fine arts to domestic life—Josiah Wedgwood—His improvements in pottery—Pottery-painting—Engraving of the period—Principal engravers—Wood-engraving—The Bewicks—Music—Cathedral and oratorio music—The English opera—Musical associations—Musical festivals—Progress of science and literature—Samuel Johnson—Oliver Goldsmith—Periodicals of the old class—They are superseded by political journals—Eminent political writers—Edmund Burke—His career and writings—Adam Smith—His *Wealth of Nations*—Effects produced by it—Historians—David Hume—Dr. Robertson—Gibbon—Other historians of the period—Writers on morals, theology, and politics—Poetry—Gray—Glover—Akenside—Mason—Wilkie—Beattie—Falconer—Churchill—Darwin—Decay of the school of Pope and Dryden—Revival of the early songs and ballads—Poetical forgeries—Ireland and Chatterton—Macpherson's publication of *Ossian's Poems*—Their popularity—Introduction of a new school of poetry—William Cowper—His history—Character of his poetry—George Crabbe—Scottish poetry—Robert Burns—His poetry and its effects—Decay of dramatic poetry—Play-writers of the period.

COMMERCE, of which she was the great representative, had now become the chief history of Britain. To this her insular position and internal resources, her favourable harbours, her foreign conquests, and the intellectual energy and enterprise of her people had been tending for centuries; and all had indicated, even from an early period, how well fitted she was both by nature and circumstances to become—and that, too, upon a grand scale—the Carthage or Palmyra of a future day. That eminence, the great object of her mission, and culminating point of her career, she had now attained, and to the steps by which it was reached we have already briefly adverted. The history of British commerce from the accession of George III. to the end of this period presents so wide a

field, and such a variety of incident, that all which we can accomplish upon the subject within our present limits, may be comprised under a few general notices.

At the peace of 1763 Britain found herself the principal commercial gainer. Independently of the increase and activity which the war had generally inspired, manifested by the steady improvement of our foreign trade, which had gone on annually to the death of George II., it had largely added to our foreign possessions, the chief of which were Canada and Florida. The war that ensued with our American colonies—which, independently of other characteristics, might be called the greatest of our national mercantile blunders—then occurred; but even during the interval of complaint, remonstrance, and quarrel by which that unhappy war was preceded, extending over

a course of ten years, the trade between these colonies and the mother country was neither retarded nor diminished. This is shown by the following statistical facts:—

The value of the imports into Great Britain from New England, New York, Pennsylvania, Virginia, and Maryland, Carolina, Georgia, and Florida, was in 1763,	£1,460,141
And of exports to these provinces,	1,912,491
In 1774 the value of imports was,	£1,900,753
And of exports,	2,902,619

The commercial shock which occurred in consequence of the war that followed, and the separation of the colonies from the mother country, was fully compensated by the acquisition of an empire in the East, compared with which the conquests of Rome were of inferior account. Besides, it was soon felt, that even this separation itself, ominous though it looked at first, was ultimately beneficial to the mother country, by confining the commerce of the world almost exclusively to the British race, instead of breaking it down, and dividing it among hostile countries. The interchange also between Britain and America, instead of being one of oppression and conquest, was of peaceful character and common benefit, and therefore certain to be resumed when the causes of quarrel had ended. This case is well stated by Chalmers, in his *Historical View of the Domestic Economy of Great Britain and Ireland*. "Had Great Britain," he says, "like Spain, received any public revenue from the transatlantic territories, she had doubtless lost this income by the independence of her colonies. If Great Britain has thereby lost sovereignty without jurisdiction, she has freed herself from the charges of protecting an extensive coast, without deducting anything from her naval strength, since the colony sailors were protected by positive statute from being forced into the public service. While this nation has saved the annual expense of great military and civil establishments, it can hardly be said to have lost any commercial profits. And, by excluding the citizens of the United States from their accustomed participation in the gainful business of ship-building, freights, and of fishery, Great Britain has in fact made considerable additions to her naval power. Thus, the means which were used to enfeeble this country have actually augmented its strength, whatever may have been the fate of the other belligerent parties."

While such was the result of an event in which the enemies of our country rejoiced as the death-blow of our commercial prosperity, the peace of 1783 gave our trade a fresh impulse, at which they might well have been astonished. Among the many proofs of this renewed spirit, and the energy it indicated, one significant fact is to be found in the increase of trade that had taken place between Britain and the revolted colonies

only a twelvemonth after peace had been proclaimed between them. Thus, our exports thither, which before the breaking out of the war were estimated at £3,064,843, were in 1784, £3,397,500. The general result was, that our entire foreign trade during ten years was almost doubled, as may be ascertained from the following statistical extracts taken from the tables of the period. Thus, in 1782 the account was—

In imports,	£10,341,628
In exports,	13,009,458

While in 1792 the account was as follows:—

In imports,	£19,659,358
In exports,	24,905,200

Still greater than this had been the increase of our shipping during the same period, as may be ascertained from the same sources. Thus, the vessels belonging to all the ports in Great Britain are summed up as follows:—

In 1782,	vessels,	7,936	tonnage,	615,281
In 1792,	„	12,776	„	1,348,884

In the years 1792 and 1793, such a mercantile interruption occurred as had not been hitherto experienced; and it was manifested by the number of bankruptcies, which had suddenly become more than doubled, and the consequent shock that mercantile confidence everywhere sustained. Many of these failures also were of the most disastrous kind, from the old standing of many of the establishments that had thus succumbed, and the immense sums for which they were responsible. This evil, the consequence of too much ardour emboldened by success, and not as yet sufficiently regulated by experience, was chiefly traced to the country banks, which had so greatly multiplied of late, that they were established in almost every market town throughout England. Their system of issuing notes, too, was in the highest degree insecure; many of them being not only without capital, but without credit beyond their own limited locality, while the paper which they issued, called optional notes, they reserved the right of paying at pleasure either in London or the country. The shock sustained by above three hundred of these banks, comprising more than two-thirds of the whole number, and the failure of more than a third hundred, with the distress which was thereby thrown over the whole community, occasioned the interposition of government; and to meet the emergency £5,000,000 in exchequer bills was advanced, divided into sums of not less than £4000 upon due security. This timely aid not only arrested the calamity, but restored commercial activity and success; the money advanced was repaid; and before 1793 had ended, the bankruptcies had diminished to their former average, and a fresh start in prosperity been secured. This is apparent from the official mercantile tables in 1800, which show the value of our

imports to have risen to £30,570,805, and our exports to £43,152,019. Even the war with France that commenced in 1793, costly and perilous though it was, instead of retarding, only advanced the mercantile prosperity of Britain, by making her manufactures more highly prized throughout the countries in which they were prohibited, as well as her shipping more necessary for general intercourse and conveyance.

While the national mercantile enterprise was thus finding such sources of wealth in foreign trade and fisheries, colonization and conquest, the variety and extent of our manufactures, the ingenuity with which they were improved, and the perfection to which they were carried, form if possible a still more remarkable feature in the history of Great Britain during the eighteenth century. But here also the subject is so ample as well as so complex, that only a few suggestive notices can be afforded.

Hitherto, the chief obstacle in the progress of manufactures, not in Britain alone, but in every country, had originated in the great consumption of human labour which it required, and to counteract this difficulty two expedients had been adopted. One consisted in the division of labour, by which a greater amount of dexterity and speed could be attained by extending a single produce among several workmen, and confining each to his own particular portion, even should the result be so trivial as the manufacture of a pin. Another was the combination of machinery, by which one pair of hands might be enabled to accomplish the work of two, and if this ratio could but be doubled, by a further complication of mechanical agency, invention was often satisfied, and sought no further. Thus matters had continued till the present period, and human force and application had reached, as was supposed, their uttermost in their power to create materials, or skill to use them. But a new and stupendous element of human action was to be introduced—and then appeared “the man whose genius discovered the means of multiplying our natural resources in a degree perhaps even beyond his own stupendous powers of calculation and combination, bringing the treasures of the abyss to the summit of the earth; giving the feeble arm of man the momentum of an Afrite; commanding manufactures to arise, as the rod of the prophet produced water in the desert; affording the means of dispensing with that time and tide which wait for no man, and of sailing without that wind which defied the commands and threats of Xerxes himself.” “It was by his inventions,” writes an eloquent critic when treating of the steam-engine, “that its action was so regulated as to make it capable of being applied to the

finest and most delicate manufactures, and its power so increased as to set weight and solidity at defiance. By his admirable contrivance, it has become a thing stupendous alike for its force and its flexibility—for the prodigious power which it can exert, and the ease, and precision, and ductility with which that power can be varied, distributed, and applied. The trunk of an elephant, that can pick up a pin or rend an oak, is as nothing to it. It can engrave a seal, and crush masses of obdurate metal before it—draw out without breaking a thread as fine as gossamer, and lift a ship of war like a bauble in the air. It can embroider muslin and forge anchors—cut steel into ribands, and impel loaded vessels against the fury of the winds and waves.”

The author of this miraculous change not only

JAMES WATT From a print by Hall after Sir W. Beechey

in the history of manufactures but of modern civilization, and even of the world itself, was James Watt. The town of Greenock, in Scotland, was honoured by his birth on the 19th of January, 1736. Having settled in Glasgow as a mathematical instrument maker, there was sent to him, by Professor Anderson, in the winter of 1763, a model of Newcomen's steam-engine to be repaired, which he did according to the prescribed form; but having been occupied during the two preceding years in studying the power and application of steam, it occurred to him that Newcomen's engine, which was chiefly applied to the pumping of water from coal-mines, was susceptible of far greater power, as well as more extensive application. To condense the steam, and thus reduce it to more manageable action as well as to increase its power, was, he soon perceived,

¹ Sir Walter Scott, *Introduction to the Monastery*.

² Lord Jeffrey.

the great *désideratum*, and this he secured by a long course of attempts, the result of which was the separate condenser. To keep the cylinder of

MODEL OF NEWCOMEN'S ENGINE.—From the original in Glasgow University.

the engine always as hot as the steam to be admitted into it—and to cool down the condensed steam and the injection water used for condensation to a temperature not exceeding 190° , were the difficult problems for solution, and these he effectually solved, so that in his hands the rude Newcomen engine became a mighty agent obedient to the slightest touch. A series of experiments through a course of years enabled him to bring the steam-engine to such perfection, that considering the clumsy inefficient condition in which he originally found it, he may be considered its inventor rather than improver. From his reputation as an engineer, and the success of his experiments in the improvement of the steam-engine, he was invited in 1774, by Mr. Matthew Boulton, of the great Soho Foundry near Birmingham, to enter into partnership with him: Mr. Watt complied, and the steam-engines, to which they devoted the large capital and immense resources of the establishment, were gradually adopted wherever they could be made available for the purposes of manufacture. To the end of his long life, which was continued to 1819, the indefatigable mind of this truly great man was employed in those various scientific pursuits in which he was so fitted to excel, and which had one and all for their object the multiplication and improvement of the comforts of

VOL. IV.

life and the advancement of society; and when he closed his eyes at last, it was not until they had beheld that universal amelioration of human labour and toil, and creation of new sources of enjoyment, which his marvellous discoveries had created.

The great establishment of Soho, and the steam-engines which it produced, had a visible effect upon the metal manufactures of Sheffield and Birmingham: the same power of steam which set 1000 wheels in motion, supplied also the necessary fuel from the coal-mines of Shields and Newcastle, and the feeble agencies of horse-power and water-power were set aside as no longer necessary. Still, however, like all great innovations, by which an old order of things is to be set aside and a new world of thought or action established, the adoption of the steam-engine was a gradual, even a slow process. It was not used in the manufacture of cotton into thread until the year 1785, nor was a cotton mill erected for the application of steam machinery in Manchester until 1789. It is perhaps as well that the oak which is to brave the tempests of a thousand years, cannot take root in a single day. Next to Watt, though at a great distance, may be mentioned the names of Sir Richard Arkwright and Samuel Crompton, the former the inventor of the spinning-jenny, and the latter of the mule-jenny. Arkwright, who was born in 1732, had spent the best part of his life in expe-

SIR RICHARD ARKWRIGHT.—From a picture by Wright of Derby.

rimenting upon cotton, for its multiplication into threads at less expense of time and human labour. The problem which he had to solve is thus distinctly announced by Dr. Ure:—"To construct a machine in which one member should supply continuously and uniformly porous cords of parallel filaments in minute portions; a second member should attenuate these cords by drawing out their filaments alongside of each other by an imper-

ceptible gradation; a third member should at once twist and extend these attenuated threads unremittingly as they advance; and a fourth

ARKWRIGHT'S SPINNING JENNY.

should wind them regularly upon bobbins exactly in proportion as they are spun." Well might all this be deemed an impossibility; but he persevered in his inquiry, until the secret was discovered of spinning by rollers; and he erected the first spinning mill worked by water-power on the river Derwent, in 1771. In this way, he was the father of the cotton factories, that immense source of British wealth and prosperity. As for Samuel Crompton, his invention of the mule-jenny enabled him to combine rapidity of production with superior fineness, so that the thread of his machine originated our muslin manufactures, by which cloth of the lightest and most delicate texture, hitherto produced only in India, and accessible only to the rich, can be introduced through British industry into the humblest cottages of Europe.

While these inventions were going onward, their impulse was necessarily communicated to those arts with which they are closely connected; and thus with spinning, the processes of weaving, dyeing, and bleaching were cultivated with similar improvements; and although cotton had now become the great subject of general solicitude, our linen and woollen manufactures had not been neglected. The result of this new industrial era was distinctly manifested towards the end of the period. The population of Lancashire, which in 1700 amounted to only 166,200, had risen in 1801 to 672,565. In thirty years, the population of Manchester had more than doubled; while improved ideas of comfort had caused a great part of the old town to be pulled down, and its place to be supplied by stately commodious mansions. It was not only the manufacturing towns also that thus grew in wealth, population, and com-

fort, through the application of science to the hitherto humble occupations of weaving and spinning; not only new loom-shops started up in every direction, but the spare room of the cottage, the lumber room of the grange, and the old barn were converted into busy working places of looms and spindles. The villages also were swarming with strong, healthy, and well-fed children, the best indexes of the increasing abundance and comfort. The enthusiasm with which these particular circumstances are described by the tourists and political economists of the day, shows how great the change had been, and how much was hoped for the future prosperity of the country; while their tangible statements about the wages of these working-classes verify the correctness of their descriptions. We are informed, for instance, that in these districts, the circulation of money had increased five-fold, and that every family brought home weekly, 40, 60, 80, 100, or even 120 shillings of wages. Nor were these benefits confined merely to the different classes of manufacturing workmen, but diffused over the community at large. The statement of William Radcliffe upon this head, in his work entitled "Origin of the New System of Manufacture, commonly entitled Power-loom Weaving," is worthy of attention. His statement is to this effect:—"It may be easily conceived that this sudden increase of the circulating medium would, in a few years, not only show itself in affording all the necessaries and comforts of life these families might require, but also be felt by those who, abstractedly speaking, might be considered disinterested spectators. But in reality they were not so, for all felt it, and that in the most agreeable way, too; for this money in its peregrinations left something in the pockets of every stone-mason, carpenter, slater, plasterer, joiner, &c., as well as the corn-dealer, cheesemonger, butcher, and shopkeepers of every description. The farmers participated as much as any class, by the prices they obtained for their corn, butter, eggs, fowls, with every other article the soil or farm-yard could produce, all of which advanced at length to nearly three times the former price. Nor was the portion of this wealth inconsiderable that found its way into the coffers of the Cheshire squires who had estates in this district, the rents of their farms being doubled, and in many instances trebled."

It is impossible within our narrow limits even to advert to the improvements which were made in every other department of British manufacture. We must content ourselves, therefore, with stating their results from Macpherson's tables, contained in his *Annals of Commerce*. From these it appears that in 1800 the value of our exported manufactures amounted to about £40,000,000, and

those used in home consumption to £76,000,000, making a total of £116,000,000. The relative proportions of the different articles is also given in the following table, where the home consumption only is given, exclusive of the exports:—

Woollen goods, ...	about £11,000,000
Cotton do., ...	6,000,000
Flaxen and hempen do., ...	4,000,000
Silk do., ...	3,000,000
Leather do., ...	12,000,000
Glass do., ...	2,000,000
Porcelain and pottery do., ...	2,000,000
Paper do., ...	1,500,000
Hardware do., ...	6,000,000
Beer, ...	10,000,000
Spirits, ...	4,000,000
Soap, ...	1,500,000
Salt, ...	1,000,000
Candles, ...	2,000,000

During this rapid increase of our commerce, and improvement of our manufactures, by which Britain was converted into the *bourse*, warehouse, and workshop of the world, the means of conveyance to every country had increased with equal rapidity, and naval skill and enterprise had covered the ocean with our ships, and made every port accessible to their visits. But the means of internal communication by which town might trade with town, and the town with the country, still continued to be defective, until nearly the close of the eighteenth century. It is singular that amidst such wealth and civilization, so necessary an art as that of road-making should have been so little understood. But notwithstanding the numerous acts of parliament, of which no less than 452 were emitted between the years 1760 and 1764, for the improvement of the principal highways, they still continued narrow, darkened with trees, and intersected with ruts and miry swamps, through which the progress of a waggon was a work of difficulty and danger. One of these—the turnpike road from Preston to Wigan—is thus described by an angry tourist in 1770, and the picture seems to have been too generally realized over the whole kingdom:—"To look over a map, and perceive that it is a principal one, not only to some towns, but even whole counties, one would naturally conclude it to be at least decent; but let me most seriously caution all travellers, who may accidentally purpose to travel this terrible country, to avoid it as they would the devil; for a thousand to one but they break their necks or their limbs, by overthrows or breakings down. They will here meet with ruts, which I actually measured, four feet deep, and floating with mud only from a wet summer; what, therefore, must they be after a winter? The only mending it receives is the tumbling in some loose stones, which serve no other purpose but jolting a carriage in the most intolerable manner. These are not merely opinions, but

facts; for I actually passed three carts broken down in these eighteen miles of execrable memory." While such was the condition of some of the principal roads in England, the conveyance of letters over the country was equally wretched even so late as 1783. Such was the testimony given at that time by Mr. Palmer to Pitt. "The post at present," he says, "instead of being the swiftest, is almost the slowest conveyance in this country. . . . It is likewise very unsafe, as the frequent robberies of it testify; and to avoid a loss of this nature people generally cut bank-bills or bills at sight in two, and send the parts by different posts. . . . Indeed it is at present generally intrusted to some idle boy, without character, mounted on a worn-out hack, and who, so far from being able to defend himself, or escape from a robber, is much more likely to be in league with him." Evils so incompatible with a profitable traffic were sure to suggest a remedy; and we find, accordingly, that towards the close of this period road-making was undergoing a rapid improvement, and bridges were in course of construction over the country. In the same manner, postal conveyance was improved by Mr. Palmer, who was appointed comptroller-general of the post-office, and who in this capacity commenced a vigorous reform of the abuses which he had detected, both in safety and speed. The result was, that between 1784 and 1797, 380 towns that had previously possessed only three posts a week, and forty that had none at all, were supplied with daily posts, while the mails were conveyed upon many of the cross post-roads in one-third or even one-fourth of their previous time.

While the means of land conveyance had thus been so defective and so slow in their improvement, those of still water, or canal navigation, had been doing much to supply the deficiency. Here will readily occur to the reader the names of the Duke of Bridgewater, that most public-spirited and munificent of British nobles, and his original, inventive, ready-minded engineer, Brindley, who by his new and daring experiments in banking, tunnelling, and aqueduct-building, conducted his artificial rivers through rock and mountain, and over wide-stretching valleys, linking cities together by a close but silent band, and making the easy conveyance by water to be unchecked by the obstacles of wind and tide. In 1758, the duke having obtained an act of parliament for making the canal to which his name was given, employed Brindley in its construction, and what had been ridiculed as an impossibility when the original plan was submitted, was successfully finished and opened in 1761. The example thus given was followed with ardour: canals were constructed upon this great model both in Eng-

land and Sootland; and so greatly was this species of inland navigation preferred, that Brindley's principle, which he asserted before a committee of the House of Commons, that the chief use of rivers was to feed canals, seemed to have been generally adopted.

Although agricultural pursuits do not call forth so great a degree of enthusiasm and enterprise as those of commerce, and are not therefore susceptible of the same rapid improvement, yet the agriculture of England during this period of mercantile predominance enjoyed peculiar opportunities for its favourable development. The taste for farming, which George III. possessed beyond all his royal predecessors, passed, by a natural transition, to the nobility, and the improvement of their estates was soon found to be their only chance of competition with the wealthy merchant princes who had now become a very influential aristocracy. Independently of this, the increasing wealth and wants of the manufacturing classes, who were liberal customers of the farm, garden, and dairy, and the new facilities for supplying the agricultural market by the conveyances of canal navigation, made every additional acre that was taken into use, and every improvement in the means of agricultural production, a source of profit to which the dullest peasant could not remain insensible. Hence the reclamation of waste lands, the better modes of tillage, the introduction of new grains and seeds, and the improvement of the various breeds of cattle, which were pursued during the reign of George III., until agriculture as a science had been improved by a series of experiments, and established in the place of that dull use-and-wont system of farming which had prevailed in England for centuries. How necessary all this had become, and how much progress it had made by the close of this period, may be understood from the incidental notices of farm and cottage life, as it existed some twenty years earlier. The following reminiscences of his boyhood, given by Parkinson in his *Tour in America*, may suffice for the condition of a substantial English farmer's family in 1780:—"I was accustomed to eat what may be termed black bread, for which the small wheat called hinder-ends, or light wheat taken out of the best sent to market, is used and kept for family use; which being ground, was afterwards passed through a wide sieve, with the small bran searched out of the best wheat flour, and put amongst the bread meal; altogether making a sort of coarse or black bread; and the fine flour used for puddings, pies, &c. Yeast not being then in general use, a piece of dough was kept out of the last baking, and salted; which before the time of using it for the next batch, becoming sour, this sort of bread acquired the same

quality. Very fat bacon was the chief of our diet, garden stuff not being in such general use at this time, excepting the large Windsor beans in summer, and potatoes occasionally in the winter, with pease-puddings. I know no greater dainty to me than these beans and fat bacon, or pease-pudding, to the offal of pig's flesh in the winter, or some of the black bread and fat bacon." The taste of Parkinson, however, had advanced so greatly amidst the superior style of life that had been adopted by his brother farmers, that when he

went to America twenty years afterwards, nothing offended him so much as the vulgar diet of the colonists, notwithstanding its goodness and abundance. Will it be believed that he who had been reared upon the offal of pig's flesh, Windsor beans, and black bread, had now grown indignant at the grossness of an early American supper of tea and beef-steaks?

The variations in English costume during this period of rapid transition, by which the dresses of men and women subsided into the fashion in which the fathers of the present generation have rejoiced, were too numerous to be particularized. The modern spirit of utilitarianism bereaved the wearers of their gay trinketry piece by piece, while the necessity of active exertion among all classes contracted their flowing robes into more succinct envelopments. And first went the long elaborated wig, which, in spite of its manifest inconveniences, had held its place since the period of Charles II., and which occupies so conspicuous a figure in the plays and novels of the former periods. Its amplitude was gradually contracted, until it dwindled into a smart round bob or scratch-wig, little differing from the natural hair; and when this stage was reached, it

WIGS AND TIES,¹
1773-1780.

was finally discarded as no longer necessary. This

important change, it appears, had commenced so early as 1763, for in that year we find the wig-makers petitioning his majesty to support their trade by his royal example. The living hair being thus restored to its natural and pristine ascen-

tunity for grave reflection or explanation. When both periwig and powder had disappeared, the smart three-cocked hat that had so blandly reposed on them looked sorely out of place, and by 1780 began to be superseded by a broad-brimmed

round one. The wide cuffs, long ample skirts, lace and embroidery of gentlemen's dresses in like manner were dispensed with, so that by the end of this period a beau, compared with his predecessors of the two former reigns, would have seemed a complete man, according to Plato's definition — a bird plumed. Changes so complete, and during a period so brief, could scarcely have been accomplished in the ordinary condition of society, and their main cause is therefore to be found in the French revolution, by which not only the ancient

COSTUMES, 1770—1793¹

dency, was in the first instance subjected to the most artificial modes of dressing, and made to look as much like a wig as possible, and for this purpose lard and flour were plentifully used; while the hair at one time was frizzled, and made to stand upright on the head like a fleece, and at another combed smartly back, or curled about the ears; and the whole was terminated by that indispensable appendage, a pig-tail. Indeed, the use of hair-powder was reckoned so essential to a respectable appearance, that not only the gentry and merchants, but even shopkeepers powdered their heads, as a proof that they were well to do in the world, and entitled to some consideration. But this general fashion, by which flour was so grossly alienated from its natural purposes, occasioned such a dearness in the price of bread, that the powder tax was imposed, and thus heads by the thousand were restored at once to their natural colour. The hair was then cut, trimmed, and arranged according to the fancy of the wearer or the fashion of the day, and that which prevailed at the end of this period was the head *à la Brutus*, which was derived from the French revolution. Last of all, the pig-tail dropped off as an unnatural excrescence. With the wig, the sword departed as a cumbrous distinction, and thus the sudden duels to which it was so often an incentive were obliged to give place to those formal appointments that afforded better oppor-

feudalism, but all the external distinctions of rank were mercilessly swept away. Britain, as well as the continental countries, caught the infection, and the consequence was that general simplicity of costume, as compared with former

periods, by which the different ranks were more closely assimilated. Henceforth, the chief distinctions between the peer and the peasant were not to consist so much in superiority of dress and ornament, as of demeanour, address,

¹ 1, 2, 3, From an engraving in the *Ladies' Magazine*, 1770. 4, Paris fashion, from a print, 1793 5, Fashionable riding-dress, August, 1786, from *Costumes in England*.

and education. This commencement, however, of the modern style of dress, which began with the present century, and the changes it underwent during the first twenty years until it finally settled into the fashion that now prevails, belongs to the next period of our history.

The same causes which operated upon male, were equally influential in female attire. This was

hair terminated behind in a queue of still greater longitude than that of the other sex. In all these cases hair-powder was plentifully used until 1793, when this practice was abandoned by Queen Charlotte and the princesses, and consequently by the court ladies, and all those grades who dressed by their example. The arrival of the great revolution, in which the whole nation of France

played at Greeks and Romans, while the ladies dressed like nymphs and goddesses, after it had swept away, in the first instance, the stiff costume of the age of Louis le Grand, tended to introduce a more simple and more natural attire; and as Paris still maintained its ascendancy as the great metropolis of fashion, the ladies of Britain followed the example, until the revolution in clothing was completed. Happily, however, they did not imitate that scanty and indecorous drapery which the ladies of France sometimes adopted from their love of the classical and antique; but

LADIES' HEAD DRESSES. 1782-1789¹

especially the case with that monstrosity the hoop, which even so early as the commencement of the present period began to be materially curtailed, until in course of time it had shrivelled into nothingness. Such we can easily learn from the pictures of the day, where ladies are represented with no greater amplitude of dress than might have been produced by the old fardingale, or even the more modern *bustle*. Seldom has the despotism of fashion been more strongly illustrated than by the fact, that ladies could endure so long not only such an uncouth ornament, but such an imprisonment within buckram and whalebone. Their gowns also underwent the same reform, so that by 1785 they had almost reached the standard of modern simplicity. The singularities of head-attire, however, were not to be abandoned so easily; and the forms in which the hair of ladies was worn, as well as the fashion of dressing it, were still as capricious as ever. Thus, at the beginning of this period, we find it lying flat on the forehead, and about twenty years after, it rises into that formidable commode, by which the wearers evidently intended to add a cubit to their stature. In 1785 this pyramid became a square tower, and in 1788 it was flounced and ringletted into the form of a cauliflower. Sometimes, too, a lady's

hair terminated behind in a queue of still greater longitude than that of the other sex. In all these cases hair-powder was plentifully used until 1793, when this practice was abandoned by Queen Charlotte and the princesses, and consequently by the court ladies, and all those grades who dressed by their example. The arrival of the great revolution, in which the whole nation of France

played at Greeks and Romans, while the ladies dressed like nymphs and goddesses, after it had swept away, in the first instance, the stiff costume of the age of Louis le Grand, tended to introduce a more simple and more natural attire; and as Paris still maintained its ascendancy as the great metropolis of fashion, the ladies of Britain followed the example, until the revolution in clothing was completed. Happily, however, they did not imitate that scanty and indecorous drapery which the ladies of France sometimes adopted from their love of the classical and antique; but the sobered taste that succeeded, by which patches, rouge and plumes, long waists, bell-shaped furbelows and high-heeled shoes were sent, along with the cocked hats, swords, and periwigs of the other sex, into perpetual banishment, or only to be recalled for a few hours to grace an occasional court ceremonial.

In the mode of living now followed by the English aristocracy, there may be seen during the earlier part of this period, a blending of old fashions with those new usages which were soon to supersede them. The nobility, who could no longer rule as kings in their ancient domains over a compliant peasantry, regarded London as their home, and a court life their proper vocation. Their mansions, therefore, which were now for permanent residence, were either in the metropolis, which they tended to enrich and beautify, or in its immediate neighbourhood, while their trains of domestics still exhibited a lingering remembrance of the grandeur of ancient feudalism. Besides the usual menials, the household of a nobleman consisted of a steward, who managed the estates; a chaplain, who read prayers to the family, catechized the servants, and acted as librarian; and a private secretary, who was generally some young gentleman in training for politics and court advancement. After these came an array, consisting of butler, valet and housekeeper, lady's-maid and footman, coachman, groom, pos-

¹ 1, From Stewart's *Whole Art of Hairdressing*, 1782. 2, From a print dated 1789. 3, From the *Lady's Pocket book*, 1782. 4, From an etching by Dighton.

tilions, and porter; and after these, was a throng of servants of a still lower grade, whose region exclusively was the kitchen. As so numerous an establishment involved great expense, the upper servants of such a household were tacitly permitted to eke out their small wages by sundry perquisites of office, which, under the name of *vails*, soon constituted the best part of their revenue. In this way, the steward in granting leases exacted a percentage which, like Master Peter Pounce, in the tale of *Joseph Andrews*, enabled him in course of time to become as wealthy as his master. The butler, in paying the household accounts, made each tradesman pay toll to a fixed amount, which was generally given without grudging. The porter who opened the outer door, held it fast with one hand, while the other was ready for a fee; and according to the bribe, the door was opened wide to receive the applicant, or rudely thrown at his face. Even the Abigail of the establishment not only exacted tribute within her own particular sphere, for every payment that passed through her hands, but regarded the wardrobe of her mistress as her own unquestionable property, after it had undergone a certain amount of wearing. This practice, however, of exacting vails became so extortionate, that it was abolished in the earlier part of this period, but not till after a ten years' struggle. The dregs of the evil, as every traveller within our island knows, is still to be found in our hotels and inns. The hours of meals among the aristocracy at the commencement of this period, appear to have been the following: breakfast at ten or eleven o'clock, dinner at five, and supper at eleven. These late hours, however, were only for the highest in rank, and upon state occasions, otherwise the usual hour for breakfast was seven, and that for dinner three o'clock. The fashionable distinction, however, imparted by late hours, in which the aristocracy had exchanged seasons with the commons, was now in such progress, that towards the close of this period a three o'clock dinner had grown utterly vulgar. "Dr. Russell was in high spirits (writes Madame d'Arblay in her diary, describing a public breakfast in 1792), and laughed heartily at seeing the prodigious meal most of the company made of cold chicken, ham, fish, &c., and said he should like to see Mrs. Montague make the experiment of inviting all the same party to dinner, at three o'clock. 'Oh!' they would cry, 'three o'clock! What does she mean? Who can dine at three o'clock?—one has no appetite—one can't swallow a morsel—it's altogether impossible!' Yet let her invite the same people, and give them a dinner, while she calls it a breakfast, and see but how prettily they can find appetites."

In passing to the amusements of the aristocracy,

which were now chiefly of a festive and in-door character, card-playing and gambling come in for particular notice. At the beginning of this period loo was the favourite game, and afterwards pharaoh or faro. So great was still the rage for card-playing, that the most illustrious characters of the day—the Duke of Cumberland, the Princess Amelia, Horace Walpole, Charles Fox, and many almost equally distinguished—were keen gamblers, and both won and lost immense sums, as well as consumed much time. One of many such instances given by Fox, was a sitting of twenty-two hours at hazard, during which he lost at the rate of £500 per hour. At length the example of the king and queen, who disliked such extravagances and discountenanced their authors—the popular feeling, that cried out against such a waste of money while the poverty of the lower classes was on the increase—the stringent laws enacted against excessive gambling, and the prohibition of the practice in the private houses of the nobility—abated its seductiveness by driving it into haunts set apart for its proscribed indulgence. Towards the close of this period, too, the stigma had been deepened, by the vigorous exercise of the law against certain noble and high-titled offenders, who were tried and punished at the police office of Marlborough Street, for keeping faro tables in their houses, and playing for sums beyond the specified limit. On one occasion, also, Lord Kenyon, in his capacity of judge, declared that he would make such offenders, were they even the highest ladies in the land, exhibit themselves in the pillory. No such threat could have been safely uttered, even by a lord-chancellor, during the reign of Charles II., or any of the predecessors of George III.

Among the other in-door amusements of the period, may be mentioned masquerades, which continued to fade under the growing refinement, until at last they were found too childish for the progress of society, and were therefore allowed silently to die out. The same may be said of routs, drums, and hurricanes—those noisy festivals of the earlier part of the eighteenth century, where the greatest amount of fashionables were crammed, packed, and wedged into the smallest possible compass; and where the company, while they trode on each other's toes, were allowed to trample the rules of grave decorum under foot, and be outrageously free and merry. Private theatricals, which were in still better taste, were also of frequent occurrence, even although the unpopular Bute had won fame as an amateur actor before he became a premier, and had made his first step in court favour under the character of Lothario, in the "Fair Penitent." Balls, which are indispensable to every state of society

except the Puritan, still maintained the ascendancy, and were common to all classes; and in high life these were not only of a private, but also of a public character, which last were called subscription-balls. These were held in spacious buildings set apart for the purpose, and the most distinguished of such establishments was that of Mrs. Cornely, in Soho, until it was eclipsed by the superior reputation of Almack's. The select aristocratic character of these privileged places, and the jealousy with which every candidate for admission was scrutinized, as well as the fashionable distinction which such a passport entailed, were well understood at the commencement of this period, and still more completely at the close, when the toe of the clown was beginning to press too closely upon the kibe of the courtier. Even the price of these meetings was calculated to preserve their exclusiveness, so that we read of a subscription masquerade held at the Pantheon which cost the subscribers £5000. Another public luxury, still chiefly confined to people of rank and fashion, was the opera, where the music was of so refined a character, and the price of tickets so high, that the public turned away from it to places of more popular amusement.

A great fashionable festival by which this period was characterized, has been recorded by the writers of the day under the name of a *festino*—a meeting that seems to have been to the eighteenth century, what the tournament or triumph was to the fourteenth. It was usually given by some person of high rank, and upon a great public or court occasion, such as a royal birth-day, or the reception of an illustrious foreign visitor. The chief place for its display was a garden or lawn, which was brilliantly illuminated in the style of a Chinese feast of lanterns, while the principal amusements were banqueting, masquerading, music, dancing, and displays of fireworks and illuminated devices. These splendid meetings were duly chronicled in courtly descriptions, and one of many is thus briefly described by Walpole: "Not only the whole house but the garden was illuminated, and was quite a fairy scene. Arches and pyramids of lights alternately surrounded the inclosure; a diamond necklace of lamps edged the rails and descent, with a spiral obelisk of candles on each hand; and dispersed over the lawn were little bands of kettle-drums, clarionets, fifes &c., and the lovely queen came without a card."

In spite, however, of this jealous precaution, by which high rank endeavoured to guard itself within a hallowed inclosure, respectability continued step by step to approximate more closely to gentility and fashion, and those public amusements which at first were wholly aristocratic, were one after another becoming a common

ground. Such was the case both with the Pantheon and the opera, which, towards the close of this period, were beginning to be patent to mere dress and demeanour, irrespective of station and title; such were the fashionable clubs and Almack's, where literary distinction, or fashion, or accomplishments, constituted a nobility of their own; and such, for a considerable time, had been Ranelagh and Vauxhall, where the only passport to every class was a Sunday suit and a ticket. A still more common place of meeting for all ranks was the theatre, which still continued to be a neutral ground, its only distinctions being box, pit, and gallery, and the uncertain separation which their prices sought to accomplish. It is gratifying, however, to find, that the new moral era introduced by the accession of George III. speedily began to show itself in dramatic exhibition, the old plays being severely pruned, and even altered to suit the now recognized decencies of the stage; while new productions, however talented, had no chance of favour, if they violated the rules of morality. But as the popular spirit still sought a vent, theatre rows and O.P. riots, as they were latterly termed, were as frequent as they had ever been during the wildest seasons, and were conducted with the same arrogant and tumultuary spirit. The same tendency to improvement which had thus reformed the most popular of all our public amusements, had also created new ones which could scarcely have existed a century earlier. Of these, may be especially mentioned the exhibitions of the Royal Academy, by which a new love of the fine arts was gradually diffused among all classes—and the public lectures, by which the sciences hitherto secluded within halls and colleges were brought into popular notice, and exhibited in their most attractive forms. Another kind of meeting common to literary talent and moral respectability, independent of rank, were the blue-stocking clubs—the most delightful of all assemblages, at which people met not to feast, dance, play at cards, or talk scandal, but to converse at their ease, and upon subjects of general interest. At these meetings, Pennington tells us, in his *Life of Mrs. Carter*, "There was no formal circle to petrify an unfortunate stranger on his entrance; no rules of conversation to observe; no holding forth of one, to his own distress and the stupifying of his audience; no reading of his works by the author. The company naturally broke into little groups, perpetually varying and changing. Nor was it absolutely necessary even to talk sense. There was no bar to harmless mirth and gaiety; and, while perhaps Dr. Johnson in one corner held forth on the moral duties, in another, two or three young people might be talking of the fashions

and the opera; and in a third, Lord Orford (then Mr. Horace Walpole), might be amusing a little group with his lively wit and intelligent conversation." These delightful meetings, so indicative of a healthy reaction, and so full of promise for the future, originated about the middle of this period, in one of those accidents which was certain to occur during an age that was ripe for its production, and is thus described by Boswell: "About this time (1781), it was much the fashion for several ladies to have evening assemblies, where the fair sex might participate in conversation with literary and ingenious men, animated by a desire to please. Those societies were denominated *blue-stock*ing clubs, the origin of which being little known, it may be worth while to relate it. One of the most eminent members of those societies was Mr. Stillingfleet, whose dress was remarkably grave, and in particular it was observed that he wore blue stockings. Such was the excellence of his conversation, that his absence was felt as so great a loss that it used to be said, 'We can do nothing without the blue-stockings;' and then by degrees the title was established."

Besides these private meetings for conversation, discussion, and social enjoyment, there were others of a more public nature established for the same purpose. Such were the clubs, to which we have adverted on former occasions. At first they were merely political meetings, where the members assembled to remove evil counsellors from before the throne, and vindicate the rights of Magna Charta, while they drenched their patriotism with such strong libations, that they were prepared to sally out and enforce an universal subscription to their political creed by heavier demonstrations than those of logic. While these were for the higher classes, the lower orders had their mug-houses, where they were copiously supplied with ale and strong waters, that they might halloo the more vigorously against Popery and wooden shoes, and be ready to rise at the signal for a Monmouth or Shaftesbury insurrection. Matters, however, were amended upon the accession of the Hanoverian dynasty, when more intellectual subjects as well as more peaceable modes of discussion were introduced; and, in turning to the descriptions of Smollett and his contemporaries, we find no worse evils resulting from these clubs than waste of time and the encouragement of idleness—a wit reciting his own verses to a knot of shallow admirers, or an impoverished adventurer haranguing upon the national bankruptcy without attending to his own. At first the higher ranks endeavoured to keep their own favourite establishments clear from vulgar access by the costliness of admission; and therefore to dine at Lockit's, Pontac's, or White's

Chocolate House, was the highest stamp of fashion. But wealth soon asserted its natural pre-eminence; and the untitled but rich *parvenu*, ambitious for such a distinction, soon contrived to unlock these sacred gates with his golden key. Thither, also, came the wits and poets from Willis's, the politicians from St. James's, the scholars from the Grecian, and rural squires, merchants, and actors from every quarter, until the lines of distinction drawn round the clubs of the West-end were erased in favour of respectable commoners. But lower down in the scale we find numerous clubs throughout the metropolis, where the choice spirits of the day could meet with less formality and for more boisterous enjoyments, of which the titles of a few will give an idea of the characters and pursuits of those who frequented them. These were the "Killers of Care," the "Silenians," the "Sons of Sound Sense" (*lucus a non lucendo*), the "Sons of Nimrod," the "Bucks," the "Bloods," the "Snitchers," the "Choice Spirits," the "Senators," the "Lumber-Troopers," &c. All this clubbing was the excitement of a new life, both intellectual and political, in which every one felt that he was somebody, and had something to say or do. But towards the close of the period this fermentation had subsided. By that time each class had better ascertained its own place and level; the rivalry of the two dynasties had utterly passed away, and a national war had succeeded, upon the merits of which all were generally agreed. Besides, the natural shyness of the English character and its love of domestic enjoyment were opposed to this life in coffee-houses, and the universal intercourse which it implied; and therefore, though clubs continued to multiply, it was rather as newspaper rooms than arenas for literary and political brawling.

Amidst all these changes, by which the higher and middle classes were brought into more friendly approximation, it is gratifying to remark the improvement in moral character that was gradually growing among them. The grossness of the period of James I. which burst into the full-blown profligacy of that of Charles II., had continued with but little abatement till the commencement of the present reign. And for this there had been too much countenance afforded by the example of each sovereign who succeeded Charles, so that a royal mistress had become an established court appendage. Such was the case with the rigidly conscientious James II., who sacrificed three kingdoms for a mass; such with the demure Presbyterian William III.; such with the first two Georges, elderly men though they were, and grave sticklers for every kind of decorum. All these sovereigns retained mistresses, whose disreputable position was overlooked on account of its rank, and whose court influence made their

society eagerly sought even by the highest in place and public estimation. The nobles had not been slow to follow the royal example; and thus the contagion descended to the classes more immediately beneath them, until society at large was more or less tainted with the leprosy. But the accession of George III. was the commencement of a new era in English court morality. His example discountenanced that nuptial infidelity and libertinism which had hitherto been reckoned the most tolerable of all trespasses; while the strictness which he introduced into court etiquette, as well as the bestowal of royal countenance and favour, made the courtiers aware that profligacy was as serious a disqualification for rising into political influence as want of talent or even of common honesty. No lady of doubtful character, however exalted, could intrude into the queen's drawing-room, or notorious *roué* gain the entrance of the back-stairs. Happily, too, the king was not of a character to alter his principles or even abate of their strictness, while his long reign gave him full opportunity for carrying out a reformation so greatly needed; and when it thus commenced at the fountain-head, the purification went onward through the subsidiary channels, until after a course of years the whole aspect of English society was regenerated. It is upon this incalculable benefit which the virtuous character of George III. conferred upon the nation that history will delight to dwell, long after his political errors have been forgot.

While such was the master-agency of this moral reformation that forms the most conspicuous era of our national record, other influences were at work by which the royal example was corroborated, and without which it could only have had a partial effect, or even been an utter failure. Learning was more widely diffused, and the taste which it imparted ameliorated the excesses of vice by bereaving them of their grossness. The press was taking its place as the fourth estate of the realm, and public defaulters were tried, condemned, and pilloried by a process as terrible as that of Westminster Hall itself. Even the pencil was lending its aid against the lighter crimes and follies of the great; and men who could fearlessly confront the chances of sword and pistol in Hyde Park or behind Montague House, learned to tremble at the caricature in a print-shop window. Another influence, as has been noticed in a previous chapter, though slow and silent, was that of Methodism, by which the old Puritan spirit of England, now sinking fast into decay, was revived into its former energy, and in a form better suited to the spirit of the people and the exigencies of the age. And at the close of all came the French revolution, that tremendous lesson of the nations, which England,

now ripened for its perusal, was wise enough to lay to heart. It spoke of the instability of thrones and the insecurity of rank, when the arrogance, the oppressiveness, and the prodigality of the higher classes have provoked the lower into rebellion. It showed how fearfully the atheism and sensuality which the mob have copied from their superiors may recoil upon the heads of those by whom the evil was fostered. It taught the leaders and instructors of the people how much it behoved them to establish their superiority upon intelligence, wisdom, and virtue, instead of popular caprice and public demoralization. To every class it announced its separate warning, of which the nineteenth century is reaping the fruits.

While this under-current was going on, by which the external aspect, as well as the course of society, was to be changed, there were still indications of a rudeness and barbarism manifested among the upper classes, which required a higher degree of refinement than that of the present period to eradicate. Of these specimens, the foremost was the duel, that relic of the judicial combat, which still prevailed as the arbiter of doubtful arguments in politics, or the nice distinctions of honour; and at the beginning of the reign of George III. these combats were as frequent as they appear to have been during the reigns of his predecessors. They were also every whit as ferocious—the combatants often using the sword in close conflict when the discharge of their pistols had been ineffectual. Among other such encounters, we read of one in 1777, in which the parties were an army captain, and the editor of a newspaper, by whom the captain had been libelled in his journal. We have already mentioned how the discontinuance of the use of swords tended to lessen the number of such meetings, by giving time for calm reflection; but still there were grave questions to be settled which reflection only tended to aggravate, as well as insults which could not be passed in silence or forgot, and the only remedy that occurred in such cases was a formal encounter with pistols, where deliberate hatred took the place of transient indignation. In this way, the duel continued to the end of this period, and still lingers among us. Another type of former barbarism was the love of gladiatorial spectacles; and as this could no longer be gratified with a sword-and-buckler exhibition, boxing was substituted in its room, and people of rank and station had their pet bruisers, upon whose encounters they watched as anxiously as if the fate of a kingdom were at issue. Nor must horse-racing be forgot, and the knaveries of which it was the fruitful source. The glories of Epsom and Newmarket had now risen to their full height, and such a horse as "Childers" could

make or mar the fortune of hundreds. It remains for philosophy to explain how so innocent an animal as a steed has produced such demoralization in society, from the days of Centaur Nessus, who jockeyed Hercules out of his life, to the horse-chaunter of yesterday, who passed off a spavined, blind, worn-out roarer, as a first-rate roadster, and sound in wind and limb.

These brief notices of boxing and horse-racing necessarily introduce the practice of betting, which constituted the chief attraction of such exhibitions. On these occasions the excitement rose so high, that wagers were staked to the amount of thousands, and all those trickeries were practised for winning which had disgraced the card-table. A well-bribed boxer, although the champion of the ring, and every way qualified to retain it, might be persuaded to go down at the twelfth round; a jockey, though mounted upon Pegasus himself, could contrive to be half a length short at the winning-post. In this way a cunning unscrupulous better might realize the fortune of a lifetime in a single hour. While the wealthy thus wagered by the pound, the mob under a similar inspiration wagered by the shilling, and the ardour was universal from the duke to the chimney-sweep. Of course, it was not merely to the race-course or the prize-fight that this epidemic of wager was confined; it pervaded almost every action of life, and included all manner of possible and impossible achievements, so that England soon grew a betting nation, to the unutterable wonderment of foreigners. A race of two fleas, or of two drops of rain upon a pane of glass, could keep a whole company upon the alert, with some hundreds of pounds upon the issue; the fate of a campaign or the result of a state negotiation was anticipated by heavy bets, when every other kind of forecast was unsatisfactory. A prime subject of wager during this period was the real sex of the Chevalier d'Eon, who had figured as court lady, beau, political diplomatist, and fencing-master by turns; and when the stakes were to be decided before a court of law, upon the death of this nondescript (who was a *bona fide* man after all), the proofs of his sex, which the winning party adduced, were enough to disgust both judge and jury. The records of the time are full of strange challenges in walking, riding, running, leaping, of which it is impossible to see the use. A lady, for instance, engages to ride 1000 miles in 1000 hours, and comes off the winner. A gentleman wagers that he will jump dressed into water seven feet deep, and there entirely undress himself without sinking. A challenge is given that an ass will walk 100 miles in twenty-four hours, a feat which the light-footed enduring animal actually performs in twenty-one. It is interesting, by the way, to

notice the strong national contrast exhibited on this point between England and Scotland. The Scot had either no money to throw away, or was too wise to do so, and therefore would not risk a single penny upon the chance turn of a wager. Besides, he was of too calculating and argumentative a disposition to venture himself beyond the limits of clear logical demonstration, all beyond that being in his eyes a *terra incognita*, or even chaos itself. Hence, while the impatient Englishman cut short the controversy with "What will you bet?" the Scot drew himself up with "How do you prove it?"

The diffusion of sound knowledge, and wisdom to apply it, had by no means become so prevalent as to banish the superstitions of earlier ages; and even in London freaks of this kind were still to be found during the latter part of the eighteenth century. Sheeted ghosts occasionally walked in churchyards, to the great disturbance of the neighbourhood, and dismay of constables who were not hardy enough to apprehend them. A wen was still supposed to be cured by rubbing it with the dead hand of a malefactor; and so late as 1767 a young woman was hoisted to the scaffold at a public execution, that she might have an excrescence removed by this healing friction. Ten years later, an Italian was tried, who under pretext of turning copper into gold, had domiciled himself in the house of a wealthy lady, and cozened her of £500. As might be expected, superstitions of this kind often sought confirmation from religion; and accordingly, an anxious holder of a lottery ticket endeavoured to insure a happy turn of the wheel, on the day before drawing, by sending to a church the following notification:—"The prayers of this congregation are desired for the success of a person engaged in a new undertaking." It is gratifying to notice, however, that in the metropolis such weaknesses were not only fast abating, but were chiefly confined to silly women and the uneducated. No literary man would now adventure to certify the Cock Lane ghost, or advocate the possibility of transmuting old saucepans and kettles into vessels of gold and silver. Matters, however, were not quite so favourable in country villages, and among the peasantry; and at the commencement of the present period the accusations of witchcraft were not only numerous, but often attended with serious consequences. In such cases the suspected person was tried by the old ordeals, by either being stripped to the shift, and weighed against the church Bible, in which case, if she proved the heavier of the two, she was acquitted; or had her thumbs and great toes tied with a cart-rope across her middle, in which hampered state she was thrown into a pool of water, where, if she sunk, she was proclaimed

innocent. Here too, however, such rude trials could not, as in former times, be conducted with impunity; and on more than one occasion these irregular judges were imprisoned, and even hanged as guilty of murder. A more harmless kind of inquest, in 1767, was to discover the body of a child that had been drowned. In this case, a twopenny loaf with a quantity of quicksilver inclosed in it was allowed to float down the river, and after a voyage of half a mile, followed by the anxious crowd, it suddenly tacked about toward the shore, and sank at the very spot where the body lay entangled among the mud. In like manner, lost or stolen property was still sought after by the old-established forms of divination.

Of the modes of life among the upper classes of this period we have already given a full account. Of those who are called the middle classes, now brought into contact with the higher, and closely influenced by their example, enough of their daily habits and common fashions may be inferred from those of their models whom they imitated. These middle classes at the present period were comprised by "the poorer gentry, lawyers, medical men, inferior clergy, literary men, merchants, artists, manufacturers, notaries, shopkeepers." Beneath these now very numerous and influential classes came the common people, who in like manner were striving by industry, intelligence, and style of living, to elevate, or at least assimilate themselves to the condition of the rank beyond them, and who constituted the strength and sinews, as well as the bulk of the British nation. Into their way of daily life and wonted habits it is at present unnecessary to enter, more especially as, with some necessary abatement, it was the same as that into which the generation of our own day was born, and with which their early recollections are familiar. But still lower than these, and separated from them, were the classes who might be called the outcasts of regular society—men who lived none knew where, and shifted for their living none could tell how, but who were felt to be always at hand, and whose progress could be traced like a pestilence. It is by the predominance or absence of these that we can generally estimate the condition of that society of which they form the refuse; even as from the character of a disease, we can form an estimate of the soundness or unhealthiness of that constitution in which it has originated.

In turning to this part of the subject we cannot fail to be struck with the insecurity both of town and country, both of street and highway, that still continued to prevail—the growing wealth of society, and the insufficiency of law to protect it. Riches had accumulated into an unwieldy heap, but as yet there was not a strong box sufficient

to shelter it. Highway robberies were therefore perpetrated as boldly and as frequently as ever, and continued until the close of the eighteenth century, so that the aged of the present day can still remember what their own eyes have witnessed, or their fathers have told them, of the perils of an ordinary journey. In those days a case of pistols was a more usual concomitant of a travelling chaise than a box of sandwiches at present; and it was well if the traveller encountered no more than one stoppage, or a solitary robber by the way. Sometimes these brigands were in formidable troops, so that the officers of justice were afraid to molest them; and of these, as well as the atrocities they committed, especially where they met with a spirited resistance, the notices of the period are odiously full. In 1767 nine young apprentices, the eldest not eighteen years old, formed themselves into a gang, and robbed on the highway—an association that could scarcely have been formed unless the examples had been both numerous and tempting. Often, however, a desperado, confident in his own prowess and resources, and unwilling to have a sharer in the plunder, pursued his vocation alone; and such men, when successful, were often elevated by popular fame into the heroes and Robin Hoods of the day. Such was the Flying Highwayman at the beginning of this reign, who conducted his exploits upon three horses—a gray, a sorrel, and a black, so that it was difficult to identify him, and was such a fleet rider that he had leaped over Colebrook turnpike a dozen times within a fortnight, and distanced all pursuit. Another notorious character of this kind was Dumas, a young man so bold and intrepid, and withal so elegant and handsome, that when he was apprehended and executed at Oxford in 1761, even the ladies whom he had robbed on the highway shed tears over his fate. This was not all; for having expressed his horror at the thought of being anatomized, a formidable band of barge-men carried off the body after execution, by main force, and gave it decent burial, after having opened it, and filled it with quicklime. So little was mercantile security as yet understood, that the mail was frequently intrusted to the conveyance of young lads in light cars or on horseback, and the robbery of such insecure guardians of public property was an event of weekly, and sometimes of daily occurrence. Will it be believed also, that this careless mode of conveyance was continued to the close of the period, notwithstanding the consequences that attended it?

While such was the insecurity of the country, that of the towns, and especially of the metropolis, was still more conspicuous. So late as 1763 the numerous roads near London were guarded by no greater force than a patrol of eighty mounted

and armed policemen; and as these *gens d'armes* were necessarily scattered over a wide extent, they might be overpowered or eluded at every turning. But this police establishment, ineffectual though it was, did not equal the helplessness of those who held the guardianship of the capital itself, so that the storming of watch-houses, and liberation of culprits, was still a frequent event; while what would now be reckoned a paltry street row, often required the interposition of the military in aid of the officers of justice. Even the toll-house keepers in London were so liable to be robbed, that they had to be furnished with arms, and enjoined to keep no money in their houses after eight o'clock at night. The boldness with which street robberies still continued to be committed was evinced so late as 1777, when the Neapolitan ambassador was robbed in his coach in Grosvenor Square by four footpads armed with pistols. And still, amidst the inefficiency of the police, and the continuing inexperience of justice, the only remedy that occurred was first to catch the offender, and then to make him sure, while the modes of accomplishing both objects were miserable confessions of helplessness. A tempting price was set upon the head of the culprit, and thus every man in want of money might relieve himself by the office of a thief-catcher. "I keep a shop in Wych Street, and sometimes catch a thief," was the reply of a witness on a trial when questioned as to his means of living, and not a few of such small shopkeepers and bankrupt tradesmen could at this time be found in London. When the rogue was caught, the next expedient was to secure him, and this was done by hanging him out of hand, so that his execution generally followed a day or two after his sentence, to abridge the chances of his escape and expense of his maintenance. The only merciful alternatives, when he was not thought fully ripe for the gallows, was to transport him to the antipodes, or send him off as a soldier to the army, by which, in either case, society would be fully rid of his presence.

As street robbery gradually became more difficult and unsafe, burglary became more frequent, and the art of breaking into lock-fast places was so greatly perfected, that dexterous entrances into houses, as well as escapes from jails, form much of the London romance of this period. The training, also, for this desperate occupation commenced so early, that we read of a gang of Westminster housebreakers, in 1787, who kept the whole neighbourhood in alarm, while the oldest member of this gang was only twenty-one years of age, and the youngest thirteen. When house-breaking in turn became doubly hazardous from the increasing vigilance of justice, and the renewed precautions with which houses were guard-

ed from within, pocket-picking and the various arts of quiet and cunning filching succeeded; and in this case, the old modes of cozening and coney-catching, that had been so rife in the time of Elizabeth and James I., were revived and brought into full exercise, with sundry modern improvements. Among the exploits of this nature, one of them gives us a strange idea of the mercantile insecurity of the post-office, even so late as near the close of this period. A gentleman dropping a letter into the usual aperture, and not hearing the sound of its falling into the box, proceeded to investigate the cause. He soon found that a false case had been introduced into the aperture, which was hung by a string, with a small imperceptible hook or fastening of watch-spring on the outside, and that when this case was sufficiently filled, the rogues, who were on the alert, could easily fish it up, and carry it off, with all its contents of political or domestic secrets, bank bills, and money remittances. Such, too, was the audacity combined with finesse which was often manifested, that even the home of royalty was no shelter from the light-fingered gentry, who were prowling everywhere in quest of booty. In this way, an attempt was made, in 1792, to rob the Prince of Wales himself, and that, too, in the very drawing-room of St. James's. For this purpose, the gang had procured admission with the passport of court-dress coats; in the throng, the clutch and tug of an unseen hand was laid upon the sacred person of the heir apparent; and on examining, he found that the ornamental guard or bow of his sword had been torn asunder, and all its constellation of rich diamonds within a thread of being carried off.

But the insecurity of London life and property that still continued to linger, was not wholly owing either to the violent brigandage or fraudulent abstractions which were carried on upon so large a scale; and other dishonest crafts were practised with equal boldness, cunning, and success. Military service in the East Indies, both from its peculiar danger and the remoteness of the scene, was so unattractive, that few willing recruits could be found for it, and the conquerors of a hundred realms had to be procured from other sources. One of these, as we have already mentioned, was the jails, where condemned criminals had the alternative of hanging or enlisting. But another fruitful supply for our Indian armies was furnished by crimps, who lay in wait in every street for the unwary, cajoled them with fair promises and professions into lock-up houses from which they could not escape, and there plied them with strong liquors until they were shipped off to the tender in a state of utter obliviousness. Even if the victim escaped, he

was arrested upon a false charge of debt, and hurried off upon his voyage before the case could be brought to trial. In this way, many a young lout from the country, while gazing upon the wonders of London, awoke next morning a soldier without knowing how. In a more violent and summary manner still, but with the full sanction of law, the navy was also manned; and while every sea-port of our island was exposed to the invasions of press-gangs, their drag-net was most active among the shoals of the London population, where they were certain at any time of a full draught; and thus Wapping, Tower Hill, and the districts of London nearest the Thames, were often swept by strong bands of sailors, armed with pistol and cutlass, which they were prompt enough to use upon the least resistance. When Roderic Random, on walking home one evening, was beset by one of these bands, and hailed with "Yo ho, brother, you must go along with me," and cut down without ceremony for his refusal, and carried off bleeding and insensible to their ship, where he was stowed away in the hold, along with a crowd of similar unfortunates, who next morning were set to "haul taut, and belay"—in such a picture Smollett described nothing more than one of those usual incidents with which the whole of the present period was familiar. Besides these several peace-breakers which we have enumerated, there were formidable bands of smugglers both in town and country, whose outlaw life and adventurous occupation often fitted them for worse atrocities than that of mere traffic in contraband liquors. Of their boldness we have a specimen in 1778, in which year it is recorded, that a gang of these, thirty-two in number, forced their passage across Surrey bridge, a little after midnight, against twenty-two dismounted grenadiers who were drawn up to apprehend them. Of their merciless cruelty a fearful specimen was sometimes given in their treatment of accomplices who had betrayed them, one of these punishments consisting in lashing the offender to death with horse-whips. Even the Mohock spirit had not yet fully died out in London, although it was now confined to the lowest classes; and of this a proof was given so late as 1792. On that occasion, a gang of twelve men assembled on Saffron Hill, armed with swords and bludgeons, who, in mere wanton barbarity, proceeded to run a muck through the neighbourhood, slashing and knocking down all they met, until one man was killed, and several desperately wounded by their savage frolic.

From regularly organized brigandage and associations for every kind of theft, by which public peace was outraged and domestic comfort interrupted, the transition to mob outrage and

popular ebullitions is a natural step. This is the more necessary, also, from the illustrations they afford of the character and condition of society at large. And here we find, during the present period, and over its whole extent, a series of mobbings, in which the old barbarism of the country still flashed out with a violence which happily has now greatly abated, if not wholly passed away. Of these, the Lord George Gordon and Birmingham riots have already been mentioned in the civil department of our history. The one was a religious, and the other a political outburst; but the paltriness with which they terminated in plundering, drinking, fire-raising, and shouting, instead of a great national convulsion—as would have been the case in France—shows how entirely these were mere mob riots, with which principle had little to do. There was no *ça ira*, no exhibition of human heads on pikes, no hanging at lamp-irons. The same may be said of the Wilkes riots, which at one time looked so portentous. Of a more mercantile, and therefore of a more national character, and pursued with greater energy, were the outbursts of the Spitalfields weavers, who fought it out with the military, and still returned to the charge after repeated defeats. Mercantile risings called *strikes* were also becoming characteristics of this period; but as they were the outbreakings of a single trade, and in a particular locality, they generally passed off in comparatively harmless explosions. One of these, which occurred in 1770, may give an idea of the manner in which they were conducted. A journeyman hat-maker having been charged with working over-hours without exacting remuneration for extra time, his brethren of the craft resolved to punish him for this flagrant breach of their privileges. They therefore mounted him upon an ass, and paraded him through Southwark, where hatters were chiefly employed, a standard-bearer going before him with a label denoting his offence hoisted upon a pole, and a train of boys attending with rough music of pans and shovels. Thus the ovation marched through the borough, taking care to halt at each hat shop by the way, and compel its workmen to strike for an increase of wages. The numerous executions of the period were also calculated to excite the riotous propensities of the spectators; and according to the character or crime of the culprit, their feelings were expressed in cheers or execrations. Some of these wild outbursts of popular justice unmistakably indicated the fierce spirit that still struggled in the bosom of an English mob, and that, with a little management, might have burst out with formidable consequences. When that execrable murderer, Mrs. Brownrigg, was conducted to the place of execution, those of the crowd who were

nearest the ordinary's coach cried out, that "they hoped he would pray for her damnation, for such a fiend ought not to be saved!" Sometimes, not contented with mere outcries, they proceeded to action, either by rescuing the body of the criminal from dissection, or holding an inquest over it at the door of the accuser, in which case, an outbreak similar to that over the corpse of Cæsar in the forum was certain to follow. One of these is thus recorded in the *Annual Register* for 1763:—"As soon as the execution of several criminals, condemned at last sessions at the Old Bailey, was over at Tyburn, the body of Cornelius Saunders, executed for stealing about £50 out of the house of Mrs. Whyte in Lambeth Street, Spitalfields, was carried and laid before her door; where, great numbers of people assembling, they at last grew so outrageous, that a guard of soldiers was sent for to stop their proceedings; notwithstanding which they forced open the door, fetched out all the salmon-tubs, most of the household furniture, piled them on a heap and set fire to them, and, to prevent the guards from extinguishing the flames, pelted them off with stones, and would not disperse till the whole was consumed." This love of justice, which jumped so hastily to a conclusion, and from conclusion to action, combined with that love of power by which the brute strength of all mobs is so prone to be swayed, was also continually manifested in the streets of London, when either a rogue was to be rescued from the clutch of the constables, or a pickpocket to be pumped or ducked. Often, however, such indulgences only whetted the appetite for worse excesses, as was shown in the following instance during the same year (1763):—"A crowd had assembled to witness an exhibition of fireworks; but in the pressure, a railing gave way, the foremost were pressed headlong into a well, and in the crush of this sudden disaster, six persons were killed and fourteen or fifteen dreadfully mangled. During the consternation occasioned by the accident a sailor had his pocket picked by a Jew, who, after undergoing the usual discipline of ducking, hopped out of the water, pretending to have his leg broke, and was carried off by some of his brethren. But the sailors discovering the trick, and considering it as a cheat, pursued him to Duke's Place, where, at first, they were beaten off by the inhabitants; but presently returning with a fresh reinforcement, they attacked the place, entered three houses, threw everything they met with out of the window, broke the glasses, tore the beds, and ripped up the wainscot, leaving the houses in the most ruinous condition. With the furniture three children, sick of the small-pox, were thrown out of the window, but happily received no damage.

Such was the condition of the lowest of the lower orders in England. It was the barbarism of the earliest ages not refined and elevated by its virtues, but, on the contrary, debased and sunk deeper down by its vices—so utterly left behind in the general progress, that their retrieval seemed impossible, or not worth attempting. Philanthropy would not venture among such dangerous outcasts, and even the church had left them to their own devices. But this non-intervention could not have been continued with impunity, and in our large cities, these festering masses were certain to become the sources of a dangerous moral fever and pestilence, that would have spread beyond their own circle to the classes that had despised and rejected them. Even among these pariahs of the community, however, the devoted missionaries of Methodism were at work; and the agencies which had been established by the admirable organization of Wesley and his successors, had broken through the hitherto impregnable fence, and commenced the work of reformation. For these zealous apostles no locality was too obscure, no ignorance too complete, no guilt too atrocious to deter them from the attempt; and their example, as well as their success, roused the emulation of other dissenting bodies, and finally of the church also. And of all these modes of religious and moral teaching which were brought to bear upon the ignorant and vicious towards the close of this century, none seem to have been so efficacious as Sunday schools, by which the young, who had none to counsel or restrain them, were arrested at the outset, and brought within the influence of the only teaching that could reclaim them, and make them fit members of a Christian and civilized community. Of these institutions, the following short notice, so early as 1791, is given by Madame d'Arblay:—"The name of Mrs. Trimmer led us to the Sunday schools and schools of industry. They are both in a very flourishing state at Bath, and Lady Spencer has taken one school under her own immediate patronage. On Sunday she sent me a message upstairs to say she would take me to the Sunday school if I felt well enough to desire it. . . . It was a most interesting sight: such a number of poor innocent children all put in a way of right, most taken immediately from every kind of wrong, lifting up their little hands to heaven, and joining in those prayers for mercy and grace, which, even if they understood not, must at least impress them with a general idea of religion—a dread of evil, and a love of good." The other cities, and especially London, could exhibit the same attractive picture, where persons distinguished by intelligence and rank did not deem themselves too elevated to devote themselves to the instruction

of the outcast and the poor. It was one of the most striking attestations of the fact, that a great moral reformation had commenced, in the benefits of which every class were to be partakers.

From the account which we have given of the state of society at this period, the necessity of emigration will be easily inferred. Notwithstanding the growing wealth and prosperity of the country, there was a large portion of the lowest classes, whose numbers continued to multiply with the increasing wealth, and whose doom seemed to be that of hopeless, incurable poverty. There were many whose sluggish industry needed the stimulus of change, and who could not commence a better career except in a new country. There were many, too, whom the mere love of enterprise, and impatience of the established state of things, were enough to drive into new regions, either as soldiers, merchants, or colonists. In this way, India and America had borne off large draughts of our population annually, by whom the former was conquered and the latter colonized. The valuable acquisition of Canada was of importance, especially to the Highlanders of Scotland, who, in the destitution of their own bleak mountains, and the establishment of sheep-farming by their landlords, had no remedy but emigration, and who found in the transatlantic province a country and climate to which they were best adapted. The great stream of British emigration continued, in this manner, to flow westward previous to the commencement of the American war of independence, by which it was materially interrupted until the return of peace, when, like a volume of gathered waters whose barrier has been withdrawn, it rushed with double violence into its old channel. Of the nature and amount of this renewed emigration, an estimate may be formed by that from the Highlands alone. In the year 1802 not less than eight vessels, carrying 3300 Highland emigrants, sailed from Scotland to America; but of these only one vessel went to the territory of the United States, the rest being bound for the Canadas. The new republic, indeed, by the erection of a government of its own, the rancours which the late war had created, and various other causes both social and political, had ceased to present such inducements to emigration from the mother country as before; but even already new outlets had been preparing to regions as rich as those of America, and for the creation of new colonies which might in time become as great and as powerful. In a happy hour, whether anticipating such an event or not, the British government had turned its attention to other fields of occupation; and in Cook, the celebrated navigator, they found the person best fitted to discover and explore them.

James Cook, a man of humble origin (his father being day-labourer to a farmer), with no better prospects than the life of a peasant, and no better education than that of a village day-school, had been removed at the age of seventeen to a popu-

CAPTAIN COOK — From the picture by N. Davice

lous village near Whitby, as apprentice to a shop-keeper; but at the sight of the sea, his latent enthusiasm was awakened into full life, and the choice of his future career confirmed: he would be a sailor, and that, too, not for warlike fame or gain, but that he might discover new lands, and be the Columbus of his own day. With this view, he studied both the practice and the science of navigation, until his proficiency raised him to the rank of captain, and introduced him to the notice of government, by whom, after various appointments, he was commissioned to explore the Pacific Ocean, and extend the discoveries which had already been made in that quarter. On the 26th of August, 1768, he set sail from Plymouth, in the *Endeavour*, a small ship of 370 tons that had been armed and fitted for the occasion; and during the course of a long three years' voyage, he explored successively Tahiti, the adjacent group called the Society Islands, New Zealand, and New Holland, now better known as Australia. Such being the success of this first voyage, he was sent out upon a second in 1772; and upon this occasion, he minutely and accurately surveyed those islands which were afterwards to be comprised under our great Australasian empire. Among these discoveries was the fact he established, that New Holland was not part of a southern continent, as had been hitherto imagined, but an island. He also signalized this voyage by a careful exploration of the New Hebrides, hitherto imperfectly known; and discovered New Caledonia. In 1776 he was appointed to make a third voyage,

to settle an important question still in doubt, namely, whether there existed, or could be established, an easy and safe communication between the Atlantic and Pacific Oceans by a high northern latitude; and of this, his researches established the fact, that it was utterly impracticable. In this voyage, he also discovered the group of islands called Hawaii, in the Pacific Ocean; but in one of these called Karakakooa, he unfortunately lost his life in a quarrel with the natives. But he had done all, or nearly all that could be effected, in the exploration of the many islands of the Pacific, and little remained for his countrymen but to enter and take peaceful possession.

And this was soon done, although in a somewhat unusual fashion. New Holland, although by far the most important of all these islands, had hitherto been disregarded both by the Dutch, who discovered it in the seventeenth century, and the Spaniards, who subsequently became acquainted with it, owing to the unfavourable appearance of the greater part of its coast. But after this vast island had been better understood by the examinations of Dampier, and especially of Captain Cook, the British government resolved to convert it into a penal or convict settlement. For many years, Britain had been accustomed to transport to the American plantations that part of her felons whose crimes were not worthy of death, but too great to be expiated by imprisonment; but the revolt of the colonies, and their separation from the mother country, made these, as a place for transportation, no longer available. The coast of Africa was then thought of as a substitute, but this plan was abandoned in favour of the eastern shore of New South Wales, as being a more eligible place of punishment and durance for our convicts. Thither accordingly, in 1787, a fleet of eleven sail, protected by a frigate and armed tender, and having on board 565 male and 192 female convicts, 200 soldiers, and several of their wives and children, were sent from Portsmouth, with Captain Arthur Philip of the royal navy as governor of the new colony; and after a voyage of eight months, they arrived at Botany Bay, the place of their destination. This place of settlement, however, was soon abandoned for the splendid inlet of Port Jackson, on the shore of which a rude encampment of huts was erected, afterwards distinguished as Sydney, the capital of the colony. But most unpromising was the struggle which it had to endure for years, in consequence of the sterility of the soil, the profligacy of the convicts, and their quarrels with the natives, which were attended with frequent bloodshed. But notwithstanding these obstacles, and a three years' famine, in which the whole population was

Vol. IV.

nearly starved, and the arrival of fresh convict ships, that only doubled the prevalent iniquity and misrule, this strange nondescript community grew into regular form and order, and thrrove amazingly, so that at the commencement of 1800 the population amounted to 6000 souls, having 7677 acres under cultivation, and possessing a live stock of 203 horses and mares, 1044 cattle, 1024 sheep, 2182 goats, and 4017 hogs.

While the present period produced such a navigator as Cook, by whose enterprise the range of nautical discovery was enlarged, and new homes opened for British emigration and colonies, it was also distinguished by the discoveries of two adventurous travellers, Bruce and Park, whose researches were directed into a different sphere. This was the interior of Africa, that region of mystery and terror, over which a veil of darkness still hung, but which was sufficient on that account to invite the bold intelligent spirits of our country, whom the stir of the latter part of the eighteenth century had inspired with a new life. James Bruce of Kinnaird, descended from a heroic race of which Scotland is justly proud, independently of his great personal and intellectual advantages, which fitted him for the life of a traveller, possessed that restlessness of disposition and daring love of adventure, which was enough to impel him into strange regions as yet unknown to civilized men. Already he had travelled much in Europe, Asia, and Africa: but this was not enough; he was anxious to explore Abyssinia, the half-mythic kingdom of Prester John, about which so many fables had for centuries been rife in Europe, and to trace to its hidden source the commencement of the Nile, "which had baffled the genius, industry, and inquiry of both ancients and moderns for the course of near three thousand years."¹ He accordingly repaired to Egypt in 1768, and after nearly a year of travelling, crossed the border of Abyssinia, and was welcomed by the sovereign, who, to insure the stranger's safety, invested him with a court appointment similar to that of a British lord of the bed-chamber. This opportunity brought him into close acquaintanceship both with the country and people; and amidst his erratic movements and hair's-breadth escapes, Bruce never lost sight of the purpose of his journey, but was careful to mark everything worthy of notice in Abyssinia. He was thus also enabled to penetrate the wild upper regions of the country, and see with his own eyes the source of the Nile, that prime object of his ambition, which he approached with the devout awe and reverence of a pilgrim. Having accomplished his purpose, it was time to return to Europe and announce his discoveries; but for thirteen months his journey

¹ Bruce's Travels.

was delayed by the civil wars of the country, in which, as an Abyssinian noble and officer, he was obliged to take a part. His return was by land through the great deserts of Nubia into Egypt, and in this route his life was constantly endangered, not only by the barbarous chieftains of Nubia, but the withering simooms and moving sand-pillars of the desert, so that eleven months elapsed, after his departure from the Abyssinian capital, before he reached the cataracts of the Nile.

On his arrival in England he announced the incidents of his journey and the wonders he had seen; but these were so different from every preconceived European opinion, and so peculiar to the wild countries and tribes which he had visited, that he was forthwith set down as a traveller of the school of Fernand Mendez Pinto, and a braggadocio to boot—one who had seen marvels that never existed, and performed exploits that had never been achieved—and by these evil surmises, with which his labours were ungenerously requited, his life was embittered to the close. But a more matured knowledge—the fruit of succeeding explorations to which he opened the way—has confirmed the statements of Bruce, and his name is now respected as one of the most veracious as well as intelligent and intrepid travellers which Britain has produced. As yet little practical use has been made of his discoveries, except to settle a British resident for mercantile purposes at the court of Abyssinia; but through this hold, when the opportunity arrives, an advance may be effected into Central Africa, and the benefits of civilization imparted to those wild races which have hitherto been inaccessible to Europe.

The other African traveller we have mentioned, —Mungo Park—was born at Fowlshields, in Selkirkshire, in 1771. It is worthy of notice, that the sphere of exploration which these two selected—by far the most difficult, dangerous, and fatal that has ever yet been tried in the history of travel—has mainly fallen to the Scots, as if it had been a natural inheritance. May we not trace in this their choice, the promptings of that love of wandering which carries them everywhere, combined with that courage which nothing can daunt, and that perseverance which knows not how to yield? Intended for the church, but preferring the profession of a surgeon, the early studies of Park qualified him for that life of African travel, into which his whole powers and acquirements were afterwards thrown. At an early age, his botanical and ichthyological discoveries made in the island of Sumatra, while surgeon on board the *Worcester* East Indiaman, recommended him to the "Association for the Promotion of Discovery through the Interior of

Africa," by whom, in 1793, he was sent out on an expedition, to explore the course of the Niger from its rise to its termination; and procure information about the great central city of Timbuctoo, at that time only known in Europe by name. Upon this route so unknown and so full of danger, he set out from a British factory established at Pisania, in the kingdom of Yam, with only five negro attendants and a negro boy, a horse for himself, two asses for his servants, and only two days' provisions; while the whole equipments for the expedition, that would extend to an indefinite period, were such as would scarcely have sufficed for an ordinary week's journey. Thus slightly furnished, he plunged into an enterprise in which a whole army might have been lost; and through dangers in which his life was daily imperilled, and in which he was successively robbed of all he possessed except a pocket-compass, he reached the Niger at the capital of Bambarra, and prosecuted the course of the river until, through sheer destitution, he was compelled to pause and retrace his steps. After his return to Britain, he settled at Peebles as a surgeon; but his thoughts were still of the Niger, and his constant wish was to renew the half-accomplished enterprise, notwithstanding the dangers and frightful sufferings he had endured in his first attempt. His ambition was gratified; and in the beginning of 1806 he left Britain for Pisania, from which he once more commenced his inland route, confident of success, and furnished with every means that might insure it. Through perils almost equal to those he had formerly experienced, he again reached the Niger at the capital of Bambarra, and launched upon the river in a small schooner which he had constructed—after which he never returned. It was certain that he had perished—but where or how? Years elapsed before it was ascertained that he had been drowned in the Niger, near the village of Boussa, in attempting to escape from an ambush of the natives which the king of the country had sent to murder him. Thus was Mungo Park cut short in his adventurous career in the thirty-fifth year of his age.

In directing our attention to the progress of the fine arts during this period of promise, we begin with architecture. The increase of wealth which had been going onward, occasioning the multiplication of public buildings, and the improvement of private mansions, was certain to produce a change in the national architecture, either for good or evil. This was the case so early as the reign of George II., when a new school arose, under the patronage and direction of the Earl of Burlington, the chief characteristic of which was, a dislike of the stately, massive, comfortable erections of Inigo Jones, Wren, and

Vanbrugh, and desire to supersede these qualities which had now become the chief distinctions of British architecture, by the lighter graces of the Italian school. It was a rash disregard of the necessities of our climate; and their choice was not amended by their feeble imitations of Palladio. Many doors in contracted spaces, chimneys between windows, and windows between chimneys—vestibules that were shelters for damps, and pillars where there was little or nothing to support—these, however pleasing to the eye from without, were but little adapted to the comforts of those within, who were exposed to every change of temperature. Such was the architectural school that predominated at the accession of George III., and which was continued until 1771. But while this was the case with the mansions of the nobility, where the principal floor was raised on a basement nearly one-third of the building in height, and where this elevation, giving an exposed front to the weather, was ascended by some twenty steps, unless the visitor had the humility to enter by a door that was placed under them—a more comfortable style was introduced into our villa architecture, chiefly owing to Sir Robert Taylor, who combined in these buildings the graces of the Italian school, with adaptations which were necessary for such a climate as that of England. Of the public buildings of this period, the chief were Blackfriars' Bridge, commenced in 1760, and completed in eight years, a noble monument of the classical taste and skill of its architect, Robert Mylne; the extension of the Bank of England, by Taylor, the father of English villas; and Somerset House, the work of Sir William Chambers, which was commenced in 1776. Already, also, the chief improvements in London, by the opening of streets and improvement of public ways, which were continued throughout this period, were for the most part devised and suggested by John Gwynn in 1766, in his publication of *London and Westminster Improved*.

From architecture we pass to painting, which, at the commencement of the present period, was assuming in Britain a distinct national characteristic. The homely but strong example of Hogarth had not been without effect: it showed that there were native incidents and objects worth delineating, as well as native talent capable of the task. This new feeling was confirmed by Sir Joshua Reynolds, a great artist wholly English, who was born at Plympton in 1723, studied the art in his own country, and after a three years' visit to Rome, where he matured the graces of his own originality by the examples of the great masters, he returned to England in 1752, and startled the critics by his independence of established example and the Sir Godfrey

Kneller school. He commenced his career by the painting of portraits, which were real living men and women in their natural bearing and appropriate costume, instead of gods and antique

SIR JOSHUA REYNOLDS.—After a picture by himself

heroes, wood-nymphs and shepherdesses; while the intrinsic merits of his delineations—their sunny, idealized brightness, combined with substantial earthly truthfulness and reality, bore down the opposition which at first surrounded him, and compelled an universal acquiescence and admiration. Neither did they forget, nor did he too forget, that he was an Englishman—

"When they talk'd of their Raffaeles, Corregios, and stuff,
He shifted his trumpet and only took snuff."

His portraits were acknowledged to possess the simplicity of Titian, the vigour of Rembrandt, and the elegance and delicacy of Vandyke, while they were essentially of native character as well as native growth. And of the highest importance was the power they exercised, and the spirit they impressed upon the character of the age. "The influence of Reynolds," as Allan Cunningham has justly observed, "on the taste and elegance of the island was great, and will be lasting. The grace and ease of his compositions were a lesson for the living to study, while the simplicity of his dresses admonished the giddy and the gay against the hideousness of fashion. His works diffused a love of elegance, and united with poetry in softening the asperities of nature, in extending our views, and in connecting us with the spirits of the time. His cold stateliness of character, and his honourable pride of art, gave dignity to his profession; the rich and the far-descended were pleased to be painted by a gentleman as well as a genius." "In portrait-painting," says Burke, the friend of the great artist, "Reynolds

¹ Goldsmith. Sir Joshua was deaf, and used an ear trumpet.

does not appear to be raised on that platform, but to descend upon it from a higher sphere."

Next in reputation to Sir Joshua Reynolds as a painter (although that reputation, while he lived, was overrated), was Sir Benjamin West, whose origin gave little promise of an acquisition to the fine arts; for he was born in America, where labour and industry in the common business of life were as yet the qualities of chief account—and of Quaker parents, a community in whose eyes the delineation of anything in heaven, or on earth, or in the waters under the earth, was an abomination, and downright idolatry. But his natural talent exhibited in boyhood was too strong to be suppressed, as well as too remarkable to be overlooked; and he was suffered to follow his own bent, and repair to Italy, the great school of painting, whence, after three years had been spent in successful application, he repaired to England, and there became the rival of Reynolds, and favourite of George III. But it was to historical, not portrait-painting, that West was devoted, and thus the two great rivals had each his own field, which he could occupy without interference. The subjects of West's principal paintings, and even their character, is generally understood from the engravings of them, which have been multiplied without end: but one quality in which his later works are conspicuous is worthy of particular notice. It is their daring fidelity in period, costume, and character, by which they represent the event as it really existed, instead of being a mere allegory of the classical school. He was required to produce a great historical painting on that heroic national subject, the death of General Wolfe, while the heart of the whole community was still throbbing with sorrow at the price which had been paid for the conquest of Canada. In this attempt of the artist even Reynolds advised the classic rule to be adopted, in which the combatants would have to be arrayed in the armour of Homer's heroes, or stripped naked like Roman gladiators—even Barry thus executed a painting of the same subject, and delineated a conflict that would have better suited the Straits of Thermopylæ than the Heights of Abraham. But discarding steel armour, javelins, and Roman togas, and the usual accompaniments of fleeing gods and goddesses—allurements to which his earlier taste had not been insensible—West represented a fight as it had actually happened a few years previously between Englishmen and Frenchmen, dressed in the veritable regimentals of the period, and armed with muskets and bayonets. How startling the innovation was in a painting, where even a modern button would have been an unpardonable blemish, can be surmised—the whole empire of art cried out against a hero dying in coat, breeches, and boots,

with a red Indian, instead of Mars or Victory, looking on. But common sense and truth were mighty, and they prevailed: the same revolution was effected in the historical, which Reynolds had accomplished in portrait painting; and for public characters, as well as great events, fidelity was recognized as the first great requisite, to which ideality was kept in humble subserviency.

But besides the effect of their productions upon the taste of the nation, the influence of Reynolds and West as innovators was chiefly shown in the foundation of the Royal Academy, which took place in 1768. A few years previously, the Society of Artists had attempted to establish an institution of the kind by an annual exhibition of paintings; but professional jealousy and disagreement had defeated their purpose, and the exhibition was discontinued, until the pre-eminence of Reynolds and the court influence of West revived it with every promise of success. Its great aim was the encouragement of native talent, and the creation of a British school of painters; and most fitly was Reynolds elected as its first president, who was also honoured by its royal patron, George III., with knighthood. In the first formation of such a society, the claims of mere mediocrity of talent to the honour of membership could scarcely be overlooked; and thus, many of the names which crowd the original list have scarcely been commemorated sufficiently by intrinsic merit to demand particular attention. A considerable number of the members who were of better account were foreigners, among whom may be specified Francesco Bartolozzi, well known by his excellence as an engraver; Giovanni Baptista Cipriani, the Florentine, whose rich imagination and refined taste were worthy of the city of which he was a native; and Angelica Kauffman, whose sex, romantic misfortunes, and excellence in design and colouring, procured for her a celebrity which the succeeding generation refused to confirm. But those of greatest merit, independent of the two principal founders of the society, were Englishmen; and of these, the first place is due to James Barry, who perhaps would have obtained an emigence equal to the highest, if, like them, he had dared to vindicate truth and nature against established rule and precedent. But his taste was that of the tragic writers who regard common life and everyday reality unworthy of their notice; while his standard, to which he adhered with the devoted enthusiasm of a martyr, was the classical—the gods of Olympus and the heroes of antiquity, which, in the eyes of the eighteenth century, were nothing but names and shadows. In this way his Jupiter and Juno, which would have been worshipped in an Athenian temple, was egregiously out of place on the walls of the

Academy of Somerset House, while his *Venus rising out of the Sea* was but a beautiful woman bathing, and who, it was felt, would have looked better upon *terra firma*. As well might Barry have preached the doctrines of the old Greek and Roman mythology, in the hope to win converts to it among the villages of Kent, or the streets and alleys of London.

In noticing the other academicians of the period, Gainsborough and Wilson, in landscape-painting, deserve a conspicuous place. Both were also portrait-painters of no ordinary excellence, especially the former, and it is in this department that he is now best known and appreciated. The school in which Gainsborough studied was the woods of his native Suffolkshire, of which he caught the inspiration so early, that he became a painter when only twelve years old, and his beloved themes for life were the sylvan scenes, the cottages, and the peasantry of England, which he portrayed with the same force, truth, and imaginativeness which Burns and Bloomfield manifested in poetry. Of Richard Wilson, the aim was of a still loftier kind; for while he devoted his whole powers to the representation of scenery, his six years of study in Italy enabled him to clothe forest and hill, tree and temple, with the bright inspiration of an Italian sky and sunshine. In contrast to this was John Opie, whom Peter Pindar found in a saw-pit, whose genius he detected under the coarse jacket of an artisan, and whom he encouraged by his approval and instructions to become an artist. Opie became a painter both in portrait and history, and although he could never surmount the effects of his early humble life and mechanical calling, he had the good sense to avoid the poetical and ideal for the realities of truth and nature, and was rewarded with the reputation of being inferior to few of his contemporaries, at least in truth, force, and originality.

The establishment of the Royal Academy, and the distinction of its two first presidents, Reynolds and West, were certain to evoke a whole host of artists either as their imitators or rivals, a brief enumeration of whom would overflow our limits. From these we must therefore content ourselves with a selection of the most distinguished. In front of them was George Romney, a native of Westmoreland, who studied at Rome, and on returning to London in 1775, became the most formidable of all the competitors of Sir Joshua Reynolds, whom for a time he almost eclipsed. But exquisite though his productions are, his patience and application were not equal to the ardour and originality of his genius; and hence so many of his pieces were either unfinished, or completed so hastily as to detract from their unquestionable merits. Another eminent

artist of the period was Allan Ramsay, eldest son of the Scottish poet of that name, who, after studying in Italy, became so highly distinguished in England by his portraits, that in 1767 he was appointed portrait-painter to the king and queen. He, too, was so popular in his day, that he for a time obscured the renown of Reynolds, and obtained the high distinction of being called the "Scottish Vandyke." But his was a divided affection, in which the love of art was counter-balanced by attachment to literary and political studies; and his professional career was prematurely stopped by an injury in his right arm, which obliged him to abandon painting. Nor in this list of British artists must the name of John Singleton Copley be omitted, although like West he was an American, having been born at Boston (Massachusetts) in 1737, and who settled in England in 1775. His subjects were illustrative of British history, and of these, the best known are the Death of the Earl of Chatham, and the Death of Major Pearson. Paul Sandby is also worthy of notice, not merely as an eminent artist, but the founder of the water-colour school of painting—a new department of the art, which had hitherto been unknown or despised. Other artists of equal distinction succeeded before the close of the present period, whose names, however, may be deferred to the next. For the present, we may close the list with George Morland, that irregular, eccentric genius, who was too impatient to study in any school, and too careless to attain the very highest excellence, which he might have won in his own department. His darling subjects were the humblest objects of rural life; but even these he could invest with interest and artistic beauty, so that at the magic touch of his pencil, the pig-sty became a palace, and the thatched hovel a home for Jove. His gipsy's ass is a creature that has supped up the east wind; his pigs are so sleek and glossy, so intelligent and happy, that ladies might fondle them instead of lap-dogs; even his dunghills have a pouncet-box richness, that gives them a sweet savour in the nostrils of the daintiest criticism. Such were the wondrous talents of Morland—or such at least they were considered till within these few years—who, after a reckless life of dissuatory application, died in 1804, at the premature age of forty, through the effects of dissipation and intemperance.

While the present period was thus so successful in the production of a native school of painting, the same may be said of the sculpture of England, which hitherto, such as it was, had been under the direction of foreign artists. The impulse, indeed, that had been given to the sister art, was certain to act upon sculpture also. The earliest in this department, who was wholly an

Englishman, was Joseph Wilton, one of the founders of the Royal Academy, who, after studying at Paris and Rome, returned to England in 1755, and was first brought into notice by obtaining the appointment of state-coach carver to the king, in which capacity he ornamented the glittering four-wheeled pageantry in which royalty is conveyed to parliament. But, unfortunately, his bias was classical and French, and the public monuments which he executed were a strange jumble, in which men who had lived in the eighteenth century were clothed in Roman costume, or brightened with saintly halos, and surrounded by seraphs, cherubs, and celestial clouds and glories. Another academician was William Tyler, a less daring, but also inferior artist, whose chief production is the monument of General Lawrence in Westminster Abbey. These sculptors, however, were nothing more than the commencement of an era, the first promise of an excellence which their successors were destined to attain. They were succeeded by Banks, Nollekens, and Bacon, who were the precursors of artists more eminent still, but whose merits are worthy of more than a passing notice.

Thomas Banks, born in 1735, indicated such early excellence as a sculptor, that his productions attracted the notice of the Royal Academy as soon as it was formed; and under its patronage and at its expense he was sent to Italy, where he studied the productions of the Greek masters, until he was wholly pervaded both with their excellences and defects. The first of these he manifested in the statue of Achilles and the Falling Giant, in which the ancient heroic forms were revived with a fidelity and power worthy of the days of Phidias; the second, by such a servile adherence to the rules of the antique, that, rather than delineate modern heroism in its own costume, he stripped its heroes to the skin, and gave them Wisdom, Valour, Genius, or Victory for their assistants or attendants. Such was still the bondage which pervaded this department of art, and from which it was not wholly emancipated even so late as when Wyatt dared to represent the pig-tail of George III. in the well-known equestrian statue. But Banks, with all his superior excellence, had neither sufficient courage nor invention to break through the conventional rule; while his own age had not sufficient taste to appreciate his productions, which would have raised him to high renown in the country and the days of Pericles. It was not, therefore, until he had departed from the world that his worth was appreciated at its full value. As for Joseph Nollekens, who was born in 1737, and whose long life was extended to 1823, he was so unrivalled in portrait-sculpture that his busts rivalled the portraits of Sir Joshua Reynolds in artistic genius,

gracefulness, and fidelity. It was in the last quality, however, that he excelled, and for which he was at all times ready to sacrifice the temptations of idealism. The same quality exists in his

BANKS' STATUE OF THE FALLING GIANT.

monuments, where he represented real personages as they veritably appeared, and mythic characters as he found them, while he imparted to them such a grace and beauty as his predecessors had been unable to attain. His chief defect, indeed, was that want of poetical power, through the possession of which he might have broke through established rule, and imparted a higher charm to the truthful and real which he was so well fitted to delineate. Lower in the scale of excellence than Banks and Nollekens, although of distinguished merit as a sculptor, was John Bacon, who, by the unaided power of his own genius, forced his way to excellence and distinction. His productions in early youth were images for a pottery, and consisted of shepherds and shepherdesses in porcelain; but he advanced step by step in the study of sculpture, until he obtained for his attempts a premium from the Society of Arts, and subsequently the prize of the first gold medal from the Royal Academy. On entering into public and professional life, he was employed to execute a bust of the king; its merits, and the royal patronage which rewarded it, brought him into notice and full occupation; and having thus learned wherein his excellence lay, he persevered in the track which conducted him to fame and fortune. This pursuit of the profitable, instead of a self-denying devotedness to posthumous fame, continued with him to the end; and contented

with the limits which he had marked to his aspirations, all his works were not only well executed, but crowned with approbation and success. On this account, his busts, and especially his full-length statues, in which the living man was to be copied, are superior to his monuments, in which allegorical personages, according to the prevalent taste, had to be mixed with human actors. His chief work of the latter kind is the monument of the Earl of Chatham in Guildhall.¹ Flaxman, by far the greatest sculptor of them all, was already at work in his studio; but a particular notice of him more properly belongs to the succeeding period.

It was not merely, however, to the studio of the artist that the cultivation of the fine arts was confined, nor to marble, stone, and canvas that their productions were limited. The imaginative spirit that was growing to such maturity, and spreading abroad its wings for still higher flights, could also condescend to visit the mechanical work-rooms of the potteries, and sit down at their furnace hearths. It indeed was right and reasonable, as well as a matter to be expected, that amidst this growing improvement, the arts should vouchsafe to throw their charm over the comforts of domestic life, as had been their office of old in Greece and Etruria, where men drank out of something better than unshapely vessels of mere vulgar clay. In England, accordingly, finer kinds of earth and better modes of glazing had already been introduced into our stoneware manufactories, although neither in form nor colour their productions had as yet been improved. This result was reserved for Josiah Wedgwood, who, in 1763, produced a new kind of cream-coloured ware of superior texture and durability. From the royal patronage which it obtained, it was distinguished by the name of the queen's ware; and so great was its superiority to that of the Continent, that England was no longer dependent upon France and Holland, as she had hitherto been, for the better kind of her earthenware and porcelain. These countries, indeed, and even Europe at large, soon became customers for this new manufacture of Wedgwood, which they termed English ware. While Wedgwood thus improved the mere material, he introduced still more important improvements into its forms and colouring by a careful study of the antique, through which he converted homely jugs and pitchers into classical Etruscan urns, and Greek poetical amphoræ. Nor was this all, for he moulded the refined attempered clay into the medallion, cameo, and statuesque ornaments of these vessels, and finally discovered the long lost art of painting upon them, as if their surfaces had been of paper or canvas,

so that there was not a vessel of ancient workmanship, however exquisite, whose exact likeness he could not produce. To this pottery-painting nothing but pottery-engraving was needed, to bring such improved ware within the means of the common people; and this was accomplished about the same period by Mr. Carter, an engraver in Liverpool, who invented the art of stamping with engraved copperplates upon the pottery. This process, from its colour, was called black printing; and the first tea-service with this improvement is said to have been made in 1767. In a few years afterwards, blue printing succeeded, by which the black was superseded.

With regard to engraving, which holds the same relation to the fine arts that printing does to literature, it was impossible that such popular painters as Reynolds, West, and their successors should arise, without creating a demand for copies of their productions; and line-engravers accordingly were created in abundance by the want that called them into exercise. Among these, especially, was Willam Woollet, the engraver of landscape and historical painting, and Sir Robert Strange, a native of Orkney, who attained the highest style of his art, in his engravings of the productions of the great Italian masters. Besides these, was John Browne, the pupil and assistant of Woollet, and William Byrne, the engraver of subjects of antiquarianism and topography. There were also Thomas Major, engraver to George III., whose chief productions were engravings from the works of the Dutch and Flemish painters; and Joseph Strutt, the illustrator of English antiquarianism. A whole host succeeded, whose names and whose excellences in their different styles of engraving would occupy too much space to particularize. But it was soon found not enough to produce large faithful transcripts of the paintings of eminent artists; books had also to be illustrated with numerous engravings, and the facilities of the art multiplied to produce impressions by the thousand; and hence, while engravers were obliged to assume the independence of artists, their productions have been multiplied during our own day by the substitution of steel for copper engraving, to meet the growing demand for splendid books and an illustrated literature. The same spirit not only multiplied the resources of the old, but recalled to life the long neglected style of engraving on wood, which had commenced almost as early as printing, but which contented itself with coarse productions and the fantastic ornaments of title-pages. But it did not keep pace with the improvement of printing; on the contrary, it continued to degenerate, until its productions were found to disfigure rather than to ornament a well-printed book; so that the practice

¹ See an engraving of the figure in Bacon's monument of Chatham in Westminster Abbey, vol. iii. p. 501.

of engraving on wood had been for some time abandoned, when Bewick came forward not only to restore it, but also to raise it to a high place among the fine arts. Thomas Bewick was born at Chersey Burn, near Newcastle, in 1753; and, before he emerged to artistic distinction, is said to have worked, when a boy, occasionally in a coal-pit. Being apprenticed to an engraver in Newcastle, he acquired the manual rudiments of his future occupation by engraving door-plates and occasionally pictures for books, until at last he was employed to cut diagrams on wood for Hutton's *Treatise on Mensuration*. The success with which he executed this commission, encouraged him to devote his attention to wood-engraving, and a premium from the Society for the Encouragement of Arts, for his woodcut illustration of the fable of the Huntsman and Old Hound decided his future choice. Having taught the art to his younger brother John, the two became in Newcastle the restorers of a revived style of engraving, whose excellence arrested general attention, and produced a host of imitators. This effect was chiefly owing to the publication of the *Natural History of Quadrupeds*, in which the masterly illustrations of Thomas Bewick exhibited the highest delicacy of manual excellence, combined with independent artistic genius. His publication, of even superior attraction, on *British Birds*, a work too popular to require description, was the crowning production of Thomas Bewick; and at the close of this period, engraving on wood may be said to have rivalled the best productions on steel and copper, and to have established itself as an important requisite in the illustrated literature of the nineteenth century.

The intellectual spirit of the age that pervaded every department of art and science alike, and the musical predilections of George III., which he inherited from his German descent, were not likely to suffer music to be neglected amidst the general stir and revival. Much, indeed, had been done in the two preceding reigns for the improvement of the national taste in this department; and sacred music in particular, at the accession of the third George, was considered to have reached its highest style of excellence. This was especially the case in the cathedral music, although the composers of anthems which the present period produced did not fall short of their predecessors. Among these may be mentioned the names of Kent, Nares, and Hayes, Dupuis, Arnold, and the Earl of Mornington. In the oratorio, that species of sacred drama which Handel had naturalized in Britain, and where the powers and resources of music were manifested in their highest state of development, that great master was still alone and without a follower; but the excellence of his

sublime productions in this department seemed enough of itself, and the public would as soon have thought of craving for another Milton or another Shakspeare, as for another Handel. In the music of the opera, that of Italy had fallen into abeyance for the time; but this was the less to be regretted, as the English opera had risen in its room, and afforded full scope for native musical composers, the chief of whom were Arne, Linley, Dibdin, Arnold, Shield, and Storace. But independently of the cathedral and the theatre, there were musical associations established for the improvement of the art, and its naturalization in an English home. Such was the Catch Club, an association of English noblemen and gentlemen established in 1761, by which the public taste was improved, and the glee, a species of song-music entirely native, was modelled anew, if not wholly invented. Another was the Concert of Ancient Music, which had for its aim the preservation of the works of the old masters, and the ancient national melodies, which were in danger of being lost amidst the ardour of modern progress. This last society originated that splendid series of fine concerts, under the name of the "commemoration of Handel," which met in the months of May and June, 1784, in the nave of Westminster Abbey, under the royal patronage and presence, and where the productions of Handel exclusively were given by 513 performers. These great meetings, which were national assemblages of all the rank, influence, and musical taste of Britain, and by which an impulse to the cultivation of sacred music was diffused throughout every part of England, were continued for several years, and with a chorus that at last nearly doubled its original numbers, until the frightful discords of the French revolution called its patrons away to more urgent and very different occupations. But their example was not lost in the provinces, as was shown by the second triennial musical festival of Birmingham in 1784, and still more by that of 1802. These were followed by concerts provincial, civic, and social, under every kind of patronage and for every grade of rank, which, commencing towards the close of the present period, were more fully manifested in the following. Music having thus grown into importance, soon found its historians; and in 1776, the *General History of the Science and Practice of Music*, by Sir John Hawkins, was published in five quarto volumes. This was succeeded in 1789 by the more popular though inferior work, *A General History of Music*, by Charles Burney, Mus. Doc., F.R.S., in four volumes quarto. Fifty years earlier such works would not have been published, or at all events would not have found readers, but they were now received with welcome, and studied with wide-spread attention.

In the researches of science the present period did not yield to its predecessors; but instead of dealing in theories and abstractions, these investigations aimed at the practical, and had reference to the business of everyday life. On this account, if they possessed more real utility, they had less show and learned pretension than many investigations of far inferior importance. Thus, the voyages of Captain Cook, which were fitted out by government, were made not for the gratification of mere scientific curiosity, but the discovery of islands to be colonized, and astronomical observations of the transit of Venus in the Pacific for the improvement of navigation. In these successful enterprises, the name of Sir Joseph Banks will always be connected with

SIR JOSEPH BANKS, P R S.—From a print by Schiavonetti, after the picture by T. Phillips, R. A.

that of Captain Cook, as the companion of the great navigator's first voyage, and practical improver of some of his best discoveries. He was born in London in 1743, and devoted himself to the natural sciences, especially that of botany, which he pursued with such ardour and success, that his wish to join Cook's expedition was granted by government with hearty cordiality. He prevailed upon Dr. Solander, a distinguished pupil of Linneus, to accompany him, and thus few of the useful productions of the South Sea Islands were likely to elude their search; he also engaged a staff of draughtsmen and painters to delineate such objects as could not be easily transported. The result was, that after the three years' voyage, Sir Joseph Banks brought home a splendid collection of specimens from Tahiti, New Zealand, and Australia, the use of which he was anxious to impart to society and the world at large. In this way, while he planted in these

islands the seeds of Europe, he brought with him their own in return; and some of the most beautiful plants which adorn our gardens and shrubberies—the sugar-cane of Tahiti, which was transplanted into some of our colonies—the breadfruit tree, which was introduced into the tropical regions of America—and the *Phormium tenax*, or flax of New Zealand, were among the substantial benefits discovered and diffused over the habitable globe by his scientific zeal and large-hearted philanthropy. Being disappointed in his hopes of accompanying Captain Cook on his second voyage, Sir Joseph equipped a vessel at his own expense, and, accompanied by several skilful naturalists, made a voyage to Iceland in 1772, where for two months he explored that region of living volcanoes and eternal snows, and returned with valuable specimens of its productions. The rest of the life of Sir Joseph Banks was spent at home in scientific investigations, which, with his previous communications, occupy a large space in the *Transactions of the Royal Society of London*; and of this important institute he was elected president in 1778, while he had the title of baronet conferred on him in 1781.

An important discovery of this period in the science of medicine, by which not only health and beauty have been preserved, but thousands and myriads of lives annually saved, has immortalized the name of Dr. Jenner, which, but for this, might have passed away with those silent benefactors of their species who demand little notice while they live, and leave no permanent record by which to be remembered. After the small pox had continued to be the felliest destroyer of life in Europe from the time of the Crusades, at which it had been introduced, till the eighteenth century, the practice of inoculation was introduced from Turkey into England in 1721, chiefly through the exertions of the celebrated lady Mary Wortley Montagu. But the popular and religious outcry raised against such a mode of cure, its severe nature and alleged uncertainty, and the tedious expensive process it required, made it unwelcome to the rich and inaccessible to the poor, so that multitudes preferred the risk of the disease itself, to the painful certainties of inoculation. Accordingly, even where the practice was adopted, it only tended to spread the contagion over the many who neglected it, as was shown by a report presented on the subject to a committee of the House of Commons. From this it appeared, that while for fifty-five years before the introduction of inoculation, the proportion of deaths from small-pox was as 72 in 1000, it had risen during the thirty years afterwards, so that the deaths were as 95 in 1000. While the great Asiatic remedy was thus becoming an European failure, the thoughtful mind

of Dr. Edward Jenner received the intimation of a simple local rumour as the groundwork of a glorious and most important discovery. He found that in Gloucestershire, where he resided, a popular belief existed, that workers in the dairy who were infected with matter from the sores on the udder of the cow, were ever after secured

DR. EDWARD JENNER.—From a print by Sculven, after a coloured plate by J. R. Smith.

from the contagion of small-pox. And what connection could there be between the disease and a cow's udder? It looked like the detection of a thief by the revolution of the sieve and shears, or the counteraction of a witch's malevolence by nailing a horse-shoe on the door. But Jenner pondered upon the report, and then tested it by actual experiment. On the 14th of May, 1796, he took matter from the sore on the hand of a dairymaid who had caught the infection from the udders of her master's cows, and applied it in two gentle incisions to the arm of a boy. The usual slight effects of ordinary vaccination followed during nine days, but on the tenth the boy was well again. Having thus tried the gentleness and safety of the application, Dr. Jenner next proceeded to make proof of its efficacy as a remedy: he on the 1st of July inoculated the boy with small-pox matter, but no disease followed; he repeated the experiment some months afterwards, and the same result was obtained. Many similar trials were subsequently made on other persons, but in every case the effect was the same, showing that the matter of cow-pox effectually guarded from the infection of small-pox, and was itself a very easy and harmless form of the disease, giving no more trouble than a common sore. These important results obtained by Jenner were hailed with triumph, but mixed also with doubt: such a blessing was thought too

great to be obtained from a cause apparently so insignificant and even ridiculous; but the trials made by others only verified the conclusion, and showed that the healing principle was more widely diffused than was at first supposed, being also found in the heels of horses, when affected with the tumour known under the name of *grease*. Thus vaccination (so called from *vacca*, a cow), was fully established, and generally used in England, and was soon after adopted in France, Italy, Germany, Holland, Turkey, the British colonies, and the United States of America. When we remember that in England there were 35,000 deaths annually from small-pox alone, before the practice of vaccinating was introduced, and that the mortality was equally great in other countries of Europe, we can then estimate the value of the discovery which we owe to the experiments of Dr. Jenner.

In passing from the fine arts and science to literature, the subject during this period becomes of such amplitude, and of so diversified a nature, that to each department nothing more than a brief notice can be afforded. In a record of the authorship of this prolific period, the first place is due to those ethical writers, who were inspired by the improving spirit of the age, and who placed themselves in the front rank of its progress and direction. And here, the highest place is due to Samuel Johnson, who, in himself, was a sort of living impersonation of that progress. He was born in 1709, and died in 1784. His first public attempt in authorship was as a poet; and in his "London," and the "Vanity of Human Wishes," he showed that he only needed a less universal mind to become one of the most eminent of British poets. But his wondrous powers needed a wider field of action, and the failure of his tragedy of "Irene" seems to have disinclined him to any further attempt in the poetical department. During the rest of his long life of authorship, he produced the *Rambler* and *Idler*, which established his reputation as one of our best moral essayists; his *Rasselas*, a tale whose popular acceptance is still unimpaired; his edition of Shakspeare, in which he showed his acuteness as an annotator; his *Lives of the Poets*, that still continues to be a masterpiece of biographical writing; and his *Journey to the Western Islands of Scotland*, where we have the literary Cyclops amusing himself and his hearers with gay flourishes upon his pandean reeds. But all his literary labours were light, compared with his *Dictionary of the English Language*, in which he singly accomplished a task which had usually been the undertaking of a whole academy, and fixed the standard of our national tongue. These which we have enumerated were his principal works; but besides, his indefatigable pen was

employed in translations, political pamphlets, and journals, upon all of which his characteristic power was impressed, and his masterly hand recognized. Even in himself, also, Samuel Johnson

SAMUEL JOHNSON — From a print by Heath, after Reynolds

was a concentration of the noblest and best qualities of the English character, with a few of its defects—a warmth and benevolence of heart, whose occasional overflows were alarmingly volcanic; a firmness of resolve that could harden into dogged obstinacy; and an independence of soul which not only dispensed with aid, but sometimes rejected it with a surly growl or angry defiance. In intellect, his massiveness was clothed with an equally massive style; the armour of Achilles, in which none but himself could move with freedom; but all this was combined with such buoyant wit and facility, and such a graceful flow of imagination, that his conversational powers were as rich, influential, and remarkable as his writings. Happily, too, the best of these winged words and choice apothegms were not allowed to evanesce as soon as they had escaped, but were caught up by his devout worshipper, Boswell, and inscribed in a book, which book, on account of these intrinsic merits alone, is one of the most interesting in the English language. Such was Johnson, who ruled without a rival as the literary dictator of the day, and whose influence has more or less continued to pervade the literature of England to the present hour.

Closely connected with this great name, occurs that of Oliver Goldsmith, whose literary career was similar to that of Samuel Johnson, although his character in many points was a striking contrast. He was born in Ireland in 1728, but

passed the greater part of his life in London, after he had been educated at the universities of Dublin and Edinburgh, and made the tour of the Continent on foot. At his arrival in London in 1758, he attempted to establish himself in practice as a physician, but found his Irish *brogue* such an impediment to his progress, that he betook himself to his pen; and his first production was the *Chinese Letters*, in which the quaint sarcasm and simple, easy, graceful style, were in such striking contrast to his appearance and conversation, as to make critics wonder how such a work could have issued from so unpromising a source. But the production which first brought him into public notice was his *Traveller*, published in 1765, and of which Johnson declared, that there had not been so fine a poem written since the days of Pope. The reputation of the *Traveller* introduced to the press the *Vicar of Wakefield*, a work that had been previously written, but for which he could not find a publisher; and this moral tale, so admirable a sketch of domestic life, and so full of nature, beauty, and quiet humour, soon took the place which it still maintains, as the most finished specimen of this style of novel-writing that has ever been produced. Encouraged by this success, he became a prose writer, and produced a *History of England* in a series of letters, a *History of England* in four volumes, a *History of Rome*, and a *History of Greece*; he also wrote an *Inquiry into the present state of Polite Learning in Europe*, and his *History of the Earth and Animated Nature*. Although these works contained nothing either new or profound, being written by literary contract, and upon the spur of necessity, yet such was the gracefulness and beauty of their composition, that they became universal favourites. He then attempted dramatic writing, for which he showed talents of a high order; but his first comedy, the “Good-natured Man,” had little success. His next production was the poem of the “Deserted Village,” a succession of beautiful and striking pictures, which few poets have equalled; and two years afterwards (1772), he produced his comedy of “She stoops to Conquer,” which was brought out at Covent Garden with complete success. These, irrespective of his incidental writings, were the works of Oliver Goldsmith, who, with his singular felicity of style, was perfectly helpless in conversation, so that, while Johnson, in full company, rolled the tide of his eloquence along with a power and copiousness which none could resist, Oliver either sat silent, or talked imbecility and nonsense, so that he was characterized as

“—our Noll,

Who wrote like an angel, and talked like poor Poll”

Time, however, did full justice to Goldsmith; his merits did not rest upon mere conventional

excellences; and when the magnificent style of Johnson had ceased to be the standard of excellence, the more simple and natural, but equally eloquent and forcible strain of "Goldie," as the giant was wont to call him, became the model of all who aspired to write classical English, and as such has continued to the present day.

In the meantime, the series of weekly papers on morals, politics, literature, and criticism, which commenced with Steele and Addison, had been continued; and the *Tatler*, *Spectator*, and *Guardian* were followed by others that were eager to rush into such an influential tide of public opinion. These works, too, were generally formed of articles written by the most distinguished writers of the time, and from their facilities of circulation they had a powerful, though silent and unnoticed influence upon the character of the reading public. The chief of these were, the *Freethinker*, conducted by Ambrose Philips; the *Museum*, which had the best wits of the day for its contributors; the *Advertiser*, edited by Dr. Hawkesworth; the *World*, the *Connoisseur*; and Johnson's *Rambler* and *Idler*, chiefly written by himself. These had also closed with the reign of George II., and were the precursors of the era that succeeded, and for the improvement of which they had so ably prepared the way. Something more pungent and better fitted to the questions of the day was required than grave, ethical discussions, and critical dissertations; and to supply this want, political journalism commenced with the era of George III. The people were now alive to their rights and ready to maintain them, and this spirit called forth instructors who, right or wrong, were prompt to explain the public grievances, and point out the mode of redress. Such was the origin of *The Briton*, set up by government in 1762, and conducted by Smollett; and such the *North Briton*, its antagonist, under the management of Wilkes, established a few days after. And what reader of English history, however ignorant of the merits of this now forgotten work, can fail to remember No. 45, and the portentous results which this insignificant broadsheet produced? And then succeeded, after a short interval, the *Letters of Junius*, a series far more powerful than the preceding, in which their mysterious and still undiscovered author pointed the way to modern political journalism, and taught its disputants not only how to sharpen, but also to envenom the weapons of their warfare. The newspapers of the day were not slow to catch the prevalent spirit; and their tone, as well as the feelings of their readers, is happily illustrated in the *Vicar of Wakefield*, by the butler who, for the nonce, is playing the character of a country gentleman, in the absence of his master: "I read

all the politics that come out—the *Daily*, the *Public*, the *Ledger*, the *Chronicle*, the *London Evening*, the *Whitehall Evening*, the seventeen magazines and the two reviews; and though they hate each other, I love them all. Liberty, sir, liberty is the Briton's boast, and by all my coal-mines in Cornwall, I reverence its guardians."

But prolific though journalism had now become, something more was needed for the political instruction of society than the rival feuds and fierce declamations of letters, magazines, and newspapers. It was necessary to define and explain those principles for which they were contending, instead of continuing a useless warfare against persons, names, and shadows; and be able to maintain the controversy with substantial arguments, instead of vague assertions. To remedy the existing defect of the age, and supply political theorizing both with soul and substance, the writings of Edmund Burke opportunely made their appearance. This eloquent orator, able statesman, and profound philosopher, was born in Dublin in 1730, and arrived in London in 1750. The greatness of his powers, his reflective character, and capacity for intellectual acquirement, were signalized at the early age of twenty-six, when he wrote his "Vindication of Natural Society, or a View of the Miseries and Evils arising to mankind from every Species of Artificial Society," &c., a work in which his profound and accurate perceptions of the principles of right government are clearly and eloquently unfolded. A few months afterwards, he published his "Philosophical Inquiry into the Origin of our Ideas of the Sublime and Beautiful," a work which he is said to have written at the age of nineteen, but in which immaturity of intellect is nowhere perceptible. The success of these and subsequent writings turned his ambition to political life and its distinctions; and after several appointments, he obtained a seat in parliament in 1765, and became the life and soul of the Rockingham administration during the brief period of its existence. His subsequent public and political career was a brilliant one, the chief points of which have been detailed in a different portion of this history; but throughout his close connection with the great parliamentary debates of the period, until his retirement from public life, and his death in 1797, his eloquent pen was constantly employed in inculcating the principles, and enforcing the duties of a sound and healthy legislation. This was the more necessary, when we take into account the outburst of the French revolution, by which British society was shaken to its foundations, and menaced with a similar change; and the dangerous theories of liberty, which found their influential advocates, not only in every department of the press, but in the

senate, and even among the aristocracy. The titles of his principal writings indicate the subjects of which they treat, and are as follows:—"An Account of the European Settlements in America," 2 vols. 8vo, 1757; "Observations on a Late State of the Nation," being a reply to a pamphlet entitled "The Present State of the Nation," understood to have been written by Mr. George Grenville, or his secretary, in 1769; "Thoughts on the Cause of the Present Discontents," 1770; "Reflections on the Revolution in France," 1790; "Appeal from the New to the Old Whigs," 1792; "Letter to a Noble Lord on his Pension," 1796; "Letters on a Regicide Peace," 1796-7; "Observations on the Conduct of the Minority," 1797. Besides these, he revised for the press his principal speeches delivered in parliament upon the great leading topics of the American colonies, the economical reform bill, the India bill, the Warren Hastings' impeachment, &c., between the years 1774 and 1789. To this enumeration must be added his superintendence of the *Annual Register*, from its commencement in 1758 to the close of his own life, and his contributions to its pages. The steadfast purpose of his career, and to which he adhered to the end, was distinctly announced in the following passage of his *Vindication of Natural Society*, the earliest of his publications:—"The editor is satisfied that a mind which has no restraint from a sense of its own weakness, of its subordinate rank in the creation, and of the extreme danger of letting the imagination loose upon some subjects, may very plausibly attack everything the most excellent and venerable; that it would not be difficult to criticize the creation itself; and that if we were to examine the divine fabrics by our ideas of reason and fitness, and to use the same method of attack by which some men have assaulted revealed religion, we might, with as good colour, and with the same success, make the wisdom and power of God in his creation appear to many no better than foolishness."

While one great mind had thus been prepared at the fitting crisis, to advocate the principles on which the stability of the British constitution is founded and its laws administered, and raising an effectual appeal against those anarchical doctrines by which they would have been subverted, another was in training to illustrate those principles on which the commercial prosperity of the nation is based, and by which its wealth and power might be augmented and perpetuated. This was the task of Adam Smith, the author of the *Wealth of Nations*. Born in Scotland in 1723, educated in Scotland and afterwards in England, and appointed successively to two chairs in the university of Glasgow, the one of logic, the

other of ethics, he had ample opportunity for the development of those theories by which senates and statesmen were to be directed in what constitutes the true prosperity of kingdoms. It was in

ADAM SMITH.—From a model by Tassie

his lectures as professor that the first sketch of these was unfolded; and they were afterwards matured by a year's residence in Paris, at a time when political economy was the great question of the day. His first work, which he published in 1759, was his "Theory of Moral Sentiments; or, an essay towards an analysis of the principles by which men naturally judge concerning the conduct and character, first of their neighbour, and afterwards of themselves;" but able though this production was, and sufficient to establish his name among the highest of ethical writers, it was not yet the vocation upon which his affections had long been set, and by which his name was to descend to posterity. This great object of his life was achieved in 1776, after years of solitary meditation and study in the obscure town of Kirkcaldy, when he produced the *Inquiry into the Nature and Causes of the Wealth of Nations*. How necessary such a work was, will be evident to any one who thinks of the vague theories and random experiments by which mercantile policy had hitherto been characterized. The mere symbols or representatives of abundance, the shadows of wealth, had been mistaken for the substance; and nations and communities were supposed to possess all things, if they had enough of gold and silver. The facts, therefore, which Adam Smith sought to establish were, that money's worth, and not money itself, is the real wealth of a nation—that the only source of wealth is labour—and that labour is productive when it is devoted to manufactures and commerce, as well as to agriculture. He illustrated the superior advantages

derived from the division of labour; and the expediency of every nation to devote itself to its own means and produce, as well as every individual to his own sphere and capacity; and showed, that what is prudence in the conduct of any private family, can scarcely be folly in that of a great kingdom. Along with these principles, hitherto so much lost sight of in the agricultural and commercial pursuits of nations, he advocated unlimited freedom of trade; and proved that all restrictions, either upon the internal or external commerce of a country, are absurd in principle and pernicious in their consequences. The *Wealth of Nations* descended upon the political world like a new revelation; it became the textbook of the British senate, and was soon translated into all the languages of Europe. Before his death, also, which occurred in 1790, Adam Smith had the happiness to witness the success of those principles of commercial freedom which he had so ably advocated, for already they were beginning to influence our national counsels, and be recognized in other countries, as the true sources of national prosperity.

The present age, which was so prolific of distinguished men in every department of intellect, also abounded in historians; and of these, David Hume, as the historian of England, merits priority of notice. He was born in Edinburgh, so early as 1711, and in 1739 had published his remarkable work, the *Treatise on Human Nature*, which ten years after was reproduced in a new form, under the title of *Philosophical Essays concerning Human Understanding*. It was a most ingenious and plausible, but cold and misanthropical system of philosophy, which promised neither comfort for this world nor happiness beyond it, and the sceptical spirit of which was happily too late for British society, already under the reaction of a better religious spirit. In 1742 he published his *Essays, Moral and Philosophical*, which, by the more general interest of their subjects, and superior gracefulness of style, were better suited to the public taste, so that their reception consoled him for the fate of his other work, which, in his own words, "fell dead-born from the press, without reaching such distinction as even to excite a murmur among the zealots." In 1751 Hume published his *Inquiry concerning the Principles of Morals*; and in 1752 his *Political Discourses*. Occupying now a very high place both as metaphysician and political economist, David Hume came forth to the world in the character of an historian, by the publication, in 1752, of the first volume of the *History of England*, comprising the period from the accession of James I. to the death of Charles I.; this was followed by the second volume in 1756, containing the continuation of events onward to

the Revolution; and the third in 1759, which was occupied with the reigns of the Tudor sovereigns. Of the fate of this new work, about the success of which he was very sanguine at the outset, he

DAVID HUME — From a print by A. Smith, after the picture by Allan Ramsay.

gives the following account:—"I thought that I was the only historian that had at once neglected present power, interest, and authority, and the cry of popular prejudices; and as the subject was suited to every capacity, I expected proportional applause. But miserable was my disappointment; I was assailed by one cry of reproach, disapprobation, and even detestation; English, Scottish, and Irish, Whig and Tory, churchman and sectary, freethinker and religionist, patriot and courtier, united in their rage against the man who had presumed to shed a generous tear for the fate of Charles I. and the Earl of Strafford; and after the first ebullitions of their fury were over, what was still more mortifying, the book seemed to sink into oblivion." All this outcry of every party was nothing more than what might have been expected from the anti-Jacobitical spirit of the age, and from the cold unsympathizing style with which he had treated the events of a period in which religion formed the prevailing element. Of the fate of the second volume he says, "This performance happened to give less displeasure to the Whigs, and was better received. It not only rose itself, but helped to buoy up its unfortunate brother." In 1761, Hume published the two remaining volumes of his history, containing the whole narrative of events previous to the accession of the Tudors, which were received, he says, "with tolerable, and but tolerable success." This indifference of the reading public gradually abated; the intrinsic merits of the work at last compelled the general suffrage; and

for a time Hume's *History of England* became the established standard, until a wider range of historical research and more liberal state of political feeling had made his chief statements more than questionable, as well as every apology for ultra-Toryism no longer worthy of a hearing.

While Hume was employed in writing a history of England, another, a distinguished countryman of his own, was performing the same service for Scotland. This was William Robertson, D.D., one of the ministers of Edinburgh, and principal of the university of that city, whom we have already noticed as an able and influential leader of the Scottish church in its General Assembly. His first great aim was a *History of Scotland, during the reigns of Mary and James VI.*, and this work he prosecuted for years in the retired and unobtrusive situation of a country clergyman, until it was published in 1759. The elegance of style and lucidness of arrangement by which it was distinguished, soon threw into the shade those antiquated and fragmentary national histories upon which Scotland had hitherto depended; and Dr. Robertson enjoyed his success not only in substantial profit, but also in preferment to the highest offices for which a Scottish presbyter could be eligible. Encouraged by this success, he threw himself with full ardour into the literary field he had chosen; and after careful thought, selected for his next attempt a *History of the Reign of Charles V.*, which he finished in 1769, and published in three volumes quarto. The success of this work was even greater than that of his Scottish history, and his fame as an historian was spread over France as well as England, by an excellent translation of his *Charles V.* into the French tongue. He would now have attempted a history of England, to which he was urged not only by the requests of his literary friends, but the wishes of his sovereign; but this design, from causes which have not been explained, Dr. Robertson afterwards abandoned. This failure of intention, however, was compensated by his *History of America*, which was published in 1777, and by which the celebrity he had already acquired was fully supported, if not increased. His last work was an *Historical Disquisition concerning the Knowledge which the Ancients had of India, and the Progress of Trade with that Country prior to the Discovery of the Cape of Good Hope*, which was published in 1791, the year previous to his death.

With the names of Hume and Robertson that of Gibbon will occur, to complete the triumvirate of distinguished historians which the present age produced. Edward Gibbon was born at Putney in Surrey, A.D. 1737. Born and educated a Protestant, he went over to the Church of Rome, and after remaining for some time in that com-

munion, he resiled into his former Protestantism. The worth of these conversions and reconversions can be tested by his works, which are impregnated throughout with hostility to the Christian faith at large. His extensive reading and profound classical scholarship were aided by his study of war, both ancient and modern, into which he entered with avidity, in consequence of holding the commission of major in a militia regiment. His taste, learning, and talents having eminently fitted him for the work of an historian, nothing but the choice of a congenial subject was needed—and this was supplied by accident. Being at Rome on the 15th of October, 1764, it was while he was musing among the ruins of the Capitol, and while the bare-footed friars were singing vespers in the temple of Jupiter, that he suddenly conceived the idea of writing the *Decline and Fall of the Roman Empire*. Although he did not commence the work until ten years afterwards, the project had never been lost sight of, and the whole of the *Decline and Fall* was completed and published by the middle of 1788. The appearance of the first portion of the work, which was in a quarto volume, excited universal attention, not only by its remarkable eloquence and learning, but its unfair and insidious account of the rise and progress of Christianity; and keen exposures of its misrepresentations were written by able writers of different churches, who were at one on this occasion in defence of their common faith. Gibbon's great historical work, which will always continue to form a portion of popular reading, is now well understood both in its merits and defects. With scholarship of no ordinary kind, he imparted to ages of darkness, and to actors and events that had been forgot, the beauty of sunshine, and the animation of moving vitality. But even this eloquence becomes cloying from its richness, and fatiguing from its high-toned continuity, so that the reader would fain enjoy the changes of descent and rest, if his author would but vouchsafe him the indulgence. And what shall we say of Gibbon's covert and most disingenuous attacks upon Christianity? It is enough to state that these have been too fully exposed to be dangerous, and that even in a dispassionate literary estimate of the *Decline and Fall*, they are in bad taste, and constitute the chief blemishes of the work. It will be agreed on all hands, and by every class of readers, that had he hated Christianity less virulently, he would have been a better historian.

The present period was eminently an age of historical writing in Britain, while the range it commanded was all but universal both in town and country. The names of its authors, however, are so numerous, that we can only afford room for a few who come nearest the excellence of the

three we have already mentioned, and who, but for them, would have occupied a conspicuous place in the historical literature of our country. The first in point of time was Lord Lyttleton, who, in 1764-7, produced the *History of the Life of Henry II.*, a work not only of great accuracy, on account of the minute and extensive research of the author into the best old authorities, but the interest which he imparted to the record of a period hitherto disregarded, but during which the English constitution was successfully struggling into existence. A still higher service was rendered to his own country by Sir David Dalrymple, Lord Hailes, who, in 1776-9, wrote the *Annals of Scotland*, from the accession of Malcolm Canmore, to the accession of the house of Stuart, a work in which his antiquarian research and critical sagacity threw light upon many important particulars in Scottish history which had hitherto been misunderstood or obscured. Another historian, whose works are still popular, was Dr. Robert Watson, who, in 1777, wrote the *History of the Reign of Philip II. of Spain*, as a sequel to Robertson's *Charles V.*, and subsequently the first four books of the reign of Philip III., as a continuation of his previous history, but which he did not live to complete. To these may be added Leland and Warner, who wrote histories of Ireland; Dr. Adam Ferguson, author of an *Essay on the History of Civil Society*, and the *History of the Progress and the Termination of the Roman Republic*; and Holwell and Orme, who wrote histories of the foundation and progress of the British empire in India. A laborious, accurate, and judicious writer of this period, also, was Dr. Robert Henry, author of the *History of Great Britain*, from the invasion of Julius Cæsar to the death of Henry VIII., in five volumes quarto, a sixth being also published after his death. The plan of this writer in treating his subject was both bold and original. Conceiving that the great object of history was to give an account of the people as well as of the kingdom, and of intellectual and moral progress as well as military and political changes, he divided each period of his work into seven chapters or segments, to each of which a separate subject was assigned. Thus, independently of the civil and military transactions of each epoch, there was a chapter devoted exclusively to its ecclesiastical history; a third to its peculiar forms of government, laws, and administration of justice; a fourth to the progress of learning; a fifth to that of arts and manufacture; a sixth to the history of commerce; and a seventh to the manners and customs by which the period was characterized. This plan, although it comprised a complete history of the people as well as the nation, and a distinct view of their successive steps of progress in every de-

partment of moral, social, and intellectual life, was found so cumbrous of management and so prolix in its details, that with the exception of Dr. Rankin's *History of France*—a work that was born unnoticed, and died without a sign—no attempt was made to imitate it until the appearance of the *Pictorial History of England*. This mode of writing history, when deprived of its cumbrousness, will perhaps be ultimately recognized and adopted as the best; and the obligations which we owe to Henry for the discovery, although so long unfelt, will at last be freely and gratefully acknowledged.

Towards the close of this period many other writers appeared, not only in the department of history, but also of theology, ethics, and politics, a few of whom we can only mention, and that, too, merely by name. Among the most distinguished of those who wrote on the doctrines or evidences of Christianity, were Bishops Watson, Horsley, and Porteous; Doctors Campbell, Macknight, and Blair; and, greater than them all, Dr. Paley, whose *Elements of Moral and Political Philosophy*, *Horæ Paulinæ*, *View of the Evidence of Christianity*, and *Natural Theology* became standard works in their several departments. In politics was the noted Thomas Paine, whose ignorance was counterbalanced by immense assumption, and a clear, vigorous English style, and whose writings were popular incentives to mischief during the revolutionary period—and Mary Wolstonecraft, as keen an advocate for the rights of women, as Paine for the rights of man. There was also Godwin, her husband, who in 1793 produced his *Inquiry concerning Political Justice, and its Influence on General Virtue and Happiness*, and who afterwards threw the whole force of his genius into philosophical novel-writing, by which he found he could more successfully disseminate his opinions than by formal disquisitions and essays. Last of all, may be mentioned the formidable name of Malthus, who appeared on the field at the close of this period like a comet in the horizon of political literature—

“With fear of change

Perplexing monarchs;”

and whose theories of superabundant populations, compared with the means of subsistence, have continued to agitate the hearts of provident statesmen without pause or mitigation to the present hour.

In passing to the poetry of this period, we find abundance of that mechanical sing-song which the imitators of Pope had introduced, and which was all the more prolific, as it could be written without the aid of poetical inspiration. It was nothing more, indeed, than versification, which any one could produce who had a tolerable ear, and could count syllables upon his fingers, let

the muse be as obstinate as she might. In this manner Dean Swift's well-known receipt for the manufacture of an epic was no caricature, but a sober reality, descriptive of not a few heroic poems that had been, and were still, inflicted on the public without diffidence or compunction. But even before this period commenced, such works as Thomson's *Seasons* and Young's *Night Thoughts* indicated the coming of a better age, and the poetry of Johnson and Goldsmith confirmed the promise. The present, indeed, was a transition period, wherein the struggle was going on through which the poetical era of Anne was to be superseded by that of the nineteenth century—a great intellectual revolution that had directed the mind into new and more important paths, and which was certain to revert with double vigour to the mere elegances of life, after its substantialities had been secured. And yet, the present age was not without its fair number of genuine poets, whose productions still survive, and whose names are worthy of notice, although the prevailing bias was more in favour of practical science and didactic philosophy. With these preliminary and general remarks, we proceed to individual notices of the chief poetical productions of this practical, reasoning, and inquiring era of British history.

As belonging both to the past and present period, because they lived in both, and have not been previously mentioned, we begin with Gray and Glover, poets of different character and excellence, though each was distinguished in his separate walk. Thomas Gray was born in 1716, and died in 1781. Seldom has an English poet been so learned, or one whose learning made him so fastidious; and on this last account, his poetry is so scanty, as to be contained in a few pages. And yet, each production is in itself an unrivalled gem, the richness of which may well compensate for its smallness. The chief of these are his *Elegy in a Country Churchyard*, and the "Bard;" and never was there such an anxious selection of words and delicate fingering of syllables, combined with such true poetical fervour, as was manifested in these wonderful poems. This character also extends to Gray's other productions, not even excepting his "Ode on the Death of a Cat," and the "Long Story"—poems in which he tried to lay aside his wonted solemnity and pomp for a light, hilarious style, and succeeded beyond expectation. After having shown how well he was fitted to occupy one of the highest places in poetry, if he would but boldly advance and occupy it, Gray, in 1768, was appointed to the professorship of history in the university of Cambridge. But notwithstanding his great scholarship and extensive knowledge, which fully qualified him for the office, the same fastidiousness which made his

poetical productions so few, still continued to haunt him; and he died three years after his appointment, of mere fretfulness at his continual resolution to write a course of lectures, coupled with his inability to commence the task. Of Richard Glover, a brief mention will suffice. He was born in London in 1712; and while cultivating his poetical powers, which he had begun to manifest in early boyhood, he pursued the occupation of a Hamburg merchant, in which he rose to wealth and influence. His chief production was the epic poem of "Leonidas," founded on the Persian invasion of Greece and the fall of the hero of Thermopylæ; and as he had been a champion of popular liberty, and supporter of the Whig party, the latter could do no less than laud his poem, which they extolled as equal to Homer's *Iliad*. This almost insane cry was continued for some years, and in the heyday of his fame, Glover wrote the tragedy of "Boadicea," which was favourably received in Drury Lane Theatre; and "Medea," a dramatic poem adapted from the tragedies of the same name by Euripides and Seneca, and modelled in the same form, with the ancient chorus. But works that were praised so far beyond their due, and for mere party purposes, were as disproportionably underrated by the generation that succeeded; and notwithstanding its intrinsic merits, which make it still worth a perusal, there are scarcely perhaps three persons in the present day who have read Glover's "Leonidas." Another poet of the last and present period, and whose merits are too great to be overlooked, was Mark Akenside, who was born in 1721, and educated at the universities of Edinburgh and Leyden, where he acquired an amount of classical learning that was rare among the poets of the day. At the early age of twenty-three he wrote his chief poem, the "Pleasures of Imagination," which Pope, who saw it in manuscript, declared to be the production of no everyday writer; and which Samuel Johnson lauded as "an example of great felicity of genius, and uncommon amplitude of acquisitions; of a young mind stored with images, and much exercised in combining and comparing them." Profound metaphysical abstractions and philosophical disquisitions have seldom been illustrated with such poetical imagery, or expressed in such sounding, magnificent language, as in the "Pleasures of Imagination;" and hence the work, which at first enjoyed a boundless popularity, was not thrown aside, when the romantic school of poetry arose, but continued to be prized by those whose estimation was of best account, until the more attractive writings of Wordsworth superseded it. Besides this poem, Akenside produced a collection of lyrics; but these, with the exception of a "Hymn to the Naiads," are cold and uninteresting.

Of the other poets, the predecessors of the modern school, who were living in the earlier part of this period, and who gained a poetical reputation that endured during their day, a few names are worthy of being particularized. Of these was William Mason, a clergyman, who was born in 1725, and died in 1797. He was the friend of Gray, whom he devoutly imitated, and whose poetical defects he exaggerated, without being able to rise to his fire and fervour. Accordingly, though he had great merits of his own, as may be seen in his dramatic poems of "Caractacus" and "Elfrida," which were formed upon the Greek model, his reputation was soon absorbed in the superior merits of the author of the "Bard," whom he so implicitly followed. Another poet was William Wilkie, professor of natural philosophy in the university of St. Andrews, and author of the "Epigoniad," an epic poem, in which he selected the siege of Thebes for his subject, and the predecessors of the Homeric heroes for his actors. Nothing could exceed the extravagant commendations with which this poem was received: it was thought equal even to the *Iliad*, of which it was scarcely a faint, dying echo. But throughout the whole work, there is nothing that rises above mere common-place rhyme, except the single episode descriptive of the death of Hercules. A greatly superior poet to either Mason or Wilkie, was James Beattie, professor of philosophy in the university of Aberdeen, who in 1770 wrote the highly popular "Essay on Truth," in refutation of the scepticism of David Hume, and in the following year completed his reputation, by publishing the poem of the "Minstrel." It was by this last production, so elevated by moral feeling, and beautified by poetical imagery and stately melodious versification, rather than his philosophical prose works, that he secured a permanent distinction. Nor must William Falconer, the bard of the ocean, be overlooked in these notices. He was born in Edinburgh in 1730, the son of parents in humble life, and after a scanty, desultory education, betook himself to the life of a sailor, and was shipwrecked off Cape Colonna, where the whole crew, except himself and two sailors, perished. Born a poet, and having such experience of storm and wreck as few poets have enjoyed, Falconer conceived the happy thought of adopting his disaster for his theme; and in 1762 he published the "Shipwreck," a work which none but a sailor could have produced. And never were the manœuvres of a ship, or the rough phraseology of the sea, more strikingly depicted, or more harmoniously expressed, nor the miseries of a shipwreck more pathetically brought before the comprehensions of ordinary landsmen, than in this poem, which took the public by surprise, and became an uni-

versal favourite. Encouraged by his success, Falconer attempted a few short poetical pieces, chiefly on political subjects; but ashore, his genius had a sailor's awkwardness, and could find no sea-room or chart amidst these land hurricanes, so that, beyond his "Tempest," not a stanza that he has produced is worthy of notice. The sea that had cradled and nursed him, and whose varieties he had so well described, was finally his grave; for in 1769 he embarked as purser on board the *Aurora* East Indiaman, which perished with all her crew on her voyage to the East Indies.

In contrast to Falconer was Charles Churchill, a poet to whom satire was absolute sustenance, and political commotion the breath of life. Although educated for the church, in which in due time he obtained a living, his restless, eccentric disposition unfitted him for clerical decencies and restraints, so that when he found he could subsist independent of its emoluments, he abandoned the profession. He commenced the career of poet at the age of thirty; and in the short course of four years, and amidst a life of reckless dissipation, he produced an amount of poetry remarkable both for quantity and talent. The chief of these were the "Rosciad," the first of his published works, in 1761, a desperate attack on the principal theatrical managers and actors of the period; the "Apology," a reply to the critics who assailed him; "Night," an excuse for his nocturnal adventures, which were by no means worthy of justification; the "Prophecy of Famine," a fierce and stinging invective against the Scots; the "Author," a satire on pedants and pedagogues; and the "Candidate." He also assisted Wilkes, and contributed several papers to the *North Briton*. Besides being regarded as the very Dryden of modern poetry, he was extravagantly lauded as the scourge of tyrants, and generous champion of liberty. This judgment, however, a succeeding generation refused to confirm. His poetry is vigorous, but rough and unmusical, and its chief pungency is derived from personal and political hatred, to which he gave unlimited scope. His themes, also, being of a local and temporary character, secured present popularity at the expense of permanence, and no one now, who reads his pages, can be moved by his abuse either of particular men and their measures, or of whole communities. In this way, for instance, his satire of Scottish poverty is utterly pointless, because no longer applicable. Such was the result of talents which, if carefully cultivated and wisely applied, might have raised him to a distinguished place among the best poets of our country, but which served no better purpose than to aid in breaking the thralldom of the old school of poetry, and pointing to that new and better path into which our literature was about to enter.

The last distinguished poet of the artificial school, in whom the reign of Pope may be said to have expired, was Dr. Erasmus Darwin. He was born at Elton, near Newark, in 1731, educated at Cambridge and Edinburgh, and settled as physician at Lichfield, in which town he is stated to have been of great service to the poor. Although he must long have cultivated his poetical talent, he did not manifest it to the world till he had attained the ripe age of fifty, when he published the first part of the "Botanic Garden," in 1781, and the other two parts at intervals, ten years afterwards. This singular poem, by its length, its learning, and the careful elaboration of its poetry, fully justifies the lateness of its appearance, and the long period required for its completion. Instead of easy, spontaneous writing, it resembles engraving upon steel, where every line, every touch seems the result of careful, laborious application; and when finished, it is seen to be a cold, hard, glittering and metallic engraving, instead of a ductile painting upon canvas, or light graceful sketch upon paper. And yet, the "Botanic Garden," although so artificial in its construction, is by no means devoid of poetical beauty: its Rosicrucian machinery of gnomes, sylphs, and nymphs is full of ethereal brightness; many of its individual portions display a high degree of imagination and power of poetical delineation, while every line is polished, stately, and dignified. But still, it is the coldest of poems, and whatever beauty it may possess is counterbalanced by its total want of vitality. This, and the scientific character of the work, has, in spite of its merits, consigned it to oblivion, and the "Botanic Garden" is only known in the present day by a few detached extracts.

A perception had for some time been evidently growing upon the public mind, that the artificial school of poetry established by Pope had become effete, and that an important change was necessary both in its form and spirit, to suit the new character of the age. But what was to be the nature of that change? The experiment had yet to be made, and until this could be effected, the lovers of poetry were fain to escape from the monotonous sing-song of the day, to the rude and rugged ballads of the sixteenth and seventeenth centuries, which were now eagerly sought in all directions, and finally collected by Percy in his *Reliques of Ancient English Poetry*. But this supply was soon exhausted, and after every scrap of the olden balladism had been worn out, the cry and craving for more could not be satisfied. In this dilemma it occurred to some, that all the works of the ancient higher poets of England had not yet been given to the world—that a careful research might still bring to light some choice treasures of this nature which our ancestors had

overlooked. This craving and hope suggested the mode of supply: if the desired materials could not be found, they might at least be created. Upon this idea Ireland proceeded, when he audaciously forged a play, and certain verses, which he palmed upon the world as the early productions of Shakspeare. Daring though the attempt was to mimic the greatest of poets, there was a general willingness to be deceived; and there were not a few in the literary world who, for a time, mistook these wretched counters for veritable coin. Such was also the attempt of Chatterton, although upon a more modest scale, who pretended that he had discovered the long lost poems of Rowley, a poet of the fifteenth century, and gave, as such, a mass of smoke-dried MSS. which he had fumigated for the purpose, and filled with better poetry, perhaps, than Rowley himself, if such a person existed, could have written. But dexterously though either fraud was executed, and enthusiastically though each was welcomed by those who would enjoy the luxury of being cheated, the imposture could not sustain the sifting analysis to which it was subjected; and that detection followed which branded Ireland as a literary felon, and drove poor Chatterton into suicide.

But a more dexterous, as well as more fortunate reviver of the long lost poetry of the past, was James Macpherson, the translator of *Ossian's Poems*. Born a highlander, in the county of Inverness (A.D. 1738), and educated at the colleges of Aberdeen and Edinburgh, he indicated at the age of twenty his ambition for literary distinction, by publishing his poem of the "Highlander," in six cantos, which proved a failure. This, instead of deterring him from any further attempt, only changed his mode of procedure; and after an interval of two years he published a work, entitled "Fragments of Ancient Poetry, collected in the Highlands of Scotland, and translated from the Gaelic or Erse Language." The whole literary world was astonished and delighted at the publication: it was a new mine of rich poetry that had hitherto been undiscovered, as well as a new and important chapter added to the history of Europe. It showed that the Celts of Scotland at an early period had been the most primitive and natural, as well as the most imaginative and heroic of ancient tribes, whose valour was superior, and whose refinement was at least equal to that of the Homeric ages. And what though critics might cavil about the authenticity of these "Fragments?" They were oral, not written communications: they were in a language inaccessible to criticism, and about a people still unexplored by historical research. Every Celt, also, felt himself bound to maintain their genuineness, when they so greatly aggrandized his ancestors

and country. Thus, granting that they were merely forgeries and nothing more, the fraud was of all but impossible detection. So felt Macpherson—and he laughed at his detractors. A subscription was raised to equip him for a mission to the Highlands, that he might gather more of these valuable remains; and, as might be expected, he was successful. The result was, that in 1762 he published “Fingal: an ancient Epic Poem, in six books; together with several other Poems, composed by Ossian, the son of Fingal; translated from the Gaelic.” The enthusiasm that had been awakened by his former translations was now raised to absolute delirium; “Fingal” was translated into almost every language of Europe; and amidst the universal praise, the objections of the sceptical were scarcely heard. Here it would have been wise to stop short; but such success was too much for even the utmost of worldly wisdom; and accordingly, in the following year (1763), Macpherson repeated his attempts, by publishing “Temora, in eight books, with other Poems, by Ossian.” But already the world had begun to pause; a suspicion was gathering and gaining ground among the learned that they had been deceived by a mere mirage or *fata morgana*; and this was heightened by the conduct of Macpherson, who drew himself up with an air of offended virtue, and refused all further explanation. The controversy that succeeded upon the authenticity of these poems of Ossian can scarcely yet be said to be fully settled; and the most commonly received opinion is, that only their groundwork and foundation was genuine, while the superstructure was wholly the work of Macpherson.

An herculean task in intellect was now to be effected. The old school of poetry was to be swept away, and a new established. But by what daring innovator was the change to be commenced? Both boldness and genius, and these in the highest degree, were demanded for the task; and they were found in a quarter which the strictest search would have overlooked. A recluse of feminine gentleness, who trembled at the sight of society, and during his whole life had sought to shun it—whose every nerve tingled at the slightest touch of emotion, and whose brain was the morbid abode of unreal fears that would not be quieted, and a gloom that could not be dispersed—was the man by whom the onset was to be made, and the new unknown path explored.

William Cowper, for whom this high destiny was reserved, was born at Berkhamstead in Hertfordshire, A.D. 1731. At the age of six he lost his mother, whom he ever after remembered with the most intense affection, and whose decease, in the well-known poem on “Receiving his Mother’s Picture,” he has bewailed in such deep tender-

ness as few parental departures have called forth. This deprivation, and the rough tyranny of his schoolfellows at Westminster, so deeply preyed upon his delicate, susceptible mind, as to confirm the nervous timidity by which he was ever afterwards haunted. He served an apprenticeship to the profession of the law, and completed his course in the Inner Temple; but the buoyant intellectual society with whom he associated was more in accordance with his taste than dry statutes and chamber counsellors. At the age of thirty-four his nervous timidity was still so predominant as to unfit him for general business; but the interest of his friends procured for him the appointment of clerk of the journals to the House of Lords, in the hope that his personal appearance in the house would not be required. But there had been some opposition to his appointment; it was necessary for him to be present, to have it confirmed; and the idea of such an ordeal, combined with his preparations to meet it, brought his latent disease to the crisis, so that when the period arrived, he was reduced to helpless insanity. His disease took the form of religious horror, under which he regarded himself as eternally lost; and even when this night of terrible darkness had passed away, it was succeeded by a melancholy gloom that remained with him during life, and unfitted him not only for business, but the ordinary intercourse of society. But kind friends were at hand, who tended and comforted him to the close of his sorrowful existence, and it was under their encouragement that he was induced to betake himself to poetry, as the best solace of his malady. It was his natural tendency, and at the late age of fifty he became a poet. And well was it for his fame, as well as for English poetry at large, that the commencement had been so long deferred: for nearly twenty years Cowper had read in his retirement no poetical works; and when he commenced to write, it was with the unbiassed mind of one in whose remembrance the old models had faded away, and who must commence anew, and upon his own inspiration. In 1782 he published a volume containing the poems entitled “Table Talk,” the “Progress of Error,” “Truth,” “Expostulation,” “Hope,” “Charity,” “Conversation,” and “Retirement.” Their independent strength and sturdiness of character, as well as startling originality, so different from the old-established rule, took the world by surprise, and criticism was afraid to pronounce its verdict, notwithstanding the obvious merits of this new strain of poetry. His next production was the “Task,” a poem of still higher excellence, and by which his reputation was established, not only as one of the most original, but also one of the greatest of English poets. It was written at the suggestion

of his affectionate friend, Lady Austen, and published in 1784. About the same time, also, he wrote the story of "John Gilpin;" and how this most humorous of poems should have been the production of one in whom such deep melancholy was a confirmed, incurable disease, would have been incomprehensible, did we not know that an extreme can beget its opposite as if by a law of nature, and that the clearest, merriest laugh, amidst a joyous circle, can often issue from the heart that is breaking. It was not, therefore, a thing unreasonable that this one outburst of merriment on the part of Cowper, amidst the whole course of a long life of sadness, should have been so transcendent and so contagious, or that it should have been immediately succeeded by shame, and the fear that he had been guilty of an act of sinful levity. In 1791 Cowper published his translation of Homer; but the very fidelity with which it was executed, made it contrast unfavourably with the modernized Homer of Pope, to which the English taste had been previously conformed. The poetical writings of Cowper are numerous; and the manly, vigorous, healthy spirit by which they are pervaded throughout, independent of their other high qualities, gives no indication of the sick, despairing mood in which they were written, or the sufferings of which they were the solace. And seldom have the lessons of virtue and religion been inculcated with such uncompromising fidelity, so that Cowper was a poetical reformer in the best sense of the term. He died in 1800; but a host of able followers and successors were at hand to complete the revolution which he had commenced. Of these George Crabbe had begun in the track of Cowper himself, so early as 1783 Wordsworth had published his "Lyrical Ballads" two years before Cowper's death, and Coleridge had contributed to the series. The "Pleasures of Hope" was published in 1799. Scott, Hogg, Southey, and Moore were already grown to manhood, and had either precluded to the public ear, or were ready to enter into the field. All gave assurance that the early part of the nineteenth century was to be signalized by a new era of English poetry, in which, whatever might otherwise be its merits, the old pedantry and mannerism were to be discarded, and the empire of truth and nature restored.

Of Scottish poetry it is now necessary to speak. Scotland, indeed, had contributed her share of poets, as the examples of James Thomson, Robert Blair, Armstrong, Wilkie, Falconer, Beattie, and Logan abundantly testify. But instead of cultivating their own native Doric, and aiming at the character of national as well as original poets, they wrote in the language and spirit of England, with whose poets therefore they were identified. Thus the dialect of Scotland, neglected as unintellectual,

was already despised as barbarous and plebeian; and in the course of a generation or two it would probably have disappeared even from among the uneducated of the land, to whose tender mercies it had been consigned. But this fate, which Englishmen and Scots alike would now be ready to deprecate, was averted by the patriotism of a peasant bard—the Wallace of his despised and down-trodden native tongue—the one poet of a nation in whom its characteristic spirit finds its full utterance, and whose lays are of greater in-

ROBERT BURNS — After the portrait by SKIVING

fluence than laws and legislators. Thus Robert Burns, the contemporary of Cowper, was more than the Cowper of Scotland.

The leading events in the life of this great Scottish poet are so generally known as scarcely to require a passing allusion. He was born January 25, 1759, and in a clay-built cottage in the parish of Alloway, Ayrshire. His father was a small farmer, who all his life had struggled with adversity; and the poet was born to poverty and toil, rendered tenfold more bitter by that oppression which helpless poverty is so frequently compelled to endure. But this only invigorated the strong spirit which it could not crush, and confirmed the peasant boy in that bold independence and hatred of tyranny which afterwards pervaded his verses with a blazing and consuming flame. Born also a poet, and compelled as by a resistless destiny to yield to the impulse, the only question was the form of language in which it should be expressed. With the exception of the poems of Ramsay and Ferguson, and the modernized version of Blind Harry's "Wallace," there was no poetry written in the Scottish dialect of the eighteenth century; and had Burns followed the example of the Scottish poets of his time, he would have contented himself with the cultivated

language of the south, and taken a place, perhaps, among the half-forgotten hundreds who constitute the third or fourth rate poets of England. But fortunately for his country and his own fame, his emotions were too impetuous, and his heart too young, to wait until they could be expressed in a style that was not wholly native to their origin; and therefore, while he commenced, as all young poets do, with love, it was love in earnest, and in the words with which he would have sued and won in prose—Scottish words of impassioned vehemence, attuned and arranged by poetical inspiration. The choice did not wait for deliberation: it was made at once, and confirmed for ever. And who would wish that "Tam o' Shanter," or "Hallowe'en," had rather been written in English? But though he commenced to write verses so early as his sixteenth year, the taste and ambition of Burns were of too high a character to be satisfied with juvenile proficiency, or eager to manifest it. On the contrary, he studied every book within his reach, making all which he perused subservient to his chosen vocation; and thus, when he was about to enter it, he was as well read in general literature as the ordinary gentlemen of the day, and better acquainted with the rules of "critic-craft," especially in their application to poetry. Even when he had written those wonderful productions which perpetuate his name, it was accident that urged their publication. Still pursued by his adverse fortune, and having no hope of bettering his circumstances at home, he resolved, like his countrymen, to renew the trial abroad, instead of yielding to defeat and despair, and had selected the West Indies as his field of enterprise. To raise funds for the payment of his passage, he published a collection of his poems in the obscure town of Kilmarnock. The money was raised, and he was bidding a mournful farewell to Scotland, when his departure was suddenly arrested. A stray copy of his works, that were circulating among the Ayrshire peasantry like fire across the heath, had found its way to the blind old poet, Dr. Blacklock; and alarmed at the thought that such a genius should be lost to Scotland and the world, the worthy doctor entreated Burns to forego his purpose, and come to Edinburgh, where his worth would be appreciated, and a better path opened up for him. Burns consented, and the whole course of his career was altered: instead of becoming a West India slave-driver or sugar-planter, should he have the good fortune to escape the yellow fever, he was now to take his place as the ornament of his country, and the first poet of the age. His further history until the close, a short interval of ten years, sufficed for the matchless poetry he produced, and the world-wide fame he has acquired. The fire that burned

within him was too intense to be lasting; but while it burned, the work of a whole lifetime was accomplished. And as long as Scottish lips can sing, and a Scottish heart be alive to national feeling—nay, as long as the name of Scotland itself survives as an historical remembrance—his name will be hallowed with that of Wallace, and Bruce, and Knox, and his songs be cherished as noble incentives to manly independence, tender, pure-souled love, and heroic, self-devoted patriotism. And after this what needs there more?—

' No further seek his merits to disclose,
Or draw his frailties from their dread abode —
(There they alike in trembling hope repose)
The bosom of his father, and his God "

Dramatic poetry, which had occupied the highest place in our literature, had now sunk to the lowest; and after Johnson's "Irene," which proved a failure, and Home's "Douglas," which was crowned with extravagant success, no tragedy worth notice was produced. This dearth was the less to be regretted, as it occasioned the revival of the old English dramas, which, under the prevalence of the artificial school of poetry, had been too greatly neglected. It may also be added that new paths had now been opened up for the highest intellects, and to which the public attention was more especially directed. But as the stage was still a place of public amusement, if no longer a school of instruction, there was an ample demand for comedy and farce, and accordingly with writers both male and female for these departments, the present period, more than any previous one, abounded. One of the best of these was Oliver Goldsmith, who excelled in this as he did in every other department. Garrick, Macklin, and Foote, all of them actors, and therefore best acquainted with the public taste and the mode of gratifying it, were successful farce and comedy writers. Of accomplished scholars, there was Colman the translator of Terence, and Murphy the translator of Tacitus, whose productions for the stage outlived their more serious literary labours. The same may be said of Cumberland, whose comedies of the "West Indian," "Wheel of Fortune," &c., can still command admiring audiences. But passing over the names of many other writers, whose light, dramatic sketches can still amuse, we are arrested by that of Sheridan, as eminent a play-writer as he was a senator, and whose "Critic," "Duenna," "Rivals," and "School for Scandal," are as well known as his eloquent speech on the trial of Warren Hastings. But as new objects and pursuits continued to increase, the theatre in like proportion was losing its former ascendancy, and becoming of even less importance, at the close of the period, than a Vauxhall entertainment, a concert, or a ball. With this summary notice we may dismiss the subject of the drama.

CHAPTER I. — CIVIL AND MILITARY HISTORY. A.D. 1802—1803.

GEORGE III.

State of France and Britain at the time of the peace of Amiens—Articles of the treaty of peace—Bonaparte's first use of the termination of naval hostilities—French expedition to San Domingo—Bonaparte retains his hold upon Italy—Discussion in the British parliament upon the terms of the peace of Amiens—Dissatisfaction expressed of them—Advantages gained by France from the treaty—Statements in parliament on the subject by Lord Grenville and Mr. Windham—Intention announced of repealing the income-tax—Parliament prorogued—Resort of English travellers to France—Condition of the French government—Improvements introduced by Bonaparte—Symptoms of the restoration of monarchic rule in France—Plot against Bonaparte's life by the infernal machine—Its failure—Punishment of the conspirators—Increase of Bonaparte's power—Mode of its exercise—Bonaparte's plans for creating a French navy—Materials of the expedition to San Domingo—The negro government of that island—First successes of the French expedition—Its terrible reverses and failure—The French compelled to abandon San Domingo—Renewed designs of Bonaparte on Egypt—Ultimate purposes to be served by his conquest of Egypt—Bonaparte's fresh aggressions upon Italy and Switzerland—Symptoms of an approaching rupture between France and Britain—Conspiracy against the life of George III.—Colonel Despard, its leader, apprehended—His trial and execution—Warlike precautions against France adopted—War declared—Popularity of the war proclamation in England—A *levy en masse* bill passed in parliament—The income-tax revived in a new form—Peltier's libels against Bonaparte in London—Complaint of Bonaparte to the British government—Trial of Peltier by an English jury for the offence—His defence by Mackintosh—Eloquent speech of Mackintosh in behalf of his client—Effect of his speech throughout Europe—Indignation of Bonaparte at the trial.

AT the time of the peace of Amiens the two great belligerent powers had scarcely the means of carrying on an active warfare against each other. Without allies and auxiliaries on the Continent, England could not hope to touch France by land; with fleets ruined or blockaded, with a navy completely disheartened, France could not expect to touch England by sea. The brilliant campaign in Egypt, which reminded the French of the old

pro prowess of the British infantry, and which told the nations of Europe that these new Gallic armies were not invincible, allowed us to treat with less sacrifice of national pride than at any previous period of the war. We could also treat without any sacrifice of public faith; for the coalesced powers on the Continent, who were engaged in their arduous struggle at the times when the Foxites had recommended negotiation with Bonaparte, had now yielded, for a season, to the terrible first consul, and had sought terms for themselves, without heeding us.

One great desire of the French was gratified by England recognizing their so-called republic; and to obtain this recognition had certainly been one of the various motives which induced the first consul to treat. The contracting parties to the treaty of Amiens were, the King of Great Britain and Ireland on the one part, and the French republic, his majesty of Spain and the Indies, and the Batavian republic, on the other. The leading articles of the treaty were:—Art. III.—His Britannic majesty restored to France, Spain, and Batavia all the possessions and colonies which he had occupied or conquered during the war, with the exception of Trinidad and Ceylon, which Spain and Batavia severally ceded and guaranteed to his Britannic majesty. Art. VI.—The Cape of Good Hope was to remain to the Batavian republic in full sovereignty, in the same manner as previous to the war. Art. VII.—The territories and possessions of our ally, Portugal, were to be maintained in their integrity, such as they were antecedent to the war; but that portion of Portuguese Guiana which had been ceded was to remain to the French republic, and Spain was to keep the territory on the frontiers of Portugal which had been yielded to her by the treaty of Olivenza. Art. VIII.—The territories, possessions, &c., of the Sublime Porte were to be maintained in their integrity as they were before the war or the invasion of Egypt. Art. IX.—A Veneto-Greek republic, which had started up under French care, in the Seven or Ionian Islands, on the destruction of the ancient republic of Venice, which had possessed these islands for many ages, was recognized by the contracting parties. Art. X.—Malta, with its dependent isles, Gozo and Comino, was to be restored to its old masters, the knights of the order of St. John of Jerusalem. The British troops were to evacuate Malta and its dependencies within three months from the exchange of the ratifications, or sooner if possible, when all was to be given up to the order, provided the new grand-master, or commissioners duly authorized, were there to receive the surrender, and that the Neapolitan troops were arrived. The King of Naples was to be invited to send 2000 of his native troops to serve in garrison for one year after the restoration of the knights, or longer, if the Maltese force should not be at that period deemed competent by the guaranteeing powers to garrison the island. Art. XI.—The French troops were to evacuate every part of the kingdom of Naples and of the Roman states, except such portions of the latter as had been annexed to the Cisalpine republic; and the British were to evacuate all the ports and islands they had occupied in the Mediterranean or in the Adriatic. Art. XII.—The evacuations, cessations, and resti-

tutions named in the treaty were to be made, in Europe, within one month; on the continents and seas of America and Africa, within three months; and on the continent and seas of Asia, within six months after the exchange of the ratifications. Art. XV.—The Newfoundland fisheries were to be placed on the same footing as previously to the war. Art. XVIII.—The Prince of Orange, late stadtholder, or the branches of the house of Nassau, were to receive equivalent compensations for the losses they could prove they had sustained, as well with respect to private property as by the change of constitution adopted in the Batavian republic. But by a secret article appended to this 18th article, the Batavian republic was exempted from finding any part of this compensation; and as no other state or territory was pledged for it, it was pretty evident that no compensation to the house of Nassau-Orange was intended. Art. XXII.—The present treaty, done at Amiens on the 27th of March, 1802, was to be ratified within thirty days, or sooner if possible; and the ratifications were to be exchanged in due form at Paris.

The very first use which Bonaparte made of the benefit of the suspension of hostilities at sea was to send out a formidable armament to recover, in the first place, the whole of San Domingo from the revolted or the free and independent negroes. On the 14th of December, 1801, only ten weeks and four days after the signing of the preliminaries, a great fleet and a strong land army set sail from Brest for the West Indies. The British ministry, on the solemn assurance that it had no other object in view than that which was publicly stated, agreed not to molest this armament on its passage; but, as the force was so great, and as the treaty itself was not yet signed, it was deemed advisable to watch proceedings, and to reinforce our own fleet on the West Indian station; and to these ends, Admiral Mitchell was despatched with seven sail of the line. That French expedition did not, because it could not, depart from the object laid down; and it terminated, not in any re-occupation, or aggrandizement, or seizure, but in the almost total destruction of the forces engaged in it. But a few days after its first departure from Brest, Bonaparte realized another great project, which gave him in name—what he already had in fact—the presidency and actual command of all Lombardy and those other rich portions of Italy which, by his last treaty with the Emperor of Germany (the treaty of Lunéville), were to constitute the independent Cisalpine republic, and to be freed alike from French and from Austrian dominion and interference. He gave emphasis to the doctrine that Upper Italy could not yet be evacuated by the French armies which had *liberated* it. The whole business was finished

by the 26th of January, 1802. It rendered the *independent* Cisalpine republic a mere appendage of France: it was an infraction of the treaty of Luneville; and, if the Emperor of Germany

had in condemning the peace was even smaller than that which had sided for so many years with Fox in reprobating the war.

The sailing of the immense armament from Brest for San Domingo, pending the negotiation of the definitive treaty, created great alarm, and occasioned some demands in the House of Commons for the recall of the Marquis Cornwallis from Amiens. It was determined that the naval and military establishments should be continued as they were, without any reduction, for three months longer. The transactions with the Cisalpine republic were the cause of fresh excitement; and in the course of the month of January, 1802, it became known in England that Bonaparte had exacted from Spain her American colony of Louisiana, and had claimed, in Italy, Parma and the island of Elba,

RUE ST LEU AND HÔTEL DILA, AMIENS — FROM *France Monumentale et Pittoresque*

had been in a condition to renew hostilities, the British cabinet would scarcely have carried the preliminaries of peace to a definitive treaty. The young Emperor of Russia, who had stipulated for a share in the settlement of Italy, was highly incensed, but beyond this he could offer no interruption. Before the signatures were set to the treaty at Amiens, other usurpations on the part of the first consul, and other provocations most difficult to be endured by a proud nation took place, but which England was obliged to endure in silence, on account of that desire of peace which was general over the whole Continent.

When the preliminaries were first announced to the imperial parliament, which met in the autumn of 1801, the ex-minister Pitt assisted the Addington administration in defending what they had done and were doing. He said that after the great coalitions had all been dissolved, nothing remained for us but to procure just and honourable conditions of peace for ourselves and the few allies who had not deserted us. On the contrary, his late colleagues, Lord Grenville and Mr. Windham, censured the conduct of the Addington administration as mean and pusillanimous, declared the preliminaries to be disgraceful, and a prolongation of the war, though single-handed and to any indefinite period, to be preferable to this insidious and insecure peace. Fox with his party now voted with Pitt and the Addingtons in approbation of the preliminaries; and, for some months, it was found that the minority which followed Lord Grenville and Mr. Wind-

thus adding, in a time of peace or of truce, to the enormous acquisitions which he had made during the war. The delays in the negotiations obliged Mr Addington, on the 3d of March, to demand a supply on the war establishment for sixty-one days more. Lord Grenville spoke with great force against the conditions and tendencies of the treaty. It would have been but just and reasonable, said his lordship, for France to have purchased back her colonies, and the colonies of her allies or dependants, Spain and Holland, by continental sacrifices; but France gave up nothing; for Egypt, at the time the treaty was concluded, was not hers to give, while England gave up nearly every foot of territory she had obtained. In fact, by the result of the treaty, France was left either in actual possession of, or with a most absolute control over the greatest or richest part of the continent of Europe. She kept Savoy, she kept Belgium, she kept the Germanic states on the left bank of the Rhine, she kept, under a fiction of independence, the whole of Upper Italy and the whole of Holland; she kept whatever she had gained. And yet she was to be repossessed of all that she had lost. and, moreover, to be allowed to acquire immense territories from her submissive and helpless allies. In Asia she was to have Pondicherry, Cochin, Negapatam, and the Spice Islands; in Africa, the Cape of Good Hope, Goree, and Senegal (for it was idle to talk of the Batavian republic having or holding anything); in the West Indies, Martinique, Ste. Lucie, Guadaloupe, Tobago, Curacao, and a part, if not the

whole of San Domingo. In America she was to be repossessed of St. Pierre and Miquelon; and, as new possessions, whence she could press upon both the Anglo-American states and the Spanish-American and Portuguese-American possessions, Louisiana was to be hers by virtue of the secret treaty with Spain, and French Guiana was to be rounded and enlarged by territory torn from Portugal by the treaty of Madrid; and, in addition to this territory in Guiana, extending to the Amazon river, she was to have, in South America, Surinam, Demerara, Berbice, and Essequibo. In the Mediterranean, too, where our naval superiority was most important, we had disposed ourselves of Malta, Minorca, and even the island of Elba, which France wanted merely in order to exclude us from the neighbouring port of Leghorn. We were now, in fact, excluded from all the ports of Italy; and all that inland sea seemed on the point of being converted into a French lake. The first fruits of this peace, continued Grenville, were seen in the necessity of our keeping in the West Indies, at an enormous expense, thirty-five sail of the line. He exposed the absurdity of placing Malta under the guarantee of powers who could never agree on any one point respecting the island, and of garrisoning it *pro tempore* with the least steady and least reliable troops in Europe. He called the pretended restoration of Malta to the knights a still greater absurdity; for how could it be said that such an order was really in existence, when almost all the funds necessary for its support had been confiscated—confiscated in good part since the preliminaries of this treaty, which was to restore them to their independent, sovereign power? The expenses of the order of Malta, principally in fortifications and garrisons, had been, on an average of the last ten years, about £130,000 sterling per annum. The total revenue derivable from the island was only about £34,000, and of this not more than £8000 came into the coffers of the knights. Of those ample revenues which in former times had been enjoyed by the order, the French had confiscated about £58,000 per annum at the commencement of their revolution, when they suppressed the French *langues*, and declared the whole order to be a thing obsolete, useless, and detestable, like all other institutions that were built upon superstition and monachism. More recently, Spain had been induced to confiscate £27,000 per annum; and still more recently, the estates and property of the order had been seized and confiscated in Lombardy and in Piedmont, while it was evident that the rest of the Italian states, beggared by the war and by French exactions, were looking with an eager eye to such lands and houses as belonged to the order, and were within their

own territory and grasp. In short, of all the former income of the order there now remained a bare £20,000 per annum—a sum evidently insufficient to keep up the extensive and magnificent fortifications, or prepare for the defence of the island. The order of Malta was therefore extinct as a power, and must necessarily come under the influence and into the pay of the French, who had reduced it to this condition of helplessness and degradation. The grand-master would be elected by their nomination, and the whole order would be subordinate to the French.

In the House of Commons, Windham still more bitterly condemned the definitive treaty. The first point he dwelt upon was Malta. The pretended neutrality of that island would at any time allow the French and their allies to collect eighteen ships of the line in its ports, while we were restricted to six ships of the line. To talk of the order, and of the different *langues* or nations composing it, was now idle; its power, its consideration, were gone for ever. The German knights had already refused to serve in a body so changed and degraded; the Neapolitan soldiers could never be any security for the independence of the island; they would throw open the gates of La Valette and Vittoriosa to the first French force that appeared; the state of Malta was a virtual surrender, and our position in the Mediterranean would be made untenable; for, with the exception of Gibraltar, at the entrance of that sea, we should not have a single port or place of refuge for our ships. He (Windham) had been secretary-at-war, and he would enter on a retrospect of the manner in which the war had been conducted. He affirmed that, with the exception of the expedition to Toulon, and the melancholy affair at Quiberon, little had been attempted upon what he conceived to be the peculiar and appropriate principle of the war. There were men, there was a party in England who had unceasingly condemned our entering into hostilities with the French. From its very commencement the war had been carried on with an incessant cry for peace; incessantly was the justice of our cause arraigned, and that of the enemy vindicated; our most splendid victories had been coldly received, our most brilliant successes had been depreciated. If the war was neither just nor necessary, every shilling spent on it was too much; if it was merely a war of experiment, it had cost us too many sacrifices; but, if it was a war for the very existence of the country, then our exertions had been too little for either our object or our means. He repeated emphatically, that it was apparent the strength of the country was unimpaired by the exertions it had made—that the country had not grown lean by them. Lord Folkstone, who seconded

Windham's motion, said that the British flag was degraded and disgraced by this treaty, as far as any treaty could have that effect; that it was a treaty built on Jacobin principles and confirming Jacobin power; that we had abandoned Portugal to spoliation, and in our treatment of the Prince of Orange had added insult to injury; that he saw nothing left for old England but dishonour, degradation, and ruin. It was, however, deemed both just and expedient to give the government of Bonaparte a trial; and with this conviction, many members of both houses had voted in favour of the treaty, and had deprecated all severe strictures on the character and intentions of the first consul.

On the 5th of April, when Addington brought forward his budget for the year, he announced the intention of government to abolish the income-tax, and fund the £56,000,000, with the payment of which it was charged. The resolutions upon the budget were agreed to without a division, and with many compliments and felicitations on the repeal of the income-tax.

On the 28th of June, parliament was prorogued by the king in person, who congratulated the country on the peace and prosperity it was enjoying. On the next day the parliament was dissolved by proclamation, and writs were issued for a new one.

English travellers, who had been so long excluded from the Continent, were now rushing in shoals to France and Italy. At the beginning of June there were said to be 6000 British subjects in Paris alone, and the number increased rapidly in the course of the summer and autumn. Among those who hastened to the French capital, to attend the levees of the first consul after the rising of parliament, were Mr. Fox and his nephew, Lord Holland, Mr. (afterwards Lord) Erskine, Lord St. John, General Fitzpatrick, and other members of both houses, mostly of the opposition party. Apparently with but few exceptions, these individuals, though they could not venture as Englishmen openly to approve of the despotism which Bonaparte had established, complacently resigned themselves to wonder and admiration at all that the great man had done and was doing,

and to a most delusive hope, not merely of the durability of the peace, but of the possibility of a close union and alliance between Napoleon Bonaparte, who was now taking his place among the hereditary sovereigns of Europe, and George III. Fox, who had begun that historical work which he did not live to finish, and who wished to make researches in the archives of the office of foreign affairs, and in other French repositories of state-papers, for the correspondence and intrigues of Louis XIV. and his ministers with our unhappy James II., was received by Bonaparte as a friend, was applauded for the efforts he had made to put an end to the war, and was promptly gratified in his wishes.

Since the revolution of the 19th Brumaire, or

10th November, 1799, immense changes had taken place in the government and internal state of France. The directory had left the finances in a wretched condition. forced loans, arbitrarily assessed, had been the chief resource of that rapacious and most corrupt government: these loans had destroyed all credit, and the money having been spent or appropriated as it was raised, the treasury was left empty when Bonaparte became first consul. He repealed the odious system, and substituted twenty-five per cent. additional upon all taxes. Other irregular exactions were put

NAPOLÉON BONAPARTE, FIRST CONSUL.—After a portrait by Isidore Dalbe

an end to, order was introduced, and confidence gradually restored. Early in the consulate it was understood that, whatever might be the scepticism or infidelity of Bonaparte, he was determined to give no encouragement to atheism, deism, theophilanthropism, or to any of those creeds or systems which had sprung up with such wondrous rapidity during the revolution. No conviction, no zeal for Christianity, was or could be pretended by the first consul, or by the theists or materialists who surrounded him and made up his government; but the dogmas of Anacharsis Clootz, Hébert, and the rest who had set up the worship of the goddess of reason, and the crudities of Robespierre, and his festival to the Etre Suprême, were all reprobated as offensive to decency and good taste; and it was ~~understood~~ that the far greater portion of the French people

were still Roman Catholic Christians in their heart. About 20,000 priests, who had been banished or imprisoned, were allowed to return, or were set at liberty on taking the oath of fidelity to the consular government as at present established. The churches were re-opened, and, though in most of the great towns many of them were but thinly attended, Christian worship was performed all over France. The Sabbath was again recognized as a day of rest, the decades gave way to the old calculation by weeks, and, by degrees, the whole of Rome's revolutionary calendar fell into disuse. The festival of the 21st of January, in commemoration of the atrocious execution of Louis XVI., was discontinued. To Sièyes, who spoke of Louis as "the tyrant," Bonaparte said, "Nay, nay! Louis was no tyrant! Had he been a tyrant, I should this day have been a captain of artillery, and you saying mass." Privately, with the very few persons he admitted into a large share of his confidence (his full confidence he never gave to living being), he did not pretend to conceal that he was himself aspiring at the name of royalty, having already more than the substance of it; but he quieted their or his own impatience by declaring that "the pear was not yet ripe"—that, powerful as he was, it was necessary to proceed with caution, and to make sure of one position before he advanced to another. He, however, as early as the 19th of February, 1800, took possession of the royal palace of the Tuileries, telling his colleagues that it was "a good military position," and a more convenient place for the seat of government than the Luxembourg, which had been defiled and disgraced by the residence of the directors. Of the placemen, those who had been the most fanatic in their republicanism became the most devoted partizans, the loudest-tongued panegyrists, the most submissive slaves of the consul. These sudden and extreme conversions were not calculated to improve Bonaparte's low opinion of mankind. He was accustomed to say that with money and a little gold lace to put upon their coats, he could un-republicanize all these republicans. But still there were in Paris republicans of a lower grade, who retained all the fanaticism of the reign of terror, and who were from the beginning dissatisfied with a dictatorship which shut up their clubs, suppressed their newspapers, and excluded them from all hope of being great or famous as demagogues. It is rather remarkable that the hottest of these Jacobins, the most sincere and devoted of these republicans, were not Frenchmen, but Italians and Corsicans.

Cerrachi, a sculptor from Rome, Dana, with several other Italian refugees, and Joseph Arena, a Corsican, and brother of Bartholomew Arena, who had been a distinguished member of the

council of five hundred, and who had vigorously opposed Bonaparte on the 19th Brumaire, when he went to St. Cloud to dissolve that legislature with bayonets, formed or headed a conspiracy against the life of the first consul, whom they designated as the greatest of liberticides. Their plot was discovered, they were tracked by Fouché's adroit agents, and were all arrested. Shortly after this, on the 24th of December, 1800, as Bonaparte was driving in his carriage to the opera-house, a tremendous explosion of several barrels of gunpowder, in a waggon which was drawn up on one side of the street, destroyed several houses, and killed many persons. The first consul's carriage, driven at unusual speed by a coachman who is said to have been half-intoxicated, had just passed; the fearful explosion made the man drive still faster; sundry impediments that had been placed in the streets were passed without accident; and unhurt, and enthusiastically cheered by the audience, who had promptly conceived the object of the explosion, Bonaparte entered the opera. As his hatred and dread of the Jacobins always exceeded his dislike of the royalists, he declared that he was convinced the murderous plot was a Jacobin one; but the police soon ascertained, beyond the reach of a doubt, that the infernal machine, as it was termed, had been the work of certain fanatical royalists connected with the Chouans in Brittany and the Vendée. They were caught in the toils which the police spread for them, and were speedily tried and executed. Their attempt had no other effect than that of increasing the popularity and power of the first consul. At the same time that they were guillotined, Cerrachi, Arena, and the others concerned in the republican plot, having already been tried and found guilty, were brought out of prison and executed also. A few days after these Bourbonists and Jacobins had lost their heads, a *SENATUS CONSULTUM*, as every decree of the senate, or published will of Bonaparte, was now styled, came forth, ordering the immediate transportation to Guiana of 130 known leaders of the old Jacobin party, several of whom had participated in the atrocities of the reign of terror. In April, 1801, a general amnesty was granted to all emigrants who chose to return to France and take the oath of fidelity to the present government. About 500 individuals were, however, excepted, including those who belonged to the households of the Bourbon princes, those who had been at the head of armed bodies of royalists, or who had held rank in foreign armies employed against their country, and all those who were held to be convicted of treason. The property of the returned emigrants which had not been sold, or which had not been appropriated by the state for public purpose, was to be restored to them.

But no laws were fixed to determine and regulate this restitution; and the first consul restored or withheld, gave to one member of the emigrant family or to another, just in proportion as he found the parties disposed to enter his service and identify their interests with his. The words "stability and order" were now constantly resounding in every ear, and introduced in every page of printed paper; and under the cloak of these two fine words the entire subversion of liberty and the erection of a despotism were concealed. They found a people wearied out by a long excitement, and anxious only for order and tranquillity at home, and glory and conquest abroad; a people that did not moan or sigh over the bloody, fantastic tricks which had been played, but laughed at them all, pleasantly terminating their political retrospects and reflections with a "*Que de forces nous avons faites dans notre révolution!*"

On the 2d of August, 1802, the following decree went forth, with a proper preamble about votes and registers and the unbiasse will of the people:—"1. The French people name, and the senate proclaim, Napoleon Bonaparte first consul for life. 2. A statue of *Peace*, holding in one hand the laurel of victory, and in the other this decree of the senate, shall attest to posterity the gratitude of the nation. 3. The senate will convey to the first consul the expression of the confidence, love, and admiration of the French people." And after a very few days this new revolution was completed by the issuing of a simple *senatus consultum*, which accommodated the last consular constitution, or that made after the bayonet-scene at St. Cloud, to the present change, by rendering it still more despotic.

By the end of the year 1802 Bonaparte had concentrated the whole power of the state in his single self, and had organized an absolutism compared with which that of Louis XIV. was a free government. In the words of the ablest and honestest of the republican historians of France, he had a class devoted to him in the clergy as re-organized by the concordat; he had a military order in the Legion of Honour; an administrative body in the council of state; a decree-making machine in the legislative body; and a constitution-making machine in the senate. The immense standing army was at his disposal, and almost unanimously devoted to him and his glory. So many places had been created with direct salaries from the state, that he had another army in his placemen, and constant baits to hold out to the thousands of needy or ambitious men that were incessantly resorting to Paris to seek employments under government; and now everything was under government, and by the centralization system the place of distribution was the capital alone. This rage for

place-hunting increased in proportion with his splendour and his power, contributing in an eminent degree to the growth and maintenance of that power, and to the general indifference for national freedom; for, besides France and Italy, Belgium and the annexed provinces on the left bank of the Rhine, Bonaparte could, soon after this, appoint to profitable employments in Holland, and in more than half the states into which Germany was divided; and a few years later Spain and Portugal presented themselves as new Lands of Promise to the ever-increasing and insatiate place-hunters. At the end of his reign, it was not easy to find a man that was not, or had not been, either *militaire* or *employé*.

The absolute power put into the hands of the first consul for life was used with the utmost vigour. His government assumed at once most of the characteristics of an ancient despotism. Even while Fox and his friends were tarrying in Paris, secret arrests were made by night and day, and by scores at a time. Men were arrested upon the information of spies and informers, were immured in the Temple or some other state-prison, without knowing of what they were accused; and were not unfrequently removed in a private manner, and by night, from these places of captivity in Paris to much more horrible prisons or fortresses in remote parts of France. These nocturnal arrests and removals were called *Fonche's lettres-de-cachet*.

The peace of Amiens, besides affording the first consul the opportunity of consolidating his power, and of putting matters at home in order, allowed him time to devise a vast system of colonization. He could not but know that, without foreign colonies, there could be no rapid or certain increase of the mercantile navy of France, and that without a mercantile navy he could have no hope of an armed or national navy capable of contending with that of England—a country whose subjugation was more frequently in his thoughts during this brief peace than it had been during the turmoil and bustle of the war. "Colonies and ships," "ships and colonies," were words constantly re-echoing in the Tuileries and the council of state. He took up the ideas of colonization and naval supremacy which had been current during the American war and all the earlier part of the reign of Louis XVI., and he added bolder notions of his own. He regarded colonies first, as *military stations* whence conquests might be pursued, and secondly, as sources of commercial prosperity and nurseries for seamen: and in his eyes the military part seems never to have been separated from the civil, or conquest from commerce. The expedition to San Domingo not only formed an essential part of Bonaparte's colonial system, but also

afforded him the opportunities of finding employment in a time of peace for a portion of his immense army, and of relegating many of his discontented officers and soldiers far from France. Papers are said still to exist which show that this expedition was for the first consul a measure of military police; that the drafting of the forces to be employed was most cunningly arranged; that the choice fell upon the demi-brigades of which he was least sure, and upon the most ardent of the republicans; that the men devoted to Moreau and the other sturdy republican generals who would not bend the knee at the Tuileries, were all thrust into this fatal expedition. But to keep in control those discontented, turbulent masses, the command in chief was given to General Leclerc, who had become Bonaparte's brother-in-law by marrying his favourite sister Pauline: and, to officers and men, the most tempting and extravagant promises were given of estates and riches in the vast and productive island to which they were going. About 24,000 soldiers were collected on the western coast of France in the autumn of 1801. To transport them to their destination, Bonaparte demanded the services of the Spanish navy; and seven Spanish ships of the line, besides frigates, were put at his disposal. The whole fleet, which sailed on the 14th of December, 1801, consisted of twenty-three or twenty-four sail of the line, including some Dutch ships, of ten or twelve frigates, and of a swarm of smaller vessels and transports. The way in which the first consul disposed of the naval forces of his allies or dependants gave rise to serious reflections in England; for it proved that all the shipping and ports from the Texel to Cadiz were at the disposal of the French, and that, if any long peace were allowed to the Continent, these navies would be greatly increased.

The negroes and mulattoes of San Domingo, who had themselves abolished their slavery by energetic, sanguinary, and terrible means, were now settled down under an imitative temporary republic, of which Toussaint l'Ouverture, a black slave of distinguished courage and ability, was the real head. Toussaint had fought like a Spartacus—only with better success—for the liberation of his race; but notwithstanding his bravery and talent, he had little instruction, and was, like all the negro race, essentially an imitator, who could only copy and follow the ideas and systems of the whites. At first he made a constitution for the negroes of San Domingo like that which the directory had made for France; but when the revolution of Brumaire established the consulship, put the power of the state in the hands of Bonaparte, and altered the constitution, Toussaint changed his constitution also, pro-

claiming himself first consul of Hayti, the Bonaparte of San Domingo! These close imitations irritated the first consul of France, hurt his very susceptible pride, and made him the more eager for the overthrow of this negro republic. "This comedy of government," said he, "must cease! We must not permit military honours to be worn by apes and monkeys!" As for the abolition of negro slavery, Bonaparte considered it as one of the most glaring absurdities which had ever been entertained by the ideologists and revolutionists of France. General Leclerc and his doomed demi-brigades found, almost as soon as they landed in San Domingo, that every negro on the island was hostile to them, and that they were sent to engage in one of the most difficult and destructive of warfares, in a country where the climate and everything else was against them. Their first successes only deceived them, led them into a false and dangerous confidence, and made their subsequent failures more terrible to themselves and more disappointing to those who had sent them thither. Fort Dauphin was easily captured; Cape François was evacuated by the negro Henri Christophe, who had once been a skilful cook at a tavern, but who was now a general of the blacks, and second only to Toussaint l'Ouverture; but, before quitting the town, Christophe burned the greater part of it, and he succeeded in drawing off 3000 armed negroes, with whom he joined the black first consul. With nearly equal ease the French got possession of Port-au-Prince and the chief seaports, and of the principal military posts near the coast. This done, they advanced into the interior of the island to encounter the black first consul and the yellow fever. Various loose actions were fought, in which victory did not invariably declare itself for the whites, and in which the black generals are said to have displayed both skill and courage. But the white first consul had instructed his brother-in-law to employ craft where force failed; to sow jealousies and dissensions among the negroes; to dupe the black first consul by treaties and promises of amnesty, honours, and the viceroyalty of the island; and to adopt all means, foul and fair, to get possession of his person. Though by no means devoid of cunning, or unaccustomed to practise treachery himself, the negro chief fell into the snare, submitted to Leclerc, and was presently loaded with chains and sent a prisoner to France. But the successful treachery did not lead to the result which Bonaparte had confidently expected from it. With an unanimity, with a fury doubled by the dark deed, the negroes flew to arms under Henri Christophe and other leaders, fell upon the French when weakened by the endemic fever, scattered them, drove them

back towards the coast, and tortured, mutilated, butchered them in heaps wherever they obtained the mastery over them. Between the blacks and the whites nearly all the plantations and the dwellings of men were wasted by fire and the sword; and devastations were committed from which the island has never recovered, nor is likely to recover under negro government. The French retaliated wherever they were able, and the most atrocious of wars was prolonged through many months. Even in the restored island of Guadeloupe, where but a slight resistance was offered by the blacks and mulattoes, detestable barbarities were committed, and the French commander frankly announced his intention of pursuing and *exterminating* the remnant of the rebels. In the autumn of 1802, when the yellow fever and the blacks of San Domingo had reduced the fine French army to a few hundreds of sickly, wounded, despairing men, and when Leclerc himself was dying of the endemic, Christophe, with the black chiefs Clervaux and Dessalines, invested the town of Cape François. Leclerc died on the 2d of November, and was succeeded in the chief command by General Rochambeau, son of the old marshal of that name who had served in America with La Fayette, and who had commanded the first great revolutionary army in 1790. The arrival of fresh reinforcements from France—in all about 15,000 men—enabled Rochambeau to drive Christophe and his blacks from Cape François, which they were threatening with a regular siege. He then attempted to recover the ground which Leclerc had lost, and to penetrate into the south of the island; but the troops fresh from Europe caught the terrible diseases of the climate; and after some marches which multiplied the mortality, and some disastrous encounters with Christophe, he was compelled to retreat to Cape François, with a force so diminished, sick, and disheartened, as to render any long defence of that place an impracticability. As by this time the war with England had been recommenced, Bonaparte could not venture to send out any more ships and troops. Preferring a capitulation with the negroes to a surrender to the English, Rochambeau treated with the black chief Dessalines, agreed to deliver up the town to him, and evacuated Cape François on the 1st December, 1803. A more fatal expedition is not to be found in the whole history of this long war. Between February, 1802, and December, 1803, from 40,000 to 50,000 men perished in the island of San Domingo; but, assuredly, one of the objects of Bonaparte was obtained; the troublesome, obdurate republicans could trouble him no longer—the dead, and only the dead, never come back—as Citizen Barrère had said in the high republican days. The treatment which

Toussaint l'Ouverture met with in France was at least as atrocious as any part of this horrible history. He died in a dungeon situated upon the highest and coldest part of the mountains of Jura, after a dreary imprisonment, exposed to every kind of privation.

A few months after the first sailing of the exiled republican army for San Domingo, the first consul despatched Colonel Sebastiani, a Corsican of great address and ability, to Egypt, Syria, and other countries in the Levant; for Egypt still lay at the heart of this all-grasping ruler; and, whether he should recover and keep the great West India islands or not, he was eager to possess himself of the ancient land of the Pharaohs, of the Isthmus of Suez, of all the country that lay between the Mediterranean and the shores of the Red Sea, or that stretched along that sea; for this possession, he still fancied, would facilitate his views on India; and it entered into, and would become a capital part of the grand scheme for seizing the islands along the African coast, and in the Arabian and Indian seas, or all the approaches to Hindoostan.

By deeds as well as by words the first consul had proved that those who were disposed to give him a trial were making a very useless and dangerous experiment. The erecting himself president of the Cisalpine republic, between the signing of the preliminaries and exchanging the ratifications of peace, had been overlooked, or had not been allowed to stand in the way of the pacific experiment. It had, however, been understood at Amiens; and an express promise and pledge to that effect had been given to the Emperor of Russia, who took an active interest in the fate of the house of Savoy, that Piedmont should neither be united to the so-called republic in Italy, nor incorporated with France, but be left, with some slight clipping, to the unfortunate King of Sardinia. It was equally understood that France, which had been allowed all the benefits of the *uti possidetis* principle, should remain content with what she had, nor attempt any new incorporations or annexations of territory, either beyond the Alps or elsewhere. Yet, because the young Emperor Alexander refused to take up that wild scheme of Indian conquest, to be made jointly by France and Russia, which had been entertained by his father, and because he declined concurring in other hostile views against Great Britain and Austria, Bonaparte, after sundry encroachments and stretches of power on the side of the Rhine, and in that other puppet-state, the Batavian republic, took possession of Elba, in virtue of an agreement with Naples and Tuscany; seized upon the duchy of Parma, on the death of the Duke Ferdinand; and finally, by a *senatus consultum*, dated Sep-

tember 2d, 1802, annexed and incorporated the whole of Piedmont with France. Vittorio Amedeo, the original member of the coalition of sovereigns, had died broken-hearted in 1796; his successor, Carlo Emanuele, had been compelled by the French and his own republican-disposed subjects, to sign an act of abdication, and to retire with all his family to the rude island of Sardinia in 1798. As soon as the then impassable sea was placed between this sovereign and his oppressors, and he was doubly safe in the midst of the brave Sards, he put forth a simple and touching, yet spirited protest. Shortly after, he voluntarily resigned the crown to his younger brother, Vittorio Emanuele, who was now ruling—not unwisely or unpatriotically—in Sardinia, which was all that was left of the dominions of his house, one of the most ancient of the dynasties of Europe. But, as a very large portion of the Savoyard and Piedmontese nobility, either anxious to escape from the insolence and oppressions of the French and the republican party of their own countrymen, or to prove their fidelity and attachment to their princes, had followed the exiled family into the island, and as industry and civilization were at a very low ebb, balking the bounties of nature and the richness of the soil, the court remained crowded and miserably poor—so poor, for years, that the noblest were obliged to exhibit themselves in patched coats, and the royal family itself must have been reduced to absolute privations if it had not been for grants of money made by England. Nor was it the intention of the French to respect this last asylum of royalty and wretchedness. "Sardinia," said Bonaparte, "produces the best bread in the world. Sardinia is but a continuation of the island of Corsica, and, like Corsica, must naturally be ours." Emissaries and propagandists were thrown into Cagliari to work upon the discontents of the people, and tempt them with prospects of the advantages and honours to be derived from an incorporation with the French republic; and more than once these agents very nearly succeeded in exciting dangerous insurrections.

The French troops had never been entirely withdrawn from Switzerland; and in the autumn of the present year a fresh army was marched into the cantons. The constitution which had been set up by the directory, and the dissensions and feuds which French intrigue had promoted, had thrown the whole of that tranquil and once happy country into a most stormy and unhappy condition. Many collisions took place, and not a little blood was spilled. At the same time the established provisional government refused to sanction the dismemberment of the Valais, which Bonaparte wanted for his projected military road

over the Simplon. In the month of October the first consul sent his trusty aide-de-camp, Rapp, to Berne, to offer to the distracted cantons his mediation for the settlement of all their differences; and at the same time he ordered General Ney to be at hand to enforce obedience at the head of an army. The democratic party readily accepted the proffered mediation; the aristocratic party, despite of Ney and his army, who were marching on Berne, showed considerable reluctance; but they were obliged to send Aloys Reding, with other deputies from their own body, to Paris, and eventually to submit to the law dictated in the Tuileries. It is true that Bonaparte, who now added "Mediator of the Helvetic League" to his other titles, displayed more moderation and at the same time infinitely more political wisdom in this matter than in any other of the same sort; but his *modus operandi* was worse than an insult to Austria, the close neighbour of Switzerland, and to the other powers of Europe, who had each as good a right to mediate as he had; the march of Ney's army was a direct and glaring attack on that Swiss independence which he had engaged to respect; and, besides all this, he forced the federal government to agree to maintain a body of 16,000 men in his service; and he retained Geneva and the bishopric of Basle, which had been seized by the directors—at the same time separating from Berne the whole of the Valais, which country was not long after incorporated with France.

Another grand provocative to the rupture was the fierce and systematized hostility of Bonaparte to the commerce of Great Britain, which, instead of being allowed, through the return of peace, to flow in its old channels, was actually more impeded and hampered in France, and in the countries where the French held sway, than it had been during the war. While the first consul was making every month or week some new encroachment, or advancing some new claim—while he was every day departing, if not from the strict letter, from the spirit of the treaty of Amiens—he pretended to bind England to the strict observance of every article in that treaty which was against her, and insisted on the immediate evacuation of Malta, the Cape of Good Hope, and of every place she had agreed to restore.

The newly returned imperial parliament assembled as early as the 16th of November, when Mr. Abbot was unanimously re-elected speaker of the House of Commons. The speech from the throne seemed to intimate that the renewal of the war was at least probable, his majesty saying that, notwithstanding his sincere desire for peace, it was impossible for him to lose sight of that system of policy by which the interests of other states were connected with our own welfare, and

by which he was obliged not to be indifferent to any material change in the relative condition and strength of the European powers. Augmentations both of the navy and of the army were proposed by ministers a few days after the commencement of the session. On the 8th of December the secretary-at-war, Mr. Charles Yorke, rose to move the army estimates. He said he considered that the feelings of the nation at large had been distinctly manifested; that those feelings were, that we should preserve the peace we had made, so long as it could be preserved with honour; that we should overlook insignificant provocations, and that we should also abstain from aggression and from irritating language; but that, at the same time, we should always be ready to repel aggression, and to resent a great national insult. The military force of France at the commencement of the present year amounted to about 428,000 men, without counting national guards and the immense bodies of gendarmerie.

In the month of November a conspiracy against the king and government was discovered and announced in a manner calculated to give rather more alarm than the nature of the plot and the character of those engaged in it seem to have justified. It was headed by Colonel Edward Marcus Despard, an old soldier, who had once been distinguished by bravery and loyalty, but who had been driven into discontent and disaffection by not receiving the rewards to which he considered himself entitled through his services and abilities, and by the refusal or delay of government to liquidate some claims which he made upon it. He was a native of Ireland, and well connected in that country. On the 18th of November, two days after the meeting of parliament, Sir Richard Ford, a magistrate, issued a warrant for his apprehension, and a strong party of the London, Surrey, and Kent patrols proceeded to a low public-house in Oakley Street, Lambeth, nearly opposite the Asylum, where they found Colonel Despard and thirty-two other individuals, mechanics, day-labourers, and common soldiers, Irish, Scotch, and English, but chiefly Irish, who were all taken into custody, without making any attempt at resistance.

A.D. 1803.

On the 7th of February, Colonel Despard was brought to trial at the Surrey Sessions-house, Newington, before a special commission, of which the Lord Chief-justice of the King's Bench (Lord Ellenborough) was principal. With the single exception of Despard, all the individuals implicated were of the lowest order. The evidence produced left little doubt as to the existence of a plot of the wildest and most absurd kind. The first witness called for the defence was the gallant Nelson, who, in energetic language, bore honourable testimony to the

character of Despard: they had been, he said, on the Spanish main together in 1779; they had been together in the enemies' trenches, they had slept in the same tent; assuredly he was then a loyal man and a brave officer. General Sir Alured Clarke and Sir E. Nepean declared that they had always considered his loyalty as undoubted as his bravery. Despard declined saying anything in his own behalf. Lord Ellenborough summed up the evidence; the jury, after half-an-hour's deliberation, returned a verdict of guilty, but recommended the prisoner to mercy.

Two days after, on the 9th of February, twelve of the other prisoners were brought to the same bar. The jury returned a verdict of guilty against John Wood, Thomas Broughton, John Francis, William Lander, John Macnamara, and four others of the prisoners, but recommended three of them to mercy.

Notwithstanding the recommendation of the jury, the appeals of his wife, and other applications, the king in council judged it not advisable to extend the prerogative of mercy to Despard. It happened unfortunately that just at this moment the colonel's countrymen were again in a very turbulent state. The dissenters of the north of Ireland were plotting under the guidance of Mr. Russel, who, like Despard, had been an officer in the army, and had served with much distinction; the Roman Catholic peasantry in the south had very recently been in open insurrection, to fix the maximum price of potatoes, and to expel the strangers who had settled among them; and ever since the rumour of the exceeding great probability of the renewal of the war with France, much activity, and going and coming to and from the Continent, had been observed among the old club-men in Dublin. On the 21st of February, Colonel Despard; Macnamara, an Irishman, and a carpenter by trade; John Wood, a soldier; John Francis, a soldier and shoemaker; Broughton, a carpenter; Graham, a slater; and Wrattan, a shoemaker, were all executed.

On the 8th of March a message from his majesty to both Houses of Parliament was received by the country, and by all Europe, as the signal of the close approach of war. It stated that, as very considerable military preparations were carrying on in the ports of France and Holland, his majesty had judged it expedient to adopt additional measures of precaution for the security of his dominions. In the debates which took place in the lords on the proposed address in answer to this message, Lord Hobart (afterwards Earl of Buckinghamshire), secretary for the colonies, said that it was the earnest wish of ministers still to be able to prolong peace. Earl Spencer, who had been first lord of the admiralty under the late Pitt administration, said that he

had ever been a friend to vigorous measures; that he rejoiced to find ministers were at length sensible they had gone the full lengths of concession and negotiation, and were now determined to act a manly part; that there was no other chance of saving this country but by showing the first consul that we were not afraid of meeting France even though single-handed, and that, rather than suffer the smallest particle of the national honour to be tarnished, we were ready to recommence hostilities. The address was carried in the lords unanimously. In the commons Addington faintly repeated the hope that the continuance of peace might yet be found possible. Here, too, the address was voted unanimously.

The very day after this debate (on the 10th of March), another message was delivered expressing his majesty's intention of embodying and calling out the militia. On the 11th, the House of Commons having resolved itself into a committee of supply, ministers proposed to add 10,000 seamen to the 50,000 already voted. In the debates on this subject no small blame was thrown upon the Addington administration for having tried the experiment of peace, and several declarations were made that the existing administration was altogether incompetent to the carrying on of a vigorous war.

On the 6th of May, Lord Pelham communicated to the lords, and Mr. Addington to the commons, another message from his majesty, intimating that orders had been given to Lord Whitworth, our ambassador, to quit Paris immediately, unless he found a certainty of bringing the pending negotiations to a close against a certain period, and that General Andréossi, the French ambassador, had applied for a passport to be ready to quit London as soon as he should be informed of Lord Whitworth having quitted Paris. Ministers said that therefore an adjournment would be advisable for two or three days. Both houses adjourned till the Monday following. But it was not until the 16th of May, and after another adjournment, that all doubt and uncertainty were terminated by another royal message, which announced the recal of Lord Whitworth and the departure of Andréossi. In order to give time for producing the necessary papers, the consideration of the king's message was postponed for two days. But on the 17th, the day after the message was delivered, an order of council was published directing that reprisals be granted against the ships, goods, and subjects of the French republic; and a proclamation was issued for an embargo on all ships in the British ports belonging either to the French and Batavian republics, or to any countries occupied by French arms. The declaration of war was received in England with almost universal enthusiasm. Men

felt that the experiment of a peace had been tried and had failed; that an armed truce would be nearly as expensive as an active war, without the excitement and glory of warfare; that such a truce would enable Bonaparte to crush the spirit of national independence, to establish his dominion over the continent of Europe, and to build, with all the resources of the Continent, in treble fortified and inaccessible ports, a fleet which, in the course of a few years, might dispute with us the sovereignty of the seas.

This important subject was not fully taken into consideration until Monday, the 23d of May. In each house an address was moved, re-echoing the sentiments of the king's message and declaration. Some few doubts were expressed as to the justice or the expediency of commencing hostilities without some further attempt at negotiation; but in both houses the doubters were left in a most feeble minority.

At war with France, it was impossible to be at peace with Holland, which was now little more than a French province, and which still retained maritime resources too great to be despised. Lord Hawkesbury soon called the attention of the commons to another royal message relating to the ex-Stadtholder of Holland, our late ally, the Prince of Orange, who had been despoiled and left without a home, and who had no reliance except on the generosity of this country. His lordship then moved that the sum of £80,000, and a pension of £16,000 per annum, during the pleasure of his majesty, should be granted to the illustrious house of Orange. The grant passed without opposition.

On the following day, the 18th of June, another royal message acquainted parliament that, for the security and defence of the country, his majesty thought it necessary that a large additional force should be raised and assembled forthwith. On the 20th, in the commons, Mr. Yorke, the secretary-at-war, presented the plan of increase, which proposed to levy an army of reserve 50,000 strong—the men to be raised by ballot like the English militia, and their services during the war to extend to Great Britain, Ireland, and the Channel Islands. A bill to this effect was carried through both houses, not without opposition to some of its particulars, but without any division. Subsequently (on the 18th of July), Mr. Yorke moved for leave to bring in a bill enabling his majesty to raise a levy *en masse* in case of invasion. [At this moment the opposite coasts of France and Belgium were lined with troops, and the *Moniteur* and the *Brussels Gazette* were calculating how many weeks or days it would take Bonaparte to reach London.] This, he contended, was an ancient and indispensable prerogative of the crown, as was acknowledged in the laws of

the Anglo-Saxons, in the assize of Henry II. and statute of Henry III.; and the object of the present bill was only to facilitate the exercise of such prerogatives in case of need. The *levy en masse* bill was passed without dissent. Three days after this a message was delivered from his majesty, acquainting both houses that a spirit of insurrection had manifested itself in Ireland, and been marked by circumstances of peculiar atrocity in the city of Dublin. The corresponding address to the throne was carried at once and unanimously; and before another sun rose, two bills, one for trying rebels in Ireland by martial law, the other for suspending anew the habeas corpus act in Ireland, were hurried through all their stages and passed. Long before these debates were over the new Irish rebellion had extinguished itself in the bottomless pool of its own follies. But at Paris the movement had been well concerted: while the shores of England were threatened with invasion, Ireland was to be made the seat of civil war, and the Irish exiles and refugees had pledged themselves for the success of the insurrection, if Bonaparte would supply them with *only* money, arms, artillery, ships, and troops.

As early as the 13th of June, in bringing forward the budget, the chancellor of the exchequer had intimated his intention of reviving the income-tax as a necessary war-tax, and on the 5th of July he moved that the house should go into committee upon that subject. The new tax he chose to call a property-tax, although in substance it was little more a *property*-tax than the old one, only containing a clause by which, in cases of incomes from land or interest of money, no particular disclosure was to be required. The proportion now demanded was not, however, so large as formerly. Some abatements were also granted to various classes of persons; and the bill was read a third time, and passed on the 1st of August. Various other new taxes were also imposed. The total amount of supplies granted for the year was £41,363,192. The session was closed on the 12th of August by a speech from the throne. The king appeared in excellent health, and was enthusiastically cheered by immense multitudes on his way to and from parliament.

The war was inevitable before, but perhaps no single circumstance tended more to exasperate Bonaparte than the trial of Peltier, with the eloquent pleading of Sir James Mackintosh. Jean Joseph Peltier was a journalist and royalist refugee, and not in himself a very interesting or exalted person, having little literary merit, and being much more abusive than eloquent or witty. At the commencement of the revolution he edited a monarchic paper, entitled *Les Actes des Apôtres*, and wrote a great number of pamphlets. After the 10th of August, 1792, when the Bourbon

monarchy was rent to pieces, and "when our shores were covered as with the wreck of a great tempest," he fled to England, and availed himself most actively, and to an immense extent, of our liberty of the press. He began, after the peace of Amiens, to publish a new journal, called *L'Ambigu*, in which he lashed the first consul, his court and government. In the fourth number of this paper appeared a miserable ode on Bonaparte's revolution of the 18th Brumaire, fictitiously ascribed to Chenier, the republican poet. Peltier, or his ode, represented Bonaparte as Cæsar who had passed the Rubicon, as the tyrant who had left no liberty in France; and pictured the last of the Romans with an avenging poniard in their hands—and then descending from classicities, asked the warriors of France whether they were not ashamed of serving a Corsican, *un Corse*—and then, returning to the classical, recommended the Tarpeian rock, &c. At the same time Peltier gave vent to another thing in rhyme, called the "Prayer of a Dutch Patriot," wherein he spoke of Bonaparte's making and unmaking kings, of his making himself consul for life, &c., praying that the succession might soon be left open by his death, or that he might disappear like Romulus in a mysterious apotheosis. Instead of meeting these rhymes with contempt, Bonaparte fell into a transport of passion: he pretended that they were provocatives to his assassination and to the overthrow of his government. He instructed his ambassador at London to demand satisfaction from the British government. Our secretary for foreign affairs, Lord Hawkesbury, replied that in England the press was unshackled, that its excesses were punishable by law—that our courts were open to all—that the British court and the ministers themselves, often traduced and libelled, had no other resource—that he did not doubt but that an English jury would give the first consul satisfaction if he chose to proceed against Peltier. The first consul, who could not, or would not conceive that our government had not the same power over newspapers which he had over his *Moniteur*, and the same power to treat journalists as he had treated them by scores, and by hundreds, intimated that nothing less would satisfy him than the suppression of *L'Ambigu*, and the deportation of Peltier. There was assuredly, at this moment (in the summer of 1802), no want of a conciliatory tone on the part of our ministers. Lord Hawkesbury went so far as to say in a note to M. Otto, that it was "impossible that his majesty's government could peruse the articles in question without the greatest displeasure, and without an anxious desire that the person who published them should suffer the punishment he so justly deserved." Finding it beyond the reach of his might or persuasion

to make our government suppress *L'Ambigu*, and transport its editor, the first consul instructed his ambassador at London to urge that government to institute proceedings in our courts of law. His eagerness for vengeance on a poor refugee scribbler made him reject Addington's very sensible advice to treat this libel with contempt. He would fain have precipitated the trial, but he could not change the routine of our lawyers. At last, on the 21st of February, 1803, the trial came on in the Court of Queen's Bench, before Lord Chief-justice Ellenborough, and a special jury. The information had been filed by his majesty's attorney-general *ex-officio*, and stated "that peace existed between Napoleon Bonaparte and our lord the king; that M. J. J. Peltier, intending to destroy the friendship so existing, and to despoil the said Napoleon Bonaparte of his consular dignity, did devise, print, and publish in the French language to the tenor following," &c. The attorney-general conducted the prosecution. It was every way a happy choice by which Peltier selected for his counsel the able Mackintosh. The subject had much that was inspiring—the contrast of condition between the real prosecutor, the master of the greatest empire which the civilized world had yet seen, and the defendant, a poor outcast, was striking and dramatic; Mackintosh, in the prime vigour of his faculties, had exerted them all in praiseworthy preparation, and he was warmed in the delivery of his forensic oration by the presence of a crowded and enlightened audience. He called that English law-court his client's last asylum upon earth; he applauded the dignified conduct of ministers in refusing to violate the sacred hospitality due to an unfortunate stranger, who now appeared in that court as the only place in which his prosecutor and he could be upon equal terms; he flattered the honourable pride of the jury by saying for his client that the most refreshing prospect his eye could rest upon was a just, impartial, and fearless English jury—that he felt, with him, gratitude to the Ruler of empires that, after the wreck of everything else ancient and venerable in Europe—the wreck of all established forms and acknowledged principles, of all long-subsisting laws and sacred institutions—Englishmen were met there to-day administering justice after the manner of their forefathers; and by the express choice of the accused himself, the jury, instead of being half foreign, was wholly English. He represented this cause as the first of a series of contests with the freedom of the press which Bonaparte was determined to carry on in the only country where the press was free; and he called upon his countrymen to pause before the great earthquake swallowed up all the liberty that remained among men. Holland, Switzerland, and the imperial towns of Germany,

had once participated with us in the benefit of a free press. Holland and Switzerland were now no more, and near fifty of the free imperial towns had vanished since the commencement of this prosecution. Every press in Europe from Palermo to Hamburg was now enslaved: and here he electrified the court by exclaiming, "One asylum of free discussion is still inviolate! There is still one little spot where man can freely exercise his reason on the most important concerns of society—where he can boldly publish his judgment on the acts of the proudest and most powerful tyrants. The press of England is still free. It is guarded by the free constitution of our forefathers. It is guarded by the arms and hearts of Englishmen; and I trust I may venture to say, that if it be to fall it will fall only under the ruins of the British empire. It is an awful consideration. Every other monument of European liberty has perished. That ancient fabric, which has been gradually reared by the wisdom and virtue of our forefathers, still stands: it stands, thanks be to God! solid and entire; but it stands alone, and it stands amidst ruins."

The attorney-general (Spencer Perceval) replied, Lord Ellenborough summed up, and the jury returned a reluctant verdict of guilty. But before Peltier could be called up for judgment, the war was renewed, and he was let off scatheless. He had in the meantime published the report of the trial, with Mackintosh's defence at full length, as revised by the author. Numerous copies of it were smuggled into the Continent, and from one of these Necker's famed daughter, Madame de Stael, made a spirited translation into French, which ran throughout Europe like a Greek fire. It gave a better reason for the renewal of hostilities than any that our diplomatists put into their protocols; it showed to the civilized world the real stake for which England was fighting; it did more mischief to Bonaparte than he would have suffered from the defeat of an army or from the destruction of a fleet. It could not but fill him with rage and animosity. He, the master of Europe, had been bearded by a penniless pamphleteer, and an advocate whose fortune was all to make; and this could have been done in England alone. Again he poured forth rhapsodies against that accursed liberty of the press which allowed little men to meddle with great, and against that British constitution which sanctioned such excesses, or prevented their being punished with arbitrary transportation, or captivity. The *Moniteur* became more abusive than ever: from this moment war was declared in the first consul's heart—from this moment the secret encouragement he had given, since the peace, to the Irish refugees and malcontents, became an open and barefaced protection.

CHAPTER II.—CIVIL AND MILITARY HISTORY.—A.D. 1803—1804.

GEORGE III.

Necessity of conquests to Bonaparte—His rage at the speech of George III. in parliament announcing war with France—His interview on the occasion with Lord Whitworth, the British ambassador—English tourists in France detained as prisoners of war—Hanover occupied by a French army—Hamburg and Bremen abandoned to France—Naples occupied by the troops of Bonaparte—Bonaparte encourages the Irish to revolt—Emmett's conspiracy—Its outbreak and desperate proceedings—Its defeat and dispersion—Apprehension, trial, and execution of Emmett—Possession of the Channel by the English fleets—War in India—M. Perron, the French adventurer—Dissolution of the Mahratta confederacy by the victories of Lake and Wellesley—Early career of Wellesley in India—Renewed malady of George III.—His recovery—Resignation of the Addington ministry—Return of Pitt to office—Progress of Wilberforce's motion for the abolition of slavery—Parliamentary grant of supplies—Naval encounter of a French squadron with a fleet of Indianmen—Capture of four Spanish frigates laden with treasure by the British—Spain declares war against Britain—Bonaparte's apprehensions of royalist conspiracies—Arrest of Moreau—Irregular arrest of the Prince of Condé—His execution—Unpopularity of the deed—Remonstrances against it by the Russian government—Bonaparte's irritating manner—Suspicious death of Pichegru in prison—Capture of Captain Wright off the French coast—His imprisonment and mysterious death—Banishment of Moreau—Bonaparte proclaimed Emperor of the French—He again addresses a letter to George III. desiring peace—His violations of the rights of neutrality—Reconciliation of Pitt with the Addington administration.

If there be one historical fact clearer than another, it is that Bonaparte was resolved on renewing the war with Great Britain. His one predominant idea was, that his existence depended on an extension of his conquests. "My power," he would say, "depends on my glory, and my glory on my victories. My power would fall if I did not support it by fresh glory and new victories. Conquest has made me what I am, and conquest alone can maintain me. A newly-born government, like mine, must dazzle and astonish. When it ceases to do that, it falls!" If he had wished to prolong the truce of Amiens for a season, it was only because he wished to be the more fully prepared for war, and to be enabled to work out some of his great projects in the interval.

On receipt of the speech with which King George had opened the session of parliament, the first consul gave way to a paroxysm of rage; and his passion was not moderated by the reception of the debates in both houses which followed the opening speech. Talleyrand, who never was in a passion in his life, conferred with our ambassador. He declared the astonishment of his master at the king's message, and at the very unfriendly debates, and asked what was the meaning of those violent attacks of the English press against the government and person of the first consul? Lord Whitworth went over the old ground, saying that whatever was published in the English papers might be considered as a national retaliation for what was published in the French papers; that in France these attacks

were published *officially*, which was by no means the case in England; and that, although the French government possessed a control over the press in France, the English government neither had nor could have such a control in their country. "But at least," rejoined Talleyrand, "your government can execute the treaty of Amiens, and evacuate Malta!" Lord Whitworth replied that that evacuation was now connected with other circumstances, and with other clauses of the treaty which had been infringed by France. A few days after this the two diplomatists had another conference. Lord Whitworth recapitulated all the principles on which the treaty of Amiens was founded, and the right which arose from those principles of interference on the part of Great Britain, for the purpose of obtaining satisfaction or compensation for any essential differences which might have arisen in the relative situation of the two countries. He instanced the cases, beginning with Italy and concluding with Switzerland, in which the territory or influence of France had been greatly extended subsequently to the treaty of Amiens.

In spite of the advice of his most able minister for foreign affairs, who thought little of his master's diplomacy except when expressed by 100,000 bayonets, and who feared that the passionate part of his temperament would carry him into some indiscretions, Bonaparte determined to confer personally with the British ambassador; and Talleyrand had scarcely left him ere his lordship was informed that the first consul wished to converse with him at the Tuileries at nine o'clock that night. It has been conjectured, and it may

indeed be assumed as a certain fact, that this irregular and unseemly obtrusion into the department of Talleyrand proceeded from a design to shake the resolution of the British ambassador, and to astound or terrify him by a display of rude violence, which had succeeded with the Austrian diplomatist at Campo Formio. But Britain had not been humbled and crushed like

(CHARLES MAURICE DE TALLEYRAND — After a portrait by Gerard

Austria, and Lord Whitworth was not Count Cobentzel. Perceiving that his menaces did not disturb the equanimity of Lord Whitworth, the first consul altered his tone. If the British government and he could only agree and act together, what might they not do? Look at the natural force of the two countries—France with an army of 480,000 men, and England with a fleet which made her the mistress of the seas, and which he thought he should not be able to equal in less than ten years. Two such countries, by a proper understanding, might govern the world, as their strifes might overturn it. If England could only come to this understanding, there was nothing that he would not do to gratify her. Participation in indemnities, as well as in influence on the Continent, treaties of commerce, in short everything that could testify friendship, he would give to her. As little moved by this as by his threats, Whitworth, when allowed to speak, calmly said that the king, his master, had no wish to participate in the conquest and spoils of the Continent, had no ambition to acquire more territory, but only to preserve what he had. Bonaparte had said in public as well as in private, and to the ambassadors of foreign powers as well as to his own subjects, that England was unequal to a single-handed contest with France; and he gave Lord Whitworth to understand that, with-

out allies, we could never touch him. To this his lordship replied, that if his Britannic majesty was so desirous of peace, it must not be imputed to the difficulty of obtaining allies. Lord Whitworth was as patient as he was firm; he did not give up negotiating until it was altogether hopeless; he rebuked with calm dignity the intemperance of the first consul, who offered him a public insult at the levée in the Tuileries on the 13th of March; he did not take his departure until the 12th of May, and then he left behind him, in the hands of Mr. Talbot, the secretary of embassy, who was to remain at Paris a few days longer, the project of a convention which England would take as the basis of a definitive and amicable arrangement. What Bonaparte did after his lordship's departure was to order that Mr. Talbot should be detained as a prisoner of war.

Notwithstanding the time which had been gained by Bonaparte, the order of council for granting reprisals and letters of marque, and the proclamation for an embargo, which were issued two days after Lord Whitworth's return, led to the immediate detention or capture of about 200 French and Dutch vessels. To retaliate for this customary procedure, the first consul had recourse to a most novel and unprecedented outrage: by a decree, dated the 22d of May, he ordered that all the English, of whatsoever condition, found on the territory of France, should be detained prisoners of war, on the pretence that many of them belonged to the militia. Nothing could exceed the harshness with which this order was executed in Paris, where there was still a vast number of travellers, many of whom were merely passing through that capital on their way homeward from Italy, Switzerland, and other countries—whole families were seized together, as if the wives and daughters of the English aristocracy and gentry were militia officers. These sweeping arrests were not confined to the English that were actually on the territory of France; they were extended to Italy and every neighbouring country where the French had an armed force, or where they could intimidate and give the law. As no distinction had been made as to sex, so none was made as to condition, profession, or pursuits. Clergymen, a venerable Indian judge (Sir Elijah Impey), men of letters or science, artists, all were captured. What made this odious seizure still more odious, was the fact that on the eve of its taking place, Bonaparte made a renegade Englishman, whom he retained in his service to write a newspaper in the English language, insert in the columns of his journal that the English travellers on the Continent, in France, Belgium, Holland, or Italy, had nothing to fear; that their persons would be guaranteed under the protection of a government which pro-

tected the laws of nations even while England was violating them. About 10,000 British subjects of nearly every class and condition remained in Bonaparte's clutches.

Before the English government began to seize the French and Dutch ships, a French army was collected on the frontiers of Holland to pounce upon the comparatively defenceless hereditary dominions of the King of England; and, as soon as the declaration of war was issued, General Mortier advanced into the heart of the electorate. The Duke of Cambridge, who was residing at Hanover, seeing that resistance was altogether hopeless, and that most of the larger towns were determined to treat with the French general, entered into a negotiation at the end of May, and engaged to surrender the territory upon condition that his army should be permitted to retire unbroken behind the Elbe, with the pledge on their part that they would not again serve in the field against the French during this war. Deputies from the principal towns treated separately with Mortier, and agreed to conditions of surrender and submission on the 3d of June. The English ministers advised the king not to ratify the treaty which his son had made. Upon this, Mortier, who had entered and taken possession of the city of Hanover on the 5th of June, called upon the Hanoverian army to surrender; or abide the consequences of an attack by overwhelming forces behind the Elbe. The Duke of Cambridge had quitted the country, but Count Walmoden, the commander-in-chief of that small but fine army, was compelled to agree to a convention on the 5th of July, and to dismount his cavalry, surrender his arms, and disband and dismiss the whole army. More than 500 pieces of artillery, a large quantity of ammunition and timber, and an immense number of horses, fit to remount Bonaparte's ill-conditioned cavalry, fell into the hands of Mortier, who, besides, levied military contributions in the country. Being in the immediate neighbourhood of the rich commercial Hanse-towns of Hamburg and Bremen, he levied considerable sums of money upon them also, without the least regard to their independence and neutrality; and other sums, very important to the first consul, whose finances were in an embarrassed condition, were raised among the Jews and other capitalists of those Hanse-towns, by way of loan. What was still worse as regarded England, the French, by their occupation of Hanover, were enabled to close the navigation of the rivers Elbe and Weser, and to prevent British merchant vessels from going up either to Hamburg or to Bremen. As the neighbouring German states made no attempt to prevent the conquest or occupation of Hanover, a country which, though the hereditary possession of the

King of Great Britain, was still an integral part of the German empire, with indefeasible claims to the protection of the whole Germanic League, and as the English were prevented from ascending the rivers, it was determined that neither German nor any other ships should descend them or enter them; and the mouths of the Elbe and the Weser were soon strictly blockaded by British squadrons. With their trade thus completely cut off, with the French armies in their close neighbourhood, perpetually threatening them with military violence and exaction, the two great Hanse-towns were reduced to a deplorable situation. In the extremity of their distress they called upon the King of Prussia as guarantee and protector of the neutrality of the north of Germany; but the shuffling and selfish court of Berlin, whose self-seeking was to end in self-destruction, had entered into the views of Bonaparte, in the hope and expectation of annexing Hanover to Prussia; and, accordingly, that cabinet refused to interfere, thus virtually abandoning not only Hamburg and Bremen, with their industrious and lately thriving dependencies, but all the smaller states of the north of Germany to the rapacity and lawlessness of the French invaders.

Nor was it only in the north of Europe that the first consul had matured his means of attack before the declaration of war, and that he now made that attack with a contempt for other treaties, which were affected by neither the observance nor the breach of the peace of Amiens. His Sicilian majesty was no party to the treaty of Amiens; the integrity of his dominions and the withdrawal from them of all French troops whatsoever, were stipulated for in a previous and separate treaty with the French government, and had been paid for, in various ways, at an enormous expense. But the court of Naples was the old friend and ally of Great Britain; the country, ravaged and despoiled by successive revolutions and invasions as it had been, was still rich; its ports on the Mediterranean and on the Adriatic offered admirable points of departure for expeditions to various countries which Bonaparte coveted: from Brindisi, near the mouth of the Adriatic, to Corfu and the other Ionian islands, of which he had determined to possess himself, was but a few hours' sail; and for these and other special and weighty reasons, besides the plan of excluding British commerce from the Continent, he poured his troops once more into the devoted kingdom of Naples.

But it was nearer at home that the consequences of Bonaparte's manœuvres and preparations during the peace were most shamefully exhibited, or most seriously felt by England. So soon as the mask began to fall off, he called to

Paris all the fugitive or disaffected Irish on the Continent; he re-organized the Irish Brigade, giving it the name of the Irish Legion; and by means of his so-called commercial agents, and of Irish clubbists in Dublin, Cork, and other towns, he carried on that active correspondence to which we have already alluded, and matured the plots for an insurrection, which at one time he confidently hoped would extend to an universal civil war. One of his most active emissaries was one Quigley, or O'Quigley, who had been outlawed in 1798, and who since that period had resided in France. This man came over secretly, and apparently with a well-filled purse. He perambulated Kildare, his native county, proselytizing and making converts with cash and whisky. But, far above Quigley, and the real head of the conspiracy, was Mr. Robert Emmett, the son of Dr. Emmett, the court or castle physician of Dublin, whose recent death had put him in possession of £2000 or £3000 (a sum he proposed to employ in the subversion of the British government), and brother to that Emmett who had been mercifully let off with banishment for the overt acts of treason he had committed in 1798. This young man (he was only in his twenty-second or twenty-third year) had gone crazy with a revolutionary and republican enthusiasm, and had neither been cured nor made more moderate by that wretched exhibition, the termination of republicanism in France. As he spent his money freely, he proselytized with some effect in Dublin; but it cannot be said that his proselytes were of a very elevated condition: the chief and very highest of them were one Dowdall, who, before the union, had held some inferior office about the Irish House of Commons; one Redmond, who called himself a merchant, and who appears to have been little more than a huckster; and one Allen, a bankrupt woollen-manufacturer. While Emmett worked in Dublin and its neighbourhood, an individual of more mature age, and who laboured under the influences of a different or a more complicated insanity—religious enthusiasm being, in his case, mixed with the political—preached and laboured at Belfast, and in other towns of the north of Ireland. This was Thomas Russel, an old half-pay officer in the king's service, who had fought against the Americans at Bunker's Hill, and who, since his retirement, had overturned a weak brain by the study of polemical divinity, and the attempt to understand and apply the prophecies of the Old Testament and the mysteries of the Apocalypse. Other chiefs of less name or note were scattered over Ireland; and material assistance was expected from one Dwyer, a fellow of infinite cunning and activity, who had been "out" in the rebellion of 1798, and who, at the head of a formidable band

of outlaws, had maintained himself ever since among the almost inaccessible fastnesses of the Wicklow mountains. Dwyer was ready for anything, and believed to be fit for everything: his lawless band, and the semi-barbarous Wicklow peasantry, over whom he exercised a wide control or influence, were fully prepared to commit every atrocity. It appears to have been fully proved that Emmett made overtures to this Dwyer—to this leader of a ferocious horde; but it is not quite so certain that the devout Russel corresponded with him. They determined to begin with seizing the arsenals and the castle of Dublin. Various circumstances pointed out the 23d of July as the best day of all the year for beginning; it fell this year on a Saturday, when the working people of the capital received their wages and got drunk, and when the ordinary resort of country-people to the market would, by itself, cover and let pass a somewhat extraordinary meeting. Towards evening on the appointed 23d of July the rabble of Dublin and the peasantry began to collect in vast numbers in St. James's Street and its neighbourhood. The castle was within a mile, and the barracks, containing 2000 or 3000 soldiers, were within half-a-mile of the spot; but not a soldier, not an officer either civil or military, made his appearance. About dusk the concerted signal that all was ready was given by some men who were mounted on horseback, and who rode furiously through the principal streets of the capital. A Mr. Clarke, an opulent manufacturer, made a bold attempt to reason with the furious mob, and, finding his efforts ineffectual, he galloped to the castle and warned the lord-lieutenant. As he was returning, a blunderbuss was fired at him, and he fell desperately, though not mortally wounded. This was the first blood that was shed, but it was soon followed by more. Just as Clarke fell, some of the insurgents fired a small cannon, and sent up a sky-rocket; and immediately after this signal, Emmett sallied forth from his dépôt, at the head of his central committee, and drawing his sword, incited the mob to action. They all rushed along the street as if intending to attack the castle. Before they got to the end of the street, Colonel Brown, a meritorious officer, who was hastening to his post, was deliberately shot dead by a blunderbuss. Disgusted at these and other cold-blooded murders, at the savage cries that were raised for vengeance and plunder, at the backwardness of his rabble-rout to press on to the castle or to any point where they were likely to meet the soldiery, and at their alacrity in breaking open houses and calling for whisky, Emmett and his staff, after some fruitless attempts to manage and direct the foul hurricane they had raised, disappeared from the scene, and stole out

of the town. Emmett's mob-generalship scarcely lasted half an hour. The head of the advancing column never approached the castle nearer than Francis Street, which is distant about half a mile. Unfortunately, Lord Kilwarden, the Lord Chief-justice of Ireland, passed in the rear of the mob, fleeing in his carriage by another line of streets towards the castle. This judge had been attorney-general at the time of the last rebellion. The ruffians wheeled round and presently fell upon him. He was accompanied in the same carriage by his daughter and a nephew. They were all three dragged out of the coach; the savages spared the lady, but they murdered her aged father and her cousin before her eyes. But by this time some of the troops were under arms and ready to march. When about 150 men, headed by two subaltern officers, reached the top of Francis Street, the disordered rabble, many thousands strong, set up a scream of terror, and all that were sober enough to run, ran off at the top of their speed. But many fell and were made prisoners, and a party of fifty soldiers, who had got into the rear of the fleeing column, fired upon it as it passed. A lane strewn with pikes pointed out the way to Emmett's dépôt, wherein were found a large quantity of ball-cartridges, hand-grenades, gunpowder, more pikes, some military uniforms, and a proclamation, wet from the press, of persons styling themselves "The provisional government," and containing a sketch of the constitution they had proposed giving to the "Hibernian republic." A hot pursuit was instantly commenced after these legislators, who showed as much folly or fatuity, when fleeing for their lives, as they had displayed in all the rest of the business. Emmett and his friends reached the Wicklow mountains, but only to find that they were shunned like men that had the plague, and that none would raise a finger for them, or give them food and a hiding-place. Quitting his companions, Emmett returned to Dublin, but only to be tracked by the police, to be seized and committed to the prison which was already crowded by the miserable wretches he had armed. Dowdall and Allen escaped out of the island, but Redmond was arrested at one of the ports as he was about to take his passage for America. In the meanwhile Russel had utterly failed in his attempts at a rising in the north; and, after issuing a proclamation, in which he styled himself the General of the Northern District, he had disappeared. After the arrest of Emmett, Russel stole into Dublin; two or three days after his arrival he was discovered and seized. He was sent for trial to that northern district of which he had intended to be the revolutionary general. Emmett was put upon his trial for high treason on the 19th of September,

VOL. IV.

in Dublin, the scene of his mad pranks, where there were too many witnesses to speak to his overt acts, and too universal an indignation at the sanguinary result of them, to allow any, the remotest chance of his escaping the gallows and the block. He died with much courage or composure, declaring himself a member of the Church of England. The undoubted Protestantism of him, of Russel, and others, totally disqualified them from heading a popular insurrection in Ireland. Redmond (one of the central committee) and two working men (one of whom confessed to the murder of Colonel Brown) were tried and executed in the same town. Russel was tried at Carrickfergus on the 20th of October. He quoted the prophecies and the Apocalypse, pleaded that his religious conscience had compelled him to endeavour to overthrow the existing government, and gave ample indications of a disordered mind; but he was nevertheless executed at Downpatrick. Some short time after these executions O'Quigley and Stafford were apprehended in the county of Galway; but government, who displayed throughout this unhappy affair an uncommon degree of leniency, were satisfied with the examples which had been made; and the lives of these two chiefs, and of a host of inferior and untried prisoners, were spared on their making a full disclosure of all the circumstances of their treason.

Ireland was safe, and England could not be invaded, for her fleets swept the Channel and the French coast in all its extent, blockading the principal ports, and occasionally bombarding a sea-port town or two. Ships and gun-boats were gallantly cut out of Havre, St. Valery, and many other ports and roadsteads; the batteries that protected the town of Dieppe were knocked to pieces; many vessels, both national and mercantile, were burned on the stocks, and the important town of Granville was bombarded and burned under the eyes of Bonaparte's generals, and almost in his own presence. With nearly 600 ships of war at sea, England, besides holding the Channel, and defending her own coasts, could despatch fleets and squadrons to every quarter of the globe, and prosecute extensive schemes of conquest.

We now return to Indian affairs, which, since the death of Tippoo Sultan, had not only been important in themselves, but on account of the master-spirit whom they were training for his splendid European career. Upon the fall of Seringapatam, in which Colonel Arthur Wellesley had borne a distinguished part, that rising officer was left in command of the city, and the part of the Mysore territory which had come under British rule and protection; and here he displayed those talents, both civil and military, which were afterwards so conspicuous in the peninsula. In the first of these, indeed, he was so remarkable

that the secret of wherein his chief excellence lay was still unknown, and even his own brother, the Earl of Mornington, Governor-general of India, was wont at this time to say of him, "I believe Arthur's great strength to be rather in the civil than the military line." This was soon to be tested, for in 1800 the colonel was called by circumstances into the field, with an independent military command. A daring adventurer named Dhoondia Waugh, a man of Patan or Mahratta origin, had, like many Indian adventurers, commenced a career of his own, sometimes as captain of a troop of hunted banditti, sometimes as the leader of an army, according to the fluctuations of his shifting fortunes, during a ten years' career; and although repeatedly defeated and driven into obscurity, he had always managed to re-appear, and become more formidable than ever. He had now suddenly emerged from the Mahratta country at the head of 5000 horse into the frontier of Mysore, which he threatened to break through and overrun, while the pompous title he had assumed of "King of the Two Worlds" announced the greatness of his ambition, as well as the dangerous nature of his purposes. A few successes, or even a short delay, might have rallied ten times the number of followers to his standard, and enabled him to establish a sovereignty as formidable as that of Hyder Ali or Tippoo Saib. As his hostility to the British power in India also had been openly announced, it was necessary that this daring adventurer should be arrested in his course, and Wellesley was sent against him for the purpose. With his characteristic decision the colonel crossed the Toombudra river into the Mahratta territories, at the risk of offending the Peishwa, or the court of Poonah, who were unable to expel Dhoondia, but might have resented the British entrance on their soil, as an infringement of former treaties. But, on the contrary, this decisive step was welcomed as a promise of deliverance from a dangerous rebel and oppressor. After following the doublings of his light-heeled adversary, who seemed always at hand although never visible, defeating several detachments of his army, and storming the hill-forts he had garrisoned, Wellesley crossed the Mulpoorba, and entered the Nizam's territory, where he at length brought Dhoondia Waugh to a stand at a place called Conahgul. The King of the Two Worlds, who was deficient neither in skill nor courage, drew up his army, which was chiefly cavalry, in a favourable situation, having his left flank and rear covered by the village and rock of Conahgul. But the four regiments of British and native troops advanced boldly to the attack, and to equalize the length of his line with that of the enemy, Colonel Wellesley had recourse to the

bold expedient of forming his regiments and charging in *one* line. The enemy were routed after a brief resistance, and chased for many miles across the country; their elephants, camels, baggage, and plunder fell into the hands of the conquerors; and the body of the King of the Two Worlds, who had fallen in the action, was placed on the carriage of a galloper-gun, and on this bier transported to his followers for interment. In this long campaign and chase, which lasted from the end of June till the 10th of September, Wellesley on every occasion had shown that courage, sagacity, and foresight by which, in after years, he anticipated every emergency, and allowed himself to be neither beaten nor surprised, as well as that promptness of decision which enabled him to profit by the blunders of his adversaries, and convert even untoward circumstances into the means of unexpected success.

The hostility to the British power in India, which had ceased for a short interval after the capture of Seringapatam, was now to blaze out afresh in the Mahratta confederacy, that threatened to become still more formidable than the opposition of Tippoo and his more able father. The most dangerous and influential of these chiefs was Scindia, who had in his service M. Perron, an able French adventurer, who twenty years earlier had arrived as a petty officer in the fleet of Suffrein, but had been raised to the rank of general by Scindia, whose forces he had brought by European discipline to a state of efficiency seldom found in Indian armies. To him also was intrusted by Scindia the keeping of that unfortunate prisoner, Shah Alum, the Mogul emperor, in 1793. Scindia, however, had a rival in Holkar, another powerful Mahratta chief; and between the two there had subsisted a struggle for the mastery, by which the country was thrown into anarchy, and rent by civil wars and dissensions. But besides the able services of Perron and his disciplined troops, Scindia had a decided advantage in the Peishwa of Poonah, the sovereign of the Mahrattas, over whom he exercised the influence of a *maire de palais*, and whose name he used as a tower of strength for the purposes of his own ambition. This state of things continued until 1802, when Holkar, watching his advantage, suddenly crossed the Nerbudda, entered Poonah with a strong force of cavalry, defeated the troops of Scindia and the Peishwa, and placed one of his own kinsmen upon the musnud at Poonah. The deposed sovereign of the Mahrattas fled to the British for protection, who saw at once their interest in adopting his cause. By enforcing his authority they could break the power of the rival chiefs, dislodge the dangerous French influence that might be revived by Perron and his countrymen, and estab-

lish a general sovereignty over the discordant Mahratta tribes who recognized no law but that of their own chieftains. A treaty was signed on the 21st of December, 1802, by which the Company agreed to restore the Peishwa to his throne; and for this purpose an expedition was to be directed in the first instance against Holkar, who ruled at Poonah, through his creature and kinsman the new sovereign. This portion of the combined movement against the dangerous Mahratta confederacy was happily intrusted to Colonel, now Major-general Wellesley; and as these events had for some time been anticipated, the order found him ready for instant action. He commenced a rapid march for Poonah on the 9th of March, 1803, crossing the rivers in wicker boats, and advancing with celerity upon the Mahratta capital; but on his approach to it, he learned that Amrut Rao, who held it, had resolved to set fire to the city, rather than yield it to the English. This brought Wellesley to a stand, but only for a moment: he opened a feigned negotiation with Amrut, and having thrown the barbarian off his guard, he reached Poonah by a rapid night march of his cavalry, and saved the city, by a sudden capture, from the destruction that hung over it. Amrut Rao fled, and on the 13th of May the Peishwa re entered his capital, and was once more established on his throne.

As so many rival chiefs had to be opposed or conciliated, General Wellesley, who had been intrusted with full power to direct all the political as well as military affairs of the British within that territory, commenced by friendly overtures to the powerful Scindia; but as that chief rejected every proposal of peace or alliance, war was declared against him on the 6th of August, and Wellesley commenced his march from Poonah. It was only by striking down this formidable potentate with a prompt and decisive blow that the Mahratta chiefs were to be prevented from combining against the British as their common enemy. His first operation was against the town and fort of Ahmednuggur, strongly garrisoned for Scindia, which he took by escalade. He then crossed the Godavery river, being eager to bring Scindia to action; but this the wary chief endeavoured to avoid through his great superiority in cavalry. In this way the British army might have been exhausted by marches and counter-marches, or destroyed in detail by skirmishes, had not Wellesley inclosed his enemy by dexterous combinations within a range that was every day becoming more circumscribed. Finding that the favourite modes of Indian warfare were unavailing, and being reinforced by sixteen battalions of infantry commanded by French officers, and a large train of artillery, Scindia now resolved to hazard an en-

gagement, and for this purpose stationed his army, nearly 50,000 strong, upon the banks of the river Kaitna, near the village of Assaye. The position was well chosen. The banks were steep and rugged, the river almost impassable, and the whole force which Wellesley mustered did not exceed 4500 men, of whom only 1700 were British. But he resolved to become the assailant, and his soldiers followed him with that confidence of success which even already his career had inspired. He crossed the river by a ford, and leaving his Mysore and other irregular cavalry to keep the Mahratta horse in check, he advanced upon the village of Assaye, where their infantry was posted. As he advanced in three lines, of which the two first were infantry and the third of horse, the enemy opened a heavy cannonade upon them, and quickly formed a new line to meet the unexpected nature of the attack, its right resting on the river, and its left on the village of Assaye and the Juah stream that flows in a direction parallel with the Kaitna. But Wellesley still kept what he had at first secured—a conflict that was to be confined to the left wing of the Mahrattas, while their powerful cavalry was thrown out of action. As their artillery was of great weight, the sound of the British guns in reply was almost inaudible: a rapid advance was necessary, as the assailants had no other chance against such a cannonade that riddled their ranks and dismounted their small field-pieces; and Wellesley ordered his troops to leave their cannon behind, and close upon the enemy with the bayonet. It was then that the advantage was transferred from the Mahrattas to the British: the artillery of the former was carried, and their ranks wavered under the close, steady charge of man to man. Once more and for a moment the fortune of the day seemed to shift; a body of the Mahratta infantry rallied; their cannoneers, who had thrown themselves upon the ground as if dead, and allowed the charge to pass over them, started to their feet, and turned their guns upon the rear of Wellington's sepoy, who had entered too hastily into a pursuit of the fugitives; while the Mahratta cavalry, that had been hovering in the distance, were now advancing to the aid of their foot. But a gallant and decisive charge, made by Lieutenant-colonel Maxwell with the British cavalry upon this portion of the battle, sufficed to scatter the body that had rallied and silence the unexpected fire of the guns, as well as keep the Mahratta horse at a wary distance. The main charge against the village of Assaye was led by Wellesley in person at the head of the 78th British infantry, and it was here that the tug of conflict was at the hottest, so that he had two horses killed under him, while most of his staff

officers had in like manner been dismounted. It was not until the darkness of night had closed that the battle was ended, and the disciplined Mahratta infantry put to the rout. The stoutness of their resistance was attested by the British loss, which amounted to nearly a third of those who had entered into action; but on the other hand, the Mahrattas had sustained a defeat by which the prestige of their high military reputation was broken, and their confidence abated. Such was the far-famed victory of Assaye, obtained on the 23d of September, 1803, a victory from which the commencement of its great hero's military renown is usually dated, and in consequence of which he obtained in after years from his illustrious rival the spiteful title of the "Sepoy general."

Scindia had now recourse to negotiation, and in the beginning of November a truce was granted him, on condition that he should remove his forces into the territory of the Rajah of Berar, and there remain strictly neutral. But far from maintaining this neutrality, he was only preparing for a new war; and at his instigation the rajah took the field against the British, his own forces being strengthened by Scindia's cavalry and a large body of Persian auxiliaries whom the rajah had taken into pay. To break this formidable combination, Wellesley set his troops once more in motion, and on the 29th of November came up with the enemy encamped near the village of Argaum. The march of the British had been under a burning sun, by which they were exhausted; the greater part of the day was spent and the darkness of night was at hand; but every hour of delay was dangerous with such an army drawn up before them. Under such circumstances the battle of Argaum was commenced, fought, and won. On the advance of the British, a heavy cannonade was unexpectedly opened upon them from behind some trees where the enemy had masked their artillery, and dismayed by the fire, the native infantry in the British service began to take to flight. But they were speedily rallied and brought back to the charge before their fear had become contagious. The first brunt of onset upon the British was made by the Persian mercenaries, who, mounted on their fiery chargers, came down like a whirlwind upon the 74th and 78th regiments, in full confidence to sweep them off the field; but as well might they have assailed the solid rocks, and in the close rolling fire of these regiments the whole of that gallant band of eastern chivalry was destroyed. At the same time Scindia's cavalry made a fierce onset upon the British left, and charged a battalion of native infantry in the Company's service, but scarcely with better fortune than their Persian allies, for they too were

routed with great slaughter. Dismayed by the utter defeat of their horse, the Mahratta infantry did not await the charge, but broke and fled in confusion, and were pursued for several hours by moonlight, until darkness saved them from total destruction, leaving in the hands of the victors thirty-eight pieces of cannon and all their ammunition, with many elephants and camels, and great store of baggage. The Rajah of Berar, after this ruinous defeat, was glad to sue for peace, and conclude it upon the terms offered by General Wellesley, which were—that he should cede the province of Cuttack and the district of Balasore to the Company, and dismiss the European officers who were in his service. The example of the rajah was followed by Scindia himself, whose army had been defeated in another quarter by General Lake; and he obtained peace upon the severe terms of surrendering to the Company the rich provinces between the Jumna and the Ganges called the Doab, several extensive districts beyond the Ganges, and a part of his maritime territory in Gujerat. He also agreed to respect the treaty which the Company had established with the Peishwa, and recognize the right of the latter to the territories of which the Company had put him in possession; and should any difference afterwards occur between him and the Peishwa, to submit it to the arbitration and decision of the Company. Rapid as was the campaign and important its results, the toils, dangers, and difficulties were such as have seldom been crowded into a whole year of the most active and eventful European warfare. But these can only be fully understood and appreciated by a careful study of the history of our empire in India, and a copious narrative of the actions of Wellington in that quarter. The service of a few days only is thus modestly detailed by himself, in a letter to one of his brothers shortly after the battle of Argaum:—"The operations of this war have afforded numerous instances of improvement in our means of communication, of obtaining intelligence, and, above all, of movement. Marches such as I have made in this war were never known or thought of before. In the last eight days of the month of October, I marched above 120 miles, and passed through two ghauts with heavy guns and all the equipments of the troops, and this without injury to the efficiency of the army; and in the few days previous to this battle, when I had determined to go into Berar, I never moved less than between seventeen and twenty miles, and I marched twenty-six miles on the day on which it was fought." It was not to be wondered at if Wellington, after the lapse of many years, was wont to speak of this campaign as the most laborious service in which he had ever been engaged. From the narrative it is evident, that in

India he had been in training for the wars of Spain and Portugal; and that after he had been annealed in such a furnace, he was well fitted for the future trials of the Peninsula.

We must here retrace our steps, to notice a very important part of this campaign which was conducted by another great and successful British commander. The expedition of Wellesley into Poonah was but part of a combined movement for the purpose of breaking up the confederacy of the Mahratta chiefs; and while he was employed in restoring the Peishwa to his throne, General Lake marched from Cawnpore on the 7th of August, 1803, with an army of 10,500 men, in the direction of Delhi, the ancient capital of India. The chief parts of his commission were, to deliver the Mogul from captivity, and break the power of Scindia by detaching M. Perron from his service. It was thought by the Governor-general of India, that the French adventurer might be bought over, and Lake was commissioned to make large offers to that effect; but Perron instead of waiting to be purchased, advanced to encounter the British commander at the head of 15,000 cavalry, and took post near the strong fortress of Alighur. Here he was attacked by General Lake at the head of his cavalry in two lines, supported by his infantry, upon which the Frenchman's troops retired without abiding the onset. Lake then took possession of Cael, and afterwards stormed the fortress of Alighur, in which Perron had his collection of military stores. This loss, with the desertion of many of his soldiers and the discontent of his French officers, made Perron resume the negotiations which had been interrupted; and three days after the capture of his fortress he applied to General Lake, stating that he had quitted the service of Scindia, and requesting permission to pass with his family, his effects, and the officers in his suite, through the Company's territories to Lucknow. He alleged as his reason for this desertion, that he was superseded in office by the government of France, who had already sent out a successor to displace him; and that he was weary of the ingratitude of his own officers, and the hopelessness of any resistance he could offer to the British dominion in India. These offers were gladly accepted, for as long as he remained he was considered, from his abilities, courage, and resources, to be the chief strength of the Mahratta confederacy, and a head around which French influence might be rallied for a fresh attempt to recover its possessions in India. It has also been supposed that he yielded at last to the tempting offers which he had originally rejected, and was enabled to retire to Lucknow with a large sum in specie, and considerable drafts upon the treasury at Calcutta.

Having got rid of such a formidable obstacle,

Lake continued his march, and on the 11th of September encamped near the Jehna Nullah, within six miles of Delhi. But here he was brought to a stand, by the intelligence that the

GENERAL LORD LAKE — From print in Military Chronicle, 1812

efficient, well-trained army of Perron, 19,000 strong, under the command of Louis Bourquien, another French officer, had crossed the Jumna from Delhi under cover of night, and was advancing for the defence of the capital. The tidings were instantly followed by the apparition of the whole army drawn up in order for battle, with their flanks completely guarded by swamps, so that they could only be approached in front, while an attack which they made upon the British outposts, was the challenge and certain prelude to a decisive encounter. Although the forces of Lake only amounted to 4500 men, and although they were weary with a long march during a hot sultry day, he could not decline the invitation. His first object was to tempt the enemy from their strong position. For this purpose he threw out his cavalry in front to skirmish, ordering them to retire after enduring the first cannonade, leaving an opening for his infantry to advance; and this manœuvre they executed with admirable precision. Deceived by this appearance of a flight, the Indians rushed out from their strong position, but in their headlong advance suddenly found themselves confronted by the British infantry, who sent them reeling backward by a heavy volley of musketry followed by a charge of the bayonet. They fell back upon their artillery, which they endeavoured to bring into play; but before they could effect their purpose another close volley was discharged among them, followed by another bayonet charge under which they were driven from their cannon, while the light flying

artillery and troops of horse, with which they were charged in rapid succession and with deadly effect, deprived them of all power of rallying: they wavered, turned, and fled in such confusion, that whole masses of the fugitives were driven headlong into the Jumna. From 300 to 400 of the British army fell in this engagement, but ten times the number of the enemy lay stretched by their side. But the completeness of this victory was more signally attested by the moral effects that followed. On the following morning, Louis Bourquien and four of his French officers surrendered themselves to the British as prisoners of war, and two days after (the 16th of September), General Lake entered the palace of Delhi, and was welcomed by the Mogul, whom his success had set free. But never perhaps since the days of King Lear had fallen royalty exhibited a more pitiable spectacle than that which was presented in the person of Shah Alum. The representative of Timour and those mighty sovereigns whose grandeur had become a world-wide proverb, and whose wealth and power exceeded the wildest fictions of eastern romance, was an old, decrepid man, worn out with years of captivity, insult, and oppression: one of his eyes had been wantonly blinded with the point of his own dagger, and now, when restored to his throne, he could receive his champion and deliverer under nothing better than a tattered canopy, and with such fragments of his former state as had been too worthless to tempt the spoilers who held him in durance. He had nothing to give but titles, and these he bestowed freely, so that the modest unpretending British general was now by patent royal, "The Saviour of the State," "The Hero of the Land," "The Lord of the Age," and "The Victorious in War."

Eight days after his entrance into Delhi, Lake was obliged to continue his march to Agra, which he reached on the 4th of October. This city was strongly garrisoned by seven battalions of the enemy encamped on the outside of the fort, who occupied the town and chief mosque. The ravines were quickly crossed, and the garrison, who had rejected the first summons to surrender, now craved for a cessation of hostilities; but during the negotiation they opened a treacherous fire upon the British, which compelled a renewal of the siege. Breaching batteries were formed, and on the 17th the garrison surrendered. But even while thus employed, the formidable resources of Scindia were employed for the recovery of Delhi from the British; and seventeen of his battalions, more perfect in discipline than any native army that India had yet sent against the conquerors, and from 4000 to 5000 horse had arrived upon the north-west frontier of Oude, to renew the campaign already all but ended, and

wrest the conquests of Lake from his grasp. On the 27th of October he left Agra to reach this new enemy, marching through roads which the rains had rendered almost impassable. On the 1st of November he reached the enemy, who were advantageously posted with their right upon a stream, their left on the village of Laswarree, and their front defended by seventy-two pieces of cannon. But as yet Lake had only his cavalry with him, having left the infantry to follow as it best might, for speed was of the utmost importance. He commenced operations with a charge of his foremost brigade, that cut its way through the left of the Mahrattas; but when it reached the village of Laswarree, it was met by such a heavy fire of cannon and musketry, that Lake found it necessary to recal it. Other similar charges of the different brigades in various quarters were resisted and repelled in like manner, when, fortunately, his infantry and artillery, which had made a rapid march of twenty-five miles in less than eight hours, began to make their appearance in the distance. This unexpected coming was as cheering to the British cavalry as it was dispiriting to the Mahrattas; they offered to surrender upon certain terms, to which Lake was willing to agree; but as symptoms of delay or insincerity were manifested, he allowed them only an hour to deliberate and decide. No answer being returned at the end of the hour, the battle commenced in earnest. The 76th regiment was first brought to the charge; but as it advanced to close with the enemy, it was encountered by such a heavy fire, that a battalion and five companies of sepoys were brought up by Lake to reinforce them, and the whole party went holdly onward against the shower of canister-shot that thinned their ranks, and the charges of cavalry that all but broke through them. But the Mahratta horse were driven back and routed by the 29th dragoons, who were let loose upon them; the whole British army that had now come up, was brought to the charge; and the conflict was a close bayonet encounter, in which the enemy, notwithstanding their gallant resistance, were driven back step by step, while their own artillery was captured and turned against them. Their resistance only occasioned their total ruin, for when they attempted to escape by flight it was too late. Seven thousand lay dead on the field, 2000 were taken prisoners by the British, and of the seventeen Mahratta battalions that had entered into action none survived, except those fugitives who concealed themselves among the bazaar people, or outstripped the pursuit by the superior fleetness of their horses. As for General Lake, who in this as in the previous engagement had headed the charges both of cavalry and infantry,

he was repeatedly exposed to imminent personal danger, while two horses were shot under him, and his son who attended him as aide-de-camp was wounded at his side. His victory, so gallantly won and so important in its results, possessed the additional advantage that it was cheaply purchased, for the loss of his own army was only 172 killed and 652 wounded; and it was the more distinguished in the annals of military heroism from the fact, that his soldiers had previously been long under arms, and that they had just accomplished a march of more than sixty-five miles in forty-eight hours.

While Wellesley and Lake had thus been conducting the campaign in different parts of the country, but for the same general object, the operations against the Mahrattas were not exclusively confined to these two successful expeditions. Simultaneously with them, two upon a lesser scale had been directed by the provident forecast of the governor-general, to distract the attention and divide the resources of the enemy. and were signalized by the same results. But of these subsidiary attempts we can only afford a passing notice. One was into Bundelcund with a division of the Bengal army under Colonel Powel, who overran the province, and re-established the authority of the Company over it, after taking its principal forts, especially Fort Calpee and Gwalior, and gaining a victory over the Mahratta chieftains in the neighbourhood of Capsah. The other was into the province of Cuttack, and was conducted by Colonel Harcourt with a division of the Madras army, which had been stationed in the Northern Circars. Harcourt, after driving the Mahrattas before him, entered the city of Cuttack and besieged its fort, which besides being strongly fortified, was inaccessible except by a narrow bridge over a very wide ditch; but in three weeks the fort was taken by storm, and the resistance of the province was at an end with its capture. But even subsidiary to these minor expeditions, and dependent upon them, were two movements, necessary to be made for the completion of this most complex and yet most successful of widely-extended and far-reaching campaigns, which were as prosperously conducted as the rest: these were by a detachment from the force of Colonel Powel after the capture of Gwalior, against the dispersed bands of Mahrattas between Bundelcund, Berar, and Cuttack—and another detachment from the army of Colonel Harcourt to take possession of the chain of mountains which separates Cuttack from Berar, and of a defile by which the only entrance can be made from the one province to the other. Never, even in the wars of Napoleon, was there a military plan of operation combining such a variety of movements directed to one great end;

and never, perhaps, was any of even his wonderful plans so successful in all and each of its details. Not one failed, and the glory of the master-spirit who had planned it in his cabinet at Calcutta was equally shared by those agents who realized it. It had lasted only four months, but had extended over nearly the whole continent of India. Four great battles and eight important sieges, in which the British arms were invariably successful, had crowned that short period; and the armies of the Mahrattas, composing in all 250,000 men, with 40,000 more who were of still greater account as they had been disciplined by French officers, and were equal in strength, spirit, and efficiency to European soldiers, had been so effectually routed wherever they made a stand, that their relics could now be only collected for a guerilla resistance. Of the trophies of these fights, besides vast stores of ammunition and treasure, there were above 1000 pieces of cannon. By the downfall of Scindia alone the power of the Mahrattas was broken, and the war which afterwards was waged with his rival Holkar stripped of the formidable character it might otherwise have borne, and brought to an equally successful termination.

While such was the great addition of glory and military prestige conferred by these triumphs, the immediate political consequences, in the establishment of our rule over India, were of the most substantial character. The signal successes of the year 1803 gave to the British empire other advantages besides the acquisition of the Mahratta dominions between the Jumna and the Ganges: they secured, by the possession of Delhi, Agra, and Calpee, the mastery and free navigation of the Jumna, with an important tract of country along the right bank of that river; they gave us the greater part of the rich province of Bundelcund, the whole of Cuttack in Orissa, and the best part of the territory in Gujerat, with valuable ports which were before accessible to the French, thereby securing the navigation along that immense coast, from the mouths of the Ganges to the mouth of the Indus; and furthermore, they gave to the Company a stronger frontier in the Deccan, and to our allies, the Nizam and the Peishwa, an important accession of strength.

A.D. 1804. Parliament had scarcely re-assembled after the Christmas recess ere it was known that the king was suffering under an attack of his old malady. On the 14th of February it was publicly announced, by an official bulletin issued at the palace of St. James's, that his majesty was much indisposed; and a succession of similar notices, notwithstanding the customary obscurity of the language, left little doubt as to the serious nature of the com-

plaint. The intelligence carried grief, not altogether unmixed with dismay, throughout the country, for, to the great bulk of the people, George III. was still the "good old king;" his popularity had increased with his years and his misfortunes, and with the costly exertions made in this war; and, from the popular faith in his high English spirit, in his fortitude and decision, it was felt that he was in a manner necessary to the defence and safety of the country, which was still threatened with invasion, and could see from her own coasts the mighty preparations that Bonaparte continued to make. The dismay was the greater from the very general conviction that the Addington administration was inadequate to the crisis. Perhaps a similar conviction in the king's own mind had mainly contributed to his present attack. He had hitherto clung to Addington, not because he considered his spirit and abilities comparable with those of Pitt, but because he knew him to be averse to the granting of that Catholic emancipation which always alarmed his own conscience, and presented itself to his excited mind as a monstrous concession, which would be equally perilous to the temporal and spiritual welfare of his line and of his country. To these state and religious anxieties were added numerous inquietudes of a domestic nature, and other uneasinesses—in which, however, despondency as to the spirit and resources of the country, or fear of the French legions that were collected on the opposite side of the Channel, most assuredly had no place. There was not a man in Great Britain more insensible of fear than George III., or that looked with a more constant assurance to the triumph of his countrymen, if an invading force should, by some unforeseen chance, be enabled to land, and to the eventual and not distant downfall of Napoleon Bonaparte. His religious convictions, which were even stronger than his patriotic sentiments, ever kept uppermost in his mind the belief that a system which had arisen out of atheism and immorality, and which had been established by violence and injustice, must soon fall and disappear. But his other anxieties were numerous and acute; and perhaps none of them affected him more than the unhappy separation of his eldest son and his niece and daughter-in-law the Princess of Wales, attended, as it was, with perennial scandals and perpetual public comment.

On the 27th of February, twelve days after the first public notification of the king's illness, a bulletin appeared announcing that his majesty was much better, and on the 14th of March the lord-chancellor declared that "the king was in such a state as to warrant the lords commissioners in giving the royal assent to several bills." On the 9th and 10th of May, and again on the

11th of May, the day before Pitt's re-appointment as premier, his majesty showed himself to the inhabitants of the metropolis, driving through the principal streets of London and Westminster, accompanied by the queen and the princesses. If he could derive comfort and consolation from the loud and hearty congratulations of the people, materials for it were not wanting. The eyes of his daughters were seen streaming with happy tears.

It was now reported that Pitt, Fox, and the Grenvilles had coalesced. Pitt assured his confidential friends that he was resolved never to hamper himself in that way, and, in effect, with neither Fox nor Grenville did Pitt think of allying himself. With Fox such an engagement was impossible; and Pitt well knew that, except in the last extremity, the king would never again admit Fox into the cabinet. At the same time it was evident that the Addington ministry could not stand. The Easter recess suspended for a short time the rising strife of parties: but when parliament met again on the 5th of April, things at once assumed a most hostile aspect. The way in which the defences of the country had been provided for, and the navy managed, were severely criticized; and in these criticisms Pitt, as well as Windham, joined. Some fruitless attempts were made to induce Pitt, the Grenvilles, and the men who had already assumed to themselves the title of "all the talents," to serve under Addington. On the 12th of May it was publicly announced that Addington had resigned, and that Pitt had been appointed to succeed him. Of the Addington ministry Pitt retained the Duke of Portland, president of the council; Lord Eldon, chancellor; the Earl of Westmoreland, lord privy-seal; the Earl of Chatham (his own brother), master-general of the ordnance; and Lord Castlereagh, now president of the board of control. He brought in with him Lords Melville, Harrowby, and Camden; Melville taking the post of first lord of the admiralty, in lieu of Lord Hawkesbury, and Camden that of secretary for the colonies, in lieu of Lord Hobart. He made Lord Mulgrave chancellor of the duchy of Lancaster, with a seat in the cabinet, instead of Lord Pelham. But Mr. Canning, the ablest and most eloquent of all his adherents, was left to the inferior situation of treasurer of the navy, which had been occupied by Tierney, and which did not give a seat in the cabinet. The government of Ireland was left unchanged under the lord-lieutenancy of Lord Hardwicke. On the whole, a majority of the late cabinet ministers were retained, and formed a majority also of the present administration.

At the time when Pitt returned to office any the shortest interruption to the activity of the

executive might have proved very fatal to the country; and at the same time any prolonged exciting discussion might have reduced the king to a worse state than that he had so recently been in. Patriotism, therefore, as well as common humanity, might well prevent Pitt from urging any stipulations in favour of the Catholics, or from bargaining with the king for that Catholic emancipation, the refusal of which he had assigned as the cause of his resignation in 1801. The Grenvilles, who knew that no strong ministry could be made *without* Pitt, were determined to prove that no strong ministry could be made *without them*; and they now joined their ill-humour with the party vehemence of Fox.

On the 30th of May, Wilberforce, who had been labouring in his vocation session after session, and without making any material progress for a good many years past—that is, in parliament, for in the country he had obtained many converts—moved for the appointment of a committee to consider the propriety of introducing a bill for the abolition of the slave-trade, after a time to be limited. Addington considered that it would be utterly impracticable to carry into execution any bill founded upon such views as Wilberforce had adopted, and therefore opposed the motion. But both Pitt and Fox voted for Wilberforce; and upon a division the motion was carried by seventy-five against forty-nine. A bill framed for the abolition was brought into the house, and was read a second time, on the 7th of June, after a long discussion. Wilberforce's majority was now much increased, the number voting for the second reading being 100 against 42. Through the pressure of other business, and the lateness of the season, the bill, after the motion for its being committed had been carried by seventy-nine against twenty, was postponed to the next session.

But little other business of any importance was transacted in parliament during the short remainder of this session. The budget had been discussed before Pitt's reinstatement. The total supplies granted were—for the navy £12,350,606—for the army £12,993,625—for the militia and fencible corps £8,159,114—for the ordnance £3,737,091—for miscellaneous services £4,217,295—for *extra* miscellaneous services (relating solely to Ireland) £2,500,000—for discharging arrears and debts on the civil list £591,742—for an additional yearly sum, out of the consolidated fund, for the better support of his majesty's household, £80,000—or a grand whole of £53,608,574! To raise this money recourse was had to new taxes and duties, to loans and annuities, and to three lotteries. The king was well enough to go down to the House of Lords and prorogue parliament in person on the 31st of July.

VOL. IV

The coasts of France, both on the Mediterranean and on the ocean, were again insulted and disturbed by British fleets and squadrons, while, in the more remote seas, other colonies belonging to her or to her dependency, the Batavian republic, were rapidly captured.

The French admiral Linois, who had reached Pondicherry, and who had been enabled to escape from that roadstead, finding he could do no good to M. Perron in the Mahratta war, hoped to do some mischief to the English by picking up a few of their stray Indiamen. He had captured several of these ships, and had plundered the English factory at Bencoolen, when, on the 15th of February, he fell in with a rich fleet of East Indiamen and country ships that were coming from China, and on the point of entering the Straits of Malacca. As Linois had with him a ship of the line, three frigates, and a brig, and as our merchant vessels had no men-of-war to convoy them, he made quite sure of an easy swoop and of an immense prize. But by this time the Company's ships were generally armed and well officered; and Captain (afterwards, by grace of this action, Sir N.) Dance, who was acting as commodore to the fleet of traders, was both an able and a brave sailor. Dance, finding that the enemy were proposing to cut off his rear, made the signal to tack and bear down on them, and engage in succession. This manœuvre was executed by three of the Indiamen; and the rest stood towards Linois under a press of sail. The French then formed in very close line, and opened their fire on Dance's headmost ships, which did not return it until they got to closer quarters. After a smart action of forty minutes, and before half of the Indiamen could come up and engage, the enemy stood away to the eastward, under all the sail they could carry. Dance pursued Linois until four P.M.; when, considering the immense property at stake, and fearing that a longer pursuit would carry him too far from the mouth of the Straits of Malacca, the gallant commodore of this well-conducted merchant fleet made the signal to tack; and, the signal being well obeyed, by eight in the evening they all anchored safely in a situation to enter the strait the next morning. Nothing more was seen of Linois, who, according to his own account, had run away through fear of being surrounded.

In declaring war against France, the British government had included Holland, but had not included Spain, which country, although not actually occupied by French arms, was almost as much under French influence and dictation as was the so-styled Batavian republic. Intelligence having been received in London that an armament was fitting out in the Spanish port of Ferrol, that a considerable Spanish force was already collected

and

there, and that French troops were expected to join them, the admiralty immediately despatched a squadron to cruise off Cadiz, to intercept and capture four Spanish frigates known to be bound to that port from Monte Video, with an immense quantity of specie on board. The commodore of this squadron was Captain Graham Moore, the amiable and gallant brother of General Sir John Moore; he carried his flag in the *Indefatigable*, forty-four gun frigate, and was accompanied only by three other lighter frigates. On the 5th of October the four British frigates discovered, near Cape Santa Maria, the four expected Spanish frigates, which were under the command of Don José Bustamente, and which were carrying all sail to get into Cadiz Bay, now so near at hand. A lieutenant, sent to demand them to surrender, having returned with an unsatisfactory answer, an action began. In a few minutes one of the Spanish frigates, the *Mercedes*, blew up, and only her second captain and about forty of her crew were saved. The rest of the Spaniards successively and soon struck their flags. The value of the cargoes captured netted very little short of £1,000,000 sterling; and this was considered as so much kept from the exchequer of Bonaparte. A deep domestic tragedy cast an additional cloud over this very questionable proceeding. Captain Alvear had embarked in the *Mercedes*, carrying with him his wife, four daughters, and five grown-up sons, and a fortune estimated at about £30,000 sterling, the gradual savings of thirty years' toil in South America. Not many minutes before the battle began, Alvear and his eldest son went on board the Spanish admiral's frigate, and from its deck they witnessed the awful explosion of the *Mercedes*, with the destruction not only of their fortune, but of all who were dearest to them. The British government restored to Captain Alvear, out of the proceeds of the three cargoes, the £30,000 which he had lost, but they could not bid the ocean restore its dead. Those who concurred in the expediency doubted the right of detaining these ships; and even those who defended the legality of the act could not help casting severe censure on the English admiralty for not having sent—instead of a force very little more than equal to that of the Spaniards—such a formidable force as would have allowed Bustamente to submit at once, without an appeal to arms, and without an impeachment of his honour. The transaction created a great stir at Madrid, where a party decidedly hostile to Bonaparte had previously been forming and gathering some strength. On the 27th of November, an order was issued to make reprisals on English property; and on the 12th of December the King of Spain put forth his formal declaration of war against Great Britain.

Bonaparte knew he had converted nearly all the leaders of the republican party, by arguments addressed to their own interest and aggrandizement; he saw daily the men who had made republican constitutions and declarations of the rights of man, and manifestoes of liberty and equality, and forms of oaths against all monarchic government, taking his pay, cringing at his feet, and writing his praise; but he felt that there were still some fanatics whom he could neither buy nor reach; and now and then, notwithstanding the slavery in which he held the press, a republican article would appear, and produce, in some of the corners and by-places of France, an impression and a sympathy which seemed to prove that the spirit of Jacobinism was not altogether extinct. Hence the journals were placed under still greater restrictions. The nocturnal arrests, and the mysterious deportations to lonely fortresses on the remote sea-coasts, or among the Jura Mountains, the Pyrenees, and the Alps, had continued to increase all through the year 1803; but the consular reign of terror, as it is called, was principally confined to the period which intervened between the month of October of that year and the month of April, 1804.

The only man in France that Bonaparte feared singly was Moreau, whose military reputation was second only to his own, who was warmly beloved by the soldiers who had served under him, and who had frankly shown a decided aversion to the despotic system of government which the first consul was so rapidly building up. With Moreau once in his clutches, or with materials and charges wherewith to discredit him in the eyes of the soldiery and the people, he calculated that the throne he was erecting would be firm and safe. His secret police well knew these not secret thoughts, and they acted conformably. The republican hero of Hohenlinden was accused of conspiring with General Pichegru, Georges-Cadoudal, the two Polignacs, and other royalists; and he was arrested on the 15th of February. Many other arrests took place at the same time, and some of the prisoners were threatened with, if not actually subjected to torture, in order to extract confessions from them, or to induce them to confess whatsoever the secret police might wish. Some of these victims had been lured to Paris by the very agents of the police who now gave a false character to their proceedings and intentions. But even evidence thus extracted failed to make out any present case of plot or conspiracy.

Monsieur, or Louis XVIII., was out of Bonaparte's reach, and living under the Emperor of Russia's protection at Warsaw; his brother the Count d'Artois, his nephew the Duke de Berri,

and the other princes of his family, were safe in London, unless that invasion could be achieved of which there seemed no present probability. But, close on the French frontiers, and within the grasp of a night-marching corps of gendarmes-à-cheval, was a young Bourbon prince, and the bravest and most interesting, if not the best living member of that somewhat degenerate race. Louis-Antoine-Henri de Bourbon, Duke d'Enghien, who was born at Chantilly, in August, 1772, was the son of the Duke of Bourbon and grandson of the Prince of Condé; being a lateral branch of the then reigning family of France. He had served under his grandfather in the emigrant army that fought in the Netherlands and on the Rhine against the Jacobin republicans, and had displayed not only a high and romantic personal courage, but a degree of military knowledge and ability which made the royalists consider him a worthy descendant of the Condés—the favourite heroes of France until the revolution broke out. Gay, light-hearted, witty, gallant, and not over-scrupulous in pursuit of pleasure, he had all the qualities which the French most admired, and which constituted the *beau seigneur*, or fine gentleman, in the olden times. At the peace of Luneville, in 1801, the emigrant corps being completely disbanded, the Duke d'Enghien fixed his residence at Ettenheim, a château on the German side of the Rhine, a few miles from that river, and in the territories of the Margrave of Baden. This choice of a residence was influenced by an attachment between him and the Princess Charlotte de Rohan, who resided at Ettenheim with her near relative the Cardinal de Rohan. "That unfortunate prince," says Bourrienne, who only pretends to relate what he knew on the very best authority, "was at Ettenheim in consequence of a love affair, and had no communication whatever with those who had been concocting a plot in the interior of France." Between love, hunting in the Black Forest, and cultivating with his own hands a small flower-garden, he passed his whole time. But, as there was the closest connection between the two Polignacs, De Rivière, and others, and the French princes in England, who could not be reached, Bonaparte decided that D'Enghien, who could be reached, was in the plot also, and that his life must be sacrificed, if not to his security, to his vengeance. By one of those orders that flew like lightning from Paris to all the extremities of France, the officer commanding at Strasburg was enjoined to send some troops across the Rhine, by night, and seize the duke in his château; and Caulaincourt, one of Bonaparte's aides-de-camp, and soon afterwards called Duke of Vicenza, was sent by his master to the Rhine to superintend the operation. Caulaincourt gave

the *delicate* commission to Colonel Ordenner, commandant of the gendarmerie-à-cheval, who, on the night of the 14th of March, crossed the river with some squadrons of gendarmes and other cavalry, entered the territory of Baden as though it had been a French province, and advancing at the charging-pace, soon surrounded the château of Ettenheim.

The duke was roused from his midnight slumber by the tramp of horses' feet and the rattling of arms; he was forthwith seized, put into a carriage, and whirled off towards Paris. Iron chains were put upon the prince's arms, and the carriage which conveyed him stopped only to change horses and mounted escorts of gendarmes. They scarcely allowed him time or opportunity to procure any refreshment. At the dusk of the evening, on the 20th of March, the carriage stopped at the gloomy old fortress of Vincennes. That same night he was brought before a military tribunal which had been named by Murat and Bonaparte himself, and which dispensed with witnesses or any kind of evidence; and on the following morning before daylight he was led down to the ditch of the castle to be put to death by some of Savary's gendarmes. The prince asked for the attendance of a confessor. "Would you die like a priest?" was the brutal reply to the request. He cut off a lock of his hair, and gave it with a miniature, and a gold ring, to an officer, imploring him to cause it to be delivered to the Princess de Rohan; and then, presenting his breast to the soldiers, he exclaimed, "I die for my king and for France." The men fired at the close distance of ten paces, and, as they fired, the duke rushed towards the muzzles of their pieces, and fell dead at their feet.

Whatever may have been the sensation produced in Paris or in the rest of France by this atrocious affair, it is certain that the kidnapping and murder of the Duke d'Enghien excited an indignant feeling in all the rest of Europe, and produced immediate demonstrations unfavourable to Bonaparte in all the courts that were strong enough, or remote enough, to hazard the expression of their opinion. The court of St. Petersburg ordered a public mourning for the death of the unfortunate prince, and remonstrated with his real assassin, the first consul; and the Emperor Alexander, as mediator and guarantee of the continental peace, notified to the states of the Germanic empire that he considered the violation of the territory of Baden, and the seizure of the Duke d'Enghien, as an overt attack on the security and independence of that empire. Going farther than this, the young czar sent in a note to the diet assembled at Ratisbon, complaining of this violation and criminal transgression of the law and rights of nations, and reminding the

diet that he had pledged himself, together with the first consul of France, to protect the rights and insure the tranquillity of the minor states of the Germanic confederation. The King of Sweden also remonstrated, and sent his note to the Germanic diet, as a party interested through the possessions which he held in the empire, and as an ancient guarantee of the independence of that league. Bonaparte, whose pride could never bear reproach or interference, and who knew or suspected that Russia, some time before this, had listened to English proposals for a new coalition, made Talleyrand write a most insolent and outrageous note to the Russian ambassador. He asked why, when the Elector of Baden and the other German princes were silent [their silence proceeded from their weakness and their fears], Russia presumed to intermeddle in a matter that was wholly German? Whence came that strange pretension of Russia to mix audaciously in what did not concern her? When the Emperor Paul, the ally of France, and the father of the Emperor Alexander, fell under the blows of assassins, *sold to England*, had France advanced the political right of examining that mysterious iniquity? This language might insure, at no distant period, a war with Russia, but it was not calculated to remove the evil impression which had been made. This war indeed was almost a certainty before; but the kidnapping and the murder of the Bourbon prince, and the recriminations cast in the teeth of the young czar (who, in the *Moniteur* and other French publications, was directly accused of being the assassin of his own insane father), hastened the declaration of hostilities, and gave a keener edge to the Russian enmity.

Just fifteen days after the execution of the Bourbon prince at Vincennes, General Pichegru—with whom, as with Georges, the Polignacs, and others, the prince ought to have been confronted—was found dead in his cell in the Temple, where he had been lying ever since the 27th of February, subject to the frequent visits and interrogatories of Réal and other familiars of the police. No threats, no promises could induce Pichegru to injure any man by his answers, or to effect the great object in view—that of implicating General Moreau in the royalist conspiracy. He threatened, on the contrary, to tear to pieces the flimsy web which had been thrown round Moreau; to speak out on his public trial; to unfold the odious means by which he and his companions had been entrapped into the conspiracy by Bonaparte's police; and to reveal what he knew of the first consul's own correspondence with the Bourbons. To proceed publicly against two such successful generals as Pichegru and Moreau at one and the same time,

might, perchance, prove too severe a trial of the temper of the army. It was calculated, too, that, if Pichegru were but dead, it might be insinuated that it was only his death which removed the proof of Moreau's complicity. Réal had been heard muttering as he came from his cell, "What a man this Pichegru is! There is no moving him." On the 5th of April, this counsellor of state and manager of police, this creature of Fouché, had a long secret interview with the general, and it was on the next morning that Pichegru was found strangled on his bed, with a black cravat tightened round his neck, by means of a stick which acted as a tourniquet. Six obscure surgeons, named by the criminal tribunal, were called in to examine the body, and sign a report that Pichegru had committed suicide.

The world was still aghast at the fate of Pichegru, when another and a more bloody catastrophe was brought to light from the same state-prison. Captain John Wesley Wright was becalmed on the morning of the 8th of May, close by the mouth of the river Morbihan, on the coast of France, and was carried by the ebb-tide close upon the rocks. Whilst his crew were sweeping with all their strength to get clear of the coast, seventeen armed vessels were rowed out from the Morbihan, consisting of six brigs, six luggers, and five smaller gun-vessels. Wright's craft was only an 18-gun brig-sloop, and his crew consisted of fifty-one effective men and twenty-four boys; yet he gallantly fought, within grape and hailing distance, the whole French flotilla for nearly two hours, and did not strike his colours until his ship was a mere wreck—until twelve of his men were wounded and two killed, and he himself wounded in the groin. Laurent-Tourneur, the French commanding officer to whom Wright struck, told him that he had nobly sustained the honour of his flag, and the high reputation of his country's navy; that the French loved and esteemed the brave, and that he and his crew would be treated with all possible kindness. This was the natural impulse, and no doubt the intention or wish of the brave French officer; but there were very different feelings and intentions entertained at Paris. The first consul was informed that Wright's vessel had been recognized as the same which had landed Pichegru; and that Wright had been a lieutenant on board Sir Sidney Smith's ship the *Tigre*, and had distinguished himself under Sir Sidney in the defence of Acre. Orders were immediately transmitted to the coast to interrogate the captured English crew *separately*, that is secretly, and by the police; and, when nothing could be got from the English sailors to throw any light on the Pichegru conspiracy, Captain Wright was brought up to Paris, thrown into the Temple, not

as a prisoner of war, but as a state-prisoner, and there confined *au secret*. What followed could be precisely known only to those familiars who possessed the secrets of that prison-house. Even the date of the unhappy man's final catastrophe is not known; for Bonaparte himself declared that his death had been concealed for some considerable time—the motive of that concealment no doubt being an anxiety to avoid a too close juxtaposition with the death of Pichegru in the same accursed place. Bonaparte also allowed that, to extort confessions, the surgeon of Wright's ship was threatened with immediate death; and this is nothing less than a species of torture. He also declared that his grand object was to secure the principals, and to extract a full disclosure of all he suspected Wright to know; and that he considered the English captain's evidence of the utmost consequence. These avowals have tended to confirm the belief, which was very generally entertained at the time, and which indeed seemed unavoidable, that Wright was barbarously treated in his close confinement—perhaps that his body, as well as mind, had been subjected to actual torture—and that, to get rid of the evidence his maimed or injured frame would present, recourse was had to another midnight assassination. Captain Wright was once, and only once, seen in public, after his arrival at the Temple. This was on the 2d of June, when he refused to answer any interrogatories, declaring that, as a prisoner of war, as a British officer, he considered himself amenable only to his own government. We know not how long after this Wright lived, but it was a considerable time ere it was announced in the *Moniteur* that he had been found one morning in his cell with his throat cut from ear to ear; and that this was another very clear case of suicide. But again a great majority of the world, not certainly excepting that of Paris, concluded it was another clear case of assassination. And, in fact, the probabilities of Wright's having destroyed himself were still less than the small probabilities in Pichegru's case.

After many vain attempts to effect a compromise with Moreau, and after the functions of the jury had been suspended, a mock state-trial commenced, the republican general being arraigned with the two Polignacs and the rest of those royalists. Nearly every form of justice was outraged, and nothing was or could be proved against Moreau. But the brave Georges-Cadoudal and twelve associates were guillotined, and Moreau was banished from France. His house and bit of ground were bought by the government, and an officer of Savary's *gendarmes d'élite* conducted the man universally esteemed the best general, next to Bonaparte, through France and

Spain to Cadiz, where he embarked with his wife and family for the United States.

These were but a few of the means by which Bonaparte paved his way to the imperial throne. For some time past preconceived addresses had been pouring in from the departments, and the opinion had been industriously circulated in Paris, that nothing but an hereditary monarchy could save France. Certain *ci-devant* Jacobins noisily took the lead, and the tribunate and the senate joined chorus in singing or shouting "Long live the Emperor!" "Long live hereditary monarchy!" "Let us proclaim Napoleon Emperor of the French!" And, after a few forms had been gone through, he was so proclaimed on the 19th of May.

In the month of July he left Paris to visit the camp at Boulogne, and the so-called army of England. Some of the Paris gossips were quite certain that he was now really going to carry into execution his long-threatened invasion, and would soon be back with King George and William Pitt, with all the royal family, and the worst of the English aristocracy, prisoners in his train. But nothing took place at Boulogne beyond a distribution of the crosses of the Legion of Honour, the swearing-in of the troops to the new absolute order of government, and a splendid review near the shore of the Channel—that Channel whose broad rough waters were studded with British ships of the line, and proud frigates which told the enthroned soldier that he was not to pass it. The poor, defenceless old pope was dragged from Rome to Paris in the inclement month of November; and on the 2d of December, he assisted at the coronation of the Emperor and the Empress Josephine.

Shortly after his coronation, Bonaparte addressed another letter to George III. personally, under the title of "Sir, and Brother." The professed object of this epistle, which was very different from its real object, was to prove that France and England ought to be at peace; and that he, the emperor, was weary of war. The King of England's answer was returned in a diplomatic note, addressed by Lord Mulgrave, our secretary of state for foreign affairs, to Talleyrand, who continued to fill that office in France. Bonaparte's string of truisms was met with the general declaration that there was no object which his Britannic majesty had more at heart than to avail himself of the first opportunity to procure the advantages of a peace founded on bases not incompatible with the permanent security and essential interests of his dominions; but that he was persuaded that this end could only be attained by arrangements which might at the same time provide for the future safety and tranquillity of Europe.

The rights of neutral states and the law of nations had been most flagrantly violated, in numerous instances, in the summer and autumn of 1804. Two or three of these cases will serve to show in what temper the British government must have received the new emperor's insidious letter. Ever since the rupture of the peace of Amiens, Bonaparte had been complaining that the British ambassadors, envoys, and other diplomatic agents resident at the different courts and states of Europe, were only on the Continent to create him enemies among his neighbours, and to encourage and promote insurrections and conspiracies in the interior of France. Even after his own intimate conviction that the Duke d'Enghien was in no plot at all, and was not a man capable of entertaining for an instant any notion of leaguering himself with assassins, he gave out that the unfortunate prince had been so leagued, and that sundry English diplomatists were leagued with him, having urged the prince to rush into the foul conspiracy, and having furnished him with money for the purpose. It is quite certain that our diplomatists were not on the Continent to make friends for this overbearing foe of their country and of Europe; and it was a part of their duty—a duty not in itself very agreeable, yet one recognized in the law or common practice of war—to encourage the Bourbon royalists and other disaffected classes in France, and to embarrass by internal commotions the enemy that was threatening to invade England, and that had long kept an immense army in sight of our coast. Bonaparte himself had done something more than this in Ireland, and that too at a time when there was peace between him and Great Britain. A plan was laid by the imperial secret police and one Mehée de la Touche, who passed himself off as a devoted partizan of the Bourbons, and who pretended to be at the head of a party. Mr. Drake, our resident at Munich, and Mr. Spencer Smith, our envoy at Stuttgart, fell blindly into the snare laid for them by the great practitioner: they took Mehée for the passionate royalist that he described himself to be; they encouraged him to persevere, and expressed the hope that the great party he represented would eventually succeed in overthrowing the intolerable tyranny of the Corsican. They suggested some measures which might contribute to that desirable end, but assuredly assassination was never mentioned by any one, excepting perhaps Mehée de la Touche himself. Obedient to the orders of Bonaparte,

the petty courts of Bavaria and Würtemberg ordered Drake and Smith to quit their territories immediately. The *Moniteur* then publicly assailed Sir George Rumbold, our chargé d'affaires to the circle of Lower Saxony; and a party of French troops, suddenly crossing the Elbe, kidnapped Sir George at his country-house near Hamburg. This diplomatist was carried a close prisoner to Paris, and there thrown into the Temple. After some time he was liberated on the remonstrance of the court of Berlin; but his papers were all detained. Such were a few of the facts which preceded the Emperor Napoleon's letter to his "brother" George III.

Before this time Pitt felt his ministerial condition to be one of extreme difficulty. The mingled opposition, including so many of his own family connections, was collecting all its force; and, shrinking from the collision, or hoping to gain strength in the interval, he put off the assembling of parliament as long as he possibly could. A severe illness deprived him for some time of the services of his colleague, Lord Harrowby; and he declared that the loss of this assistance would be a great misfortune, but that he must do as well as he could. An attempt was made to conciliate Lord Grenville, but it failed—his lordship would not abandon Fox and the Talents, or his preconceived notion of a comprehensive ministry. Nothing, therefore, remained for Chatham's proud son to do, but to make peace with Addington, who had carried with him no inconsiderable reinforcement to the mixed opposition. It is said that the king, who retained his warm partiality for Addington, and who was reasonably alarmed at the weakness of Pitt's majorities at the close of the session, strongly recommended, and in fact insisted upon, this reconciliation: and this appears to be proved by expressions used privately and confidentially by Pitt himself.

Simultaneously with this reconciliation, and possibly as an essential ingredient to it, Addington was raised to the peerage, as Viscount Sidmouth, of Sidmouth, and was brought into the cabinet as president of the council, in the room of the Duke of Portland, whose years and infirmities made retirement desirable. At the same time Lord Mulgrave was appointed secretary of state for the foreign department, in the place of Lord Harrowby, and the Earl of Buckinghamshire took Mulgrave's post as chancellor of the duchy of Lancaster.

CHAPTER III.—CIVIL AND MILITARY HISTORY.—A.D. 1805—1806.

GEORGE III.

Meeting of parliament—Pitt questioned about Catholic emancipation—His reply—Parliamentary supplies for the year—Impeachment of Lord Melville—Treaties of alliance against France—Bonaparte crowned at Milan—His menaces renewed of invading Britain—His preparations at Boulogne—His sudden departure for the invasion of Austria—Mack appointed commander of the Austrian army—Surrender of the Austrians at Ulm—The French enter Vienna—Bonaparte defeats the Austrians and Russians at Austerlitz—The Emperor of Austria signs the treaty of Presburg—Extensive territories ceded to France by the treaty—Confederation of the Rhine established by Bonaparte—Political blunders of Britain at this period—Unsuccessful operations on the Baltic—The combined French and Spanish fleets sail from Cadiz to the West Indies—They are pursued by Nelson—They are attacked by Sir Robert Calder off Cape Finisterre—Preparations of Nelson for battle near Cape Trafalgar—Battle of Trafalgar—Defeat and destruction of the united French and Spanish fleets—Death of Nelson—Spain gradually becoming reconciled to England—Suicide of Admiral Villeneuve—War in the East Indies—Victories of the British over Holkar and the Mahrattas—The Rajah of Bhurtpoor, Holkar's ally, submits to the British—Peace restored in India—Death of William Pitt—Debate on the question of a national monument to his memory—His debts paid by government—A new and opposite administration succeeds—Its want of agreement—Fox appointed secretary for foreign affairs—His unsuccessful negotiation for peace—Proceedings of the negotiation—Preliminary proceedings—Changes introduced into enlistment for the army—Improvements in the army—Opening of the budget—Impolitic taxes—The slave-trade—Preparations for its final extinction—Impeachment and trial of Lord Melville—His acquittal—Prorogation of parliament.

OTWITHSTANDING the accession of Lord Sidmouth's partizans, Pitt felt that his majorities would still be rather feeble and therefore he wished to put aside all questions which might divide his friends.

When parliament met, on the 15th of January, the minister appeared to have lost much of his usual confidence; but this might in part arise from his declining health. His rival did not omit to remind him that he had done nothing to redeem the pledge which he was understood to have given to the Roman Catholics. On the last point Pitt replied with great animation. If the measures in favour of the Catholics of Ireland, which Fox was now so loudly calling for, appeared to him so immediately necessary, why had he suffered four years to elapse since the union, without having ever called for them before? "What the reasons are," continued Pitt, "which have induced me to suffer the Catholic question to remain dormant, I shall, on a future occasion, have an opportunity of stating: and I flatter myself that the house and the country will give me credit for consistency, when I shall have stated the reasons why I still think that the matter should remain dormant at the present moment." The opportunity for explanation cannot be said to have presented itself during the present session; and before the next session was two days old Pitt was dead: so that it seems to us unfair and inconsistent to talk of his resuming office in 1804, "refusing to make any stipulation for the Catholics," and of his having from that

time "*always* opposed those who urged their claims." This *always* includes only a few most busy and stormy months. In opening the budget Pitt stated that he should require a loan of £20,000,000 for England, and one of £2,500,000 for Ireland; together with the imposition of several new war-taxes, and a double duty on salt. Some additions were made to the army grants; £4,000,000 were allotted to the militia and fencible corps; nearly £4,500,000 to the ordnance; £15,000,000 to the navy; and a very large sum to miscellaneous services. The total amount of the supply voted for the year was £55,590,000. The property or income tax, or "the contribution on the profits arising from property, professions, trades, offices, &c.," was increased, as were certain duties on legacies, on horses, &c.

From the commencement of the session Lord Melville [Henry Dundas] was menaced with the storm which burst over his head in April. "Rumour," says Wilberforce, "had for some time impeached Lord Melville's integrity." But rumour is not truth. Pitt, whom Dundas had served so long and with such untiring zeal, declared to Wilberforce that he was fully persuaded of his personal integrity—that "he was quite sure there was no real pocketing of public money in him." Mr. Whitbread led the parliamentary assault with a degree of violence which has not often been surpassed; the Addingtonians joined in the attack; and Wilberforce took the same course, and influenced forty other members, or the party commonly called "the saints." When, however, the house first divided, there occurred, what had

not happened upon any great question for many a year, a perfect equality of votes, 216 voting for the criminatory resolutions, and 216 against them. The speaker (Abbott) with whom Wilberforce had consulted beforehand, gave the casting vote, and it was against Melville. On the 8th of April, Pitt, who was greatly agitated, informed the house that Lord Melville had resigned his office—that of first lord of the admiralty. The health of the premier was visibly affected by this occurrence. Many violent debates and other proceedings followed; and on the 26th of June, Whitbread, accompanied by a great number of members, impeached Lord Melville, in the name of the Commons of Great Britain, of high crimes and misdemeanours, at the bar of the House of Lords. A bill was brought into the commons by Whitbread to avoid those differences of opinion which had arisen in the case of Warren Hastings, or to prevent the proceedings in the impeachment of Lord Melville from being affected by any prorogation or dissolution of parliament; and, after some slight alteration in the wording, it was carried through all its stages without a division. Here the proceedings rested for the present; and before any further progress could be made, Pitt, whose health and spirits were evidently affected by them, was laid in Westminster Abbey.

On the 12th of July, in consequence of a message from the king, £3,500,000 were voted for the new coalition which was forming on the Continent; and on the same day parliament was prorogued by commission.

Two days before the prorogation, Lord Sidmouth (Addington) and Lord Buckinghamshire resigned. Sidmouth was succeeded by Lord Camden, and Lord Buckinghamshire by Lord Harrowby. Lord Castlereagh obtained Earl Camden's place of secretary of foreign affairs.

Although it had not been deemed expedient to communicate the fact to parliament, a treaty had been signed as early as the 11th of April, by which the Emperor of Russia and the King of England reciprocally bound themselves to use the most efficacious means for forming a general league of the states of Europe, for the purpose of putting an end to the encroachments of the French government. Sweden and Austria had both entered into the same views. The King of Sweden had signed a separate treaty with the Emperor of Russia, on the 10th of January; but Austria hung back, and recommended that negotiations should be attempted with Bonaparte before proceeding to hostilities. A Russian envoy was despatched for France; but he stopped for a time at Berlin to sound the intentions of the prevaricating cabinet of the King of Prussia; and while he was there, intelligence was received at Vienna and St. Petersburg of Bonaparte's having annexed

Genoa to France, and of his having intimated by other proceedings that a state of peace on the Continent was not to prevent his aggrandizing himself still further at the expense of his neighbours. This led to the envoy's immediate recall, and to the determination of Austria to try again the fortune of war. By a treaty signed at St. Petersburg, on the 9th of August, Austria became a member of the league with England, Russia, and Sweden. But Prussia continued in the same dubious state: increasing her armies, avoiding any direct engagement, or even explanation, and evidently waiting events, in order to determine which side to take as the most advantageous to herself.

Bonaparte had torn the treaty of Luneville into pieces, and since the opening of the present year he had but too plainly intimated that Europe must fight or submit to him. He gave the people on the other side of the Alps to understand that the Italian republic was an anomaly, and that they must turn it into a monarchy. No time was lost in executing this work. The French emperor crossed the Alps; and on Sunday, the 26th of May, he was crowned in the magnificent

THE IRON CROWN OF LOMBARDY.—From the Illustrated News.

cathedral of Milan. The ceremony was not performed by the pope, although Pius VII. was at Turin, but by the Archbishop of Milan. Being crowned with the iron crown of the Longobards, Bonaparte instituted an Italian order of the "Iron Crown;" and modelled the new kingdom on precisely the same plan as the French empire. He forthwith established his military conscrip-

¹ "The celebrated iron crown of Lombardy was deposited in the cathedral of Monza. This famed symbol of kingship is a broad circle of gold, set with large rubies, emeralds, and sapphires, and was deposited in an ornamented cross, placed over an altar, closely shut up within folding doors of gilt brass. The crown is kept in an octagonal aperture in the centre of the cross. It is composed of six equal pieces of beaten gold joined together by close hinges, and the jewels and embossed gold ornaments are set in a ground of blue and gold enamel. The most important feature in this crown is a narrow iron rim which is attached to the inside of it all round. The rim is about three-eighths of an inch broad, and a tenth of an inch thick, and is said to have been made out of one of the nails of the crucifixion. The crown is said to have been presented to the Emperor Constantine by his mother Helena, and the sacred iron ring from which it is named was to protect him in battle."—*Illustrated London News*.

tion, and raised the army of Italy to 50,000 men. These Italian troops were of immense service in the ensuing campaign; and without them Massena must have been crushed on the Adige by the Archduke Charles. On his return from Italy he gave a new impulse to the preparations for the invasion of England, and spoke of it publicly as an attempt fully resolved upon, and not to be prevented by any occurrences whatever. He repaired again to the coast, and dated several striking and important decrees from "the imperial camp of Boulogne." The army of England, as it was called, augmented rather than diminished, still lay at Boulogne; the flotillas had been increased, and a junction was making between the French fleets and the fleets of Spain. But—to say nothing of the doubt which still exists, and will ever exist, as to the reality of his intention to risk his army and person in this desperate enterprise, as Nelson at Trafalgar annihilated the united fleets, without which the invasion was an absolute impracticability, as that battle would have been fought whether there had been a coalition or not, and as the continental war affected on neither side the forces whose battlefield was the wide ocean—it is absurd to say, as some French writers continue to do, that it was the hostile movement of Russia and Austria, brought about by English gold, that saved England from invasion, if not from conquest. England was safe through the cannon fired at Trafalgar, though not a gun had been fired on the Continent, and though Bonaparte had been left undisturbed to parade his troops on the coast as he had already done for years. Towards the end of August, Bonaparte returned once more to Boulogne, and the *Moniteur* announced that this journey was the prelude to the invasion of England. But on the 28th of that month it was announced that the army of England was to become the army of Germany—that the Emperor Francis had attacked the Elector of Bavaria, an ally of Napoleon—that the Emperor Alexander was marching—that the Continent was in flames. And forthwith the one hundred and fifty thousand men collected at Boulogne and along that coast struck their tents, and, forming into five separate corps, under the commands of the five marshals, Soult, Davoust, Ney, Lannes, and Murat, marched away with admirable rapidity for the Rhine.

After hesitating so long, and thereby occasioning delays on the part of the Emperor Alexander, the cabinet of Vienna precipitated measures, and took the field too soon; for the Russians, who had to perform an immense march before they could reach the banks of the Upper Danube, were still far off when the Austrians commenced operations. By a strange fatality, the Emperor

Francis had given the command of his main army to General, now Field-marshal Mack, who had the art or knack still to pass with the aulic council as a great military genius, and the best of tacticians and strategists. His shameful discomfiture in the south of Italy, in the year 1799, was attributed solely to the bad, unwarlike qualities of the Neapolitan troops; with the steady veterans of the emperor, the sturdy Austrian infantry, the active light troops of Bohemia, and the brilliant cavalry of Hungary, he would do better, nay, must conquer, and rescue the whole of Germany from the thralldom of the French. Of this confidence he had himself the fullest share, so that he threw himself into action with more alacrity than prudence. Some fruitless attempts were made to secure Maximilian Joseph, Elector of Bavaria, as an ally; but that prince, hating the whole house of Austria, and believing in the invincibility of Bonaparte, remained steady to the French, and assisted in the humiliation of Germany. Not only did Prussia remain neutral, but the Elector of Baden, in whose territory the Duke d'Enghien had been kidnapped, and the Elector of Würtemberg, followed the same line of conduct as his serene highness of Bavaria. If Prussia had fallen upon the French in flank as they were advancing against the Austrians, the consequence must have been fatal to the invaders: but she professed to be neutral and impartial; the daring violation of her own territory by French troops could not rouse her, and she kept her splendid army of 200,000 men in perfect inactivity. In vain Pitt offered his subsidies; in vain the Emperor Alexander repaired in person to Berlin; that unwisely selfish cabinet would do nothing, or nothing yet; and this indecision lasted until the coalition was ruined. There was treachery in his camp, and in the field Mack made scarcely one movement that was not a mistake. The Austrians were defeated by Ney at Elchingen, and at the bridges over the Danube at Guntzburg; and after the affair of Guntzburg there was scarcely any more fighting, a system of capitulations being commenced, and detached masses of troops surrendering to the French without firing a musket. Within twelve days after Bonaparte had crossed the Rhine, Mack's doom was sealed—he was shut up in Ulm, as old Marshal Wurmser had been in Mantua, without a hope or possibility of being relieved. On the morning of the 20th, the Austrians came out of Ulm, and defiled before Bonaparte; the infantry then threw down their arms at the back of the ditch; the cavalry dismounted, and delivered up their arms and their horses to some of the French cavalry who had lost their own horses in the campaign. The poor Austrians, in the act of surrendering their arms, shouted, "Long live

the Emperor Francis!" Mack, who was there, replied to some French officers, who addressed him without knowing who he was, "Messieurs, you see before you the unhappy Mack!"

As the French approached Vienna, the Emperor

fighting some desperate battles on the Adige, at Caldiero, and other places, had been driven out of Italy by the superior forces of Marshal Massena, who closely followed him on his retreat through the Tyrol. The archduke, however,

formed a junction with the forces under the command of his brother, the brave Archduke John. Affairs were not desperate, or were so only in the eyes of cowards. The Emperor Alexander had now arrived in Moravia with his formidable army; the loyal subjects of Austria were rapidly recruiting the forces of their sovereign and the two archdukes; the country afforded no subsistence to the French; a most severe winter had set in, and the French must either have retreated or have perished there. It behoved the allied emperors to avoid a general action; but it was a part of the fatality of the adversaries of Bonaparte

THE TOWNHALL, ULM.—From Prout's Sketches in Holland and Germany

Francis and his family fled from it into Moravia. On the 13th of November, the French took undisputed and quiet possession of that proud capital, which had stood in former ages so many sieges, and which had seen the Moslem conquerors twice retreat from before its walls. There had been an abundance of time to allow of the removing of all such things; the grand united army in Moravia was very badly provided; the Russians were in want of almost everything; but the Austrian managers of these matters appear to have thought it better to keep their military stores, arms, clothing, and provisions for the use of their enemies than to send them to their friends; for the French found in the magazines of Vienna and its suburbs an immense quantity of all these things. Bonaparte gave a part of the spoils to the Elector of Bavaria, whose troops were fighting under his banner, and whose un-German heart was triumphing in the calamity and humiliation of Austria. The new Emperor of the French took up his abode in Schonbrunn, the splendid palace of the far-descended Emperor Francis; he appointed one of his generals governor of Vienna; and conducted himself in all things like the sovereign of the country. Many times the report was confidently spread that peace had been concluded between Napoleon and Francis; and this, connected with other occurrences and indications, was likely to damp the spirit and embarrass the counsels of the Russians, who had marched so far only to meet a beaten, disheartened, unsteady ally.

In the meanwhile, the Archduke Charles, after

parting to be slow when they ought to be quick, and quick when they ought to be slow. The Russians and Austrians, therefore, marched to the plain of Austerlitz, and gave the French battle there on the 2d of December. The two armies which engaged were nearly equal in number; but the French had a decided superiority in artillery, both as to number and quality; and it was on the employment of that arm that they principally relied for their victory. The Russian infantry made a great use of the bayonet: most of the French that were wounded, were wounded by that weapon, and in nearly every case these wounds proved mortal. In the end it was a victory for Bonaparte; but it was for a long time doubtful, and it cost him a tremendous price. The Russians retired in perfect order, in solid bronze-like masses, and the French showed no inclination to follow them. The Emperor of Russia refused to join in the humiliating measure; but the Emperor Francis, the very day after the battle, opened negotiations with the French.

On the 26th of December, while Alexander was retiring by regular day marches into his own territories, Francis signed the ruinous treaty of Presburg. By this treaty he ceded, nominally to Napoleon's kingdom of Italy, not only Venice and the Venetian provinces in Upper Italy, but the Venetian provinces in Istria, in Dalmatia, and on the coast of Albania, which he had possessed ever since the treaty of Campo Formio; he ceded to the Elector of Bavaria the whole of the Tyrol, with the bishopric of Passau and other territories;

he ceded to Würtemberg and Baden, those other liege vassals of France, other districts; he recognized the regal titles of the Electors of Bavaria and Würtemberg, and the grand-ducal title of the Elector of Baden,—for the Emperor Napoleon had resolved that the first two should have the rank of kings, and that the Elector of Baden, who had taken the kidnapping and murder of the Duke d'Enghien in such good part, and who, like the other un-German princes, had rendered important services during this campaign, should have the rank of grand-duke; and, in addition to these and other sacrifices, Austria, in a secret article, agreed to pay to the French a military contribution of 140,000,000 francs. The population thus turned over to the conqueror by a few strokes of the pen was estimated at about 3,000,000. But there was worse than a loss of population, and a limited surrender of territory: by being made to give up Trieste, which had long been her only sea-port, and all that she had obtained by the treaties of Campo Formio and Luneville on the Adriatic, Austria entirely shut herself out from the sea, and became an inland power, without the faculty of exporting or importing directly a bale of goods or a cart-load of produce—she became *enclavée*, cooped in on every side; and on the Adriatic side, where she most wanted freedom and extension, a hostile state, a strip of the kingdom of Italy, which was merely a province of France, was interposed between her and the sea. The fracture made of the independence of Switzerland and of the Grisons had weakened her frontier on the side of France; and now the disseverance of the Tyrol, the cradle of the imperial house, and the oldest of its possessions, completed this ruin of frontier and bulwarks, and gave the French the entire command of the best routes which connect Upper Italy with Germany. But still more loss of influence and honour!—all the smaller German states of the Rhine were formed by Bonaparte, who put himself at the head of it as “Protector,” into what was called the Confederation of the Rhine: the old Germanic empire was thus dissolved; the influence of the French was fully established over a great part of Germany; and very soon after this treaty the Emperor Francis formally renounced his title of elective Emperor of Germany, and assumed that of hereditary Emperor of Austria, &c. The King of Prussia, who had been the only king in Germany until Bonaparte chose to give kingly crowns to his vassals of Bavaria and Würtemberg, was recommended by the cabinet who were leading him to his ruin to take the title of Emperor of Prussia; but he did not. Less than three weeks after the signing of the treaty of Presburg, Eugene Beauharnais married Augusta Amelja, daughter of the King of Bavaria;

and shortly after Mademoiselle or Princess Stephanie Beauharnais, Eugene's cousin, was given in marriage to the son and heir of the Grand-duke of Baden, who had earnestly solicited the honour of an alliance with the august family of Bonaparte. Another matrimonial alliance was contemplated with the family of the King of Würtemberg.

Other parties connected with the coalition were to blame besides Mack and the aulic council; and the government of Pitt, who had originated the convention, had made a very injudicious use of the resources of their country. That system of petty expeditions which had so long disgraced England, or which, at the least, had deprived her of the honour she might otherwise have obtained, had again been resorted to; and for the present saving of a few millions, the necessity had been incurred of a future expenditure of very many millions. If the King of Sweden, whose zeal in the cause was depressed only by his poverty, had been liberally supplied with money—if 25,000 or 30,000 British troops had been sent to the Baltic in the autumn, a great movement might have been effected in the north of Germany—the vacillations of Prussia might have been brought to an end by those best of all arguments, the presence of a great allied army, and the exceeding great probability of the French being the losing party; and Prussia would have carried with her into the coalition Saxony, Brunswick, and one or two other minor states; Bonaparte would have been obliged to divide and sub-divide his grand army; he might have been attacked on his left flank and on his rear, and the Hanoverians, and probably the Dutch, whose countries had been left with hardly any French troops in them, would have risen *en masse* and have overthrown their temporary Gallican governments; for the Hanoverians were heartily attached to their old line of sovereigns, and the Dutch were by this time heartily sick of French domination, and of that system which had led to the almost entire destruction of their foreign trade, the one great source of their wealth, as of their former political greatness. If this course had been pursued in good time, Bernadotte would not have quitted Hanover at all, or if he had done so, he must have been compelled to retrace his steps; and in either case the catastrophe at Ulm, to which he so essentially contributed, would not have taken place. But precious time was lost, money was withheld, and the very small number of native British forces which Pitt's government thought they might spare for foreign service was divided, and sent to two opposite extremities of Europe; only 5000 or 6000 British troops were sent to the Baltic, and, counting the king's German legion and other foreign corps, the entire force which

landed in Swedish Pomerania (*and not before the month of October*), under the command of General Don and Lord Cathcart, fell short of 16,000 men. This force was joined by 12,000 Swedes, and by about 9000 or 10,000 Russians. The supreme command was rather nominally than really intrusted to the King of Sweden, who, after recovering Hanover, was to advance upon Holland. But there could be no advance of this extensive kind without securing, at the very least, the neutrality of Prussia; and a mixed army of less than 38,000 men, and the delays which had occurred, and the differences of opinion which were known to exist among the officers in command of it, were but little calculated to give to Prussia those convictions she wanted. Pitt had despatched Lord Harrowby to Berlin, and the English generals were disposed to rely upon the effects of his lordship's diplomacy; but his Swedish majesty, who better knew the character of that cabinet, and who forgot that he had not a force sufficient to dictate to Prussia with her 200,000 men, wrote some impatient and rather violent notes to his Prussian majesty. The court of Berlin complained; the English and the Russians too remonstrated; a quarrel was the consequence; and his Swedish majesty, throwing up the command of the allied army, retired with his own forces to Stralsund. After more than three weeks had been spent in waiting the result of the negotiations at Berlin, and in explaining away the words and letters which had given offence to his Swedish majesty, Gustavus resumed the command, and the petty allied army began to shake itself: but it was now beyond the middle of November; and in the interval Mack had surrendered at Ulm, and Bonaparte had entered Vienna—events which made the Berlin cabinet more vacillatory than before, and more tenacious of the rights of neutrality with regard to the belligerent party that was so evidently succumbing in the present struggle. Gustavus marched into the electorate of Hanover, and even laid siege to the town of Hameln, where Bernadotte had left a considerable garrison: but then came the news of the battle of Austerlitz, and thereupon the allies conceived no alternative was left them but to get back with all speed to their respective countries. The British re-embarked; the Swedes retired again to the shelter of the well-fortified Stralsund; and the Russians retreated into Mecklenburg, there to await the arrival of their shipping.

The operations of the 3000 British troops, who were sent to the south of Italy, will be noticed in the following year, in connection with the French conquest and entire occupation of the kingdom of Naples—an event which would have happened about the time it did, whether the allies had or had not induced the Neapolitan court

to break its treaty of neutrality with the French, although our sending and landing of troops certainly furnished Bonaparte with good materials and colours for excusing his ambition, and his predetermined aggrandizement.

We gladly escape from these continental disasters and disgraces on shore, to our victories and glories at sea. But for our successes on our own element, woful, indeed, must have been the close of this year, 1805. With the joint navies of France and Spain, Bonaparte had hoped to gain an Austerlitz by sea. Eluding the vigilance of Lord Nelson, now in command of the Mediterranean fleet, Admiral Villeneuve, who stole out of Toulon, on the 31st of March, with ten ships of the line, seven frigates, and two brigs, reached, after an indirect course, the harbour of Cadiz. Here he was joined by six Spanish sail of the line and two French ships of the line, with 10,000 troops on board. With these troops, with eighteen sail of the line, and with his frigates, Villeneuve sailed for our West India islands. As soon as he could learn the course he had taken, Nelson followed him across the Atlantic with only ten sail of the line. The British admiral reached Barbadoes on the 4th of June, three weeks after the arrival of the French admiral at Martinique. Villeneuve had been joined by two more French ships of the line, but they had brought him conflicting and bewildering instructions from his emperor, and he had been able to do little more than capture and burn a few of our merchant vessels; and so soon as he learned the arrival of the dreaded Nelson, he set sail on his return for Europe. His twenty sail of the line were followed by our ten. Nelson returned to England on the 18th of August, without having seen anything of the combined fleet. But Villeneuve did not reach port without an action: he was attacked by Vice-admiral Sir Robert Calder, to the north-west of Cape Finisterre, on the 22d of July. The Frenchman had still his twenty sail of the line and seven frigates; Calder had only fifteen sail of the line and two frigates; yet he captured an eighty-four and a seventy-four gun ship (both Spaniards), and was much censured for not having done more. After this action Villeneuve ran into Ferrol and Coruña. He was ordered to proceed to Brest, where Gantheaume was ready to join him with the Brest fleet, which counted twenty-one ships of the line; but upon learning that Calder had joined Admiral Cornwallis, instead of sailing for Brest he ran round the Spanish coast, and took refuge in Cadiz.

On the 21st of August, the day on which Villeneuve got into Cadiz Bay, Admiral Gantheaume, who was expecting him at Brest, stood out of that harbour with twenty-one sail of the

line, as if to meet him a little way out at sea. Admiral Cornwallis, who was watching Ganteaume, had at this moment only fourteen ships of the line with him; but with this inferior force he moved in to attack, and, after a distant cannonade, Ganteaume, who strained his eyes in vain in looking out to the south for Villeneuve's fleet, retired to the protection of land batteries, and at nightfall returned again into Brest harbour. As the French and Spanish squadrons remained inactive, the other movements of our fleets were of little importance, until Nelson again took the chief command.

On the 14th of September the foot of the hero was again on the quarter-deck of his favourite ship the *Victory*; he sailed on the 15th, and on the 29th, his birth-day, he arrived off Cadiz, and

CAPE TRAFALGAR, from the Shores of Barbary.—De Capel Brooke's Sketches in Spain and Morocco.

joined Lord Collingwood. A novel and most admirable plan of attack was concerted, and with a full assurance of success, the fleet awaited the day when the French and Spaniards should venture out to sea. On Monday, the 21st of October when Nelson was near Cape Trafalgar, the enemy was discovered. Nelson told Blackwood, his captain, that he would not be satisfied unless he took twenty of them. He asked whether the captain did not think there was a signal wanting. Blackwood replied, that he thought the whole fleet understood what they were about. But Nelson gave his last signal—"ENGLAND EXPECTS EVERY MAN TO DO HIS DUTY;" and, as the telegraphic message was communicated from the mizzen-topgallant-masthead of the *Victory*, it was greeted with three cheers on board of every ship in the fleet. It was the hour of noon when this most memorable of our sea-battles began in earnest. Nelson's customary signal on going into action, "Engage the enemy more closely," was fast belayed at the *Victory's* main-topgallant-mast-

head. The entire British force consisted of twenty-seven sail of the line, four frigates, one schooner, and one cutter: the French and Spaniards united counted thirty-three sail of the line, five frigates, and two brigs. The largest ships on our side were the *Victory*, the *Royal Sovereign*, which carried Collingwood's flag, and the *Britannia*, which carried the flag of Rear-admiral the Earl of Northesk; they mounted 100 guns each. The largest ships on the opposite side were the *Santissima Trinidad* of 130 guns, the *Principe de Asturias* of 112 guns, the *Santa Anna* of 112 guns, and the *Rayo* of 100 guns. The British had four ninety-eight gun ships, and one eighty-gun ship: the enemy had six eighty-gun ships. Of the smaller line-of-battle ships, mounting sixty-four guns, the British had three, and the enemy only one: the British had sixteen seventy-four's, the enemy twenty two. Leaving out of the account the frigates and small craft on both sides, Nelson had but 2148 guns to oppose to Villeneuve's 2626 guns. His numerical inferiority in men was much greater: his patched-up ships, too, were inferior in quality; but his immense superiority lay in the quality of his crews, in the long-practised skill and bravery of his officers, in his own ready resources, and in the zeal and enthusiasm with which he had inspired every

man and boy in the fleet. The enemy fought bravely; but by three o'clock ten ships of their line had struck, and Admiral Villeneuve was a prisoner. The victory was completed in another half-hour; but Nelson had been mortally wounded by a rifle-ball fired from the mizzen-top of one of the French ships, and he was breathing his last as the sailors were shouting triumphantly. Two Spanish admirals had surrendered. In all, nineteen ships of the line had struck to Nelson at Trafalgar. Admiral Gravina, in the *Principe de Asturias*, a 112-gun ship, fell away to leeward of the rear, and made off, with four other ships. Five other ships, four French and one Spanish, under Villeneuve's second, Rear admiral Dumanoir, which had sustained little or no damage in their masts and sails, while hardly any of the hard-fought British ships had a stick left standing, hauled off to windward; but as Dumanoir passed the *Royal Sovereign*, the *Conqueror*, and the *Victory*, which were lying like logs upon the water, he and the three French ships with him

poured their shot, not only into those British ships, but also into the Spanish prizes they had made. Both Gravina and Dumanoir escaped from the battle; but Gravina had been mortally wounded, and Dumanoir and his squadron fell in, in their flight, with Sir Richard Strachan, who was cruising in search of the Rochefort squadron, and were all taken on the 4th of November. The *Achille*, a French seventy-four, after having surrendered, by some mismanagement of her crew took fire and blew up; 200 of her men were saved by British tenders, who picked them out of the water. The total number of prisoners taken, including the land forces on board, amounted to nearly 12,000. The total British loss in the battle was 1587, including many officers, besides the greatest of all. Captain Duff of the *Mars*, and Captain Cooke of the *Bellerophon*, were among the slain. The French, out of eighteen sail of the line, preserved only nine, and the Spaniards, out of fifteen sail of the line, preserved only six. The moral effect was as great as the physical one; between the two, the marine force at the disposal of Bonaparte might be said to be annihilated.

Nelson's crowning glory rescued England from all chance of invasion, and left her sovereign of the seas. After the battle of Trafalgar the task of the British navy, that had attained under Nelson to a degree of perfection which it had never approached before, was of the easiest execution: nor could reverse, defeat, or disgrace have possibly attended our flag in any seas, if our changing boards of admiralty and variable governments had known how to make use of the mighty powers and energies at their disposal, and had discarded, on the one hand, their proneness to jobbery, or to political trafficking in promotions, and on the other hand their incidental fits of economy. The French, indeed, henceforward renounced all hope of invading and conquering England; nay, even of contending with her as a maritime power; but they flattered themselves that they had found more than an equivalent, in the easy subjugation and plunder of the Continent; and that the continental system, which began to occupy Bonaparte's mind as soon as his navy was destroyed, would, by closing all the ports of Europe to English commerce, reduce the proud rival of France to poverty and despair. The Spaniards generally had fought bravely in the action; but the heart of the Spanish people was not in that cause, some humane and politic proceedings of Collingwood, being superadded to the very unfavourable effects produced by Dumanoir's conduct, and by various other deeds of their French allies, produced a sudden popular reaction favourable to the English. All this tended to obliterate the recollections of the melancholy

affair of the four treasure-frigates, and to qualify the Spaniards for that close alliance with the English into which they were so soon driven by Bonaparte; and it enabled Collingwood to exercise a powerful influence over the people of Spain at the commencement of their great rising.

Admiral Villeneuve, who acknowledged that the French could no longer think of contending with us at sea, was brought over to England, but was almost immediately liberated on parole, and allowed to return to France. Perhaps it would have been better for himself to have been retained a close prisoner; for scarcely had he reached Rennes on his way to Paris when his name was added to that ambiguous list of suicides which was headed by the names of Pichegru and Wright.

In the course of the year which witnessed the glories of Trafalgar, our arms were attended with signal success in the East Indies; and a land war was there carried on, not in the petty manner practised by us on the European continent, but on a grand scale. Notwithstanding the victories of Generals Lake and Arthur Wellesley in 1802-3, a fresh Mahratta war broke out in 1804. The great chief, Holkar, who had remained inactive during the war against Scindia and the Rajah of Berar, and who had been strengthening himself while they had been rushing to their ruin, suddenly assumed an attitude which excited alarm or suspicion. Having refused to enter into an amicable negotiation, General, now Lord Lake, and General Fraser, were sent against Holkar. One or two hill-fortresses were stormed, a skirmish or two were fought, and then, on the 13th of November, 1804, Holkar's infantry and artillery, strongly posted near the fortress of Deeg, in the midst of tanks, topes, and morasses, were entirely defeated by General Fraser, who charged them with the bayonet, under a terrific fire of round, grape, and chain shot. Unfortunately, a cannon-ball took off Fraser's leg, and he died of his wounds a few days after. On the 17th of November, Lord Lake gained another victory at Furruckabad. This would have finished the war but for a new alliance which Holkar contracted with the powerful Rajah of Bhurtpoor. Lake instantly turned his arms against the territory of that rajah, and drove the Mahrattas out of several of his fortresses. On the 1st of January, 1805, his lordship marched to the city of Bhurtpoor, the excessively strong and well-defended capital of the rajah, and on the 3d he commenced a siege which has scarcely a parallel in the history of modern India, and which witnessed minings and explosions of unprecedented magnitude. Two assaults were repulsed by the besieged, with great loss to the besiegers. At length Holkar's general, Meer Khan, having been entirely routed

and chased out of the country by General Smith, and Holkar himself so much reduced that he could give no assistance to his ally, the rajah made proposals for peace, and on the 10th of April he repaired in person to Lord Lake's camp. The terms granted to him were:—1. That the fortress of Deeg should remain in the hands of the English, and that the rajah should renounce for ever all connection with the enemies of Great Britain. 2. That he should pay to the Company twenty lacs of rupees, and restore to it some territories which had been conferred upon him by the Company. 3. That he should deliver up one of his sons as an hostage. At this juncture the now aged and infirm Marquis Cornwallis arrived to succeed the Marquis Wellesley as governor-general; but he fell sick on the road, as he was travelling to the upper provinces to confer with Lord Lake, and died at Ghazipoor, near Benares, within three months after his return to India. Scindia now separated his forces from those of Holkar, and implored for a peace. Holkar spurred away to the banks of the Indus to seek fresh allies among the chiefs of the Sikhs, giving out that he expected to be joined by the hardy and warlike tribes of Afghanistan. Lake followed him, and never allowed him rest until he had driven him beyond the Hyphasis, the boundary of Alexander the Great's conquests. But a timid, money-sparing policy now prevailed in the council of Calcutta; Lake was checked in his career of victory, and was ordered to grant the peace for which the ruined Mahratta was praying. The negotiations were neither long nor difficult, though they must have been painful to his lordship; for he was bound by his instructions to reinstate Holkar, not only in his own dominions, from which he had been driven, and which he had deserved to

forfeit, but also to put him in possession of territory to which it was believed he never had any right. In conformity with the new system of policy which had been adopted of abandoning all connection with the petty states, and, generally, with the territories to the westward of the Jumna, Lord Lake was instructed to dissolve the defensive alliances which we had contracted with the Rajah of Gyssore and other inferior powers

who had rendered essential services to his lordship, and who looked upon their ruin at the hand of the Mahrattas as an inevitable consequence of their being abandoned by the English.

As Lord Lake, Sir John Malcolm, and every other enlightened man in India (whose eyes were not distracted by the prospect of a present saving of money) had clearly foreseen, these treaties, with their concessions and renunciations, gave only a transitory calm to the country. But the campaigns, we repeat, had been conducted in a glorious style; the reports of them in England came opportunely to revive the spirit of the nation—a nation which had little to fear, when it could breed and send forth such men as fought with Nelson at Trafalgar, and marched and fought with Wellesley and Lake in Hindoostan.

MONUMENT TO LORD NELSON, in St. Paul's Cathedral, by John Flaxman, R. A.

for a peace. Holkar spurred away to the banks of the Indus to seek fresh allies among the chiefs of the Sikhs, giving out that he expected to be joined by the hardy and warlike tribes of Afghanistan. A.D. 1806.

Parliament was appointed to meet on the 21st January. Pitt's government had never been so weak as now, and the uneasiness of the king seemed to threaten another return of his distressing and incapacitating malady. The health of the premier had been visibly affected before the close of the preceding session. In the autumn he repaired to Bath; but the sanatory effect of those waters and that genial air, was prevented by the dismal news of the surrender of Ulm, of the battle of Austerlitz, and of Austria's seceding from the coalition;

and these calamities on the Continent appear to have assumed such a magnitude in his eyes as almost to blind him to the gain, glory, and triumph of Trafalgar. He came up to town as the meeting of parliament approached; but he was too ill to attend to much business, and on the appointed day, when the houses met, he was lying in a dying state at his country house at Putney. The royal speech was delivered, not by the king in person, but by commission. Two days after the meeting of parliament, Pitt expired in the forty-seventh year of his age. After some ungenerous efforts on the part of the Foxites, Mr. Lascelles, on the 27th January, moved, "That an humble address be presented to his majesty, that he would be graciously pleased to direct that the remains of the late Right Honourable William Pitt be interred at the public expense, and that a monument be erected to his memory in the collegiate church of St. Peter, Westminster, with an inscription expressive of the irreparable loss the nation has sustained by the death of so excellent a statesman." This was opposed, with more or less illiberal heat, by Lord Folkestone, Mr. William Smith, the Marquis of Douglas, Mr. Ponsouby, Fox, and others. Hawkins Browne, Sir Robert Buxton, Lord Temple, Ryder, George Rose, Lord Castlereagh, and Wilberforce warmly supported the motion, variously expressing their astonishment or disgust at the disappointment of their expectations, that, on this solemn occasion, party considerations would have been buried in oblivion, and that the proposed honours to the dead—to the unflinching, honest, disinterested statesman—would have been voted unanimously. Fox and his opposition persevered to the dividing of the house; but the division strongly marked the superior generosity of that assembly, the numbers being, *for* Mr. Lascelles' motion 258, *against* it only 89. And, at this moment, few doubts were entertained of Fox's stepping into the post which Pitt had vacated; and if Pitt had been alive, and in his place, he could, on no question whatever, have commanded more than a very slight majority.

Pitt was accordingly interred in Westminster Abbey, where Fox was so very soon to be laid by his side. But more was required from parliament than the vote for a tomb in the Abbey. Pitt had died penniless, and had left debts to a large amount. Wilberforce generously attempted to raise the money by subscription among political and private friends; but his efforts did little more than elicit a miserable exhibition of ingratitude and baseness. Nothing therefore was left but an application to the public purse. A motion for a grant of £40,000 was made by Mr. Cartwright on the 3d of February, and was carried

without opposition. In private, as in public affairs, Pitt had allowed himself to be cheated and robbed; but never had a minister that ruled the country for twenty long years, or for a half or a fourth of that time, done so little to enrich himself or his family—never had statesman and dispenser of patronage and places been more indifferent to his interests. Even in Fox's long harangue against the public funeral—and which, after all, was more a criticism on the wording of an epitaph, the inscription to be put on a tombstone, than anything else—he himself had confessed that no minister was ever more disinterested, as far as related to pecuniary matters—that his integrity and moderation in this respect were confirmed by the state of his affairs when he died.

As the king's antipathies to Fox were undiminished, an attempt was made to patch up the ministry which Pitt had formed, and to place Lord Hawkesbury at the head of it. But Lord Hawkesbury declined this dangerous promotion. It was whispered that the king then tried Addington, and that Addington refused, from a sense of the impracticability of forming a government capable of resisting the coalesced and formidable opposition. It is stated as a certainty, that an offer was made to the Marquis Wellesley, who had just arrived from India, by the remainder of Pitt's ministry, and, of course, with the king's approbation, to take the lead of administration; and that the marquis immediately and distinctly declined it. Nothing, therefore, was left but to call in Lord Grenville; and, as Grenville was pledged to the Foxites, or to the principle of a comprehensive ministry, with "all the talents" or chiefs of different parties in it, the king was at last compelled to admit Fox also. The following arrangements were finally settled, and were announced to the public on the 4th of February:—Lord Grenville, first lord of the treasury; Fox, secretary of state for foreign affairs; Viscount Sidmouth (Addington), lord privy-seal; Earl Fitzwilliam, lord president of the council; Lord Howick (Grey), first lord of the admiralty; Earl of Moira, master-general of the ordnance; Earl Spencer, secretary of state for the home department; Windham, secretary for the colonies; Lord Henry Petty, chancellor of the exchequer; Erskine, lord high-chancellor; and Sir Gilbert Elliot, who had been created Baron Minto after his return to England from losing Corsica, had the patronage and management of India, as president of the board of control. All places were swept clean, and new men put into them. So thorough a ministerial change had not been witnessed for many years. Among the minor appointments, Sheridan obtained that of treasurer of the navy; and even this place, which

gave him no seat in the cabinet, appears to have been grudgingly and reluctantly bestowed. Lord Auckland became president of the board of trade, with Earl Temple for vice-president; Earl Temple (who had thus two places) and Lord John Townshend, joint paymasters of the forces; General Fitzgerald, secretary at war, &c. The law appointments were—Pigott to be attorney-general, and Sir Samuel Romilly to be solicitor-general. Law, who had been made Lord Chief-justice of the King's Bench and created Baron Ellenborough, in 1802, by the Addingtonians, was, by rather a startling novelty, brought into the cabinet. The Duke of Bedford, whose family, friends, and dependants had formed an important part of the mosaic opposition, became Lord-lieutenant of Ireland. From the first, this cabinet carried in its construction the seeds of its own dissolution. No one acquainted with public affairs, with the temper of the court, and of parliament and the country, believed that this "motley wear" would wear long; nor would it, even though Fox, the real but not the nominal head of it, had not been carried so soon to the Abbey. There was jealousy, incompatibility, and disagreement between Lord Grenville and Charles Fox. Windham, again, differed both with Grenville and with Fox on many essential points of home as well as of foreign policy; and Sidmouth differed from them all three. There was wanting, too, that harmony or sympathy with the court, without which no ministry can expect to do much good, or to enjoy a long existence.

As secretary for foreign affairs Fox had the management of the most important and the most difficult affairs of government. As he had been declaring for thirteen long years and more that the present war was unnecessary, that its origin was iniquitous as its conduct was imbecile, he could hardly do less than make some attempt to bring about a peace. It appears, too, that he calculated somewhat on his personal influence with Bonaparte, and on the pacific professions he had made to him during his visit to Paris. Upon some empty compliments and vague expressions now used by the conqueror, Fox commenced a long correspondence with Talleyrand for the pur-

pose of obtaining—what was not to be obtained from Bonaparte, without leaving him the master of the Continent, without the sacrifice on our part of all public faith—a peace, a sure and durable peace. In his first letter on this great subject, Fox, who was now a minister, and not a leader of opposition, confessed the difficulties which stood in the way of negotiation; that the treaty of Amiens could not now be taken as a basis, and that England could not think of consenting to a short and uncertain truce; and he declared that the British government was determined to keep faith with all its allies on the Continent, and to conclude nothing except in concert with the Emperor of Russia, whose armies were still in the field, and to whom England was bound by the closest ties of alliance. On discovering the determination of the French cabinet not to admit the Emperor Alexander, either as a contracting party or as a mediator, Fox ought to have broken off his correspondence; for the continuance of it could only dishearten the Russian army, and instil into the Russian cabinet doubts and misgivings as to the honesty and steadiness of the English cabinet; but Fox continued to write long letters to Talleyrand, to betray an eagerness for entering upon negotiations, which the French, in spite of his declarations that Britain itself had nothing to fear—that her

resources were as abundant as ever—attributed to a terror of Bonaparte, and to an inward conviction of the inability of Britain to continue the war much longer. Talleyrand, whose letters savoured of the dictation of Bonaparte, limited his correspondence to the most vague, equivocal expressions, avoiding every positive point, every word that might commit him or his court to any fixed line of action, and giving back to Fox, and with interest, his philanthropic apophthegms and generous syllogisms. This correspondence was good as a homily, or as a course of moral philosophy and philanthropy; but as a negotiation, or as a preliminary to a feasible and positive treaty of peace, it was nothing. Fox, upon a mere hint that such a measure would be taken as a proof of the sincerity

WILLIAM PITT¹

¹ From the statue in bronze, by Sir F. Chantrey, R.A., erected in Edinburgh by the Pitt Club of Scotland.

of the British government, appointed Lord Yarmouth (the late Marquis of Hertford) to act as minister plenipotentiary at Paris. Lord Yarmouth had long been living in France—at the English dépôt at Verdun—having been one of the ten thousand and more travellers seized and detained as prisoners of war, at the rupture of the peace of Amiens. Before he could enter upon any discussion, the French invaded and conquered the kingdom of Naples, and put forth a claim to the possession of its dependency, the island of Sicily, where a small British army had now been collected to defend our fugitive ally, the Bourbon king. There was on both sides a promise that these negotiations should be kept a profound secret—an agreement dishonourable to England; but the French, who hoped to break up our alliances, adroitly divulged the secret to the court of St. Petersburg, and to well-nigh every court in Europe. Hence arose a downright quarrel between Lord Yarmouth and M. d'Oubril, the Russian minister at Paris. The conditions proposed by Bonaparte were inadmissible; but Fox, persevering in the path he had chosen, determined to send over to Paris a public and openly accredited plenipotentiary to treat for peace. The person he selected for this mission was Lord Lauderdale. The Scotch earl soon found he could do no more than the English earl had done. Lauderdale's negotiations lasted from the 9th of August to the 6th of October, when they were broken off by a demand for passports. Fox had laid down no basis, or none on which Bonaparte's negotiators would meet him; and the results of his pacific policy were an increase of presumption on the part of the French, and of suspicion on the part of our allies.

We return to the business of parliament. Mr. Windham brought in his plan for altering the military system, and particularly the mode of recruiting the army, which certainly called for improvement, as hitherto men had been enlisted for life. Conscription or force, he said, could not be resorted to in England: the enlistments must be voluntary, and, to render them prompt and sufficient in number, the term of service must be limited, and the condition of the soldier improved; the trade of the soldier must be brought to a competition with the other trades usually followed by the poorer classes. For this purpose, Windham proposed that the soldiers raised in future should be enlisted for a term of years; that this term should be divided, for the infantry, into three periods of seven years each; and, for the cavalry and artillery, the first period to be ten years, the second six, and the third five years; that at the end of each period a man might have a right to claim his discharge, and that his privileges, pensions, &c., should be augmented in proportion to the length of his service. As the first step neces-

sary to introduce this change, Windham moved for a bill to repeal Pitt's additional force bill. Here he encountered the full brunt of opposition, with speeches from Castlereagh and Canning. But on the 14th of May the repealing bill passed through the commons. In the lords it met with great opposition; but it was finally carried. Windham's plan for limited service was then introduced (on May 30th) by way of a clause to be inserted in the annual mutiny bill. The opposition was again powerful; but the clause was voted and inserted. A bill for the training of a certain number of persons, not exceeding 200,000, out of those that were liable to be drawn for the militia; a bill to suspend the ballot for the militia in England for two years, with a reserved power to government of recurring to it in order to supply the vacancies of any corps which should be reduced below its quota; a bill called the Chelsea Hospital Bill, to give a legal security to invalid, disabled, and discharged soldiers for such pensions and allowances as they were entitled to; a bill for augmenting the pay of infantry officers of the regular army; and a bill for settling the relative rank of officers of yeomanry, volunteers, militia forces, and troops of the line, completed Windham's new military system, and were all carried, though not without opposition. An increase was also voted to the pay of sergeants, corporals, and privates of the line, to the Chelsea pensions, and to the pensions of officers' widows—three points on which the house was unanimous. On the whole, the British army, which began to improve rapidly soon after these enactments—though certainly the improvement was not owing solely to them—owes a debt of gratitude to Windham. Similar benefits were voted to the navy. On the motion of Lord Howick, the head of the admiralty, additional pay was allowed to the officers, petty officers, and seamen, and the Greenwich Hospital allowances to out-pensioners were increased. But there was a most unwise and unpatriotic-looking delay in voting the proper honours and rewards to those who had fought at Trafalgar.

The budget for the year was opened by the chancellor of the exchequer, Lord Henry Petty, on the 28th of March. The permanent taxes were stated at £32,535,971. The requisite supplies for the year were put at £48,916,000. Of this enormous sum, £15,281,000 were to be applied to the navy—£18,500,000 to the army—£4,718,000 to the ordnance, including ordnance sea-service. Among the proposed ways and means were another loan of £18,000,000, and war-taxes to the amount of £19,500,000. The new chancellor of the exchequer showed himself a good accountant and a clear expositor; but he gave on this occasion no proof of financial genius;

he showed no originality of conception; and, though nurtured in the school of Adam Smith and the Edinburgh philosophers and economists, he laid on or retained taxes which could not but have an injurious effect on manufactures and commerce. He imposed, for example, a duty of forty shillings a ton on pig-iron. He also kept up that old petty-tax system, by which a modicum of money was raised at an infinitude of trouble and vexation, and wherein, in some instances, the amount was half eaten up by the expenses of collection. He imposed an additional duty on beer and spirits in Ireland, and a paltry tax on appraisements, which was calculated at £66,000 per annum. But his lordship's great financial move was the simple but bold one of raising the income or property tax from 6½ to 10 per cent., and making it to extend to all property above fifty pounds a year. The pig-iron tax, which he calculated would yield £500,000 per annum, met with a great opposition; but this was nothing compared to the storm raised by the sudden and high increase of the property-tax to 10 per cent. In spite of their dangerous, demoralizing effects, lotteries were continued as a source of revenue to government. Lord Henry Petty, however, introduced sundry improvements in the auditing of accounts, in regulating the excise-office, custom-house, and other public offices, so as to prevent the practice of public officers deriving profit from the public money in their hands. Some slight improvements were also made in the acts regulating commercial intercourse between Great Britain and Ireland, and a law was passed for permitting the free interchange of grain of every kind between the two islands.

But the glory of this session, and of this ministry, is held to be the blow struck at the slave-trade. By the labours of many years, Wilberforce, Clarkson, and their numerous and influential friends, had at last prepared the majority of the country and of parliament for this measure, which, from the beginning, had been favoured by the advocacy and eloquence of Pitt, who had delivered on the subject some of the best speeches he ever spoke. This preparation had been slow and gradual; and it appears probable that measures which could not be carried in 1805 under Pitt, were carried in 1806 under Fox, simply because the time was more ripe for them. Yet, even now, the measures carried were far less extensive than is generally imagined—they were only instalments and advances towards a total suppression of the slave-trade—some few instalments added to those several acts and resolutions which had been passed in favour of the negroes during Pitt's long administration. We repeat, it was the work of time: and, possibly (if there is blame), Pitt was no

more to be blamed for not doing, at an early period, what Fox did, than Fox is to be blamed for not doing what was done a quarter of a century after his death, when the Whig government of Earl Grey proclaimed the emancipation of the negroes.

If Pitt had not been able to prevent the impeachment of his friend and colleague Lord Melville, when alive and in power, there was but slight chance that that prosecution would be let sleep now that he was gone, and his adversaries in place. The trial commenced in Westminster Hall, on the 29th of April, before the lords, the members of the House of Commons being present in a committee of the whole house. The articles of the charge were ten in number; but in substance only three:—1. That, as treasurer of the navy, Lord Melville had applied divers sums of public money to his private use and profit. 2. That he had permitted his paymaster, Trotter, to take large sums of money from the Bank of England, issued to it on account of the treasurer of the navy, and to place it in his own name with his private banker. 3. That he had permitted Trotter to apply the money so abstracted to purposes of private emolument, and had himself derived profit therefrom.

Whitbread, the chief manager, was not a Burke; office-books and bankers' accounts were but indifferent materials for rhetoric; a very large portion of the public, now that the first excitement was worn away, were weary of the subject; and of the upper classes the majority, though admitting some carelessness and irregularity, considered Dundas as an ill-used man. Nearly all the attractions were wanting that crowded Westminster Hall with rank, genius, and fashion at the commencement of Warren Hastings' trial. The attendance was thin and flat, and the proceedings were run over pretty much in the manner of an auditing of accounts. It was made perfectly clear that Mr. Trotter had made up for the miserable deficiency of his salary by deriving profit from the banking house of Coutts on the deposits; that Melville had made temporary use of sums of money, but had repaid them all, and with interest: but Whitbread's evidence failed altogether in proving that Melville had ever sought private emolument from the deposits, or had ever abstracted any public money with the intention of keeping it for himself. There were altogether only sixteen days of trial. Fox, Sheridan, Lord Howick, Lord Henry Petty, and Dr. F. Laurence, though managers, scarcely opened their lips during the proceedings; and except two long, hard, and dry orations from Whitbread, no speech was delivered on that side. On June the 12th, the sixteenth day of the trial, the lords voted on the

several charges. The number of peers that voted was 135. When the clerk, with the lord-chancellor, had cast up the numbers at the wool-sack, the chancellor ordered proclamation for silence; which being made, his lordship addressed the house:—"My lords, a majority of the lords have acquitted Henry Viscount Melville of the high crimes and misdemeanours charged upon him by the impeachment of the commons, and of all things contained therein." Their lordships adjourned to the chamber of parliament; and, the chancellor having announced there that the impeachment was dismissed, the whole business, which had cost the country some thousands of pounds, ended.

The present ministry, by their new bill, and their debates on the regular army, in which they spoke disparagingly of the yeomanry and volunteers, had given great offence to a very numerous part of the nation; their financial measures gained them no credit with the country at large; but what drew down upon them the greatest weight of discredit and unpopularity, was their ungenerous conduct with respect to that unhappy woman, the Princess of Wales.

Parliament was prorogued on the 23d of July. During the last month of this session ill health had wholly prevented the attendance of Fox. It was evident to most of his friends that he was rapidly following Pitt to the grave.

CHAPTER IV.—CIVIL AND MILITARY HISTORY.—A D. 1806—1807.

GEORGE III.

Unsuccessful efforts of the British and Russians in behalf of Naples—The Neapolitan dominions overrun by the French—The King of Naples and his family driven into Sicily—Defence of Gaeta against the French—The war in Naples—Victory of the British over the French at Maida—Several accounts of the battle—Disasters of the French troops in Calabria—General Stuart unable to follow up his success at Maida—He returns to Sicily—Gaeta surrenders to the French—Expedition of Sir Home Popham to Buenos Ayres—Buenos Ayres capitulates—The colonists rally, and compel the British troops to surrender—Subsequent movements of Popham's expedition—Louis Bonaparte appointed by his brother King of Holland—Bonaparte becomes Protector of the Confederation of the Rhine—His hostile purposes towards Prussia—Mutual complaints between him and Prussia—Preparations of Bonaparte for a Prussian campaign—Delay of British and Russian aid to Prussia—Bonaparte commences the war—He defeats the Prussians at Auerstadt and Jena—His Berlin decree against British commerce—Bonaparte holds out delusive hopes to the Poles—He applies in vain to Kosciusko for his co-operation—He uses the name of Kosciusko without permission—He excites the Poles against the Russians—He enters Poland—Battle between the French and Russians at Pultusk—Unprovided condition of Russia for the war—Death of Fox—Changes in the British cabinet—A new parliament opened—Its unsatisfactory proceedings—Liberal supplies voted for the war—Progress of the slave trade abolition bill—Unpopularity of the ministry—Attempts in behalf of Catholic emancipation—They are unsuccessful—The ministry dismissed and a new one appointed—Popular agitation against Popery—The parliament dissolved—The war continued in South America—Monte Video taken by the British—General Whitelocke appointed to the command in South America—His unfitness and injudicious proceedings—His unsuccessful attack on Buenos Ayres—Disgraceful close of the expedition—Whitelocke brought to trial and cashiered—Commencement of hostile proceedings between Britain and Turkey—A British fleet sails up the Dardanelles—Constantinople effectually fortified by the French—Inglorious end of the Turkish expedition—British expedition to Egypt—Its defective means and failure—Death of the Turkish sultan—Reduction of the island of Curaçoa by the British—Preponderance of Bonaparte's influence in Denmark—Apprehensions of his using the Danish fleet against Britain—The British ministry resolve to anticipate him—They send an expedition to take possession of the Danish fleet—Bombardment of Copenhagen—The Danish fleet surrendered to British keeping—War proclaimed between Britain and Denmark.

UR military operations in the course of this year extended to the south of Italy and Sicily. Portugal, the Cape of Good Hope, the East and West Indies, and South America. The petty expedition which had been sent into the Mediterranean under General Sir James Craig, being joined by a Russian force, landed at Naples in the month of November, 1805, when the French army, under General St. Cyr, which had been occupying a great part of

that kingdom, was absent in Upper Italy, co-operating with Marshal Massena. Before St. Cyr took his departure, the Neapolitan government promised to remain neutral; but that engagement, like so many others, was contracted under the influence of fear and weakness, and Ferdinand IV., though deploring the smallness of their forces, received the English and Russians as friends and deliverers. If the allies had been more numerous, and if they had arrived six weeks or two months earlier, they might have set the

whole of Lower Italy in a blaze against the French; they might have insured the destruction of St. Cyr's *corps d'armée*, and have prevented every one of the successes which Massena had obtained over the Archduke Charles in Upper Italy. But as things were—with their contemptible numbers and too tardy arrival—the English and Russians could do little but hasten the ruin of Ferdinand IV. As soon as Bonaparte learned the breach of the promised neutrality, or the arrival of the Russians and English (whose landing Ferdinand could not have prevented if he had been ever so much disposed to do it), he issued from Vienna one of his terrible proclamations, declaring that the Bourbon dynasty of Naples had ceased to reign. As the battle of Austerlitz and the peace with Austria had left his armies nothing to do in the north of Italy, he ordered St. Cyr to retrace his steps to the south with all possible speed. But St. Cyr's forces were only the van of a much more formidable army. Marshal Massena followed close behind with three great columns, and a multitude of generals of name and fame; and behind them all came Joseph Bonaparte, destined by his brother to fill this Bourbon throne. In all, counting the Italian regiments which had been raised in Lombardy and Piedmont, more than 70,000 men were in full march for the Neapolitan frontier, behind which lay 3000 British, about 4000 Russians, and a small and disorganized Neapolitan army, which was worth less than nothing. The Russian general presently informed the Neapolitan court that they had better negotiate with St. Cyr for a renewal of the neutrality which they had violated, and that, for his own part, he must be gone; and, before the foremost French column reached Rome, the Russians marched away to the sea-ports of Apulia and embarked for Corfu. Sir James Craig could only follow the example of the Russian general: he fled rather than retreated from the banks of the Garigliano. Without seeing an enemy, except in the Neapolitan peasantry, whose vengeance they provoked, Craig's force was found to be considerably reduced before he could embark and sail away for Sicily. None were left to defend the frontiers or the line of the Garigliano, except Fra Diavolo and a few hundreds of brigands and insurgents. As soon as the *débâcle* began, old King Ferdinand, thinking most of his personal safety, embarked for Palermo: Queen Caroline remained till the 11th of February, when St. Cyr had crossed the frontiers; but on the evening of that day, not without a risk of being seized by her own subjects of the French faction (and in the capital they were very numerous), she fled with her daughters on board ship, and sailed for Sicily to join her husband. On the application

of Ferdinand IV., Admiral Lord Collingwood had despatched a small squadron, under Sir Sidney Smith, to give such aid and assistance as should be practicable. Sir James Craig soon collected his troops in the neighbourhood of Palermo, and for a considerable time the court owed its safety entirely to the presence of our petty army and two or three of our ships. On the morning of the 14th of February the advanced guard of the French appeared on the heights which overlook Naples. On the 15th, the garrisons in the city and forts having previously surrendered, Joseph Bonaparte entered Naples, and took up his abode, as king, in the palace from which the Bourbons had so lately fled. Previously to his ignominious flight, Ferdinand had despatched his two sons, the hereditary Prince Francis and Prince Leopold, into the Abruzzi and into Calabria, to rouse the hardy native population of those mountainous countries. There was no want of loyalty in the peasantry; but more than half of the Neapolitan nobility and proprietors were at this moment either indifferent to the cause of the Bourbons or inclined to favour the cause of the French; the poor people had no arms, ammunition, or other necessities; and the royal princes had nothing to give them save compliments and white cockades. A little later the French found Calabria the fiercest and most destructive country they had ever entered; but this was when the population had been driven to despair, and after supplies and ammunition had been thrown among them from Sicily. For the present no stand could be made. The two princes fled over to Sicily, and the French general, Regnier, subdued, or seemed to subdue the whole of Calabria, with the exception of a few towns. The English had gained possession of the rocky island of Capri, which commands the Gulf of Naples, and some Sicilians, under the command of the Prince of Canosa, occupied Ponza and other islands off the coast. In advancing from Rome, Massena and St. Cyr had not been able to reduce Gaeta, a formidable fortress on the Neapolitan coast, which happened to be garrisoned by some trustworthy troops, chiefly foreigners, in the pay of the Bourbon king, and commanded by an officer of honour and courage, a Prince William of Hesse-Philipstadt. Sir Sidney Smith threw succours into the place, battered the works of the French besiegers, landed English sailors as he had done at Acre, and inflicted several severe blows upon Massena's forces at various parts of the coast. The siege of Gaeta promised to be a long affair. When first summoned by the French, the German prince told them that Gaeta was not Ulm, and that he was not Mack—and the French felt the truth of the assertion.

In Calabria, General Regnier, after three days' desperate and bloody fighting, carried the walled town of Maratea, into which a great number of the Bourbon partizans had thrown themselves.

GAETA.—From a view by J. D. Harding

The castle capitulated on the next day; but as it was pretended that these Bourbonists were not regular troops, but only partizans and insurgents, they were butchered in cold blood. Leaving Maratea in flames, the French advanced to the siege of Amantea. Amantea could not be taken by the French; Reggio was retaken from them; the castle of Scylla, which had surrendered to the French, was invested. Regnier was compelled to halt, and then to retreat towards Monteleone. By this time, the British troops in Sicily had been reinforced, and the command of them transferred to Sir John Stuart. On the entreaties of the queen, which were seconded by his personal feelings and his own ardent wishes, Sir John agreed to cross over into Calabria. All the force he could take with him, including artillery, did not amount to 5000 men;¹ and of these above a third were Corsicans, Sicilians, and other foreigners in British pay. On the 1st of July, Sir John Stuart effected a landing in the Gulf of Sant' Eufemia, not far from the town of Nicastro, to the northward of Monteleone, and between that city and Naples. Apprised of this disembarkation, General Regnier made a rapid march, uniting, as he advanced, his detached corps, for the purpose of attacking the British without loss of time, and of driving them into the sea, or back to their shipping. Instead of encamping on the beach, to have the co-operation of shipping, Stuart marched some distance along the beach, and then struck boldly inward to meet Regnier. All the artillery that

Sir John had brought with him from Sicily consisted of ten four-pounders, four six-pounders, and two howitzers; and from this formidable artillery, scarcely a shot seems to have been fired except as

a signal, or for measuring distances. The battle of Maida was a battle of bayonets. The French advanced with a quickened step, and with their wonted cheers. They were veterans, thoroughly trained, and looking martial and fierce with their mustachios; the British line consisted in good part of young and beardless recruits. It was the boast of the French, and the boast had grown louder since the encounter with the Russians at Austerlitz, that no troops in Europe would stand their bayonet charge. The fact was now to be proved, though not in an equal contest; for,

to have an equality, Stuart ought to have had veterans to oppose to veterans. But such men as we had disproved the boast. They gave one true British hurrah, and rushed on with their bayonets levelled. Some few of the French really stayed to cross bayonets (a rare occurrence in war); but these were overthrown or pushed back by the superior physical strength of their adversaries; and the rest of them became appalled, halted, fell back, and recovered arms. The French officers were now seen running along the line, resorting to those extraordinary efforts which French officers are expected to make at every crisis; but nothing they could do could encourage their men, or lead them back to the points of the British bayonets; and as the British advanced upon them, the 1^{re} Légère broke their line, fell into irremediable disorder, and endeavoured to flee back to the hills. But it was too late—they had got too close—they were overtaken by a most dreadful slaughter. Being thus completely discomfited on his left, Regnier, who had been galloping about the field, storming and cursing like a madman, began to make a new effort with his right, in the hope of recovering the day. He threw horse and foot on Stuart's left; but only to see them beaten in a trice. He made a fruitless essay to turn our flank, and this was the last feeble struggle that Regnier made; and after it was nothing but flight, confusion, *débâcle*. A Frenchman, a man of genius, the wittiest and one of the best prose writers of modern France, was attached to the service of the boastful French general at the time, and was too noble a fellow

¹ Sir John Stuart, in his despatch, states his total number, rank and file, including the royal artillery, at 4795.

to cover over the defeat with falsehood and invention.¹ He wrote to his friends that bulletins and *Moniteurs* might say what they liked; but that the plain truth was, that Regnier had been most thoroughly beaten—had been well thrashed by Stuart—*bien rossé*. "This adventure," says he, in writing to a French artillery officer at Naples, "is a very sad one for poor Regnier! The French fought nowhere. All eyes are fixed upon us. With our good troops, and with equal forces, to be defeated in such a few minutes! This has not been seen since our revolution."² This writer does not state the amount of Regnier's loss; but another French officer, who was in Calabria some time after the battle, admits that he left 1500 men dead or wounded on the battle-field. Sir John Stuart, in the despatch to his government, dated from the camp on the plain of Maida, July the 6th, or two days after the affair, says that above 700 bodies of their dead had been buried upon the ground; that the wounded and prisoners already in his hands (among whom were General Compère, the colonel of a Swiss regiment, and a long list of officers of different ranks) exceeded 1000; and that the peasantry were hourly bringing in fugitives, who had dispersed in the woods and mountains after the battle. By the official return of the assistant adjutant-general, the loss of the British amounted to one officer, three sergeants, forty-one rank and file killed; eleven officers, eight sergeants, two drummers, 261 rank and file wounded. Sir John declares that no statement he had heard of Regnier's numbers placed them at less than 7000 men, when they began the action. Regnier, we know positively, had entered Calabria with 10,000. A part of the force he first brought with him had been detached to distant points, and some few hundreds had already fallen under the knife of the vindictive, infuriated Calabrians; but, on the other hand, there had been a constant influx of reinforcements: and, upon a comparison of various French and Italian accounts, it appears quite certain that Regnier descended from his wooded heights with from 6000 to 7000 fighting men.

General Verdier, who was occupying Cosenza, an important town a few miles to the north of Maida, with a French brigade, was driven out of the place by the insurgents. Every fort along the coasts of the Tyrrhenian Sea, with all the French depôts of stores, ammunition, and artillery, prepared for the reduction of Calabria and then for the attack of Sicily, became the prey of Sir John Stuart's little army; and on the shores of the Ionian Sea, to which the French had

retreated, Cotrone, situated between Catanzaro and Matera, was reduced to capitulate by the 78th regiment—a part of Stuart's force which was carried round by sea—and by a small squadron of ships, under the command of Captain William Hoste, who was assisted by some Sicilian gunboats, and by some of the armed Calabrians. On the 4th of August, Regnier reached Cassano; on the 7th he was joined by Verdier, who retraced his steps from Matera; and on the 11th these two wandering fugitive generals effected a junction with Marshal Massena, who then assumed the supreme command in the Calabrias, assuring King Joseph that in one month he would reduce those two provinces to submission and loyalty to him. But though the great Marshal—the darling child of Victory, as they called him—brought with him a fresh army of 6000 or 7000 men, and remained much longer than a month in that wild country, he did not fulfil his promise. Fortresses were recovered, towns were taken and burned; the more level or open parts of the provinces were kept in subjection; but to subdue the fiery furious mountaineers, or even to secure constantly the highroads which led from the capital, was found to be impracticable. It took Massena's successors five long years, and it cost the French army, from first to last, 100,000 men to quench the flames of this ardent Calabrian insurrection—and then it was that sort of peace which proceeds from solitude and extermination.

If, instead of less than 5000 men, Sir John Stuart had had with him 10,000, he might have cleared Upper Calabria, as he did Lower Calabria, of the last Frenchman in it. Backed by the Calabrians alone, he might have hurled Regnier and Verdier, the great Marshal Massena and all, down the precipices of the Sylla Mountain, or have destroyed them at the edge of the province, in the passes of Campotanesse. With 30,000 men he might have swept Naples and the whole of Southern Italy clear of the French, and have caused the greatest embarrassment to Bonaparte, who had weakened his army in the north of Italy in order to collect the greater force for the war with Prussia. Almost immediately after the battle of Maida the white flag of the Bourbon was actually raised in nearly every part of the kingdom. The mountaineers of Basilicata and Capitanata, of Principato-Citra and Principato-Ultra, of the wild and lofty pastoral regions of the Molise, flew to arms; a daring partizan, named Picciolo, raised nearly the whole population of the Abruzzi; and Fra Diavolo, a half-brigand half-Bourbon partizan, scoured the Terra di Lavoro, and the garden plains that lie behind Naples, penetrating at times almost to the gates of the city. The intruded King Joseph lost

² Letter dated Cassano, the 11th August, 1806, in *Mém. des Correspondances*, &c.

heart completely. In his council of state it was anxiously discussed, whether he ought not to flee to the frontiers of the kingdom, collect there the army of Calabria, and all his other troops save a few garrisons, and await there the arrival of another army from France. But it was not the half of the Italian peninsula, but the vaster peninsula which embraces Spain and Portugal, that was destined to be the great battle-field of Britain. With less than 5000 men, Sir John Stuart could not follow up his brilliant success. His little army was reduced by the malaria fevers; he had neither time nor the necessary means to attempt organizing and disciplining the very disorderly Calabrians; and, after clearing the lower province of the enemy, and throwing some small garrisons into the castle of Scylla, and one or two other places he had captured, Sir John embarked the rest of his forces, and returned to Sicily, which the French long continued to threaten with invasion.

With admirable exertions Sir Sidney Smith collected some more supplies and succours, and sent a second convoy to the besieged Gaeta. Everything went well so long as he was

there, and the brave governor of the fortress was in a state to do his duty; but the presence of the British admiral was required at Palermo—where the court thought itself in danger so long as he was absent—at Messina, at Reggio, along both coasts of the Calabrias; Prince Hesse-Philpstadt received a mortal wound on the ramparts where Sir Sidney had so often stood by his side; the command fell to a Colonel Storz, who had bravery and skill, but infinitely less authority than the prince; that origin of all evil in war, a council, was created: and then, collectively, the superior officers of the besieged agreed to do what, perhaps, not one of them would have done singly—to beat a parley and capitulate. Massena said that the fall of Gaeta was equivalent to a successful campaign.

The Cape of Good Hope, which the Addington administration had given up so prematurely, was recovered in the month of January, by Sir David Baird with 5000 land troops, and Sir Home Popham with a small fleet. Tempted by very inaccurate reports of the wealth and weakness of the Spanish colonies on the Rio de la Plata, Sir Home Popham, it is said, without the slightest authority from the government at home, ventured to carry his whole naval force to South America,

and induced Sir David Baird to allow General Beresford to accompany him with a portion of the land force which had conquered the Cape. Having touched at St. Helena, Popham and Beresford arrived at the mouth of La Plata early in June, and on the 24th of that month landed the troops at some distance from Buenos Ayres. The whole force disembarked, including marines, did not exceed 1600 men. Some Spanish troops, who attempted to dispute their passage, were dispersed by a single volley; and on the 27th of June, favourable terms of capitulation having been granted to the inhabitants, Beresford entered the city without resistance.

THE GREAT SQUARE BUENOS AIRES —From a camera sketch by Major Kretschmar

The news of the capture of Buenos Ayres was received with transports of joy by our trading community, and by that part of the cabinet and country which clung to the paltry idea of making war for what they termed British objects, or exclusively national interests. The cabinet, on first learning Sir Home Popham's wild enterprise, had sent out orders to recal him; but, as these orders did not reach the admiral in time, as the conquest had been made with so much ease, as 1,000,000 dollars remitted by him was looked upon as a valuable consideration, and as the popular joy and commercial exultation were so great, ministers now sanctioned the whole scheme, and resolved to keep what had been gotten without their will. But, before people at home had finished rejoicing for the conquest, the conquest was no more, and the capturers were captives. As soon as the Spaniards and the colonists became generally aware of the smallness of Beresford's force, they began to concert measures for his expulsion. A popular insurrection was organized in the heart of the city; emissaries were sent to excite the hardy country people to arms; and, when everything was ripe for action, M. Liniers, a Frenchman in the Spanish service,

crossed the river in a fog on the 14th of August, and landed above Buenos Ayres with more than 1000 fighting men, whom he had brought from Monte Video and Sacramento. Other armed levies joined Liniers, who now advanced against the city. Then, within the walls, the inhabitants rose upon Beresford, who attempted to retreat to the ships, but was prevented by the bad state of the weather. After a desperate action in the streets and great square of the town, in which they were exposed to a fierce and destructive fire from the windows and balconies, and the house-tops, the English capitulated and laid down their arms. Sir Home Popham, who had the good fortune to be on board ship at the time, then blockaded the Rio de la Plata. He then proceeded to make an attack on Monte Video, but his ships could not get near enough to batter the walls. In the month of October, successive reinforcements having arrived from the Cape of Good Hope and from England (where the cabinet ought to have foreseen Beresford's fate), he landed a body of troops at Maldonado, drove the Spaniards from the Isle of Goriti, and took up good anchoring-ground and quarters on shore to await the arrival of more reinforcements.

Returning from his Austrian conquests, Bonaparte had entered Paris in triumph in the month of January. Before this time he appears to have determined to put crowns upon the heads of all his brothers except Lucien. It was on the 30th of March that he invested his brother Joseph. On the 5th of June he proclaimed his brother Louis King of Holland, thus transforming, by a stroke of the pen, the Batavian republic into a kingdom dependent on France. In giving Louis his investiture, he told him that, though he was going to reign over the Dutch, he must never cease to be a Frenchman; that his hereditary dignity of constable of the empire must constantly remind him of the duties he owed to the Emperor of the French—in other words, poor Louis was told that he must do whatever his brother should command.

The Confederation of the Rhine had elected the Emperor Napoleon to be their "Protector." By a secret treaty, which was made public about the end of July, the Kings of Bavaria and Würtemberg, the elector arch-chancellor of the Germanic empire, the Elector of Baden, the Grand-duke of Berg and Cleves (Murat), the Prince of Hesse-Darmstadt, and ten other petty sovereign princes, separated themselves from the Germanic empire, and united in a distinct confederation, to be guided by its own diet and under its own primate. This primate was declared to be the elector ex-chancellor of the empire; but the Emperor Napoleon was to have the right of naming this primate's successor. All these German

VOL. IV.

states were to be bound to one another and to France by an alliance offensive and defensive. In case of another coalition and continental war, they were all to act together, France engaging to furnish 200,000 men, Bavaria 30,000, Würtemberg 12,000, Baden 8000, Berg and Cleves 5000, Darmstadt and the other states 4000 each. This arrangement went to array 100,000 German troops on the side of Bonaparte and against the liberty and independence of Germany. Other states were invited to join the confederation.

Bonaparte felt himself humbled by the concessions he had been obliged to make to Prussia, and he retained a bitter recollection of the uneasiness her undecided line of conduct had several times caused him during his last campaign. He calculated that a great deal might be gained by going to war with her; and he doubted whether, if ever so much disposed to remain at peace with her, she would not take an early opportunity of appealing to arms. He knew that there was, and long had been, a strong war or anti-Gallican party at Berlin, headed by the Queen of Prussia and Prince Louis, the king's cousin—a party who had all along deplored the mean, shuffling conduct of their cabinet. Hence Bonaparte was induced to give an underhand encouragement to the propagation of slanders and invented stories, injurious to the character of her Prussian majesty, and offensive beyond measure to the feelings of the king, her husband, by whom she was tenderly and almost romantically beloved. These calumnies against the Queen of Prussia were the more atrocious, as they were directed against an interesting and beautiful young woman, exemplary in her private conduct, and high-minded, and enthusiastically patriotic in her political aspirations.

On seeing the effects of the Confederation of the Rhine, which almost surrounded her with hostile states, or with neighbours devoted or subjected to France, Prussia had some reason to complain. Bonaparte answered her murmurs by making the *Moniteur* talk of Prussia as a secondary power, which was assuming a high tone not warranted by its population and extent, or by its actual position. A part of the victorious army which had fought at Austerlitz had been left beyond the Rhine, to preside over the organization of that new confederacy, or to live at free quarters among the rich trading Hanse-towns, which had lost their trade, and were fast losing all their wealth. According to the treaty of Presburg, all these French corps ought to have evacuated Germany. Bonaparte, if he did not absolutely refuse to withdraw his troops from beyond the Rhine, certainly left them just where they were, and denied that Prussia or any other power had a right to complain of their presence.

It even appears that he reinforced those troops the very moment Prussia began to murmur. At the beginning of September he collected his great captains around him in Paris—Soult, Augereau, and Bernadotte, who had been serving in Germany, and Murat, who had been residing for a season in his grand-duchy of Berg, and he consulted with them as to the best means of commencing and conducting a campaign against Prussia, so as to render it as rapid and decisive as his last campaign against Austria.

In a note delivered to Talleyrand on the 1st of October, General Knobelsdorff said, and said truly, "that the king his master saw around his territories none but French soldiers or vassals of France, ready to march at his signal;" and he peremptorily required that the French troops should forthwith evacuate the territory of Germany. To this Bonaparte made answer, in the haughtiest tone of defiance, that for Prussia to provoke the enmity of France was as senseless a course as to pretend to withstand the waves of the ocean! On the 9th of October the King of Prussia, who had put his army in motion, issued a long manifesto from his head-quarters at Erfurt. This was the war-note; there was no formal declaration of hostilities on either part. But, before the signal was given, Bonaparte, having quitted Paris on the 25th of September, was on the Rhine, and quite ready to begin operations. He had, in fact, been in a state of readiness ever since the beginning of August; for at that time his army of Germany, then under the supreme command of Berthier, was extended from Baden to Düsseldorf, and from Frankfurt to Nüremberg—the main body being in a manner already in position, and only waiting the arrival of the reserve.

The Emperor of Russia had refused to ratify a disgraceful treaty which his minister D'Oubril had really signed separately at Paris during Lord Lauderdale's negotiations, and was again in the field, though far away beyond the Vistula. The Prussians have been taxed with the same fault which the Austrians had committed in 1805, in not waiting for the arrival of the Russians in Germany. But, by the time it became known at Berlin that the Emperor Alexander had refused to ratify the treaty of peace with France, Bonaparte was fully prepared to commence operations against Prussia; and his cunning negotiator, General Sebastiani, having been despatched to Constantinople, had got up a "very pretty quarrel" between the Ottoman Porte and Russia—a quarrel which led to the sultan's abandoning his former alliances with England and Russia, to the hasty contracting of a new alliance with France, and to an actual war between the Turks and Russians, which commenced in November, and

gave occupation to a large part of the czar's army. The cabinet of Berlin has been also censured for not waiting for pecuniary aid and other succours from England; but our cabinet, neither before the crisis nor after it, showed any great alacrity or liberality: the succour from England, like the arrival of armies from Russia, seemed distant and uncertain.

On the intelligence that Prussia had taken possession of Hanover, and had closed her ports to the British flag, Fox had recalled our ambassador from Berlin—an embargo had been laid upon all Prussian vessels in the harbours of Great Britain and Ireland—and the Elbe, the Weser, and the other German rivers had been again declared in a state of blockade. At the first symptom of the political change in the cabinet of Berlin, our government had professed a readiness to renew friendly relations; they had instantly removed the blockade of the ports and rivers, which had caused much inconvenience to Prussia and the whole of the north of Germany; and they despatched Lord Morpeth on an embassy to his Prussian majesty. But Lord Morpeth, who did not quit London until the 1st of October, did not reach the Prussian head-quarters at Weimar until the 12th, when the two hostile armies were almost in presence of each other.

The force which Bonaparte brought into the field was numerically superior to the Prussian army by nearly one-third; as he advanced, he had in his front and on both his flanks none but friendly states; the armies of the Confederation of the Rhine were ready to co-operate with him; and he had in his rear, behind the Rhine, an immense force in disciplined troops, as he had anticipated a whole year's conscription, or raised in 1806 the levies which by law ought to have been raised in 1807. Prussia, on the other hand, had only one reluctant ally, the Elector of Saxony, who evidently would have behaved now towards Prussia as Prussia had behaved towards the coalition in the preceding autumn, if the Prince of Hohenlohe had not marched into the country at the head of a division of the Prussian army. One or two of the petty states, expecting subsidies from England, which did not arrive, professed a perfect neutrality.

In one particular the Prussians followed pretty closely the fatal example of the Austrians in 1805; they extended their line of operations far too much, being almost incredibly oblivious of the very simple and never-varying tactics of their adversary. On the 6th of October, Bonaparte had collected his columns about Bamberg; and on the 8th (four days before Lord Morpeth's arrival at Weimar), he commenced a variety of skilful and successful but very simple movements, which

ended in his turning the Prussian left, in his gaining possession of most of their magazines, and interposing between their main body and the city of Berlin.

The French were now posted along the river Saale from Naumburg to Kahla, with their centre at Jena. The Prussians were ranged between Jena and Auerstadt. The road to Dresden, the capital of Saxony, lay as open to the French as the road to Berlin. The Duke of Brunswick, the commander-in-chief of the Prussian army, called in his outposts, which had been imprudently scattered in all directions, and concentrated, as much as it was possible, the masses of his left at Auerstadt. The Queen of Prussia, mounted on horseback, rode along the splendid lines, to encourage by her presence the 50,000 fighting men collected on that point. On the 14th of October the fine Prussian army was defeated, and the ill-amalgamated Prussian monarchy, the work of the great Frederick's whole life, was absolutely shattered by the double battle of Auerstadt and Jena. Except Blücher and Lestocq, who kept some regiments together, and fought bravely with them, the conduct of the Prussian generals, after the day of the double battle, seems to have been about equally void of spirit and of ability. The way in which several of the fortresses were surrendered exposes some of them to very dark suspicions. Spandau, Stettin, Küstrin, Hameln, Nieuburg, Magdeburg, all surrendered without attempting the least resistance.

On the 18th of October, Marshal Davoust, with nothing to oppose him in Saxony, took quiet possession of the city of Leipsic. The Elector of Saxony, who had so reluctantly joined Prussia, immediately made overtures to Bonaparte for a separate peace, and a beginning was soon made to that close un-German alliance which gave the elector a kingly crown, with a vast accession of territory, chiefly torn from the Prussian monarchy, and which bound Saxony to Bonaparte for seven long eventful years.

Still keeping uppermost in his mind his war against English commerce, Bonaparte despatched Marshal Mortier to occupy the free trading city of Hamburg, and seize all British goods and property there. Berlin became a sort of lay Vatican, whence the Emperor of the French hurled his thunderbolts at our broadcloth and calicoes. The well-known Berlin decree was issued on the 21st of November. It was simple and concise enough:—The British Islands were to be considered in a state of blockade by all the Continent. All correspondence or trade with England was forbidden under the severest penalties. All articles of English manufacture or produce of the British colonies were declared to be contraband.

Property of every kind belonging to British subjects, wherever found, was declared lawful prize. All letters to and from England were to be detained and opened at the post-offices.

The King of Prussia had fled for refuge into the fortress of Königsberg, on the Pregel. Out of the wreck of the army, General Lestocq was enabled to assemble there a few thousand men for the protection of his sovereign. But the main reliance of Frederick William was on the Emperor Alexander, who was now in Poland and advancing towards the Vistula. In Poland, the Russian emperor was standing on unfriendly ground, for the seizure and partitions of that unhappy country had excited, if not the great body of the people, the majority of the nobility and upper classes to direct hostility or mortal hatred against the three partitioning powers; the feeling, for evident reasons, being more vehement against Russia than against Prussia and Austria. Bonaparte, who had long had a great number of Poles in his army—fugitives from the army of independence of Kosciusko, or men otherwise victims of the last unfortunate Polish war—had often entertained them with prospects and hopes of re-establishing Poland as an independent nation, and of restoring them, and their brothers in exile and poverty, to their native country, their confiscated property, and their lost places and honours. With these delusive visions he had completely dazzled many of these Poles, and had created in them an enthusiastic attachment to his person and his fortunes. He now applied to the patriot Kosciusko for the high sanction of his name. But Kosciusko, who had constantly declined entering his service, saw clearly through Bonaparte's selfish designs, was proof to every temptation, and would not quit his retirement. As he was living in France, an excuse was needful: he stated that the effects of his numerous wounds, and his general bad health, prevented him from sharing in the fatigues of war. But to his confidential friends the single-minded patriot said, that liberty was not to be expected from the French, who were enslaving all nations: that Bonaparte was a conqueror devoured by ambition, and a thorough despot, whose character and conduct precluded confidence: and that all the conqueror now wanted was to make the Poles serve his present projects. The French, he said, had often talked and written a great deal about the wrongs of Poland, but had never done anything to redress or relieve them. In spite of this refusal, Bonaparte ordered the exciting proclamation, giving assurances of liberty and independence to the Poles, to be inserted in the *Moniteur* with the high sanction of Kosciusko's name and signature attached to the spurious document. And now—on the 1st of

November—as he was preparing to pour his grand army into Poland, he made General Dombrowski issue that proclamation, and other addresses, wherein the Polish nation was told that Kosciuszko was speedily coming to fight with them for the liberation of their country, under the shield and protection of the Emperor of the French. Few knew the secret, and very few of the Poles had the prudence and foresight of Kosciuszko, or a fragment of his capability for the inductive process which had convinced him of Bonaparte's intentions. A great part of the country was electrified by the addresses, and in a tumult of joy at the rapid advance of the victorious French columns. All Prussian Poland was in a blaze; the Russians, who had advanced

Poland, and took possession of the city of Warsaw; but on the approach of the French he found himself under the necessity of evacuating that capital. Bonaparte entered Warsaw in triumph, in the midst of the acclamations of the Poles; and there, on the 11th of December, while the columns of the grand army successively crossed the Vistula, he signed his separate and most advantageous peace with the Elector of Saxony. That elector, like the Electors of Bavaria and Würtemberg, was transformed into a king, and his army, instead of fighting for the independence of Germany, was joined to the army of the oppressor and marched against the Russians.

The Russians retired due north in the direction of the Niemen, as if intending to cross that river and draw their enemy into the wide country beyond it. But this wise design, which was really entertained, was abandoned, and Beningsen halted at Pultusk, on the little river Naren, at the distance of only a few days' march from Warsaw. The position was well chosen, with the river on one side, a wood on the other, and an open plain in front. After some skirmishes and affairs of outposts, a bloody battle was fought on the 26th of December. The approach of night put an end to one of the most terrible of combats in which the French had ever found themselves engaged, and in which they are said to have lost nearly 8000 men in killed and wounded. The Russian loss was estimated at

POLISH SOLDIERS.—FROM CHOPIN, L'Univers Pittoresque

into those provinces with the design of crossing the Vistula and succouring the King of Prussia, found a new enemy upon their hands—a furious insurrection gathering all round them. From nearly all parts of Poland enthusiastic volunteers—men who had fought under Kosciuszko, or who were inspired by the recollections of his exploits—rushed to join General Dombrowski, who, as early as the 16th of November, had formed at Posen four good Polish regiments. This miscalculating, blind national enthusiasm was at its height when Bonaparte, after levying enormous contributions at Berlin, advanced and established his headquarters at Posen. He received deputations and numerous addresses from the credulous patriots, all entreating him to restore their country to its ancient independence. In his replies the conqueror adopted that mysterious, oracular style which was familiar to him, and which had often been made to pass for supernatural intelligence, or for the voice of destiny. Beningsen, the Russian commander-in-chief, occupied a part of Prussian

5000. In the darkness of night the French began their retreat to the Vistula; and they moved off so rapidly that on the next morning the Cossacks could not discover a rear-guard anywhere in the neighbourhood. Bonaparte went into Warsaw with his guards, leaving the rest of his army on the right bank of the river, in Praga, which is but a suburb of Warsaw, and in the villages round about. He had announced by bulletins that the war would be at an end before New-year's Day; but now he found himself condemned to inactivity, and even to winter-quarters. He waited the arrival of reinforcements, and the organization of his Polish recruits. The Russian army was again in want of almost everything except guns, muskets, bayonets, ammunition, Cossack spears, courage, loyalty, and resolution; it was as poor and as unprovided as it had been in Moravia the winter before, and the treasury of the czar was in no condition to supply the deficiencies. The resolute way in which the young czar had torn to pieces D'Oubril's treaty

and had adhered to the coalition, the firm stand which his armies had made, and were actually making, demanded whatsoever succour and assistance England, his ally, and the real head of the coalition, could afford to give. The prolongation of this war, which had already drawn Bonaparte so far from France, must cost the French enormous sacrifices, and might be expected to terminate in some terrible catastrophe, and in the destruction of the conqueror, if not in the country between the Vistula and the Niemen, in the vast plains of New Russia beyond the Niemen. The lengthened struggle would at least have impeded that consolidation of the French system in Germany, which left such enormous resources in the hands of the Emperor of the French. Yet when Alexander applied to the British government for a supply of money, all that he got was a beggarly subsidy of £80,000. To this untimely parsimony of "All the Talents" are mainly attributable the lamentable reverses of the Russians early in the following spring. To this niggardliness Europe may almost be said to owe seven years more of a destructive war.

Nearly four months before the battle of Pultusk, the brightest of "All the Talents" had been removed from office and from life. Soon after the rising of parliament Fox grew worse. His disease was dropsy, which would not yield to the repeated operation of tapping. He expired at Chiswick House, in the afternoon of the 13th of September, as the Tower guns were firing for the capture of Buenos Ayres. He was in the fifty-eighth year of his age, or eleven years older than Pitt. "How speedily," exclaims Wilberforce, "has he followed his great rival!" His death was considered as equivalent to the death of his party. "I look upon what has been called Mr. Fox's party," says Horner, "as extinguished entirely with him. His name alone kept the fragments together, after the party had been long ago broken to pieces." This fact, however, did not immediately appear. The cabinet which Fox had aided in forming retained possession of office; his nephew and pupil, Lord Holland, was brought into it as lord privy-seal, and Fox was succeeded in the foreign department by his friend Lord Howick, who was more identified with the Foxite policy than almost any other public man. The other ministerial changes were simply these:—Mr. T. Grenville became first lord of the admiralty, in lieu of Lord Howick; Tierney, president of the board of control, in lieu of Grenville; and Sidmouth, who had held the privy seal, now given to Lord Holland, became president of the council, in lieu of Earl Fitzwilliam, who resigned. Thus Lord Holland was the only new member brought into the cabinet.

As parliament was not sitting, there were no

angry invidious debates on the merits of Fox, the sort of funeral to which he was entitled, or the wording of his epitaph. The ministry took it upon themselves to give him a public funeral in Westminster Abbey. On the 10th of October, all that remained of Fox was carried to the Abbey in great state, and deposited in a tomb immediately adjoining the monument of the Earl of Chatham, and within eighteen feet of the grave of Pitt.

The mixed cabinet had continued to complain of the coldness or want of confidence of the court. Hoping to gain greater strength in the House of Commons by a new general election, they proceeded to the sudden and unexpected measure of a dissolution of parliament, which had sat but four sessions.

The new parliament assembled on the 19th of December, and was opened, not by the king in person, but by commission. The royal speech dwelt principally upon the calamitous war in Prussia, and upon the conduct of our government in respect to that power. It said that Prussia had found herself at length compelled to adopt the resolution of openly resisting the unremitting system of aggrandizement and conquest; that neither this determination nor the succeeding measures had been previously concerted with his majesty, nor had even any disposition been shown to offer to our government any adequate satisfaction for those aggressions of Prussia, which had placed her and England in a state of mutual hostility; but that nevertheless his majesty had not hesitated to adopt immediately such measures as were best calculated to unite their counsels and interests against the common enemy. Great praises were lavished on the good faith of his majesty's allies, the King of Sweden and the Emperor of Russia; and it was declared that our alliance with Russia afforded the only remaining hope of safety for the continent of Europe. This confession ought to have been followed up by the voting of a proper subsidy; a liberal supply of money might yet have reached Poland in time to turn the scale in favour of the Russians; but nothing of the sort was proposed, and when the Emperor Alexander made fresh applications, he was met with an absolute negative.

On the 22d of December, the thanks of both houses were voted to Major-general Sir John Stuart, to Brigadier-general Lowry Cole, to Brigadier-general W. D. Ackland, to the officers under their command, and to the non-commissioned officers and private soldiers for their bravery and good conduct. If the French made too much of their victories, we certainly made too little of ours. "All the Talents" continued to act as though they were ashamed of the glory of our arms; nor did the orators in opposition to

them exert any extra spirit, or display any superior eloquence on this occasion. Except Windham, who spoke out like an Englishman, all the cabinet seem to have been as cool as if they had been discussing a beer bill or a pig-iron duty. In praising the heroes of Maida, Windham said: "He praised them with his whole heart; he praised them also with his understanding." Maida, he said, might be put upon a level with Crecy, Poitiers, and Azincourt. It had dissolved a spell—it had been obtained in the face of Europe—it had proved to the world, in a manner not to be concealed or disguised, that French troops are inferior to British troops. If England had accomplished nothing more than this, still the battle of Maida was worth ten times the labour and sacrifice it had cost us.

A.D. 1807. When parliament re-assembled after the Christmas recess, there were debates in both houses on Fox's unfortunate negotiations for peace. As by the admission of all parties war must now continue, efforts were necessary (and efforts far greater than any that were made in this session of parliament, or by this ministry), to give an increase of power and a proper direction to our military forces. The most liberal supplies were voted. The sum of £11,305,387 was devoted to the regular army, including pensions, half-pay, the military college, the military hospitals, &c. The sum of £4,203,327 was devoted to the militia, fencible corps, volunteers, &c. The ordnance had in all £3,321,216. At first the number of men to be employed for the sea service for the year 1807, including 29,000 marines, was fixed at 120,000 men; but to this number were almost immediately added 7600 sailors and 2400 more marines. The total of the money devoted to the navy for the year was £17,400,337.

Wilberforce had placed his main dependence upon Fox, but the death of that minister seems to have given additional zeal to Lord Grenville for the abolition of negro slavery. On the 2d of January his lordship brought in a bill for the total abolition of the African slave-trade. In reply to a question put by the ex-chancellor, Lord Eldon, Grenville distinctly said, that the bill extended to the *African trade only*. This bill was now carried through both houses by large majorities, and on the 25th of January it received the royal assent.

Ministers had already felt that the ground was sliding away under their feet. The dissolution and the general election had given them no accession of strength; they could command no great majority, except on the negro slave question, and even there Wilberforce's friends and the party called the Saints had more influence than ministers, while they were hostile to minis-

ters on almost every other point. The fault may not have been all their own; but "All the Talents" had certainly disappointed the nation at large. That fatal three and a half per cent. clapped on the income and property tax was very mischievous to them. In other quarters their untimely parsimony towards Russia, and the now fast-coming news of defeats and losses sustained by the forsaken or neglected czar, created a violent ill-feeling against them. Many even of those who acknowledged their merits in other respects, were of opinion that they had been clamouring too long against the war to be in case to carry on that war with spirit—that they were not the men to fight the ship—and they had proved to a demonstration that they were no more able to make peace than their predecessors had been.

Both Fox and Grenville, though so deeply pledged to the Roman Catholics, had accepted office without making any stipulation that Catholic emancipation, or some extensive concession tending to that point, should be made a cabinet question. It is quite certain that George III. would have consented to no such stipulation; but the party or parties who knew his unchangeable resolution on this point ought not to have taken office at all if they had been then determined to press the Catholic claims upon him so soon after getting possession of the cabinet. It does not appear that they were at this moment driven forward by any pressure from without, or by any extraordinary appeal or eager impatience on the part of the Irish Catholics. Yet, on the 5th of March, Lord Howick moved for leave to bring in a bill for securing to all his majesty's subjects the privilege of serving in the army or navy, upon their taking an oath prescribed by act of parliament. Spencer Perceval, who, as well as his friends Sidmouth and Ellenborough, had of late been closeted several times with the king, instantly rose and opposed the motion. The bill, however, was brought in and read the first time; and that day week was fixed for the second reading. But the second reading was subsequently postponed from the 12th to the 18th of March. It appears that in order to effect a compromise with the king, ministers offered to withdraw the bill altogether, and that his majesty refused any compromise. On the 17th March, Lord Howick announced that the second reading must again be postponed. Explanations were scarcely needed, for the house knew that negotiations had been going on at Buckingham House for several weeks. "Ministers," says Sir Samuel Romilly, "had determined not to resign, but to be dismissed from their offices." They were dismissed on the 25th of March. Between the 26th and 31st of March the following appointments were announced:—The Duke of Portland, first lord of the treasury;

Lord Hawkesbury, secretary for the home department; Canning, secretary for foreign affairs; Lord Castlereagh, secretary for war and the colonies; the Earl of Chatham (Pitt's elder brother), master of the ordnance; Spencer Perceval, chancellor of the exchequer and under-treasurer of the exchequer; Earl Camden, lord president of the council; Earl Bathurst, president of the board of trade, with George Rose for his vice; and the Earl of Westmoreland, keeper of the privy seal. On the 1st of April, Lord Eldon was sworn lord high-chancellor, and the Duke of Richmond was made Lord-lieutenant of Ireland. On the 3d of April, Lord Mulgrave was named first lord of the admiralty, and the Honourable Robert Dundas, president of the board of control. On the 8th of April, Lord Melville was sworn of the privy council. This was the day on which parliament met after the fortnight's adjournment. The remaining offices were filled up in the course of a few days after this. Among other appointments, George Rose became treasurer of the navy in lieu of Sheridan.

Between the 25th of March and the 8th of April the new ministers appear to have done all they could to excite a cry in the country against Popery. The Duke of Portland, the nominal head of the cabinet, being chancellor of the university of Oxford, wrote to it to request a petition to parliament against Catholic concessions: the Duke of Cumberland, chancellor of the university of Dublin, wrote two letters to that university for the same purpose; and in the last of these letters he plainly intimated that it was the wish of the king that this should be done. Harry Erskine, the witty brother of the ex-chancellor, said it was a pity that poor Lord George Gordon did not live in these times, when he would have a chance of being in the cabinet instead of being in Newgate. Spencer Perceval, who had vacated his seat by accepting office, told the electors of Northampton that it was a duty in the people as well as in the sovereign to resist the inroads of Popery; that he himself had quitted a lucrative profession and accepted his new office in order to stand by his sovereign at this important crisis. The Society for the Promotion of Christian Knowledge, of which, as of nearly every other religious society, Wilberforce was a conspicuous and active member, lent the aid of its publications in keeping up the "No Popery" cry. The days of Lord George and the London riots seemed really coming back again.

A motion made in the commons by Mr. Littleton, to express the deepest regret at the late change of administration, was defeated by a vote for passing to the order of the day, the numbers being 244 against 198.

It was understood that a dissolution was to

take place, but it was not supposed that it would be before the end of May and the regular close of the session. But an immediate dissolution was decided upon on the 24th of April, although kept a profound secret until the 26th. The object no doubt was to take advantage of the cry of "No Popery." This unlucky parliament had existed only four months and seven days. Tremendous and almost unprecedented were the efforts made both by the ins and outs at the new general election. On both sides immense electioneering purses were made up and emptied in the old way. On the whole the new ministry gained immensely by the dissolution and general election. In the new parliament, which met on the 22d of June, their majorities were found to be large and sure. An amendment to the address on the opening speech, censuring the late dissolution of parliament, was rejected in the lords by 160 against 67, and in the commons by 350 against 155. The business which was transacted was of little interest, except as showing on the divisions the great strength which the new administration had obtained. The prorogation took place on the 14th of August; the king's speech, delivered by commission, was hopeful and cheering.

The military operations of the year had been nearly all devised by the Grenville cabinet. Although Sir Home Popham had been brought to a court-martial, and censured for his disobedience, and although the leaders of that cabinet did not entertain a favourable opinion of the bold enterprises in South America, reinforcements had been forwarded to General Beresford; and an armament had been sent to the Rio de la Plata, under the command of General Sir S. Auchmuty, convoyed by Admiral Sir C. Stirling, who superseded Sir H. Popham. On the 18th of January the troops were landed near Monte Video. A sally made by the Spaniards, who were 6000 strong, was repelled with great slaughter; the town was forthwith invested; and on the 2d of February it was taken by storm, with a loss to the British of 560 in killed and wounded. Before intelligence had yet reached England of the re-capture of Buenos Ayres by the Spaniards, Brigadier-general Craufurd was sent on a wild expedition for the reduction of the vast American province of Chili. Craufurd had only 4200 men, and the naval force which accompanied him under Admiral Murray was proportionally small. The expedition had not been gone long ere the government learned—not that Sir S. Auchmuty had stormed and captured Monte Video, for there was not time for that intelligence to arrive—but that Buenos Ayres had been lost, and Beresford obliged to capitulate. Instantly orders were sent after General Craufurd to tell him not

to conquer Chili, but to go to the Rio de la Plata. These orders overtook Craufurd while he was at the Cape, and in pursuance of them he altered his course, and made the best of his way for the neighbourhood of Buenos Ayres. Craufurd was a brave and experienced soldier, and so was Auchmuty; but they were only brigadier-generals, and, as the force gradually collecting in that latitude was becoming considerable, it was considered that an officer of higher rank ought to take the general command. Unless they had taken General Mack out of the fortress into which the Emperor of Austria had thrown him, the British government could hardly have made a worse choice. General Whitelocke had attained to high rank in the army with scarcely any service beyond parade duty and an attendance of palace-guards. He was a handsome, well-spoken man, and, like Mack, had had the knack of making people who were no soldiers themselves believe that he was a great one, and a very consummate general. It was said at the time that he owed his appointment to the present command to the personal favour of George III.; but it should appear that ministerial and all manner of suffrages were united to procure him this advancement. With 1600 more land troops, General Whitelocke left England in the month of March, to take the command-in-chief of all the British forces on the Rio de la Plata, and reduce the whole province of Buenos Ayres, at the very least. He arrived near Monte Video towards the end of May. By this time nearly 12,000 excellent British troops were collected on the Rio de la Plata—brave, active, and only wanting a proper general to command them. But Whitelocke, like Mack at Ulm, appears to have lost his head as soon as he reached the South American shore. At first, he seemed to think that with such an army he could conquer the whole of Spanish America; but then, in a very few days, he pretended it was too difficult an enterprise to conquer even a single town. On the 28th of June he landed nearly 8000 men about thirty miles to the east of Buenos Ayres. He took about the worst roads which could have been selected, and he separated his little army into different divisions, subjecting them to the risk of being cut off among rivers and bogs, or being decimated in their passage through defiles and thick woods. If the Spaniards had been an active and enterprising enemy, it may be doubted whether this carpet-knight would ever have reached the walls of Buenos Ayres. The inundating rains which set in periodically at the end of June, or the beginning of July, swelled the rivers, and rendered them almost impassable; and Whitelocke appears to have obtained no information as to the places where the rivers were fordable, or as to any

other particulars connected with the nature of that excessively difficult country. All operations were conducted in the dark. It was not until the 3d of July that Whitelocke brought his exhausted and famishing troops up to Buenos Ayres. On the 5th he made a blind mad attack on the place, and lost 2500 men. On the 6th, he began to treat with Liniers, who still commanded the Spaniards. The definitive treaty was signed at the fort of Buenos Ayres on the next day, the 7th of July, by General Whitelocke and Rear-admiral Sir George Murray, and by Liniers and two Spanish generals. Hostilities were to cease on both sides of the Rio de la Plata; the British were to retain possession of the fortress and place of Monte Video, which Sir Samuel Auchmuty had stormed and taken before Whitelocke's arrival, for the space of two months; but at the end of that time these buildings were to be delivered up to the Spaniards, with all their artillery, &c. All prisoners whatsoever were to be mutually restored; Whitelocke's famishing army was to be supplied with provisions, and to be assisted in re-embarking and crossing over to the north side of the Plata river, with its arms, stores, equipage, &c.

The popular indignation at home was so excessive that if Whitelocke had arrived in England in the month of September, with the officer who brought home his despatches, he would have run some risk of being torn to pieces by the people. He had committed faults enough, but these were all exaggerated, and others were invented for him by ignorance, malevolence, and an uncritical and unexamining fury. Many can still remember the rage excited by the report that, before sending his men to be slaughtered in a hopeless street-fight, he ordered all the flints to be taken from their muskets. The name of *Whitelocke* was universally adopted as a synonym for *white-feather*. Many believed him to be the most perfect compound of coward and traitor that had ever been known among Englishmen. It was said to be owing to his favour at court and in other high places that his trial was so long delayed. There might be other grounds for this procrastination of justice; but it was not until the 28th of January, 1808, that he was brought before a general court-martial, held at Chelsea Hospital; and even then such numerous adjournments were allowed to take place that the trial was not concluded until the 18th of March. The mass of the nation certainly thought the sentence too mild which condemned him to be cashiered in the most disgraceful manner; but not a few thought that the ministers under whom he had been employed, and under whose general and insane orders he had acted, ought to have been called to a severe account.

In a very opposite direction, another armament despatched by the Grenville administration led to no very honourable result. Towards the end of November, 1806, when our diplomatists at the Ottoman Porte had been circumvented by the French, and had failed in their endeavours to prevent Sultan Selim from engaging in a war with the czar (an event which acted as a capital diversion in favour of Bonaparte, by obliging the Russians to keep a large army on the Lower Danube), Admiral Louis appeared off Tenedos and the coast of Troy with three line-of-battle ships and four frigates. It was an ancient rule, recognized in treaties with the Porte, that no ships of war, with their guns on board, were to be allowed to pass either the Straits of the Dardanelles or the Straits of the Bosphorus. Nevertheless Admiral Louis sent through the Dardanelles a ship of the line and a frigate. The Turks, who certainly wished to avoid hostilities with the English, let the two ships pass their tremendous batteries in the straits without firing at them, and allowed them to come to anchor without molestation off Constantinople. While this single ship of the line (the *Canopus* of eighty guns) and this single frigate lay thus, with their broadsides towards the seraglio, or palace of the sultan (a most vain and impotent menace), some attempts at negotiation were renewed on shore; but the active, able, and intriguing Sebastiani was an overmatch for our ambassador, Mr. Arbuthnot, who had several of the qualities of an old woman, and who was at this time suffering under the depressing influences of a slow fever. The victories which Bonaparte was then obtaining gave a great weight to Sebastiani's diplomacy; and all that Admiral Louis could do was safely to carry off the English and Russian ambassadors. It was then resolved to try what might be done by the presence of a greater force; and, at last, on the 10th of February of the present year, Sir John Duckworth, a favourite admiral of the "All Talents" administration, arrived off Tenedos with some more ships of the line and two bomb-vessels. This force, being united to that of Admiral Louis, made up a squadron of eight line-of-battle ships, two frigates, and two bombs. On the 19th of February, favoured by the wind, Duckworth entered the terrible strait, and passed all the batteries and castles with scarcely any loss or injury. A Turkish squadron, consisting of a 64-gun ship, four frigates, four corvettes, two brigs, and two gun-boats, was destroyed by Sir Sidney Smith. Instead of hastening to Constantinople, which he might have done, as the wind continued favourable, Duckworth lingered in the Sea of Marmora several days, and then, instead of anchoring before the panic-stricken capital, he brought up at the Princes' Islands, at the distance of ten miles,

VOL. IV.

where he lost several more days. In the meanwhile the Turks recovered from their panic, and under the able direction of Sebastiani and other French officers put their city in a very formidable state of defence. Some bombastic and ridiculous letters were despatched to the Porte; but the Turkish ministers could not now be bullied. On the 1st of March, after making an idle flourish before the walls of Constantinople, Sir John bore up for the Dardanelles. He repassed those straits with very little loss of men on the 3d of March; but some of his ships were a good deal damaged by the enormous stone-shot which were fired by the Turks, and which, in some instances, weighed 800 pounds. And thus ended the famed expedition to the Hellespont and the Bosphorus. It had broken the spell by which the passage of the Dardanelles had been guarded for so many ages; but the result of the whole was little more than a brilliant bravado, followed by a series of wretched and dishonouring blunders.

From Tenedos, where he left a Russian squadron under Siniavin to blockade the Dardanelles, Sir John hastened down to the mouths of the Nile, to co-operate in a still more imbecile expedition which had been planned by "All the Talents." Ever since the evacuation of Egypt by the British troops, that country had been the scene of anarchy and civil war. There had been a rumour that the sultan had entertained the notion of a treaty, by which Egypt was to be given up to the French as the price of Bonaparte's assistance against the Russians on the Danube, in the Crimea, and in the other vast regions round the Black Sea, which the czars had successively torn from Turkey; but the French could neither keep, nor so much as take possession of Egypt so long as Britain maintained her superiority at sea. The landing of a British army in Egypt might indeed serve as a present diversion highly favourable to our ally the Emperor Alexander, who, while outnumbered and hard pressed by Bonaparte between the Vistula and the Niemen, was obliged to keep an army of 30,000 or 40,000 men on the Danube; but to effect this desirable object our ministers ought to have sent 15,000 or 20,000 men, instead of a diminutive force which was not capable of contending with Mehemet Ali, and which was crushed and disgraced without so much as the marching of an oda of janizaries from Constantinople, or from any part of European Turkey, or from Asia Minor, or from Syria.

From 4000 to 5000 men taken from our army in Sicily, and placed under the command of Major-general Mackenzie Fraser, were landed near Alexandria by the 20th of March. The ancient capital capitulated immediately. But though they had taken Alexandria, our poor soldiers found that they had taken it only to

starve in it. Provisions were scarce—the neighbouring sands supplied nothing—and the open country beyond remained in possession of Mehemet Ali's fierce Albanians, who cut off all supplies. A column was detached to Rosetta, but it insanely engaged in the narrow crooked streets of that town; and instead of provisions General Fraser received a list of 400 killed and wounded—a sad reduction to a force so small as his. By the end of July, Fraser was in a hopeless condition. On the 22d of August, on the near approach of some of Mehemet's columns, he sent out a flag of truce, announcing that, if the pacha would deliver up all the British prisoners taken at Rosetta, El Hammet, and elsewhere, the army under his command should immediately evacuate Egypt. This was readily agreed to; and on the 24th of September what remained of the British army set sail for Sicily.

Irritated by all these hostile proceedings, the sultan had declared war against Britain, had seized all British property or merchandise in his dominions, had concluded a close alliance with the French, and had sent an ambassador into Poland to follow in the train of the triumphant Bonaparte, who duped him with fine promises so long as it suited his purpose, and then left Turkey to defend herself as she best might against the Russians. But before our troops quitted Egypt Sultan Selim had ceased to reign, and his chief ministers and advisers had been savagely massacred by the revolted janizaries. Sebastiani regretted this sudden revolution, for Selim had showed every disposition of steadiness and attachment to the alliance with Bonaparte; but as soon as he was deposed, Sebastiani cultivated a close friendship with Cabakchy-Oglou, the violent and brutal man who had overthrown him, and through Cabakchy's means the French influence at the Porte remained undiminished.

One little expedition which took place under the Grenville administration, and which demonstrated that they too had a hankering after petty conquests and unhealthy colonies, was attended with complete success. On the first day of the year the Dutch island of Curaçoa was reduced.

The first expedition sent out by the new ministry was accompanied by some painful circumstances, but with a triumphant success, at least, to our arms. The terrible chastisement which the Danes had received at the hands of Lord Nelson had not promoted any friendly feeling towards England. They had professed to remain neutral; but, even more than before that chastisement, they had favoured the French. A woful experience had taught England and her allies how little Bonaparte respected the neutrality of any country that was weak, when it suited his purpose to violate it. The predominant idea of

that conqueror now was to enforce what he termed his "continental system;" to carry into effect, in every maritime state of Europe, his Berlin decree, in conformity with which all ports were to be closed against the British flag and trade. Russia and Prussia, by events which will be explained hereafter, when we have finished the narrative of our own military and naval operations, had been compelled to accede. The Hanse-towns, with all the rivers of the north of Germany, Holland, and its outlets, were occupied by French troops. Sweden could not long offer any valid opposition; but the system would be incomplete in the north of Europe unless Denmark, who holds the keys of the Baltic in her hand, and whose trade and enterprise and mercantile marine were very considerable, should be, by negotiation and treaty, or by military force, brought into it. It was known to our cabinet that there had been negotiations of a secret nature, and it was equally well known that Bonaparte would not hesitate to employ force if negotiation failed. The north of Germany was swarming with his troops, and with the troops his brother Louis had brought into Hanover from Holland; an entire *corps d'armée* was lying not many days' march from that frontier of Denmark where the heroic and unfriended Blücher had been compelled to lay down his arms. There was no army in Denmark at all capable of resisting these French forces: the country was indubitably Bonaparte's so soon as he might choose to take possession of it, and with the country he would gain a fine fleet and well-stored arsenals and dock-yards. If Britain could have relied on the friendship of Denmark, there was no relying on her weakness. If the court, the cabinet, and the country had been devoted to us, instead of being alienated from us—if, instead of an evident leaning towards France, which had lasted for many years, there had been a high and resolute spirit of patriotism, with the determination to resist foreign interference and dictation, we could not have relied upon the ability of the Danes to oppose the mighty will which had overthrown a great military power like Prussia almost at a single blow, which had, for the time, subjugated Russia as well as Austria, and which had involved in a vortex all the old principalities and powers of Europe. A capital part of the case reduced itself simply to this—if we did not make sure of the Danish fleet, Bonaparte was sure to get it. The great law of nature, the instinct and duty of self-preservation, recommended the step we took. Our government rushed to its object without a declaration of war against Denmark, because such a declaration would have defeated our object, and have at once thrown the Danes, their fleet, and their country into the hands of the French.

It was utterly impossible for the prince royal to keep his ships and arsenals out of the clutches of our mortal foe, who avowedly intended to avail himself of the subjugation of the Continent in making the most strenuous efforts for creating a new French navy, and for bringing into action along with it all the fleets of Europe. Bonaparte had too thoroughly rent the book of the law of nations for any British minister in his senses to count upon one of its torn pages. The enemies of the conqueror had already suffered too severely from binding themselves by laws which were less than gossamer to him. The uncontrollable rage which he felt and expressed on learning the daring blow which had been struck at Copenhagen clearly evinced his intentions as to Den-

mark and her fleet, and the bitterness of his disappointment at finding the prize seized before he could clutch it.

Early in the summer a powerful expedition was fitted out in our ports, with a secrecy and promptitude highly honourable to the new ministry. A fleet of twenty-five sail of the line, with upwards of forty frigates, sloops, bomb-vessels, and gun-brigs, and 377 transports, was prepared and got ready for sea; and about 27,000 land troops, of which more than one-half were Germans in British pay, were embarked. The command of the fleet was intrusted to Admiral Gambier, and the command-in-chief of the army to Lord Cathcart, who had the good fortune to have under his command Major-general Sir Arthur

THE CASTLE OF CRONBURG AND TOWN OF ELSINORE: the Entrance to the Sound, with the British Fleet and Transports
From a drawing by Captain Cockburn, of the Royal Artillery.

Wellesley, already renowned by his exploits in India. On the 26th of July, Gambier set sail from Yarmouth Roads. By the evening of the 9th of August, all the transports were safely collected round the admiral, in Elsinore Roads, and Lord Cathcart had arrived with the troops from Stralsund. The crown prince was with the main body of the Danish army at Kiel, in Holstein. That army was from 20,000 to 30,000 strong; but, from the station which he occupied in the passage of the Great Belt, Commodore Keats kept it completely in check, or at least prevented its crossing over to the island of Zealand for the protection of the capital. Mr. Jackson, who had resided for some years as British envoy in the north of Germany, was sent over to Kiel to attempt an amicable arrangement with the crown prince, on the basis of his delivering up the Danish fleet to the British admiral, on the solemn assurance that it should be restored at a general peace, or at the conclusion of the war between

France and England. The answer was an angry and indignant refusal. Contrary winds kept the British fleet stationary in Elsinore Roads until the morning of the 15th, when, at a very early hour, the men-of-war and transports weighed, and worked up to the Bay of Vedbek. Here Admiral Gambier and the bulk of the fleet anchored, while a small squadron proceeded higher up the sound to make a diversion. On the morning of the 16th, a part of the land troops were disembarked at Vedbek without opposition. The fleet then weighed, and made all sail for Copenhagen. On the evening of the 17th, Admiral Gambier, with sixteen sail of the line, came to anchor in Copenhagen Road, about four miles to the north-east of the Trekroner, or crown battery, which had fired with such terrible effect into Nelson's ship. By the 21st, the island of Zealand was completely surrounded by the British ships, which prevented all ingress or egress; on the 22d, General Macfarlane's division, having

been landed the preceding evening, joined the army, and encamped in the rear of head-quarters; and in the course of the 23d, Lord Rosslyn, who had landed with another division of troops in Kjöge Bay, joined the main army and covered its centre. On the 29th, Sir Arthur Wellesley marched to Kjöge, where some of the Danish troops and militia had taken up a strong entrenched position, with the view of molesting the besiegers in their rear. These Danes were completely defeated and dispersed, Sir Arthur taking upwards of sixty officers and 1100 men, ten or fourteen pieces of cannon, and a quantity of powder and other stores. The Danes in Copenhagen attempted several sorties, but they were each time driven back with loss. On the 1st of September it was found necessary to detach Commodore Keats to blockade Stralsund; for that place was already in possession of the French, who might have made some desperate attempt to send across reinforcements to the island of Zealand. So great had been the necessity of rapid and decisive movement—so short the time which would have been necessary for the location of an imposing French force in Copenhagen. On the evening of the same day, the 1st of September, the army having nearly finished its gun and mortar batteries, the two British commanders-in-chief summoned the Danish major-general to surrender the fleet. The Dane requested time to consult the crown prince his master. Admiral Gambier and Lord Cathcart refused to allow him any such delay; and on the 2d, all the British land batteries opened upon the town, and our bomb-vessels began to throw some shells into it. It was a terrible night; the city and the space immediately round it looked like a volcano in a state of eruption. The British continued their bombardment without any intermission till eight o'clock on the morning of the 3d; they suspended their fire till the evening, and then, though they again continued it throughout the night, they fired with less vigour, wishing to avoid inflicting a greater mischief on the poor inhabitants than was necessary; but, on the morning of the 4th, seeing no symptoms of surrender, they renewed the bombardment with more fury than ever. Without counting the bomb-vessels afloat, about fifty mortars and howitzers, and twenty 24-pounders, well placed in land batteries, rained shot and shell into the devoted town, which began to burn and blaze in all quarters. On the evening of the 5th the Danish governor consented to the surrender of the fleet; and Major-general Sir Arthur Wellesley, Lieutenant-colonel George Murray, deputy quartermaster-general, and Sir Home Popham, were appointed to settle the few and simple remaining conditions of the capitulation. By the morning of the 7th of September

the articles were signed and ratified. On the 8th, the British troops entered the town and citadel, and the sailors instantly began to get the Danish fleet ready for sea. So great was the rapidity with which they worked, and so well were the Danish stores arranged in the warehouses, that in nine days fourteen sail of the line were towed out from the inner harbour to the road, and got ready for sea. Within the space of six weeks three more ships of the line, with the frigates and sloops, were got ready, and the arsenal and its storehouses were completely cleared. There were three 74's on the stocks; two of them were taken to pieces, and the best of their timbers were embarked; the third ship was destroyed, as were a rotten old sixty-four and two or three old frigates. This left in the possession of the captors seventeen ships of the line, one 60, two 40, six 46, and two 32-gun frigates, fourteen corvettes, sloops, brigs, and schooners, and twenty-five gun-boats. The most valuable part of the seizure consisted of masts, spars, timber, sails, cordage, and other naval stores. The quantity was so immense that, exclusive of the stores which were shipped on board of the British and Danish men of war, ninety transports, measuring more than 20,000 tons, brought away full cargoes. The ordnance brought away is stated at 2041 long guns, 202 carronades, and 222 mortars.

Mr. Jackson, before taking his final leave, made some more diplomatic overtures, but in vain. A declaration of war followed on the part of the crown prince, who had a formidable French army at his elbow, and an alliance with the Emperor of Russia in perspective. On the 4th of November the British government ordered reprisals to be granted against the ships, goods, and subjects of Denmark. But it had not waited so long to invade and possess itself of Danish territory. On the 4th of September, three days before the governor of Copenhagen finished his capitulation, Vice-admiral T. Macnamara Russel and Captain Lord Falkland captured the small Danish island of Heligoland in the German Ocean. The place was a perpendicular unproductive rock, with a barren sandy flat at the foot of it: its entire circumference did not exceed three English miles, and it was subject to such rapid waste by the beating and washing of that stormy sea that there appeared a chance of its being some day washed away altogether. But there were circumstances which rendered the bare inhospitable spot of exceeding great value to England at that moment. It was situated off the mouth of the Elbe, and at the distance of only twenty-five miles from the mouths of the Weser and the Eyder; it could scarcely be better placed as a depôt for British manufactures, colonial produce, and other goods, which could be smuggled up

the mouths of the neighbouring rivers, and conveyed into the interior of the Continent; and, at the same time, it afforded a safe asylum in those dangerous waters to the English men-of-war and cruisers, which were now shut out from every port in the North Seas, except those of Sweden. Heligoland, too, served as an admonitor: it constantly reminded the mariners and coast-dwelling people of those northern regions, that there was an element which did not own

the sway of Bonaparte; and the French could hardly look seaward from their conquests in Oldenburg and Hanover without seeing the British flag floating over that near rock.

In the month of December, the Danish West India islands of St. Thomas, St. John's, and Santa Croce surrendered, without resistance, to a squadron commanded by Sir Alexander Cochrane and a small military force under General Bowyer.

CHAPTER V.—CIVIL AND MILITARY HISTORY.—A.D. 1807—1808

GEORGE III.

Recapitulation of events that led to the bombardment of Copenhagen—Operations of Bonaparte's grand army—The Russians resume hostilities—Battle of Eylau—Indecisive nature of the conflict—Russia disappointed of aid from the British government—Victory of Bonaparte over the Russians at Friedland—Mutual wish of the French and Russian emperors for peace—Their meeting at Tilsit—Their treaty of amity—Disappointments of Poland and Turkey through the treaty of Tilsit—The seizure of the Danish fleet occasioned by the treaty—Hopeless struggle of Sweden against France—The Swedish king dethroned—Erection of the kingdom of Westphalia by Bonaparte—He appoints his brother Jerome its king—Portugal overrun and occupied by the French—Bonaparte's Milan decree against British commerce—His occupation of Tuscany—Entrance of his troops into Rome and imprisonment of the pope—Opening of the British parliament—The royal speech—The budget—Miserable condition of the Spanish court and government—Bonaparte's aggressions on Spain—He places his brother Joseph on the Spanish throne—Hazardous nature of his attempt on Spain—Dissuasions from it disregarded by Bonaparte—Insurrection of the Spaniards—Its sanguinary character—The junta established by the insurgents—Proclamation of George III. in favour of the Spanish cause—Aid sent to it from the British government—Deficiencies of the Spanish armies—Defeat of the Spaniards at Rio Leco—Total defeat of a French army at Baylen—King Joseph retreats from Madrid—Successful defence of Saragossa—Defect of military skill among the Spaniards—Arrival of Sir Arthur Wellesley in the Peninsula—Revolt against the French in Portugal—Wellesley marches for Lisbon—His victory over the French at Roliça—His victory at Vimeiro—Causes of its not being successfully followed up—Convention of Cintra—Advantageous terms conceded to the French—They are conveyed from Portugal—Unpopularity of the convention of Cintra in England—A board of inquiry appointed to report on it—Its verdict—Sir Hugh Dalrymple made the scapegoat of the inquiry.

ME must proceed briefly to recapitulate the operations of the grand army, and the other proceedings of Bonaparte, which were mixed up with nearly all our transactions, and had led directly to several of our measures besides our attack upon Copenhagen.

We left the Emperor of the French comfortably quartered in the city of Warsaw. The Russians, after gaining the terrible battle of Pultusk, retired to Ostrolenka, where they found better winter-quarters, and where they were joined by the *corps d'armée* of Prince Galitzin, who, on a distant point, had defeated a French division on the same day on which the battle of Pultusk was fought. The critical situation of the King of Prussia, cooped up in Königsberg with only a few thousand men, did not allow Beningsen to take a long repose. He resumed offensive operations with great spirit, spreading

his Cossacks over the whole country near the Vistula, and making many prisoners. This forced the French from their winter-quarters into the field—a field covered with snow and ice, and swept by pitiless winds. On the 25th of January, a terrible conflict took place near Mohrungen, and, though they claimed a victory, the French suffered a decided reverse. A diversion was effected in favour of Königsberg; and the brave and faithful Lestocq was enabled to relieve and throw reinforcements into Gaudentz, an important town on the Vistula, below Warsaw, which still remained in possession of Prussian troops. Towards the end of the month of January, the Russians, who were in want of everything, became clamorous for battle, and their able general, against his better judgment, led them into it, or rather allowed them to meet it, on the 8th of February, at Eylau, in the circle of Königsberg. Bonaparte had actually on the field 85,000 men, including 16,000 cavalry; Ben-

ingsen, who had been obliged to detach some of his troops, had only 75,000 men, counting the Prussian division of Lestocq, of which a part was not in line when the battle began; in artillery the Russians were superior, having 460 guns to oppose to about 380; but in cavalry they were very inferior, and the nature of the country was favourable to charges of horse. The bloody battle, which began at daybreak, in the midst of a snow-storm, lasted till ten o'clock at night. The Russian infantry had stood like stone ramparts, or like walls of brass: the Prussian columns of Lestocq, properly commanded by an honest, loyal man, a patriot and a hero, behaved as well as ever Prussian troops had done under Frederick the Great. The French had utterly failed in all their attacks, and in some of their retreats they had betrayed nearly every symptom of demoralization. The corps of Augereau had been put to a panic flight and cut to pieces; the corps of Davoust, one of the largest and finest of the army, had been pushed off the field by an inferior number of Prussian bayonets; and from 10,000 to 12,000 French soldiers had quitted their colours in the evening, under pretence of looking after the wounded. The loss on both sides had been tremendous: in the absence of regular authentic returns it has been roughly stated at 50,000 killed and wounded; but it should appear that of this number above 30,000 were French. The grand army had lost twelve of its eagles, and was certainly in no humour to attempt the recovery of them.

The best testimony as to the real effect of the battle of Eylau was borne by Bonaparte himself. Four days after the conflict he despatched a courteous message to the King of Prussia, proposing a suspension of hostilities, and hinting that, if his majesty would make a separate peace with him, he might be induced to forego all the advantages he had gained by the double battle of Auerstadt and Jena, and to restore nearly the whole of his dominions; and on the 19th of February he evacuated Eylau, and retreated to his old line on the Vistula, being followed by clouds of Cossacks, who took many prisoners, and made a great booty.

The Emperor Alexander, now in want of money to continue the war, applied to the British government to negotiate for him a loan of six millions sterling, and make him an immediate advance on account: it is said that the security he offered was not bad. If he had offered no security at all, the money ought to have been raised and sent to him; but the "Talents" ministry thought fit to decline the transaction, and thereby they gave a mortal offence to the czar, and almost paralyzed his exertions in the common cause. From this moment Alexander seems to have

doubted the sincerity and generosity of Great Britain, and begun to think of a separate treaty for himself. In the course of the months of February and March, he made repeated and urgent application for a British army to co-operate with the Swedish forces in Pomerania. Lord Howick, then in office, wrote a chilling letter to the emperor, and told him that he must not look for any *considerable land force* from Great Britain. This was poor encouragement for the Russians, who had so recently strewed the field of Eylau with 20,000 of their killed and wounded. A fortnight after the date of Howick's note, the ministry of which he formed a part was no more. The rival party, who succeeded to the management of affairs, remitted £500,000 to the court of St. Petersburg; but this was not money enough, and the Tory cabinet sent out no troops until it was too late, and the force they sent was contemptibly small. In the month of July, after the great battle of Friedland had been fought, our German legion, about 8000 strong, was landed in the isle of Rügen, near Stralsund. Our ministers, too, were so slow in sending 160,000 muskets to Königsberg, that an immense body of Prussian militia were unable to march for want of arms—that these muskets did not arrive until the middle of June, when they came just in time to fall into the hands of the French, who took Königsberg a few days after the carnage at Friedland.

The Emperor Alexander sent such inconsiderable reinforcements to Beningsen, that that army was never even raised to its original computation of 90,000 men. But, by the month of June, Bonaparte, who had been allowed time, and who had called up troops from Germany and the Rhine, had 200,000 men on the Vistula, and between that river and the Niemen. The Prussian general, Kalkreuth, surrendered in Dantzic on the 27th of May. The great battle of Friedland was fought on the 14th of June near the river Aller, only a few miles from the field of Eylau. It was not a battle of bayonets, but one of artillery. After a brave contest the Russians were worsted by Bonaparte's well-served and tremendous batteries; and as night approached they began to retire behind the Aller, crossing that river by a ford, and carrying with them all their artillery and baggage. It appears they did not lose so much as a single gun or a single tumbril. The French had suffered too severely to attempt to follow: many of the regiments of the grand army were reduced to less than one-half—whole companies had disappeared to a man. The Russian general slowly retired to Tilsit, on the Niemen, destroying all the bridges, and falling back upon his reserves. He was joined by 15,000 or 20,000 infantry, who were closely followed by a

multitude of irregular cavalry. But Bonaparte and Alexander both eagerly and equally wished for peace. A suspension of hostilities was agreed to; and, on the 25th of June, the two emperors met on a raft in the middle of the Niemen, at a short distance from Tilsit. The young czar appears to have been dazzled by the brilliant and insinuating Corsican. The two took up their residence in the town of Tilsit, where the treaties of peace were finally concluded—that with Russia being signed on the 7th, and that with Prussia on the 9th of July. Frederick William was restored to about one-half of his former territories, as far as the Elbe; but all the principal Prussian fortresses, and all the seaport towns, were to remain in the hands of the French till the general peace, or until Britain should be reduced to submission. The portion of Poland acquired by Prussia in the partition of 1772 was disunited from that kingdom, and erected into a separate territory, to be called the grand duchy of Warsaw, but to be held, not by a Polish prince, or a republic of Poles, but by the King of Saxony, that faithful ally of Bonaparte. Russia made no sacrifices; on the contrary, she obtained a part of Prussian Poland. But there were secret articles to the treaty, by which France allowed Russia to take Finland from Sweden, and Russia on her part promised to close her ports against British vessels. Throughout both treaties the means of giving effect to the Berlin decree, and of totally excluding the commerce of Britain from the Continent, were kept steadily and constantly in view.

Loud were the lamentations raised by the Polish patriots and dupes, who had kept on dreaming about the reconstruction of their once great nation under a native prince and a free and happy constitution. Nevertheless the Polish officers who were gathering fame (such as it was) by following the French eagles, and who were getting crosses and ribands to tie to their button-holes, and plenty of money to spend, professed great gratitude for the creation of the Warsaw duchy, and believed, or affected to believe, that at some not very distant day Bonaparte would keep all his promises, reconstructing Poland, and making it again the great power of the North.

The Turks had at least as much reason as the Poles to complain of the treaty of Tilsit: they had been tempted and dragged into the war by the most solemn promises that Moldavia and Wallachia, with all their territories on the left bank of the Danube, should be secured to them, and by the fond hope of re-obtaining, through the assistance of French arms and French negotiations, the whole of Bessarabia and of the Crimea, of all that the Russians had taken from them since the beginning of the reign of Peter the Great; but now all that they really got was a

temporary suspension of hostilities, with the withdrawal of the Russian troops from the provinces of Moldavia and Wallachia.

When it was far too late, Mr. Canning despatched Lord Leveson Gower to reconcile the irritated czar, and bring him back to that close alliance with Britain which had been broken by British folly, faction, slowness, and want of timely liberality. Alexander would not even grant an audience to the noble envoy; and his lordship returned to England with the painful convictions that Russia had taken her part, that she had entered very deeply into the projects of France, and that she had agreed to place at the temporary disposal of Bonaparte her own fleet of nineteen or twenty sail of the line, and to allow him to obtain, by fair means or by foul, the fleet of Denmark and the eleven or twelve sail of the line which belonged to Sweden. When the news of our attack on Copenhagen, and our seizure of the Danish fleet, reached him, Alexander joined chorus in the outcry that was raised by France, although it is said he secretly rejoiced in the event, as the means of lowering French ambition, and favouring his own purposes of northern aggression and supremacy.

Almost entirely abandoned by Britain, who had brought down the 8000 men landed in the isle of Rügen to assist in the Copenhagen enterprise, and threatened with immediate hostility by her late ally and nearest neighbour, Russia, the poor kingdom of Sweden was left in a most perilous situation. Even after the peace of Tilsit, the enthusiastic Swedish monarch kept his ground at Stralsund, and issued spirited addresses to the great Germanic family, calling upon them, in God's name, to shake off their ignominious bondage. Marshal Brune was sent against him with a mixed army of Frenchmen, Dutchmen, Bavarians, and other un-German Germans. A terrible battle was fought in Pomerania, about eight miles from Stralsund. The French, or rather their allies, were beaten to pieces. The days of Gustavus Adolphus and of Charles XII. seemed to be returned; but, alas! Brune was reinforced from different nations or countries, until his army amounted to 70,000 men; while the King of Sweden—who could no longer draw a man or a musket from his own dominions, and who had now little reason to hope for any proper succour from England—saw his small army dwindle down to 8000 or 10,000 men. On the 19th of August, he evacuated Stralsund, destroying his magazines, spiking his cannon, and smashing their carriages, and throwing them into the ditches. Early on the 20th, he and his troops were safely landed on the island of Rügen, where various fortifications and field-works were erected. His majesty soon crossed the Baltic to Stockholm. Almost as soon

as he was gone, the troops he left in Rügen discovered that the island was not tenable; and early in the month of September they capitulated to the French general, who obtained easy possession of all the other Baltic islands on the German coast. The crown of Gustavus was by this time in jeopardy. He had been steady and faithful to the coalition into which England had drawn him, and his reward was to be dethronement and the expulsion of his dynasty.

In the meanwhile Bonaparte, after more than a ten months' absence, had returned to Paris. Having stripped the Elector of Hesse-Cassel of his dominions, because he had not joined him in the war against Prussia, and having despoiled the Duke of Brunswick of his dominions, because his father had joined Prussia against the French, the conqueror created, out of these and other countries and districts, including the greater part of Hanover, the so-called kingdom of Westphalia, whose existence had already been recognized in the treaties of Tilsit, both by Russia and by Prussia; and on the 18th of August he gave investiture to his brother Jerome, who took up his residence at Cassel, and began to establish such a government and court as the world had never before seen.

Shortly after this the *Moniteur* announced that "the house of Braganza had ceased to reign in Europe." Our old ally the Prince-regent of Portugal having refused to enforce the Berlin decree against England, Junot was sent with 30,000 men to take possession of Portugal. By an infamous and imbecile treaty signed at Fontainebleau on the 9th of October, Spain not only allowed a free passage through her territories, but also engaged to assist Junot with an auxiliary force, supply him with provisions, &c. The French general entered Lisbon without opposition on the 30th of November, and began immediately to disarm the inhabitants, to levy contributions under the bayonet, and to treat the country as a conquest of France. The prince regent and his court had fled in English ships for Brazil; and 18,000 Portuguese had abandoned their homes and their country rather than submit to the French yoke. And, while Spanish troops were co-operating in this work of spoliation and iniquity in Portugal, the Spanish court and royal family broke furiously out into unnatural quarrels which threatened a civil and family war, and which, by exposing the weakness and profligacy of the government, offered to Bonaparte temptations difficult to be withstood even by a less grasping and more conscientious ruler.

On the 16th of November, Bonaparte quitted Paris to visit Milan and Venice. He had many objects in this journey to his Italian kingdom; but he particularly aimed at the completion of

his so-called continental system, determining to close every port in Italy to the British flag, and hoping to induce Austria by fear and by negotiation to enter into the league against the commerce of Great Britain. On the 17th of December, being at Milan, he issued his celebrated Milan decree, declaring all merchant vessels, of whatsoever nation, which should submit to the British orders in council, to be lawful prizes to the French. Forthwith a number of merchant vessels belonging to the United States of America were seized and confiscated in the ports of Italy, in the ports of France, and in the other harbours of Europe which the French occupied, upon the ground that they had submitted to the British orders in council, and by so doing had infringed the law of nations, and injured the interests of the whole civilized world. This step might seem to have been calculated to draw immediately down upon him a declaration of war from the American republic; but he was tolerably well acquainted with the strong French sympathies and the strong English antipathies of that people, and he hoped from the first to make his Milan decree, and his seizures and confiscations of American property, the means of driving the United States into a war against England.

Having summoned the Queen-regent of Etruria and her infant son into his presence, he signified to her that she must instantly resign Tuscany, or the kingdom of Etruria, for that new kingdom of Northern Lusitania which had been carved out of Portugal by the treaty of Fontainebleau. Although this Spanish princess appears to have foreseen that her son would never get those dominions in Portugal, she could offer no resistance, and could venture on no remonstrance against the absolute will of this maker and unmaker of kings. Forthwith Tuscany, with all its ports, was occupied by French troops; and, in the month of June following, the country was formally annexed, not to the kingdom of Italy, which Bonaparte pretended to be building up, with a view to the unity of that fair peninsula, but to the French empire, of which it was made to form three new departments. There now remained in all Italy only the seaports of the Roman states, on the Adriatic and Tyrrhenian Seas, open to the British flag; and these he determined to close immediately. French troops were sent to occupy Civita Vecchia, and guard the mouth of the Tiber; and on the Adriatic side a strong garrison was thrown into Ancona. The poor pope, who had been so compliant and submissive, appealed in vain to the rights of neutrality, to the rights of nations, to the more sacred laws which had supported in former times the heritage of St. Peter. Not satisfied with seizing the cities, fortresses, and harbours, Bonaparte in-

sisted on the pope declaring war against England! Pius VII. replied that he was a sovereign of peace, and that he could not declare war against any Christian power. Ever since the treaty of Tilist, the conqueror had claimed to be Emperor of the West. He said that, as the successor of Charlemagne, he was Emperor of the West, King of Italy, and Suzerain of the Pope; that the English were heretics, and therefore enemies of the Holy See, and that the donation of territory by Charlemagne to Rome had been made for the defence of the Holy Church against its enemies; that if the pope did not comply with his wishes, he, Napoleon, would resume Charlemagne's grant. In February, 1808, General Miollis entered Rome, occupied the castle of St. Angelo, and shut up the pope as a prisoner in the Vatican. More French troops were brought from Tuscany and from Lombardy into the Papal States; and on the 2d of April, 1808, Bonaparte, by one of his sweeping decrees, annexed the Marches, or Adriatic provinces of the pope, to his kingdom of Italy. The magistrates and ecclesiastics of those provinces, being called upon to take the oath of fidelity to their lawful sovereign, Napoleon, King of Italy, refused almost to a man; and this led to midnight arrests, to sudden transportations to state-prisons and fortresses in the Apennines and Alps, and, in the rude regions of Dalmatia, to popular discontents and insurrectionary, to military tribunals and bloodshed.

A.D. 1808. The British parliament was opened on January 31st by commission. The speech delivered for the king dwelt at great length upon foreign affairs, and mentioned nearly every country in Europe as in a state of hostility to England. Some light was thrown upon the system conceived by Bonaparte for uniting all the navies of Europe against us. It was shown how he had counted upon obtaining the fleet of Portugal, as well as the fleet of Denmark. Parliament was informed that the order in council, with which his majesty had retaliated for Bonaparte's Berlin decree, must be followed up by other measures of greater rigour, which would require parliamentary aid to give them full effect. The increased produce of the taxes and duties, in spite of the war and the Berlin and Milan decrees, was dwelt upon as a proper subject of congratulation. In both houses the addresses were carried without a division.

On the 5th of February the chancellor of the exchequer (Spencer Perceval) moved that the orders in council should be referred to the committee of ways and means. The opposition immediately declared that we ought not to attempt retaliating by any such measures; that the orders in council, unjust in themselves, would do us

much more mischief than the Berlin and Milan decrees; that they went to violate both the law of nations and the municipal law of England. On the other side it was maintained by ministers that we had a perfect right of retaliating upon the enemy his own measures; that, if he declared we should have no trade with any nation, we had a right to declare that he should have none. They also insisted that, if neutrals acquiesced in restrictions imposed by one belligerent, the other belligerent was warranted in considering such neutrals as a party to those restrictions.

In opening the budget for the year, Mr. Perceval stated the amount of the supplies at about £43,000,000 for England, and £5,700,000 for Ireland, and the produce of the war-taxes at £20,000 000. Among the ways and means were a loan of £8,000,000, and additional taxes to the amount of more than £300,000. The events rapidly passing in Spain, the occupation of Portugal, the threatened invasion of Sicily, which was only preserved from the grasp of the French by the presence of British forces, the obligation of succouring the King of Sweden, who had been brought to the brink of ruin by our alliance, all called for an increase to the number of soldiers and sailors. The number of seamen voted for the service of the year was 130,000. In the army, the regular infantry establishment, which in 1807 had been 109,000, was raised to 132,000. The whole establishment of the army was stated by the secretary-at-war, Lord Castlereagh, at not less than 300,000 men.

Parliament was prorogued by commission on the 4th of July. The greater part of the speech delivered by the lord-chancellor turned upon the Spanish nation, which had already risen against the tyranny and usurpation of France, and which was therefore no longer to be considered as the enemy, but as the ally of Great Britain.

The blindness, the imbecility, the mad intestine rage of the Spanish court, and of the factions that directed or distracted its councils, continued down to the last moment, and were the means of allowing Bonaparte to secure, not only the command of the principal roads of the country, but the possession of some of its best and strongest fortresses, before he threw off the mask, and told the Bourbon dynasty, as he had told the house of Braganza, that it had ceased to reign. After the passage of Junot into Portugal, other French divisions had entered Spain, as friends, and had seized by stratagem St. Sebastian, Pamploña, and Barcelona. These movements, which were not justified by the treaty of Fontainebleau, astonished and terrified Godoy; but that favourite of royalty, who had equal influence over the queen, whose paramour he was, and

king, whom he dishonoured, had been some time engaged in mortal strife with Prince Ferdinand, the heir to the crown, and dreaded much more the vengeance of the prince than the occupation of the country by the French; and seeing no hope of resistance to the might and will of Bonaparte except through an appeal to the nation at large, with whom Ferdinand was popular and himself odious to the last degree; and hoping that a ready compliance and submission would secure him the all-potent protection of the conqueror, Godoy removed the few Spanish troops that were near the frontiers, and ordered the commanders of fortresses to open their gates and receive the French as friends and allies.

An insurrectionary movement took place at Aranjuez on the 20th of March, when Godoy was thrown into prison, Ferdinand was proclaimed king, and Charles was easily induced to abdicate. Upon this revolution the Corsican child of revolution founded a pretence for interfering. He invited father, mother, son, and favourite to meet him at Bayonne. Charles and his queen went readily, but Ferdinand hesitated. Hereupon Bonaparte looked about him for an adroit kidnapper, that should, by force or by fraud, bring the prince into France. The choice naturally fell upon that notorious head of gendarmerie and secret police, Savary, who had presided over the murder of the Duke D'Enghien; and by his solemn asseverations of his master's honourable and friendly intentions, Savary gradually decoyed the weak prince from stage to stage, until he was beyond the Spanish frontier. A scene of duplicity and dishonesty, of indecent and most unnatural recrimination ensued between that disinterested arbiter, Bonaparte, the old king, the queen, and her son, which has scarcely a parallel in history. Charles resumed his character of king, stigmatizing Ferdinand as a rebellious son; the queen joined in reviling him at the expense of her own and her husband's honour; and Ferdinand, overwhelmed by insults and threats, renounced his claim to the crown of Spain on the 6th of May. After this renunciation the spiritless prince became a close state-prisoner in France. Charles likewise resigned all his royal rights "in favour of his friend and ally, the Emperor of the French;" and this part of the precious game was completed by Bonaparte's issuing a decree, whereby he appointed his "dearly beloved brother Joseph Napoleon, King of Naples and Sicily, to the crowns of Spain and the Indies." By a subsequent decree, he named "his dearly beloved cousin Joachim Murat, Grand-duke of Berg, to the throne of Naples and Sicily."

Advice had not been wanting to warn Bona-

parte of the perilous nature of his Spanish enterprise, and to prevent his rushing into that war which he himself afterwards called "that wretched war, the cause of my ruin!" Even Fouché, his police minister, and the man of whom he stood in most awe, pleaded strongly, but in vain, against the whole enterprise. The presumptuous conqueror replied that the character of the Spanish government was contemptible, that Charles IV. was imbecile, that Godoy was a scoundrel and unpopular, and that one good volley of French artillery would scatter the common people and the monks who led them on or excited them. He knew at the moment, or at least he afterwards seemed to admit, by the vast military preparations he made, and by the great precautions he took, that the fiery peasantry of Spain would not be so easily subdued or scattered; but his present object was simply to beat down the objection and opposition of Fouché, to whom he also exhibited the dazzling nature of the temptation which lay before him through the vices of the Spanish government, and the footing he was obtaining in the country, by means of the iniquitous treaty of Fontainebleau and the marching of his troops into Portugal. "My stake," said he, "the stake I play for, is immense! I will continue in my own dynasty the system of Louis XIV. and the Bourbons, and unite Spain for ever to the destinies of France. Remember, the sun never sets on the empire of Charles V.!"

Talleyrand also endeavoured to turn the wily man away from his project. The persuasive tone, the extensive information, the marvellous political sagacity of this minister, must have prevailed with almost any other sovereign; but they were thrown away upon one whose successes had driven him mad. Bonaparte complained of the pertinacity of Talleyrand; and Talleyrand now began to speak privately of Bonaparte as one who could not be served, because he would not listen to any advice that was contrary to a preconceived notion or to a cherished system. In a discussion on the affairs of Spain the Emperor of the French lost all respect for the high-born and able minister who had served him so long and so well, lost all command of his temper, and called Talleyrand "traitor" to his face. But that imperturbable, impassive face betrayed no more emotion than one of the marble statues in the Tuilleries garden. Talleyrand looked placidly out upon that garden and its statues from the window above; but when he went home he shrugged his shoulders and said, "This is the beginning of the end!" (*C'est le commencement de la fin.*) On the 9th of August, 1807, just eighteen days before the conclusion of the treaty of Fontainebleau, which was but a preparatory step to the greater but not more iniquitous Spanish

scheme, Talleyrand either voluntarily resigned or was dismissed from office; and Champagny, who was immeasurably inferior to him in all qualities except that of passive obedience, was put into his place. From this moment nearly all political wisdom and moderation disappeared from the councils of Bonaparte, who had been far more indebted to Talleyrand than French or any other historians seem inclined to allow.

The flames of insurrection—commencing at Madrid on the 2d of May—soon spread to New Castile, to Old Castile, to Navarre, to Andalusia, to Valencia, to Catalonia, to the Biscayan provinces, to every province and district in Spain; and they raged almost in every town excepting those occupied by strong French garrisons. From every part of that Peninsula there proceeded an earnest prayer for English assistance; and this aid was very soon granted them. In vain the native Spanish ministers, and other authorities whom Bonaparte had appointed to aid his brother in the task of government, issued manifestoes to assure the people that they would gain immensely by these political changes, that the French aimed at nothing but the good of their country, that their holy church and their ancient usages would be respected, revered; in vain these unnational Spaniards sent out agents to make converts, and get up a party for King Joseph; their manifestoes were spit upon and torn to pieces, their agents wherever they were detected by the people were slaughtered, and they themselves, ministers and high functionaries, or grandees, as they were, could not show their faces outside of the walls of Madrid, unless they were shielded by a body of French troops. After Murat had taken his departure, the management of a large party of the French army fell to Savary and other men who had little of his soldier-like magnanimity, who encouraged rather than checked the fury of the troops, exasperated by the frequent deaths of their comrades, cut off singly or in straggling parties; and who adopted as a principle that so unfriendly and stubborn a people was to be subjugated only by fire and sword. As in Calabria, cruelty begat cruelty, excess, excess: from the beginning of the conflict between the French and Spaniards to the end of it, it was a war of wild beasts; nor could the British officers ever convince the Spanish peasantry that they ought not to torture and then butcher the treacherous kidnappers of their king, the unprovoked invaders of their country. It was utterly hopeless to talk to them of the usages of civilized warfare. They were not civilized; and never was a more maddening provocation given to a naturally fierce people than that which was given to the Spaniards by the treacherous manner in which their country was invaded, and in the ruthless

way in which the war was very soon carried on by the French.

Even before a terrible explosion at Madrid, in which the streets were cleared by the French with grape-shot, and temporary tranquillity restored by wholesale executions, a popular insurrection had broken out in Toledo, where men once made good sword-blades, and still knew how to use them. When the intrusive King Joseph crossed the frontiers, surrounded by a French and Italian army, he found no Spaniard to welcome him, or say, "God bless you." At Vittoria the townspeople seemed disposed to prevent his entrance, and would certainly have fallen upon him but for his artillery and troops. He entered Madrid on the 20th of July, and on the 24th of that month he was proclaimed king. But by this time a local Spanish government was established at Seville, which took to itself the title of "Supreme Junta of Spain and the Indies," renewed the oath of allegiance to Ferdinand VII., issued a formal declaration of war against the usurper Joseph, called upon all Spaniards between the ages of sixteen and forty-five to flee to arms, summoned some veteran Spanish troops, at the camp of St. Roque, under the Rock of Gibraltar, to march to Seville; and ordered General the Marquis of Solano to attack and seize a French squadron of five sail of the line and a frigate, which had taken refuge in the harbour of Cadiz from the pursuit of the English. Solano hesitated, incurred the fatal suspicion of being a French partizan, and was murdered by the people of Cadiz. Nearly at the same time, and on account of the same suspicion, Count d'Aguilar was butchered by the people of Seville. Don T. Morla, who succeeded to the Marquis of Solano's command, seized all the French ships, and made prisoners of all the officers and crews, having refused English assistance. Before receiving the summons of the Seville junta, and even before the formation of that governing body, General Castaños, who commanded the army of Andalusia at St. Roque, had adopted the resolution of resisting the French, and applied (not vainly) to English officers for aid and assistance.

On the 4th of June, the birth-day of George III., a proclamation was issued from the queen's palace at Buckingham House, stating that his majesty, having taken into consideration the glorious resolution of the Spaniards to deliver their country from the tyranny and usurpation of France, and the assurances his majesty had received from several of the provinces of Spain of their friendly disposition towards England, he was pleased to order that all hostilities against Spain should immediately cease. On the 9th of June, Admiral Lord Collingwood, who

had been watching Toulon, came down to Gibraltar with two ships of the line, being attracted thither by intelligence he had obtained of the rapid progress of the Spanish insurrection, and by letters he had received from Sir Hew Dalrymple, the governor. On the 10th, Collingwood went through the straits to Cadiz, to take the command of the whole of the fleet assembled there, and to give such encouragement and such supplies as he could spare. He carried with him Major Cox, whom Sir Hew Dalrymple had selected to reside as confidential agent at Seville. Collingwood, who admired and loved the good parts of the Spanish character, was not blind to its defects; and though he had great hopes that this universal rising would be attended with important results, he very clearly foresaw that numerous and great errors would be committed, and that the struggle would not end quite so soon as men of more hope and less knowledge and experience seemed to imagine. When the war of independence began, the organized Spanish force was roughly estimated at 127,000 men of all arms; but of this number 15,000 men were far away, serving and shivering under the banner of Bonaparte, in Holstein and other regions of the Baltic; and nearly 20,000, concentrated in Portugal, were obeying the orders of Junot. Of the 92,000 or thereabouts that remained, not less than 30,000 were mere militia; but about 11,000 were Swiss infantry, with all the discipline, steadiness, and bravery for which Helvetic troops have always been celebrated. Thus the number of native regular troops actually on foot on the soil of Spain did not exceed 61,000 men; and these, for the most part, were but indifferently officered by off-shoots of the Spanish aristocracy, who were impatient of fatigue and of subordination, and who, speaking generally, and with due honour to the exceptions, possessed but few essential military qualities. There was another capital deficiency; in the whole Spanish army there was not a single staff deserving of the name—their staffs were sticks. These troops were widely dispersed in different parts of the kingdom; but the largest body among them happily chanced to be on the southern side of the Sierra Morena and in Andalusia. In addition to the 30,000 militia, there was a sort of local reserve, called *Los Urbanos*, or *Urban Militia*, a most irregular and motley force, but which, though not worth much in the field, could supply the place of better troops in the towns. At the same moment, or in the month of May, the French army, exclusive of the 30,000 men in Portugal with Junot, was about 80,000 strong; but not more than 70,000 were capable of service in the field, the rest being in the hospitals or in the depôts. There were some of Bonaparte's best men, im-

perial guards and veteran regiments of the line; but the much larger number was made up of conscripts, Swiss, Italians, Poles, and even Portuguese, whom Junot had forcibly levied. But at Bayonne, ready to march into Spain at any moment, was an army of reserve, under General Drouet, more than 20,000 strong; and, close in the rear of this army of reserve, other French corps were collected. The French army, too, like the Spanish, was at first scattered over a wide extent of country.

Upon entering into Catalonia, General Duhesme found himself involved in a destructive partizan war, waged by the indomitable peasantry of the mountains. It fell to the lot of Marshal Bessières to fight the first battle that was fought against the Spanish patriots. With far more enthusiasm and valour than prudence, the old Spanish general, Cuesta, with his raw levies and a few Walloon regiments, and without any cavalry, risked a general action at Rio Seco, a few leagues from Valladolid, and sustained a complete defeat: this was on the 14th of June. But on the 22d of July the French general, Dupont, who had attempted to penetrate into Andalusia, and who had been completely surrounded and worsted in several combats, by the Andalusian army of Castaños and by clouds of armed peasants, was compelled to lay down his arms. From 18,000 to 19,000 were thus made prisoners, with their artillery, baggage, and all they had. It was long since the French had sustained so signal a disgrace. The news of this battle of Baylen and of Dupont's surrender flew like lightning to the Spanish capital, diffusing a joy and triumph which was not to be repressed by the presence and the oppressions of the French. A council of war was called by Joseph, and then and there it was determined to abandon Madrid, to retire behind the Ebro, and to establish court and head-quarters in the city of Vittoria, which lies at a conveniently short distance from the French frontier. The intrusive king had not been a fortnight in his new capital when he was thus compelled to flee from it. The retreat of the French from Madrid began on the 1st of August; but General Castaños did not enter that city until the 23d. Among the many important results of the affair of Baylen and the flight of King Joseph, was the raising of the memorable siege of Saragossa. This ancient capital of the kingdom of Aragon, though miserably fortified, had resisted 15,000 Frenchmen for the space of two months, and had inflicted on them a terrific loss. The Spanish women had fought like heroic men; and the fair Augustina, the far-famed maid of Saragossa, had served on the batteries. When the French general, Verdier, thinking the town more than half taken, had sent to propose

a capitulation, Palafox, the governor, had replied, "Guerra al cuchillo!"—War to the knife!

Nor was Duhesme more successful in the siege of Gerona. Assisted by Admiral Lord Collingwood, the Catalans foiled all this French general's efforts, and reduced his army to a wretched state of disorganization. Marshal Moncey also failed in his operations in Valencia. But the Spanish general, Serbelloni, imprudently risking a battle in the open field with badly disciplined troops, sustained a complete defeat. These details will be sufficient to convey a notion of the manner in which the war was carried on by the Spaniards so long as they were left to act in the field by themselves. Notwithstanding the affair of Baylen, which raised their self-confidence to a giddy and dangerous elevation, and some other encounters in which, mainly through the advantages of ground and other local circumstances, they had a decided advantage, it was on the whole very clearly demonstrated that there was little military genius among the Spanish commanders, that a Spanish army could not yet contend in the open field with veteran French troops, and that *all* the Spaniards fought best when covered by walls and strong stone houses. But by this time British bayonets were glittering on the shores of the Peninsula; and General Sir Arthur Wellesley was preparing to enter upon a career far greater and more glorious than his Indian one had been.

The French had rendered themselves as odious in Portugal as in Spain. A national rising, which commenced at Oporto, spread rapidly into Tras os Montes, Minho, Beira, and Algarve. The people and students of Coimbra, enthusiastically flew to arms, submitting to the junta of Oporto as the legitimate government; the people of Alemtejo followed the example of the people of Algarve, and both were supported by a body of Spanish troops which crossed the frontiers at an opportune moment. Junot, whose head was never very clear, became completely bewildered, and his subordinates only increased the popular fury by the indiscriminate massacres they committed. The Portuguese called upon their ancient allies. On the 1st of August, General Wellesley landed near the town of Figueira. On the 5th, General Spencer joined him from Cadiz, with about 4000 men, thus raising the entire force under Sir Arthur's command to 13,000 foot and 400 or 500 horse.

The French forces at this time in Portugal consisted of from 16,000 to 18,000 men; but, deducting the garrisons of Elvas, Peniche, Setubal, and other places, there remained only about 14,000 men for the defence of Lisbon and its approaches. Their communications were cut off from their countrymen in Spain; for, since the surrender of Dupont, the Spanish patriots were

masters of Andalusia and Estremadura; and in Old Castile the French corps under Bessières had not advanced farther than Benavente, being observed by the Spanish army of Galicia. A clear stage was therefore left for the contest in Portugal between Wellesley and Junot, whose respective disposable forces were nearly equal, except that the French had the advantage of a considerable body of cavalry, an arm in which the English were almost entirely wanting. On the 9th of August Sir Arthur began his march southward for Lisbon. On the 16th the French general, Delaborde attempted to make a stand at Roliga, but he was soon driven back with loss of men and guns. The French troops had been told that the English soldiers were nought, and that their general, Sir Arthur Wellesley, was but a s-poy-general, who might beat Indian sultans and rajahs, but was altogether incapable of contending against French commanders, who had risen out of the revolution, and had been trained under the Emperor Napoleon; but the precision of movement, the unflinching steadiness, the regularity and the quickness of their firing, undeceived them, and displayed the real qualities of British infantry; while all those who understood anything of the business of war saw a high directing mind, and felt that the sepo-general was a great master in the art of war. Steadily pressing forward, Sir Arthur reached Vimeira on the 19th, and was there joined on the 20th by Generals Anstruther and Ackland, with two brigades freshly arrived from England. This raised his force to about 17,000 British, besides 1700 Portuguese. But Junot, by calling in his garrisons, had now a force numerically equal or nearly equal to this, and he retained his superiority in cavalry, as also in artillery. But what was of more consequence than all, just at this critical moment Sir Arthur Wellesley was superseded in the chief command by a very inferior personage, Lieutenant-general Sir Harry Burrard.

As soon as it was resolved at home to raise the British army in the Peninsula to 30,000, ministers gave the chief command to Lieutenant-general Sir Hew Dalrymple, who, as acting governor of Gibraltar, had so promptly aided Castaños and the Spanish army of Andalusia; and they appointed Sir Harry Burrard to be Sir Hew's second in command, leaving Lieutenant-general Sir John Moore, who had just returned from a fruitless expedition to the Baltic, and who was now on his way to the Peninsula, and Lieutenant-generals Sir Arthur Wellesley, the Honourable John Hope, Lord Paget, and Mackenzie Frazer to command respective divisions of the army. Wellesley was thus reduced from first to fourth. Accidents, and the order in which the new-appointed generals arrived made a bad scheme worse. Sir Harry

Burrard arrived first; on the evening of the 26th he came to Maceira Bay near Vimeira. Sir Arthur immediately went on board, and reported to Sir Harry the situation of the army and his own intended plan of operations, which was to continue marching along the coast-road as far as Mafra. No plan could have been better; no reinforcements were wanting, the British, without counting either the Portuguese regulars or the insurgent peasantry for anything, being rather superior in number to the French in front of them, and elated by the success they had obtained at Roliça. There was probably not a man or an officer in the army but was anxious to advance. Sir Harry Burrard, however, thought differently, being of opinion that no further advance ought to be made till the arrival of the reinforcements under Sir John Moore. But the enemy in the

clined assuming the command, or any way interfering with Sir Arthur Wellesley's disposition till the enemy was repulsed. But then, when the French were running off, almost in a *saute qui peut* disorder, when Major-general Ronald Ferguson on the left was close upon them, when General Hill was ready to spring forward by a shorter road than the French could take upon Torres Vedras (which must have cut them off from Lisbon, and perhaps have obliged them to lay down their arms), and when General Wellesley would have followed up his victory by a general and rapid movement forward, Sir Harry Burrard demurred, thought it unwise to hazard the fortune of the day upon what he considered a perilous throw—thought it advisable not to move any farther, especially on account of the superiority of the French cavalry—thought it best of all

to suspend offensive operations, and to wait in the position of Vimeira until the arrival of Sir John Moore. Accordingly General Ferguson was ordered to desist from pursuit, General Hill was called in; and the French officers, to their great astonishment, were allowed to rally their men, and make good their retreat to the always admirable position of Torres Vedras. On the next day, the 22d, Sir Hew Dalrymple, arriving in a frigate from Gibraltar, landed in Maceira Bay, and superseded Sir Harry Burrard, as Sir Harry had superseded Sir Arthur Wellesley. Thus, owing to the unwise arrangements of our

VIMEIRA.—From Landmann's Historical and Military Observations on Portugal

meantime was bringing the question to a speedy issue. With 15,000 men and with generals far abler than himself, Junot advanced from Torres Vedras, and at ten o'clock in the morning of the 21st of August, he fell upon the British at Vimeira. In two hours the affair was decided, and Junot's 15,000 men were completely routed by about one-half of the British force. The French left on the field 1800 killed and wounded, many prisoners, and fourteen cannon. The first British brigade, by a masked movement, had got two miles nearer to Torres Vedras than was any part of the French army, and the whole of that army, moreover, was in the greatest confusion. There was abundant time and an admirable opportunity to annihilate Junot; but Sir Harry Burrard had landed, and had brought with him the depressing, nightmare-like influences of senility and irresolution. Sir Harry had been present on the field during part of the engagement, but he had de-

own government, and to chances which they ought to have foreseen, the army, within twenty-four hours, had successively three commanders-in-chief! The time for prosecuting the victory was gone before Sir Hew Dalrymple came ashore; and popular clamour was guilty of great injustice towards Sir Hew both with regard to the battle of Vimeira and the convention which followed it.

In the course of the 22d General Kellermann appeared at the British head-quarters, with a flag of truce, to propose in the name of Junot an armistice, preparatory to a convention for the entire evacuation of Portugal by the French, with their arms and baggage. The terms were discussed between Kellermann and Sir Hew Dalrymple; Sir Harry Burrard and Sir Arthur Wellesley both being present. In the end the suspension of arms was agreed upon to terminate at forty-eight hours' notice; and Sir Hew directed General Wellesley to sign this agreement. On

the 23d, Sir Hew and the army made a forward movement from Vimeira to Ramalhal, near Torres Vedras, but within the boundary stipu-

This, with the arrival of Sir John Moore and his 20,000 men in Maceira Bay, startled Junot, who at one moment had thought of defending the strong position of Torres Vedras, and at another of crossing the Tagus, and throwing his forces into Elvas. On the 29th, the term for the suspension of hostilities having expired, Sir Hew moved his head quarters to Torres Vedras, from which the French had withdrawn. On the 30th, Junot at last signed the treaty, and the definitive convention was ratified by Sir Hew Dalrymple, at Torres Vedras, on the 31st. Sir Arthur Wellesley was not present at this final ratification, having moved to the left very early in the morning, and being now at Sobral with his division.

TORRES VEDRAS —From Vivian's Scenery of Portugal and Spain

lated by the armistice which he had ordered Sir Arthur Wellesley to sign

Junot still talked very high, and endeavoured to gain time, but on the morning of the 27th instructions were sent to Colonel George Murray at Lisbon to break off the negotiation if Junot should be found obstinate, and to tell him, that in no case the armistice would be prolonged for a more extended period than twenty four hours

We have his own words, in various forms, for the assurance of the fact, that, after the fatal orders of Sir Harry Burrard on the field of Vimeira (orders with which Dalrymple had nothing to do, as he was many miles off at sea in his frigate), he approved of a convention allowing the French to evacuate Portugal; that he felt that the favourable moment for pushing upon the French had been lost, that, if they could not be

GENERAL VIEW OF LISBON from near Almada —From a drawing by William Tebbin

brought to evacuate the country by sea, they might either defend themselves desperately within Lisbon, or cross to Elvas and Almeida, which, being places regularly fortified, would have required regular and long sieges, during which the British army could not have been made available in Spain, where the presence of a part of it was

earnestly desired by some of the Spaniards, and whether the British government was very eager that some corps should go as quickly as possible.¹ It was not against the convention itself, but against the monstrous folly which made it necessary, and against some particular clauses of, and

¹ See Colonel Gurwood, *Wellington Despatches*.

omissions in the definitive treaty, that he was indignant. He wrote to Lord Castlereagh that the treaty had been altered, but not as he thought it ought to have been; that ten days after the battle of Vimeira the army was not farther advanced than it could or ought to have been on the night of the 21st; that matters were not prospering; that he felt an earnest desire to quit the army; that he had been too successful with this army ever to serve with it in a subordinate situation.

The forts on the Tagus were taken possession of on the 2d of September by the British troops, and the port of Lisbon was then opened to our shipping. On the 8th or 9th, one of our corps marched into Lisbon, in the midst of popular acclamations and rejoicings, to secure tranquillity, during the embarkation of the enemy. Transports being collected, the French presently began to depart; and except their last division, detained by orders from England, they were all sent off before the end of September.

Both long and loud was the popular vociferation in England against the whole of the convention, misnamed of Cintra. No measure, indeed, was ever more universally reprobated, or less understood or inquired into. Nor was this a merely popular outcry; soldiers, and statesmen, and secretaries of state, shared in the violence, and both court and cabinet swelled the chorus. At first all were blamed, and no exception was made in favour of Sir Arthur Wellesley. The government appointed a board of inquiry, consisting of four generals and three lieutenant-generals. Sir Hew Dalrymple and Sir Harry Burrard were recalled, in order to be examined by this board, and Sir Arthur Wellesley, who had already asked and obtained leave to return home, was also examined at his own desire. The court of inquiry assembled in the great hall of Chelsea College on Monday, the 14th of November, and continued sitting, with adjournments, until the 27th of December. The final report stated that

however some of the members of the court might differ respecting the fitness of the convention, they were unanimously of opinion that "unquestionable zeal and firmness appeared throughout to have been exhibited by Lieutenant-generals Sir Hew Dalrymple, Sir Harry Burrard, Sir Arthur Wellesley," &c.

But neither the ministry nor the court, neither the parliament nor the people, assented to the very inconclusive award of the board of inquiry. All, or nearly all, now agreed as to the honour that was due unto Sir Arthur Wellesley, and in the opinion that, if Sir Harry Burrard had not interfered with him on the field of Vimeira, there would have been no convention, but an unconditional surrender on the part of Junot. But there was much less fairness in allotting the dishonour or the blame. We know not to what prejudices or influences in high quarters it was owing that an undue portion of censure and severity fell upon Sir Hew Dalrymple; we only know the facts that Lord Castlereagh and the king both declared themselves strongly against him, that ministers turned him out as a scape-goat, and that a very severe censure was addressed to him in his majesty's name. Sir Harry Burrard, who was a hundredfold more censurable, immediately resumed the military command of the London district, which he had held before he was sent to Portugal.

After the sitting of the court of inquiry, Sir Arthur Wellesley, whose sharp, concise answers before the board showed the clearness of his head and the firmness of his heart, resumed the duties of his office as chief secretary for Ireland, seeming determined to devote himself entirely to home politics and administration. He went over to Ireland in December; and when parliament assembled in January he returned and took his seat. But most men felt that his more fitting place would be at the seat of war, and the disastrous occurrences in the Peninsula soon strengthened this conviction.

CHAPTER VI.—CIVIL AND MILITARY HISTORY.—A.D. 1808—1809.

GEORGE III.

Sir John Moore appointed to the command of the British army in Spain—He is joined by Sir David Baird—Incapacity and disasters of the Spaniards—Moore misled by erroneous representations—Conference between Bonaparte and the Emperor of Russia at Erfurt—Bonaparte repairs to Spain—The Marquis Romana and his troops extricated from French service—Bonaparte's successes over the Spaniards—He enters Madrid—He replaces Joseph on the throne of Spain—Sir John Moore advances under false intelligence—His rapid retreat—His arrival at Coruña—Battle of Coruña—Death of Sir John Moore—Safe embarkation of his army—Despondence occasioned in England by the Spanish campaign—The war establishment increased—Charges of Colonel Wardle against the Duke of York as commander-in-chief—The inquiry into the proceeding at the Horse-guards—The duke resigns office—He is succeeded as commander-in-chief by Sir David Dundas—The British war in Spain continued—Sir Arthur Wellesley appointed to the command of the British army in Spain—State of the war at his arrival in Portugal—His remarkable passage across the Douro—He dislodges Soult from Oporto—Soult's disastrous retreat into Spain—Sir Arthur Wellesley enters Spain—His successful advance—His victory over the French at Talavera—He retreats across the Tagus—Sir Arthur raised to the peerage as Viscount Wellington—A British expedition sent to Holland—Its capture of Flushing—Abortive results of the expedition—Flushing evacuated by the British—A diversion effected by a British army in Italy—The Calabrians rise against Murat—They are aided by the British—Operations of the British troops and insurgents on the coast of Naples—They capture the islands of Procida and Ischia—Their capture of Zante and other islands—British captures in the West Indies—The war of Austria against France—Bonaparte enters Vienna—Battle of Aspern—Peace of Schönbrunn—Its conditions—Rome annexed by Bonaparte to the kingdom of Italy—The pope carried off a prisoner to France.

FEW days after the battle of Vimeira despatches arrived in Portugal from Lord Castlereagh, containing the appointment of Sir John Moore to the command of the British troops to be employed in Spain. On the 6th of October, Sir John received more explicit instructions, the secretary-at-war informing him that his army of 20,000 men was to be employed in the northern provinces of Spain, "to co-operate with the *Spanish armies* in the expulsion of the French from that kingdom." Lord Castlereagh also intimated that an additional corps of 10,000 men under Sir David Baird was about to sail for Coruna. Marching through Portugal in the worst of weather, over execrable roads, and with no proper guides, Sir John Moore crossed the boundary between that kingdom and Spain on the 11th of November, and on the 13th he reached Salamanca.

In the meantime Sir David Baird with his 10,000 men had reached the northern coast of Spain. Sir David had anchored at Coruña on the 13th of October; but to his great surprise, the supreme junta of Galicia refused to allow his troops to be landed; and he was informed that the assent of the central government, or junta now sitting at Madrid, must be obtained previously. This unfriendly treatment proceeded from Spanish vainglory and conceit, and from the prevalent notion that their own troops could drive the French beyond the Pyrenees without

the assistance of foreign auxiliaries. It took a deal of beating to drive this conceit out of them. For fourteen long days Sir David Baird's 10,000 men were kept cooped up in the transports in the harbour of Coruña. At last a courier arrived from the dons at Madrid, who, after mature deliberation, thought fit to grant leave to the army to land. Baird had been sent on this expedition without specie, and Moore had been supplied only with £25,000. He was, however, under the necessity of transmitting £8000 to Baird to enable him to move from Coruña.

Before Moore began his march from Coimbra, he was assured that the French, weak in numbers and in organization, were lying behind the river Ebro, menaced by superior Spanish armies, that were all elated with success, and quite capable of preventing any advance of the enemy; but on the very day after his arrival at Salamanca he got accounts of the defeat of the Conde de Belveder in front of Burgos; and two nights after this, news was brought to him that the Spanish general, Blake, had risked his army and lost it at Espinosa, on the borders of the Asturias. Thus two of the armies with which he had been ordered to co-operate were already no more; no communication reached him from Castaños; none were transmitted him from the Spanish government at Madrid; and the ingenious author of *Whistlecraft* seems to have continued his doze on the banks of the Manzanares. Mr. John Hookham Frere, our accredited minister at Madrid, was a man of wit and genius, but absent-

minded, constitutionally indolent, and assuredly never meant by nature for a diplomatist. He miserably misled the general in the field, being himself misled and duped by the prating Spanish politicians of Madrid, and by the not over-honest members of the central junta. Everything corresponding with this bad beginning, the expedition of Sir John Moore could not prove otherwise than unfortunate. By this time the British government had supplied Spain with 200,000 muskets, with ammunition in proportion, with clothing, and with 16,000,000 hard dollars; Mr. Frere had delivered 2,000,000 dollars for the sole use of the Spaniards in the north, among whom Moore now found himself; yet our general could derive no assistance from these people. The Spanish armies in other parts were in a state of destitution and nakedness, and were lying scattered all about. "These provinces," said Sir John, "are not armed; and, as to enthusiasm, I have seen no marks of it."

While Moore was thus desponding at Salamanca, Bonaparte in person was crossing the Pyrenees, with 70,000 more men.

In the month of September the Emperor of the French had repaired to Erfurt to hold conferences with the Emperor of Russia. The subjects of their conferences were carefully concealed; but it was generally understood that the question of Spain and the fate of Turkey were agitated, without reference to any other principle than that of the advantage and aggrandizement of the two emperors. It should also seem that it was understood between them that Alexander should not interfere in the Spanish question, and that Napoleon should allow him in return to encroach on the trans-Danubian provinces of the sultan; for, shortly after this meeting at Erfurt, Russian troops were again poured into Wallachia and Moldavia. The two emperors wrote a joint letter to the King of England, inviting him to a speedy pacification, but laying down no basis for negotiation, and offering no conditions for our allies. To this doubly imperial, but really insignificant epistle, not George III., but Mr. Canning, his secretary for foreign affairs, replied in two spirited notes, one addressed to the Russian, the other to the French minister for foreign affairs. From Erfurt Bonaparte hastened back to Paris, and there told his senate that he and the Emperor of Russia were irrevocably united in the bond of alliance. This was on the 18th of October. On the 25th he opened the session of the *corps législatif*, and told that soulless body that he was going in person to take charge of the Spanish war, and drive the English out of Portugal. He used a style which he had already worn threadbare, but which he could not use too often—"The hideous presence of the English leopards

contaminates the continent of Spain and Portugal. I go to place myself at the head of my armies, to crown my brother at Madrid, and to plant the French eagles on the ramparts of Lisbon!" Two days after this he set out for the Pyrenees. Troops had been for some time collecting on that frontier; for, still anticipating his vital resources, Bonaparte had called out two conscriptions. The very *élite* of his immense army was now to engage in this momentous struggle. Before they arrived in the country which was destined to be the grave of most of them, a small army of native Spanish veterans and patriots was wafted to the shores of the Peninsula in English ships. At the time when Spain and her resources were entirely at the disposal of Bonaparte, Manuel Godoy had sent General the Marquis de la Romana, with 15,000 men, to serve the French on the shores of the Baltic, or wherever else the conqueror might choose to employ them. These Spanish troops were quartered in Holstein, Schleswig, Jutland, and the islands of Funen, Zealand, and Langeland, when Mr. M'Kenzie, an agent employed by the British ministers, opened a communication with Romana by means of a Catholic priest. The Spanish general was incensed at the iniquitous proceedings at Bayonne; his soldiers were equally indignant; and all were most heartily sick of their exile in Denmark and those Baltic regions. A plan was ingeniously concerted and most ably executed. The marquis, with from 9000 to 10,000 of his men, after being aided by Admiral Sir R. Keats, got safely on board our Baltic fleet, commanded by Sir James Saumarez. Touching at England, where the marquis received a most enthusiastic welcome, he proceeded to San Andero, and there landed his men, who were equipped from the English stores, and were then sent in divisions to join Blake's army in Biscay.

On the 8th of November, Bonaparte arrived at his brother's head-quarters in the city of Vittoria, and took the entire direction of the campaign. On the 23d of November was fought the battle of Tudela, in which the armies of Castaños and Palafox were quickly thrown into disorder, put to flight, and savagely slaughtered by the French cavalry. Plundering the towns through which they passed, and shooting every Spaniard they caught in arms (Bonaparte having given an express and standing order to that effect), some of the French columns marched forward to drive out the central junta and take possession of Madrid.

Having done nothing when they had time to do it, the central junta now precipitated measures in the most hurried and confused manner, issuing a multitude of orders, some of which were not understood, and very few of which were at-

tended to, partly through the despair which seemed to have fallen upon the Spanish people, and partly through the shortness of time that was allowed them. On the 29th of November, Bonaparte had his head-quarters at a village upon the outer skirts of Somosierra. On the 30th the principal pass was carried, the 6000 Spaniards entrenched at Sepulveda fleeing before a charge of Polish lancers. On the morning of the 2d of December, Bessières, with the French cavalry, came within sight of Madrid, and took possession of the heights; and at noon on the same day, being the anniversary of his coronation, the Emperor of the French arrived. The town was immediately summoned. There was a great noise and a show of resistance; but early in the morning of the 4th of December, Don T. Morla, who was both a traitor and a coward, and who had played upon the credulity of Mr. Frere, came forth with a capitulation, and Madrid surrendered. Joseph Bonaparte entered that capital in the tail of the French army; but, though all seemed quiet and submissive, he dreaded insurrection and assassination; and, while his brother went to look after Sir John Moore, he retired, well-guarded, to the royal palace at St. Ildefonso.

The situation of the English general was critical in the extreme. On the 28th of November, Sir John received vague intelligence of the unexpected dispersion of all the Spanish armies, and of the rapid advance of Bonaparte with overwhelming forces upon Madrid. As there appeared no longer any army in the north of Spain with which he could combine, he prepared for a retreat into Portugal. But Mr. Frere continued to urge his advance, grossly misstating the French force, and representing the Spaniards at Madrid as full of resolution and heroism.¹ Two Spanish generals arrived at Salamanca to assure Moore that the army of San Juan was in excellent case. But, before these two generals and a letter from Morla came to hand, the French were undisputed masters of the capital; and the army of San Juan existed nowhere except upon paper, for the troops had fled pusillanimously, and had murdered—at Talavera—their own general, reputed the best officer in the Spanish service. There is every reason for believing that Don T. Morla's letter, which was dated on the 2d of December, the very day that he actually began negotiating terms for surrendering Madrid, was dictated by some of Bonaparte's people, or was written and

sent to serve that conqueror, by drawing the British army into a snare. Continuing in his moral stone-blindness, Mr. Frere took into his confidence a certain French adventurer and spy, named Charmilly, who had secret relations with the traitor Morla, and even sent him to Sir John's cantonments. In the end, Moore was induced to believe that Madrid, instead of having surrendered without firing a gun, was really standing a siege; that the Spanish generals were concentrating their scattered forces, and that the French army was far less considerable than had been reported. On the 6th of December he wrote to Sir David Baird, who had retreated as far as Villafraña, to concentrate his troops and return to Astorga. "I mean," said Moore, "to proceed bridle in hand; for if the bubble bursts *we shall have a run for it.*" And the bubble did burst. Advancing to Benavente, and then to the banks of the Carion with less than 24,000 men, Moore, on the 25th of December, found Bonaparte and 100,000 men closing upon him by four different routes. The French had fully expected to surprise and surround him; but notwithstanding his amazing rapidity, Bonaparte arrived twelve hours too late. On the 26th, Moore commenced his retreat for Coruña. On the 1st of January, Bonaparte had advanced as far as Astorga.

From the heights behind Astorga, A.D. 1809. the Emperor of the French could discover the now confused rear of the retreating British army; but he was exceedingly wroth that Moore, by his rapid movements, should have escaped him; and circumstances had arisen in a distant part of the world which prevented his enjoying the satisfaction of pursuing the most cordially hated of all his enemies. Despatches arrived from Paris and from other places, which left no doubt as to the intention of Austria to take the field against him; and therefore, on the 2d, intrusting the pursuit of Moore to Soult, he turned away from Benavente to Valladolid, whence he travelled with almost incredible speed to his own capital, cursing all the way the efficiency of English policy, alliances, and subsidies, to which solely he attributed the war with which he was now threatened in Germany and Italy. But even after his emperor's departure Soult had 60,000 men and ninety-one guns to put in the track of Moore; and he lost no time in precipitating these masses through Galicia. His cavalry was very soon close upon the British rear; and

¹ *Parliamentary Papers.* "Mr. Frere had come out to Spain impressed with false notions of what was passing in that country, and tenaciously clinging to the pictures of his imagination, he resented the intrusion of reason and spurned at facts. The defeat of the Conde de Belveder at Gamonal—a defeat that broke the centre of the Spanish line, uncovered the flank and rear of Castaños's army, opened a way to Madrid, and rendered the concentration of the British divisions unsafe if not impos-

ible—he curiously called the 'unlucky affair of the 10th at Burgos.' After the battle of Tudela, he estimated the whole French army on the side of Burgos and Valladolid at 11,000 men, when they were above 100,000! and yet, with information so absurdly defective, he was prompt to interfere with, and eager to control, the military combinations of the general (Sir John Moore), which were founded upon the true and acknowledged principles of the art of war."—*Napier.*

the whole of that army, from excessive privation and suffering, from the murmurs and misconduct of many of the officers, and from the despondency generally induced by such a retreat, was becoming every day demoralized. They had hardly any provisions with them; they could obtain little or nothing except sour wine, in that famine-stricken country; the roads were wretched, and covered with deep snow; when it did not snow it rained in torrents; the cold on the mountains was intense; and many of the sick, and many of the women and children who had been allowed to follow the army in spite of Sir John's orders, lay down by the roadside and died. Yet, wherever or whenever the French came up to fight, the British formed in good order and beat them off. At last, on the 13th of January, Moore got sight of the sea and of Coruña; but his evil star was still predominant; a fleet of transports, in which his army could have been quickly embarked in safety, was not there, but detained by contrary winds at Vigo, and there were only a few small vessels in the harbour. He, however, pressed forward to the town and put his wearied troops into quarters. The town of Coruña was weakly fortified, and commanded on one side by some heights. Some general officers thought that even now the campaign must end in a convention. But such thoughts were far from the mind of Moore, who strengthened the weak side of the town, occupied the citadel, put the worst of his sick on board the few vessels in the harbour, and made the best dispositions to fight the French and secure his embarkation by a general action. In the evening of the 14th, the transports hove in sight; but it was now impossible to think of embarking without fighting a battle, or abandoning a great portion of the army as a rear-guard; for Soult had come up, was crowning the hills, and his light troops were skirmishing close outside the town. In the course of this night and following morning, the remainder of the sick, the dismounted cavalry, and fifty-two pieces of artillery, were safely embarked, Moore retaining on shore only eight English and four Spanish guns for action. During the night of the 15th, Soult

with great difficulty established a battery of eleven heavy guns, on some rocks which closed the left of his line. At one o'clock in the afternoon of the 16th, he began his attack on the right wing of the British with about 20,000 men. Moore had only 14,500 under arms—all foot soldiers and full of ardour. Sir John rode up to the 42d, and said, "Highlanders, remember Egypt!" At these words the 42d rushed forward, driving the French before them. Early in the fight Sir David Baird had his arm shattered with grape-

shot, and was forced to quit the field. Not long after, at a point where the battle was raging very fiercely, Sir John Moore was struck on the shoulder and left breast by a cannon-ball. He fell from his horse, and was soon carried by some weeping Highlanders to his lodgings at Coruña. The battle continued until the French fell back in confusion, leaving the ground thickly strewn with their killed and wounded. Soult had consumed nearly all the ammunition he had brought up with him. Sir John Hope, upon whom the command devolved, thought it best to avail himself of the present disorder of the French, and get his own army on board the transports during the night; and this difficult operation was effected without delay and without confusion. The arrangements for embarkation had all been previously made by Moore, and they were complete and admirable. Before the troops began to embark, their beloved leader was dead. At

SIR JOHN MOORE¹

midnight the mortal remains were carried to the citadel by Colonel Graham, Major Colborne, and the aides-de-camp. A grave was dug by a party of the 9th regiment, the aides-de-camp attending by turns. No coffin could be procured, as the Spaniards never use any; so the body was never undressed, but wrapped up by the officers of his staff in blankets and a military cloak. Towards eight o'clock on the morning of the 17th some firing was heard in the distance. The simple funeral rites were then hastened, lest a serious attack should be made, which would oblige the officers to quit the body and prevent

¹ From the statue in bronze, by John Flaxman, R.A., erected by his fellow-citizens, in George Square, Glasgow.

their paying the last sad duties to their chief. The officers of his own staff bore the body to the grave, which the soldiers had dug on the rampart: the funeral-service was read by the chaplain, and then the earth was thrown in, and the grave closed by the soldiers.

When the morning dawned, the French, discovering that the British line had quitted its position, pushed forward some battalions to the heights of Santa Lucia; and, about noon, they got up some cannon to a rising ground near the harbour, and fired at the transports. At two o'clock in the afternoon General Hill's protecting brigade embarked under the citadel. During that night and the following morning General Beresford, who kept possession of the citadel, sent off all the sick and wounded whose condition admitted of their being removed: and about noon on the 18th this rear-guard got into the boats and reached the fleet in safety. The inhabitants had undertaken to maintain the town, but it appears that the French made no effort to attack it, or to interrupt the embarkation. The enemy were no doubt kept in awe by the presence of some English line-of-battle ships. When all were on board, the admiral made the signal for sailing, and the transports, under a strong convoy, sailed for England.

In the battle of Coruna the English lost from 800 to 1000 men, the French from 2000 to 3000. Our troops had never fought better.

Thus ended the retreat to Coruna, and the first campaign of the English in Spain (during the present war; for the exploits of Lord Peterborough and General Stanhope in Queen Anne's time must not be forgotten). Our greatest captain has said that he could discover only one error in Moore's campaign—his not sufficiently providing for retreat when he advanced against Soult.¹

The great Whig organ in the north had not waited till now to cast discredit upon the war in the Peninsula and our interference in it; to declare despondingly that, after all, we must expect to fight the battle with Bonaparte on our own shores; that Ireland must be torn from us, and that even the most unsuccessful war which France could carry on in this commercial country must be attended with the most dreadful of consequences. The same organ or luminary had, at the beginning of the struggle, delivered the discouraging oracle that the Spaniards could not be

aided, but must be defeated and for ever subdued by the tremendous power of the French emperor; that it would be madness in the English to think of assisting them, and a wickedness of the worst sort to endeavour to form another coalition against the French; that army after army would be poured through the Pyrenees until all Spain was one field of blood; that nothing could resist the vigour and unity of Bonaparte, and the discipline of his veteran soldiers, &c. &c.* The defeats and errors of the Spaniards, the retreat and death of Moore, and other obvious facts, had prepared many minds for the reception of these dark omens; and a large portion of the parliamentary opposition were disposed not only to censure our management of the war in the Peninsula, but also to maintain that no management or skill whatsoever could enable us either to defend Portugal and Spain, or to inflict any blow by land on our invincible foe. All these parliamentary prophecies may be read, by those who have the patience to read them, in the debates of the times. We say *times*, for they were not only issued now, but continued to be issued for years, and almost down to the eve of the brilliant day when Wellington drove the last French corps down the French side of the Pyrenees. The majority for ministers who entertained better hopes was found, however, to be considerable. Five days before the meeting of parliament—on the 14th of January, when Moore's retreat was known, and when Spanish affairs bore so gloomy an aspect—Mr. Canning signed the treaty of amity and alliance with the Spanish insurgents, binding his country, which was not hitherto bound by any treaty, to support the cause to the utmost of its power; and never to acknowledge any other King of Spain than his Catholic majesty Ferdinand VII., his heirs, or *such lawful successor as the Spanish nation itself should acknowledge*. This was a species of political heroism, let the hopes our ministers entertained about the new Austrian war be what they might.

The noble secretary-at-war lost no time in urging the necessity of increasing our military force. By two acts greater activity was given to enlistment in the militia, and that force was carried to its full number; the vacancies left by the bill of last session for allowing the militia soldiers to volunteer into the line were filled up; and from 20,000 to 30,000 regular troops, which had been doing garrison or coast duty, were added to the corps disposable for foreign service. An active system of recruiting for the line was commenced at the same time. Some additions were also made to the navy; and in this year the number of cruising line-of-battle ships in commission was 127, being the maximum during the war. Above

¹ The modest words of the great captain are these:—"In Sir John Moore's campaign I can see but one error: when he advanced to Sahagun he should have considered it as a movement of retreat, and sent officers to the rear to mark and prepare the halting-places for every brigade. But this opinion I have formed after long experience of war, and especially of the peculiarities of a Spanish war, which must have been seen to be understood; finally, it is an opinion formed after the event."

* See *Edinburgh Review*, vols. ix. xii. xiii.

£27,000,000 were voted for the army and ordnance, and nearly £19,000,000 for the navy. The total amount of supplies for the year for Great Britain and Ireland was £53,862,000. Among the ways and means it was necessary to raise a loan of £11,000,000. The loan was contracted for at a lower rate of interest than money had ever been before borrowed at on the public account: ministers quoted this as proof of public credit and prosperity.

Early in the session a subject was introduced which excited extraordinary interest, and which, for months, caused nearly all other public matters to be forgotten by the people. Mr. Wardle, a Welsh gentleman and colonel of militia, who had married a Welsh lady of considerable fortune; who in earlier days had been distinguished by his high Tory zeal, and by the eagerness with which he offered to carry his Welsh militiamen into Ireland to put down the rebels, had lately changed his political creed, and had cultivated a close acquaintance with Sir Francis Burdett, Lord Folkestone, and other members of the extreme opposition party. On the 27th of January he affirmed in the House of Commons that everything was wrong and rotten at the Horse-guards; that the Duke of York, the commander-in-chief, suffered himself to be swayed by one Mary Anne Clarke, who had been carrying on a traffic in commissions and promotions. Not satisfied with blaming the easiness of temper of the royal commander-in-chief, Wardle insisted that he was a partaker in the benefit and profit arising from these pecuniary transactions. This was a fine theme for the opposition orators in parliament, and for the ballad-singers in the streets. An inquiry was instituted, and Mrs. Clarke was examined at the bar of the House, where she displayed infinite malice, infinite impudence, and a great deal of promptitude and wit. It was not proved, unless we admit the evidence of this woman, and a single story of her friend, Miss Mary Anne Taylor (whose brother was married to Mrs. Clarke's sister), that the commander-in-chief ever knew of her getting money even for her own use by the favours which he dispensed at her intercession; but that he had yielded to that intercession, and had granted a few commissions, promotions, and appointments to persons recommended by Mrs. Clarke, was proved and established by ample and good evidence. Testimonials of the highest value, as coming from the most competent judges, continued, however, to be given to the Duke of York's general management of affairs at the Horse-guards; and it was cogently urged that the numerous improvements which he had introduced into the army, and the point of excellence to which the army had attained since he had been its commander-in-chief, ought to cover and wipe away a few petty irregularities

and peccadilloes. It might be proved that the duke had his weaknesses; but no one could disprove the facts that he had been assiduous and most punctual in his attention to the business of the army, and that he had proved himself to be a good man of business. The army had never had a commander-in-chief with whom it was so well satisfied, or to whom it was so much attached:—take common soldiers, as well as officers of every class, and these feelings of satisfaction and attachment would be found in immense majorities. Such were the best arguments used in the duke's defence, and the truths on which they rest remain indisputable. The house, however, on the 19th of March only counted a majority of eighty-two upon a motion favourable to the duke; and hereupon his royal highness resigned. This terminated a discussion which occupied nearly a third of the whole session, to the grievous interruption of other business, and more grievous interruption of the progress of public morality.

It had been hoped, on the resignation of the Duke of York, that the system of the admiralty would be adopted at the war-office, and that the office of commander-in-chief would be put in commission. This had been the more confidently expected, as it would make several places, instead of one, and so far tend to increase the patronage of government. But, to the disappointment of sundry expectants, ministers made no alteration in the existing system, and that worthy, but old and pedantic and worn-out officer, Lieutenant-general Sir David Dundas, was appointed to succeed his royal highness. The army felt that it had sustained a grievous loss by this change, and before old Sir David had presided six months at the Horse-guards there was a universal clamour against him.

On the 15th of June, Sir Francis Burdett made a motion for a sweeping parliamentary reform. Nearly all the country gentlemen in the house had left town, and of the members that remained but few were inclined to enter upon this discussion at the fag-end of the session. Sir Francis had intended to make his motion the day before, but there had not been members enough present to make a house; and now, when the house divided, he found only fifteen to vote for him, while seventy-four voted against him. On the 21st of June the session was closed with a speech from the throne, again delivered by commissioners.

The Austrian war operated as a grand diversion likely to be highly favourable for the Peninsula, as it distracted the attention of Bonaparte, obliged him to withdraw his imperial guards from Spain, and prevented his sending reinforcements to that country so quickly as he would otherwise have done. The British government, undismayed by the unfortunate, but not inglori-

ous or discouraging result of Sir John Moore's campaign, and undeterred by the orators and writers who represented the attempt as the height of madness, resolved to persevere in sending assistance to the Peninsula, and to enter upon that war on a larger and a bolder scale. Spain, at that moment, did indeed seem prostrate and lost; and even Portugal, from which the French had been completely expelled, was, long before the rising of parliament, reinvaded by an army under Marshal Soult. But in a memorandum dated on the 7th of March, Sir Arthur Wellesley, who had well examined the country during his short stay in it, delivered his decided opinion that Portugal might be defended, whatever might be the result of the contest in Spain; and that in the meantime the measures adopted for the defence of Portugal would be highly useful to the Spaniards in their contest with the French.

There could now be scarcely a doubt as to the proper person to be appointed to the supreme command of the armies in Portugal. If any such doubt had lingered, it ought to have been dissipated by Sir Arthur's memorandum of the 7th of March, by other suggestions he offered to ministers with rare brevity, clearness, and precision, and by the concurring opinions of the best officers in the British army. Men as well as officers, Portuguese as well as British, called loudly for his return to the Peninsula. In spite of the very illiberal and very unwise opposition of Lord Folkestone, and a few other individuals of that party, votes of thanks to Sir Arthur, and a resolution in approbation of the gallant conduct of the non-commissioned officers and privates who had fought at Roliça and Vimeira, were passed by both houses in the month of February. Towards the end of March, Sir Arthur Wellesley, having previously resigned his office of secretary for Ireland, as well as his seat in parliament, and having taken a long farewell of home politics, accepted the chief command of the British forces in the Peninsula. On the 15th of April he set sail from Portsmouth for Lisbon in the *Surveillante* frigate, which was

very nearly lost in a storm at the back of the Isle of Wight, the night after she quitted Spithead.¹ On the 22d of April he arrived safely at Lisbon, and took the command of the army, which had now been left for some time in the hands of Sir J. Cradock.

Soult, after the capitulation of the Spaniards at Coruña, had obtained easy possession of Ferrol, Bilbao, and all the most important places on the northern coast of Spain. Then he had proceeded towards Portugal, and, having entered that country by Braga, he had taken possession of

Oporto on the 29th of March, after a spiritless resistance of only two days. Upon the rapid advance of Soult, Sir J. Cradock had concentrated his forces for the defence of Lisbon. There were other discouraging circumstances; the French had reduced many towns and districts on the east of the Ebro; Saragossa, a second time besieged, was not so valorous or so fortunate as in 1808, but had been obliged to surrender at discretion on the 14th of February; and what was gloomiest of all, the Spaniards at Madrid, and in many other large cities and districts seemed to be quietly re-

signing themselves to the dominion of King Joseph. Still, however, there were some brighter glimpses—some few indications of Spanish patriotism and resolution; for no sooner had Soult evacuated Galicia than the people rose in arms, and several places in the Asturias and in the Biscayan provinces had been retaken by the patriots. Moreover, in Portugal, a body of regulars had been admirably disciplined in the English manner by General Beresford, to whom the Prince-regent of Portugal had given the chief command of all his troops. Beresford's Portuguese, being added to the British reinforcements, enabled Sir Arthur to take the field with an army of about 25,000 men. His first business was to dislodge Soult from Oporto; and to this end, and after leaving a division on the Tagus to guard the eastern frontiers against the French division or corps of Victor, stationed in Spanish Estrema-

SIR ARTHUR WELLESLEY, K.B.—From a print published in 1810, after a picture by Robert Home.

¹ Note by Colonel Garwood, in *Despatches*.

leagues from the Spanish capital. These movements terrified Joseph, and gave great encouragement to the Spanish guerrillas. On the 22d of July, the combined armies of Sir Arthur Wellesley and

Cuesta attacked Victor's outposts at Talavera, and drove them in. On the 23d the British columns were again formed for the attack of the French position, as Sir Arthur wished to beat Victor be-

Oporto, showing the Bridge of Boas, and Troops crossing the Douro, 1809 — From a drawing by Henry Smith, Esq

fore he should be joined by Sebastiani, who was coming up from La Mancha; but old Cuesta was whimsical and perverse, and would not fight that day. At the midnight hour Marshal Victor retreated, in order to form the junction with Sebastiani. When Sir Arthur halted the British troops at Talavera, Cuesta seemed all of a sudden to be invaded by an irrepressible energy and activity; and, with remarkable arrogance, he singly dashed forward in pursuit of the French. He was soundly beaten at Torrijos on the 26th by Victor's rear-guard. Having been joined not only by Sebastiani, but also by King Joseph and Marshal Jourdan, who brought with them the guards and the garrison of Madrid, Victor retraced his steps and on the 27th attacked two advanced British brigades, which fell steadily back across the plain into their assigned positions in the line. This was about two o'clock in the afternoon; but the terrible battle of Talavera did not begin in earnest until it was dark—a darkness illuminated only by the flames from the cannon's mouth and the blaze of musketry. On the morning of the 28th, the battle was renewed by a desperate attempt on the part of the French to gain possession of the height on which the British left was posted, but the two strong columns that were thrown against it for this purpose were driven backward down the steeps with a terrible slaughter. After a long pause the enemy resumed their attacks at noon, which extended over the British left and centre; but in every quarter their desperate onsets were met, resisted, and baffled, chiefly by charges of the bayonet.

In the end the French were thoroughly discomfited. The British, reduced to less than

14,000 men, and exhausted by fatigue, were unable to pursue the enemy, and Cuesta's Spaniards, who had scarcely been engaged at all, were incapable of making any evolution. The combat, which began at night, was not decided until the following evening. Talavera was a double battle. Out of the 50,000 men, which they had on the field at the beginning of the combat, the French had lost 7000 in killed and wounded, an immense number of officers and two generals being among the killed. Out of the less than 20,000 British, 857 had been killed and 3913 wounded; 653 were reported missing; and two general officers, Major-general Mackenzie and Brigadier-general Langworth, were among the slain. The French also lost a considerable number of men as prisoners, and as they retired they left in the hands of the English seventeen pieces of artillery, with tumbrils and ammunition complete. Except at Albuera, the French never again fought so well throughout the rest of this war; and yet France confessed, in a hurried night-retreat, that she had been beaten and humiliated:—

“Far from the field where late she fought —
The tents where late she lay —
With rapid step and humbled thought,
All night she holds her way.
Leaving to Britain's conquering sons
Standards rent and ponderous guns,
The trophies of the fray,
The weak, the wounded, and the slain,
The triumph of the battle plain,
The glory of the day”¹

¹ *Battles of Talavera*, a poem General Sarrazin, who, like a good Frenchman does not like to confess too much, confesses that “the bloody day (*la sanglante journée*) of Talavera had spread terror in the French army (*avait répandu l'effroi dans l'armée Française*)”

In the course of the 29th of July, General Robert Crauford reached Sir Arthur Wellesley's camp from Lisbon, with the 43d, 52d, and 95th (rifles). The reinforcement altogether amounted to nearly 3000 men. This was the light brigade, which was ever after in advance during the peninsular campaigns, and which acquired military celebrity for its gallantry and quickness of movement.¹ But army upon army was gathering round the British. On the evening of the 3d of August, Sir Arthur learned at Oropesa that Soult's advanced posts were at Navalmoral, and consequently between him and the bridge of Almaraz, on the Tagus, thus cutting the line of communication with Portugal. The English general was now placed between the mountains and the Tagus, with a French army advancing upon each flank, and with his retreat by the bridge at Almaraz completely cut off. After the experience he had had of Cuesta and the Spanish army, he could not rely upon them in an open field of battle; and he could not, with 17,000 British, fatigued and famishing, hope to fight successively two French armies, each nearly three times stronger than his own. But there was still one—and only one—line of retreat left open to the British; for, a little below Talavera, the Tagus was crossed by the bridge of Arzobispo; and by this route, and by this bridge, Sir Arthur determined to retire immediately, before the enemy should have time to intercept him. It was a blessing that the Spaniards, who generally destroyed what they ought to have left standing, and left standing what they ought to have destroyed, had not blown up the bridge! The 2000 wounded, the artillery, the stores, were all carried safely over the Tagus; before evening the general took up an excellent position behind the right bank of that river; and then the British army was safe.²

¹ André Vieusseux, *Military Life of the Duke of Wellington*. The author of this admirable, brief, and correct compendium, served for some time in the Peninsula with the light brigade.

² "It was Wellington's great merit that he discovered from the outset that more than one sort of genius and of good luck was necessary in wrestling with Napoleon. Continental Europe had thrice entered the ring, and it had thrice received a fall; nor did it seem to have profited by the lesson. Numbers, courage, and discipline had not inclined the balance in its favour. The finest armies had been beaten, and the most renowned commanders had shown their inability to match him.

"It will be readily admitted that the great continental powers were endowed with resolution and patriotism; they were governed by statesmen of consummate ability, but they wanted a general. . . . They assumed the offensive as a matter of course, as if a beaten and demoralized army could face on equal terms an army flushed by victory. It was thus that Austria, in seeking to avenge Marengo, found Ulm and Austerlitz. Prussia, aiming at a great victory to wipe out Austerlitz, found Jena and Auerstadt. Russia, seeking to gain a great victory after Jena, found Eylau and Friedland. It was thus, again, that Austria once more entered the lists, in 1809, with a superb army, after having voted a levy *en masse* that brought all her able-bodied male population to the field of battle; she assumed the offensive on all hands, and this superhuman effort led her to Ratisben and Wagram!

By the 2d of September, Sir Arthur had his head-quarters at Badajoz, close on the frontiers of Portugal; and in a day or two a part of his army was sent across the frontier, and his sick and wounded were conveyed to the strongly fortified Portuguese town of Elvas.

Soult's army now went into cantonments in Estremadura and Leon, near the borders of Portugal; Joseph Bonaparte had got back to Madrid as soon as it had been possible or safe to do so; French moveable columns, not unlike the infernal columns which had formerly traversed the Vendée, now traversed various parts of Spain; the irregular guerilla warfare was carried on in many distant provinces and districts; some towns on the eastern coast, in Catalonia and Valencia, were taken by the French, while others held out, costing the besiegers an enormous sacrifice of life; but, from the middle of August till the middle of November, no actions took place in the field, of any importance, on the part of any of the scattered Spanish armies; nor was the repose of the British forces very materially interrupted until the month of May, 1810. But, on the 19th of November, the army of Andalusia—the largest that the junta had hitherto sent into the field—was destroyed by Mortier and Sebastiani in the battle of Ocaña; and this defeat drew after it the destruction of the army of the Duque del Parque, at Alba de Tormes, on the 28th of November. These reverses were entirely owing to the ignorance, presumption, and mismanagement of the Spanish generals.

On the 4th of September, almost as soon as the news of his remarkable battle reached England, Sir Arthur was raised to the peerage with the titles of Baron Douro of Wellesley and Viscount Wellington of Talavera. He had now placed his army in cantonments on the line of the Guadiana,

"Amid this whirlwind of victories, one man alone scanned the situation with a steady eye, and measured the whole depth of the chasm. Wellington was aware that fortune could not change sides at a leap, and that it was only after repeated trials that you could win her favours. He saw at once that Napoleon was not to be beaten *à la Napoléon*—with his own weapons; that it was folly to stake all on one cast of the die, and to beard his colossal antagonist in his own stronghold; and that, before acquiring the art of gaining great victories, it was necessary to begin by learning to avoid defeats, and for a time to decline all engagements. This idea, simple enough in good sooth, was, as matters stood, a flash of genius. Men of the greatest ability both in theory and practice, in the cabinet and on the field, had groped about that idea for fifteen years without grasping it . . . All that Wellington did, said, and thought, from the first day that he held the supreme command, shows that he was under the sway of this master idea; that he had a clearly defined system; that he had chalked out for himself a course to follow, and that he adhered to it with all the stubborn tenacity of his race. After the campaign of Talavera, he renounced all direct co-operation and association with the Spanish army. On that occasion he had marched and fought a battle against his judgment, and notwithstanding his victory he was obliged to fall back. Thereupon he declared that he should never be caught doing the like again."—*The Duke of Wellington, his Character, &c.*, by Jules Maurel, p. 32.

to cover Portugal from Soult, who had established himself in Leon and Estremadura.

The declaration of war by Austria against France—which would not have been made at that moment without English encouragement and promises of aid—bound our government to attempt two great diversions in two very opposite parts of Europe—in Holland and in the south of Italy—and this in addition to the war we were carrying on in the Spanish peninsula, which gave occupation to 200,000 French. From the beginning of the month of May preparations were made for fitting out one of the greatest armaments that had ever issued from the ports of Great Britain; and by the end of July an army of 40,000 men was collected, and a fleet of thirty-seven sail of the line, two fifty-gun ships, three of forty-four guns, twenty-three frigates, thirty-one ship and brig sloops, five bomb-vessels, twenty-three gun-brigs, and about 120 sail of hired cutters, tenders, gunboats, &c.—in all 245 vessels of war—accompanied by about 400 sail of transports, was ready to convey, and co-operate with the army. Unfortunately the destination of this mighty armament could not possibly be concealed from the French, or from any other people that knew what was, and had long been in progress on the Scheldt. Not even Nelson and Trafalgar had made Bonaparte despair of disputing the sovereignty of the seas and invading England. Ever since the spring of 1807 formidable naval preparations had been carried on by France in those waters; and by the spring of the present year ten seventy-four gun ships were at anchor near the Calot Sand; nine ships of the line were on the stocks at Antwerp, most of them ready to be launched; and at the same place the keels of nineteen ships of war, large and small, were laid; while on the stocks at Flushing there were one seventy-four and three smaller vessels. Besides these there were, at Flushing, at Antwerp, and in the Texel, several sail of the line actually ready for sea. Ministers made an unfortunate selection of commanders for this expedition: the Earl of Chatham, to whom they gave the supreme command of the land forces, had scarcely anything to recommend him, except his being an amiable man, and connected with great men; and as for Rear-admiral Sir Richard John Strachan, it would be committing an injustice to the navy not to say that there were fifty officers, even among those who had the requisites of professional rank or grade, fitter than he for the command of the fleet.

On the 28th of July the grand armada—for such it might be called—set sail from the Downs. In the course of the following day, it was nearly all collected on the Dutch coast; and then began the differences of opinion between the land and

sea commanders, and the discovery that the fleet was not sufficiently provided with boats for landing the troops, ordnance, &c. The wiser part of the officers were for going on to Antwerp at once (Antwerp was not forty-five miles distant), to try a *coup de main* before the place should be put in a full state of defence; but the less wise were for beginning with Flushing; and this last opinion prevailed. Flushing, whose importance, as compared with Antwerp, was as ten to a thousand, was invested on the 1st or 2d of August; but so slow were our incapable commanders that nearly a fortnight elapsed before they got their batteries all ready, and commenced their bombardment in earnest. They began to bombard hotly on the 13th; and on the 15th, General Mounet, who commanded the garrison of Flushing, requested a suspension of hostilities. On the following evening the articles of capitulation were signed; and the garrison, amounting to about 6000 men, laid down their arms in front of the place. The ships that were afloat had fled at the approach of the English; those that were on the stocks, or in dock, were secured. The reduction of Flushing was the virtual termination of the campaign. On the 21st, and not sooner, the late Lord Chatham removed his head-quarters from Flushing to Veere; and on the 23d he went to Ter Goes, on the contiguous island of South Beveland, and talked solemnly of going to Antwerp. But before he could get there he must reduce Lillo and Liefkenshoeck, places strong of old, and of late years made much stronger. A great many batteries had been erected during the fortnight and more that he had been pottering at Flushing. And while he paused and pondered for nearly another fortnight, Marshal Bernadotte arrived at Antwerp, and from 40,000 to 50,000 regular troops, French, Dutch, and Germans, were collected in that neighbourhood, together with hosts of militia both from Belgium and from Holland. Add to all this, that 10,000 of the British troops had been left behind to keep possession of the island of Walcheren; that 3000 were on the sick list; that nearly all the provisions brought from England were eaten up; that the country we had seized could supply next to nothing: and we need not be surprised that a council of war, called together by the Earl of Chatham, on the 27th of August, should be decidedly of opinion "that it was not advisable to undertake further operations."

By the 4th of September every part of Zealand was evacuated by the English, except the island of Walcheren. On the 14th of September, Earl Chatham embarked for England with the greater part of the army, leaving Sir Eyre Coote to hold the command of the remainder, and to keep

possession of Walcheren, for the purpose of blocking up the Scheldt, stopping the egress of the Batavo-Gallic fleet, and keeping open an inlet for the trade of Great Britain into Holland! Before the Earl of Chatham took his final departure, 8000 men were on the sick list. And he had not been gone long when all the force he had left under Sir Eyre Coote began to disappear with alarming rapidity in the hospitals or in the grave. England considered herself bound to retain possession, so long as it could be of any use to our unlucky ally; and the Emperor of Austria solicited us to continue our operations in Holland down to the moment, and apparently even past the time, when, beaten again, and again losing all heart, he prostrated himself at his conqueror's feet. Dearly as it cost us, our occupation of Walcheren cost Bonaparte many exertions as well as anxieties. But at last, on the 13th of November, which was a month all but two days after the Emperor Francis had signed his degrading treaty of peace with the Emperor Napoleon in Vienna, his capital, orders were despatched to Lieutenant-general Don, who had succeeded Sir Eyre Coote in the command, to evacuate Flushing, and take such measures as he might judge most effective for the destruction of the basin and of the naval defences of the island. The piers of the flood-gate of the basin at Flushing were blown up with gunpowder; the strong and costly pile-work on the east side was destroyed; the arsenal and magazines in Bonaparte's new dockyard were burned; but very little was done to damage the land fortifications of the place, lest the houses and property of the townspeople should be injured by the explosion. The 6000 prisoners who surrendered in Flushing had been shipped off for England long ago. The ships on the stocks were destroyed; but one fine new frigate was brought away, as were also the timbers of a seventy-four, which, being put together at Woolwich, produced in 1812 a good ship, which was called the *Chatham*, to preserve, we suppose, the memory of that earl's Walcheren exploits. These things and the fever were about all we brought back from this expedition, which cost us many thousands of lives and many millions of money.

Our diversion on the side of Italy cost no such enormous sacrifices, and yet it too was attended with some advantages to our allies; for it tended to deprive Bonaparte of the services on the Danube of his most brilliant and best cavalry general, his brother-in-law, Joachim Murat, by virtue of Bayonne decrees now King of Naples. Our movements, moreover, along the whole extent of the Neapolitan coasts obliged Murat to reinforce his army in Calabria, to wear it out with long marches hither and thither, as the danger

seemed more imminent on this point or on that, and to keep on the shores of the Mediterranean and Adriatic both French and Italian troops which would otherwise have been employed against the Austrians in Upper Italy, and in the Tyrol or the Illyrian provinces. It is true that with all these stoppages Bonaparte contrived to beat the Emperor Francis, but his work would have been much easier and more speedy if even this our Italian diversion had not been made.

The crowned dragoon had signalized his accession to the Neapolitan Bourbon throne, on his arrival at Naples, by recovering from the English possession of the isle of Capri. Murat also recovered almost immediately several places in Calabria, and among them, the rock, town, and castle of Scylla, which in the course of two years had changed masters three or four times. But it was easier to take old castles and irregularly fortified towns than to subdue the fierce spirit of the Calabrian people. Bands of insurgents—all called by the French brigands or banditti—still kept the field, or lurked in the mountains and among the forests. As soon as one redoubtable chief was captured or killed, another sprang up to supply his place and avenge his fall. When the new war in Germany became known, and when intelligence reached the southern extremity of the peninsula, that the Austrians had beaten Eugene Beauharnais in the north of Italy, and had compelled the French to retire behind the Adige, the Calabrians were highly excited, and hoped that their deliverance was at hand.

On the 11th of June, Sir John Stuart, the hero of Maida, and now commander-in-chief of our forces in Sicily, embarked with 15,000 British troops. On the 13th, his appearance induced the enemy to abandon the greater part of their posts along the shore of Calabria Ulteriore; and the posts and works upon the line opposite to Messina, from which the French had long been threatening Sicily with invasion, were seized and destroyed by Lieutenant-colonel Smith. Arms and ammunition were landed, and sent up the country for the use of the insurgents, who took possession of some of the mountain passes, where they did great mischief to Murat's army, and who recovered several towns in the interior of the country, where they took sanguinary vengeance on the French, and their partizans and abettors. Two smaller expeditions, issuing from the port of Messina, landed 400 or 500 Sicilian soldiers and Calabrian refugees in the Gulf of Gioia, and 2000 or 3000 soldiers, regular and irregular, between Reggio and Palmi. A portion of these forces, assisted by a few of our troops, undertook the siege of Scylla; the rest carried on a loose guerilla warfare, which cost

Murat rather dear. At the same time flotillas of English and Sicilian gun-boats and other armed vessels ran along and scoured all the coasts of Calabria from the promontory of Scylla to the edge of the Gulf of Salerno, and from Reggio to the head of the Gulf of Taranto, operating simultaneously in the Tyrrhenian and in the Ionian Seas, threatening a dozen places in one day, capturing or destroying many of these places, making the French generals hurry now hither now thither, and spreading consternation in every town and station on both sea-boards.

In the meanwhile Sir John Stuart, having been joined by some Sicilian forces, which embarked at Palermo, nominally under the command of King Ferdinand's second son, Don Leopold, Prince of Salerno, had made straight for the Bay of Naples, to menace the capital, and seize some of the islands in its immediate neighbourhood. Nothing would have been more easy than to bombard Naples and batter it to pieces; nor would it have been a work of great difficulty with 15,000 British troops to have landed and driven Murat out of that city, for he had only some 11,000 or 12,000 regular troops collected there, and of these the greater part were Neapolitans, whose discipline was incomplete, and whose fidelity and courage were both exceedingly doubtful. But to destroy the city under the eye of the son of the old king would have been a particularly revolting act; and though 15,000 British troops might have taken, they could not have kept Naples in the case of the French beating the Austrians in Upper Italy; and several weeks before the arrival of our armament at Cape Miseno, the Archduke John, though not beaten by the French, had been compelled, by the reverses of the Austrian armies in other quarters, to abandon Upper Italy altogether. Besides, Sir John Stuart's plan was merely to create and keep up an alarm, and "to make such a movement, as, although it should produce no issue of achievement to ourselves, might still operate a diversion in favour of our Austrian allies." And a considerable body of troops, which Murat had recently detached from Naples as a reinforcement to Eugene Beauharnais, as well as almost the whole of a corps of 6000 men which he had sent into the Roman States to complete the seizure of the Papal dominions, which his brother-in-law, Napoleon, had ordered,

were precipitately recalled on the first appearance of our armament on the coast. On the 25th of June, 2300 men, including some Sicilian light infantry, a regiment of Corsican rangers, and a detachment of Calabrian Free Corps, were landed under the command of Major-general Macfarlane, in the island of Ischia. A chain of batteries, which the French had erected to fortify every accessible part of the shore, was easily turned; and then the batteries were successively abandoned. The castle, which is situated on the

III CASTLE OF ISCHIA.—FROM A DRAWING BY H. BUBBY

summit of a steep detached rock, surrendered upon terms of capitulation. The small but thickly-peopled island of Procida, close to Ischia, surrendered at the first summons; and this event contributed to the almost entire capture or destruction of a very large flotilla of heavy gun-boats. The two islands thus captured, with hardly any loss, are among the most beautiful and productive of all the islands that lie close in to the coast of Italy. But no permanent occupation had ever been contemplated; and, as it became evident that no diversion of ours could save Austria from her fate, Sir John Stuart dismantled the castles of Ischia and Procida, destroyed the batteries and all the other works, re-embarked his troops, and returned to Sicily.

While the French were alarmed, and fully occupied in the south of Italy, Admiral Lord Collingwood, who still retained the command-in-chief of our Mediterranean fleet—wearing out in hard service the last days of an honourable and most valuable life—recommended General Sir John Stuart to send an expedition against the islands of Zante, Corfu, and Cephalonia, which lie opposite to the Neapolitan coast, at the mouth of the Adriatic, and which, partly by force, and partly by an amicable understanding with the Czar

Alexander, had been seized and occupied by the French, who were also looking forward to conquests or occupations in the Morea, and in other parts of continental Greece. The expedition was undertaken with such secrecy that none of the people knew whither they were going. It was very successful. On the 2d of October the French commandant surrendered to Brigadier-general Oswald not only the whole of the island of Zante, but also the islands of Cephalonia, Ithaca, and Cerigo. The island of Santa Maura was reduced in the month of April, 1810; but Corfu remained in the hands of the French until the downfall of Bonaparte in 1814.

Our government had not even yet recovered from its delusion about the value of countless sugar-islands and West Indian colonies, nor opened its eyes to the sacrifice of capital and of human life contingent on these conquests and occupations. In 1807 we had taken the Danish West India islands of St. Thomas, St. John, and St. Croix; in 1808 we had captured the French West India islands of Mariegalante and Desadea; and in the course of the present year we took possession of the French West India colonies of Cayenne and Martinique, as well as of a part of Spanish San Domingo, of which the French had gained possession. These petty, insecure, and costly conquests were also extended to the African coast, where we took Senegal from the French.

Austria had made astonishing exertions, and raised her armies to more than 400,000 men. The Archduke Charles commanded the army of Germany, the Archduke John the army of Italy. Bonaparte, by one of his rapid and skilful manœuvres, broke the line of the Austrians, gained the battle of Eckmühl, and obliged the Archduke Charles to retire into Bohemia. On the 12th of May the French entered Vienna. The Archduke Charles now collected his army on the left bank of the Danube: Bonaparte crossed the river to attack him, and the great battle of Aspern took place on the 21st of May. The battle remained undecided; but on the following day it was renewed with fury on both sides, when, in the midst of the action, Bonaparte was informed that the bridge in his rear, which communicated with the right bank of the Danube, had been carried off by a flood. Upon this he ordered a retreat, and withdrew his army into the island of Lobau, in the middle of the Danube. The loss of the French in killed and wounded was very great: Marshal Lannes, Duke of Montebello, finished his earthly career at Aspern; Generals Espagne and Saint Hilaire were also among the slain; and

an immense number of field-officers perished on the field or died of their wounds on the isle of Lobau. The visible discouragement of the men was good evidence that Aspern had in fact been a defeat to the French. Bonaparte remained six weeks copped up on the island of Lobau. Having re-established the bridge, and received reinforcements, he once more crossed over to the left bank of the Danube, and fought the battle of Wagram (6th of July), in which he defeated the Austrians: the loss on both sides was tremendous. Still the Austrian army was not destroyed or dispersed, and the Archduke Charles was for continuing the struggle. Other counsels, however, prevailed, and an armistice was concluded at Znaim, and this led to the peace of Schönbrunn, which was not signed, however, till the 14th of October. Napoleon had entertained some idea of dismembering the Austrian empire; he had even addressed an invitation to the Hungarians to form an independent kingdom under a native ruler; but this address produced no effect. Germany began to be agitated by a spirit of popular resistance against him; bands of partizans under Schill, the Duke of Brunswick, and others, had appeared; the Tyrol was still in arms, and he was not quite sure of Russia. The war in Spain continued with dubious success, and the English had landed at Flushing. He thought best, therefore, to grant peace to Austria on moderate conditions. Austria ceded Trieste, Carniola, and part of Croatia, Salzburg, Cracow, and Western Galicia, and several other districts, to the amount of about 2,500,000 inhabitants. The brave Tyrolese were abandoned to their fate. Hofer and others of their chiefs were seized by the French, taken to Mantua, and there shot. The Austrians, moreover, were bound to pay into the French exchequer, as expenses of war, 75,000,000 francs.

It was from the palace of Schönbrunn in Vienna that Bonaparte aimed his last thunderbolt at the head of the pope. In May, 1808, he had annexed, *for ever*, the best part of the Papal dominions to the mock kingdom of Italy; and his own generals and the Roman revolutionary party—about the most savage, atheistical, and intolerant of all the reformers of that day—had constituted Pius VII. a prisoner in the Vatican. At midnight the palace was surrounded by French troops and gendarmes; the walls were scaled, the inner doors were broken open; and between two and three o'clock on the morning of the 6th of July, the aged pontiff was seized and carried off a prisoner to France.

CHAPTER VII.—CIVIL AND MILITARY HISTORY.—A.D. 1809—1812.

GEORGE III.

Dissensions in the war department of the British cabinet—Changes in the ministry—The Marquis of Wellesley takes the office of foreign affairs—Sir Francis Burdett arrested for a libel against the House of Commons—Parliamentary measures—State of the war in Spain—Soult appointed to the command of the French army—Movements of the French and British armies in the Peninsula—The peninsular war concentrated upon Portugal—Massena sent by Bonaparte to oppose Wellington—Ciudad Rodrigo captured by the French—They take Almeida—Massena's tardy advance on Lisbon—Wellington defeats him at Busaco—Retreat of Wellington to Torres Vedras—Its strong entrenchments—Massena compelled to retreat from them—British successes in other quarters—Bonaparte marries the daughter of the Emperor of Austria—Louis Bonaparte abdicates the throne of Holland—Celebration of the national jubilee in Britain—Difficulties of the king—His domestic afflictions—A return of his mental malady unfits him for rule—The Prince of Wales installed as prince-regent—The Duke of York re-appointed commander-in-chief—Warlike operations in the Peninsula—Massena's calamitous retreat from Portugal—The French take Badajoz—Their defeat at Barrosa by Sir Thomas Graham—Unfavourable close of the campaign for the French—Victory of the British at Albuera—Dissension between the French and Russian emperors—Its causes—Bonaparte resolves to invade Russia—His disregard of the dissuasions to the enterprise—Lord Castlereagh re-appointed secretary for foreign affairs—Dissensions between the Tories and Whigs—Assassination of Mr. Perceval in the lobby of the House of Commons—His character—Resignation of ministers—The Earl of Liverpool appointed premier—New cabinet formed—Warlike operations in the Peninsula—Wellington recovers Ciudad Rodrigo and Badajoz from the French—The French repulsed in their attempts upon Tarifa—Wellington advances into Spain—His victory at Salamanca—His difficulties at Madrid—He is disappointed of reinforcements—His unsuccessful siege of Burgos—He retires upon Portugal—His own summary of his proceedings in the Peninsula—Military operations at Alicante—War between Britain and America.

THE untoward course of events on the Continent, the disastrous issue of the Austrian war, together with sundry other causes, produced violent dissensions in the British ministry, in a part of which there had never been much harmony. It is a capital defect in the construction of our cabinet, which confides the direction of war not to one, but to two ministers, the secretary of state for foreign affairs having nearly as much authority over generals in the field as the secretary-at-war. There had long been a jealousy, or a strong divergency of opinion, between Mr. Canning, the secretary of state for foreign affairs, and Lord Castlereagh, the secretary-at-war. What one proposed in the cabinet the other almost invariably condemned; and each was constantly complaining of an invasion of his official authority by the other. On the 21st of September, when the country was resounding with outcries against the Walcheren expedition, the management of which was said to be disapproved of by the secretary for foreign affairs, a duel was fought between him and Lord Castlereagh. Mr. Canning was wounded below the thigh-bone, and Lord Castlereagh had a narrow escape. The two ministers had sent in their resignations before they went to Putney Heath. The Duke of Portland, the head of the cabinet (who was not altogether blameless

as to the causes which had led to the quarrel), also resigned, and died a few days thereafter.

The ministers that remained in office after these three resignations—with Lord Liverpool, the only remaining secretary of state, who had for some time to perform the duty of the home office, the foreign office, and the war office—were reduced almost to despair, scarcely knowing where to look for a new head and for two new colleagues. Their situation appeared at first so forlorn, that (on the 23d of September) official letters were addressed to Earl Grey, the now leader of the Foxite Whigs, and to Lord Grenville, informing them that his majesty had authorized Lord Liverpool and Mr. Perceval to communicate with their lordships for the purpose of forming an extended and combined administration. To this invitation Earl Grey, who was in Northumberland, replied at once that he would not enter into any coalition with the ministers now in place. Lord Grenville, who was in Cornwall, replied that he would lose no time in repairing to town, and begged leave to defer all observations till his arrival. The day after his arrival in town he sent an answer conformable to that of Earl Grey.

Great hopes were now entertained by the adverse party that the ministry would fall to pieces altogether. It was said, as on some former occasions, that high offices and places went a-beg-

ging, and that none could be found to accept them. The only hope of the ministry now rested upon the Marquis Wellesley. Hints were thrown out that the marquis would not join any administration in which Mr. Canning was not included. But the marquis came home from Spain, being succeeded in his embassy by his brother Henry, and accepted, not the war department, which Canning had destined for him, but the office of foreign affairs, which Canning himself had vacated. Early in December the ministerial arrangements were completed, Mr. Perceval taking the place of the deceased premier, the Duke of Portland, thus uniting in himself, as Mr. Pitt and Mr. Addington had done before him, the offices of first lord of the treasury and chancellor of the exchequer. The loss of the Duke of Portland was little more than that of a name; but the loss of the eloquent pen and the still more eloquent tongue of Canning—the best debater, and on the whole perhaps the greatest orator now in parliament—was a most serious loss; and the secession of Mr. Huskisson, who resigned his seat at the treasury, was also felt and regretted. As if his previous domestic employment had particularly qualified him for the war department, the Earl of Liverpool was transferred from the home office to the office which Lord Castlereagh had quitted, becoming secretary of state for the department of war and the colonies, and being succeeded in the home office by the Hon. R. Ryder. Lord Palmerston became under-secretary-at-war in lieu of Sir James Pulteney. These were all the changes that were made.¹

A.D. 1810. The session opened on the 23d of January. The king's speech was again delivered by commission. It had cost ministers no small pains to draw it up; for, after

the battle of Talavera, there were few subjects for congratulation. Amendments, strongly condemning the ministerial direction of the whole war, and particularly the Walcheren expedition, were moved in both houses, but were rejected by great majorities.

By the publication of a libel against the House of Commons, and of a passionate and dangerous appeal from the authority of parliament to the excited people, Sir Francis Burdett incurred the displeasure of the house; and on the 5th of April it was carried by a majority of thirty-eight that he should be committed to the Tower under the warrant of the speaker. Sir Francis shut himself up in his mansion in Piccadilly, barring his doors and windows, and declaring that he would yield only to force. This led to a lamentable popular riot, in the course of which two men were killed and several more wounded. Since the No-Popery riots London had seen no such commotion as this, and since the days of John Wilkes no such idol as Sir Francis Burdett. The French newspapers announced that it was a revolution. But the end of it all was that the baronet was lodged in the Tower and kept there until the prorogation.

The supplies voted for the year amounted to £52,185,000, of which the Irish proportion was £6,106,000. The ways and means, which it was calculated would leave a surplus of £141,200, included a loan of £8,000,000, which was negotiated on terms even more moderate than those of the preceding year. No new taxes were proposed; and a favourable report was made of the commerce and general prosperity of the country. At the same time Mr. Perceval drew a striking picture of the state of commercial affairs in France, and of the effects produced by our orders in council. The orders in council had not done all the

¹ "We have arrived at the end of 1809. The critical moment draws nigh. Napoleon has just dictated peace to Europe for the third time. The Continent is quiet, and the empire has 1,000,000 men under arms, whom it can launch upon Spain, already half-conquered, and on Portugal, defended by 25,000 English troops. The British ministry experiences the deepest anxiety respecting the issue of the war and the fate of the army. Lord Liverpool, in the name of the whole government, consults Wellington on the propriety of continuing the war; he asks if anything is to be expected from it; and if he will become answerable for the safety of the army that is intrusted to him. These were terrible questions put at a terrible moment

"The ministers and the general who were thus about to stake the fortunes of England were only citizens in a free country. They governed and they fought before the face of a jealous, violent, and implacable opposition, that would not have pardoned the slightest check or the most trifling equivocation. They were acting in broad day light, under the fire of platform and parliamentary orators, and of the press. By no shift could they mask a defeat or stretch a victory. In bad as well as good fortune, there was nothing for it but to speak the plain truth, whether their object was to raise their own reputation or to justify their conduct. Every success claimed a fourfold victory—first, on the field of battle; secondly, in the house; thirdly, in the press; and fourthly, at the hustings.

"At this trying moment, and whilst the British ministry was asking Wellington what ought to be done, the opposition in-doors was attacking the victor of Talavera with a puerile violence, contesting his success and denying his talents; and the city of London was addressing to parliament a petition having for its object to summon Wellington before a commission of inquiry. But neither his friends nor his enemies suspected at that time who Wellington was. Even England only learned to know him late in the day; and there is a considerable portion of the British people who, up to the present time, remain ignorant of all that they owe him.

"Wellington answered the ravings of a violent opposition, and the vacillation of an uneasy ministry, with the quiet assurance of a superior man who knows what he is about, and who is resigned to stand alone in his opinion. 'You see,' he says to the Hon. J. Villiers, 'the dash which the common council of the city of London have made at me! I act with a sword hanging over me, which will fall upon me whatever may be the result of affairs here; but they may do what they please; I shall not give up the game here as long as it can be played.' 'I cannot expect mercy at their hands,' he writes to Lord Liverpool, 'whether I succeed or fail; and if I should fail, they will not inquire whether the failure is owing to my own incapacity, to the nameless errors to which we are all liable, to the faults or mistakes of others to the deficiency of our means, to the serious

mischief to the enemy; but Bonaparte's war system, and the working out of his "continental system" together, had contributed to destroy nearly all foreign trade in France and its dependencies.

A scheme for parliamentary reform, brought forward by Mr. Brand, was rejected by 234 against 115. The debate was chiefly remarkable on account of the strong opinions pronounced against radical reform by the moderate reform party, and on account of some very enthusiastic declarations in favour of the transatlantic republican system. The session of parliament terminated on the 21st of June.

At the beginning of the year the aspect of affairs in the Peninsula was far from bright. In the autumn of the preceding year, besides the defeats which we have enumerated, the Spaniards had sustained several signal overthrows. But the way in which the Spaniards had defended the old walls of Gerona gave better hopes; for, though that place had surrendered on the 10th of December, it had only yielded to famine after a six months' siege: though rent with three wide breaches, it had constantly repulsed its assailants, and had caused them a terrible loss; nor did those stanch Spaniards think they were starving until they had eaten up all their horses and mules.

Towards the close of 1809, Marshal Soult had been appointed chief of the staff and principal military adviser to King Joseph, in the place of Jourdan, who was recalled to Paris. It was the fate of all these marshals to be dissatisfied with the service, and to cause great disappointment and dissatisfaction to their emperor, in whose bosom, however, these unpleasant feelings continued to be mitigated by the opportunity afforded him of saying, "I cannot be everywhere," and of showing to the French people how much their glory and success depended upon him personally. Soult, however, commenced operations with vigour and with a unity of plan. Taking with him King Joseph, who could scarcely have been safe without him, the ablest of the French marshals marched upon the Sierra Morena, with the determination of crossing those mountains and subduing Andalusia, together with all that country of the south which had not yet been touched by the French arms.

As usual with them, the fugitive Spanish generals and the wandering junta seem to have taken

difficulties of our situation, or to the great power and abilities of our enemy. In any of these cases I shall become their victim, but I am not to be alarmed by this additional risk, and whatever be the consequences, I shall continue to do my best in this country.

"He replied to the formidable questions put to him by the ministry, by stating that the war was possible, and that Portugal was its proper theatre"—Maurel's *Wellington*, p. 86.

VOL. IV.

no thought of what they were leaving behind them, provided only it was not coined money. As the French advanced from town to town, they found and collected large quantities of ordnance and military stores, which had come principally from England, and which any people but the Spaniards would have removed. The citizens of Seville had talked highly about defending their fine old town; but the city was too vast to be converted into a fortress; no preparations had been made; the assistance of British troops had

MARSHAL SOULT

been refused by the late junta; and so Soult entered Seville, not only without opposition, but in a kind of triumph. For some time the headquarters and the court of King Joseph were established in Seville. But Marshal Victor was hurried on to Cadiz, in the hope that he might make sure of that most important city. Although every man seemed required for the defence of Portugal, Lord Wellington had previously despatched three British and one Portuguese regiment for the defence of Cadiz. Other British forces, together with a fragment of the Spanish army which had escaped from the field of Ocaña, were brought down from Gibraltar, and other small corps were brought in from various places; so that it was calculated there were 18,000 Spanish troops for the defence of Cadiz and the Isla de Leon, besides the volunteers of the town and the British and Portuguese troops. The number of British alone soon amounted to 6000 men; and Lieutenant-general Graham, one of the bravest and best of our officers, was sent out from England to take the command of them. Both Soult and Joseph came down to the coast; and, by the 15th of February, the French army, which occupied the neighbouring country from Rota to Chiclana, was estimated at 25,000 men. The siege or blockade of Cadiz lasted more than thirty months, or from the 5th of February, 1810, to the 12th of August, 1812, when it was

finally raised, in consequence of the successive advantages gained by Wellington. In strictness of language it could neither be called a siege nor a blockade; but it gave constant occupation to French forces varying from 25,000 to 15,000 men, and it led to no inconsiderable loss in detail.

The two other *corps d'armée* which Soult had sent to the south-eastern coast encountered but few obstacles. Nearly the whole of Andalusia was overrun. Sebastiani entered Granada without resistance, and carried the old Moorish town of Alhama by storm. But in all the mountains which traverse or hem in the great country of Andalusia the entire population was in arms, causing constant trouble and frequent loss.

In Catalonia, O'Donnell, the best of the Spanish generals, kept up a more regular system of warfare against the French, being assisted by the nature of the ground, which was interspersed with numerous strong positions, and dotted by a good many fortresses, and also by the English squadron along the coast, and by the organization and daring spirit of the Catalonian militia, known by the name of Somatenes and Miguelets.

But all eyes were now fixed upon Portugal, and upon the British army there; for it was known that the great effort of the campaign, on the part of the French, would be made in that direction. The peace with Austria had enabled Bonaparte to send large reinforcements from Germany into Spain. During the winter Junot and Drouet had crossed the Pyrenees with two fresh corps; they were followed by a part of the imperial guards, and it was rumoured that the emperor himself was coming. By the beginning of the month of April, Ney, Kellermann, and Loison, with about 60,000 men, were in Old Castile and Leon, threatening the Portuguese frontier in that direction; and, as a prelude, they had besieged and taken Astorga, and had made their preparations for the siege of Ciudad Rodrigo. At the same time General Regnier was on the borders of Spanish Estremadura with about 12,000 men, menacing the frontier of Portugal on that side. Bonaparte, in the honeymoon of his marriage with the imperial Austrian, did not come, but he sent Marshal Massena, Prince of Essling, to take the command of the army in Old Castile and Leon, which now assumed the name of "the army of Portugal." Massena had obtained the name of the "Darling Child of Victory." Massena, from his earliest essays as a commander in the Maritime Alps and the Apennines, had been accustomed to mountain warfare; Massena, though with an evident injustice to Soult, was considered the greatest general and strategist, next to Bonaparte himself; so, assuredly, with superior forces, Massena could not fail in executing his emperor's commission, which was

simply this—to drive the English leopards and the sepoy-general into the sea. Massena himself had no doubt as to his success; for on quitting Paris he had said that he only required three

MARSHAL MASSENA

months to replace the eagles of the emperor on the walls of Lisbon. He arrived at Valladolid about the middle of May, and assumed the command, not only over the corps of Ney, Kellermann, and Loison, but also over those of Junot and Drouet. Massena had from 60,000 to 62,000 men when he first put himself in motion to meet Lord Wellington, and he was afterwards reinforced. His lordship had only about 24,000 British troops, and from 28,000 to 30,000 Portuguese regulars. Early in June, Massena commenced operations in earnest, by investing Ciudad Rodrigo, close on the Portuguese frontier. The Spanish garrison defended itself bravely till the 10th of July, when, a practicable breach being made, the French entered the place by capitulation. As the corps of Marshal Ney came thundering on after the fall of Ciudad Rodrigo, it came in contact with our light division, which was commanded by General Craufurd, a very brave and an able man, but somewhat hot-headed and self-willed. Instead of falling in quietly and easily, as he had been ordered to do, Craufurd, eager for fame, halted repeatedly, and disputed the ground against a much superior force: he finished by effecting his retreat in a masterly manner by a bridge across the Coa, by repulsing the French in their attempt to follow him, and by costing Ney 1000 men in killed and wounded. But Craufurd himself suffered considerable loss, and Wellington could ill bear any useless reduction of his small British force. This fighting, however, gave Massena a specimen of the resistance he was likely to encounter in his march to Lisbon, and it delayed for a day or two some of the enemy's operations.

Marshal Massena found he could not advance quite so rapidly as he had calculated on doing. In the interval General Regnier quitted Spanish Estremadura, crossed the Tagus with his whole corps, and established himself at Coria and Plasencia; and General Hill, making a corresponding movement, had also crossed the Tagus to take post at Atalaya, from whence he could either be joined to Lord Wellington's army or could be thrown again in front of General Regnier. At last, on the 15th of August, the French broke ground before Almeida. This ancient but strongly fortified city was defended by a good Portuguese garrison, commanded by an English officer, Colonel Cox, who was prepared for a determined resistance. Lord Wellington brought his army nearer, so as to be able to strike a blow if the enemy should afford an opportunity. The French opened their fire on the 26th of August, and on the night of the 27th, in consequence of the accidental explosion of a magazine which contained nearly all the ammunition, and by which a large part of the town and defences were destroyed, the governor was obliged to capitulate. Lord Wellington was greatly disappointed, for he reckoned on the place detaining Massena till the rainy season set in. He seemed, however, provided for everything; and, strange to say, his famed opponent let nearly three weeks elapse after the reduction of Almeida before he seriously moved forward. This strange delay nearly brought on the rainy season, which the British general wanted, as the swelling rivers and streams, and the increasing badness of the roads, must greatly retard the march of the French columns. On the 15th of September the great French army began its march down the valley of the Mondego for Lisbon. Having called up the corps of Hill and Leith, Lord Wellington resolved to give Massena a check on "grim Busaco's iron ridge." The French made a fierce attack in the morning of the 27th, and were beaten and hurled back from the hills with terrible loss. Massena left upon the field of battle 2000 killed (killed chiefly by the bayonet), and from 3000 to 4000 wounded, besides one general and a few hundred men and officers prisoners. The loss of the allied army did not exceed 1300, of which number 578 were Portuguese—a very convincing proof that the men whom Lord Beresford had trained had gone well into action. In truth, mixed with British troops, the Portuguese had emulated their steadiness and valour; and from the date of the battle of Busaco, Wellington knew that they were to be depended upon. The British general had no intention of remaining where he was; his place of strength, his chosen inexpugnable position, in which Portugal was to be saved, was not in the Serra de Busaco or on the Mondego, but much

nearer Lisbon, and thither a good road remained open to him. By the 29th the whole allied army was in motion; and on the 30th it was collected on the left bank of the Mondego, and began its retreat towards the Tagus and the capital. The plan of defence which Wellington had formed and matured was still unbroken and entire, and so were his own hopes. He was never so confident as he was a day or two after he began this retreat. Massena followed him in one immense column. On the 7th of October the French van first caught sight of the chain of hills, behind which, at the distance of twenty-four miles, lay the city of Lisbon, where the marshal had promised to replace the imperial eagles. And now up, Lines of Torres Vedras, and show the lion in the middle path!¹

But those lines were already up; and everything was prepared to keep the French at bay,

"As famish'd wolves survey a guarded fold."²

We have mentioned the first conception of this grand defensive scheme, which had more or less occupied the mind of Wellington ever since the campaign of 1808. It had been indispensable to conceal the great project, and to mystify the French as to its existence; and this had been done with astonishing address. Even when most actively engaged in directing the construction of the works, Wellington had the art to make not only the enemy, but also the people of the country, believe that he intended nothing serious there; and it is said that, in order to keep up the illusion, he sometimes spoke of the plan, even to officers of his own army and about his own person, as a thing which had flitted through his head, but which had been abandoned. And even when Massena received better information, he remained in the belief that the works thrown up were little more than field-works, which might easily be turned or overpowered by his own batteries, and that so extensive a line was not defensible by such a force as the British general commanded, but must have several weak points, at some one or two of which, a concentrated, sustained attack, costing perhaps a few thousands in killed and wounded, must eventually succeed. For a complete notion of the lines of Torres Vedras³ the reader must consult military and scien-

¹ "But in the middle path a lion lay!"

Walter Scott, *Vision of Don Roderick*.

² Ibid

³ The "Lines of Torres Vedras" consisted in a double chain of fortifici posts—comprehending a vast number of batteries, redoubts, and various field-works—erected across the peninsula which intervenes between the lower course of the Tagus and the shores of the Atlantic. The high grounds by which the peninsula is there crossed render the locality well suited for defensive purposes, and the natural advantages which it possesses were strengthened, under the directions of Wellington, with the most admirable military skill.

Of the two lines of defence, the first extended from Alhandra

tific books, and Wellington's own despatches. These lines were constructed upon the two serras, or ranges of mountains that cross the peninsula on the south-eastern extremity of which Lisbon is situated. The first line was about twenty-nine, and the second twenty-four English miles in length. These lines were secured by breast-works, abattis, and stone walls with banquettes and scarps. Not an opening nor interstice, through which a mountain goat could pass, but was blocked up or guarded. About 100 redoubts or forts, containing altogether more than 600 pieces of artillery, were scattered along these lines.

Within the foremost of these lines Lord Wellington and the allied army entered on the 8th of October, leaving the French van behind them in the plain. When Massena came up on the

11th, he appears to have been taken by surprise at the sight of the lines of Torres Vedras; and he employed some days in reconnoitring them from one extremity to the other. Not a single attempt was ever made to assail any of the works, or to penetrate the outer line in any part of its long range. Towards the end of October, when the privations and the sickness of his exposed army were alarmingly on the increase, Massena detached some of his troops to Castello Branco; and on the 15th of November, he himself began a retrograde movement, for the purpose of withdrawing his army from the low wet grounds in front of Torres Vedras and placing it in cantonments for the winter. The French head-quarters were soon established at Santarem, where the troops continued to suffer nearly every possible distress.

VIEW OF THE LINES OF TORRES VEDRAS. - From a painting by W. Telbin.

The allies, with the city and port of Lisbon in their rear, remained, in plenty and comfort, behind the impenetrable defences which the genius and

perseverance of their great leader had created for them.

In other quarters of the world our military

on the Tagus to the mouth of the river Zizandre, a length following the inflections of the hills, of twenty-nine miles. The second line, traced at a distance varying from six to ten miles in rear of the first, stretched from Quintella on the Tagus to the mouth of the San Lorenzo river, twenty-four miles in length. The several works erected along these lines varied according as the nature of the country rendered more or less necessary such artificial means of defence as would make the passage of a hostile army through them a difficult (if not an impossible) achievement. The works were most numerous in those localities where the defensive features of the country were least strongly marked. The most conspicuous position along the first line consists in the Monte Agraca, the lofty summit of which overtops the adjacent country, and from which the works along the entire line were visible. This mountain was crowned by an immense redoubt, armed with twenty-five guns, round which three smaller works, containing nineteen guns, were clustered. The Tapada, or royal park of Mafra, occupied an important place along the second line. The open but strong ground here, with the pass of Mafra, was defended by a system of fourteen redoubts. The Sierra de Chypre, in front of Mafra, was also covered with redoubts. In the space of ten or twelve miles intervening between the Tapada

and the pass of Bucellas, the country is in great measure filled up by the Monte Chique, the head of which is in the centre of, and overtops, all the other mountain masses. The narrow and rugged defile of Bucellas was strongly defended by redoubts upon either side. Five roads practicable for guns pierced the first line of defence - two at Torres Vedras, two at Sobral, one at Alhandra. Two of these roads unite at the Cabeça de Monte Chique, so that there were only four points of passage through the second line, that is, at Mafra, Monte Chique, Bucellas, and Quintella. It was the aim and scope of the works throughout to bar these roads, and to strengthen the favourable fighting positions between them, in case the French army should attempt to force a passage. The several works were of a construction requiring the least labour compatible with sufficient strength: the redoubts were generally of a size to require each from 150 to 250 or 300 men for their defence, and were armed, according to the importance of their fire, with three, four, five, or six pieces of artillery. The main works at Torres Vedras (near which were the head-quarters of Wellington), Monte Agraca, and elsewhere, were made larger and stronger, assuming the character of independent fortresses, and required a much greater number of men for their defence.

Of these stupendous lines, the second was the strongest, and

charges of ingratitude, and irritated, Louis declared that, unless a peace were concluded with Great Britain, or some important modification of the continental system allowed in Holland, he would no longer wear that crown, which he found he could not wear without being a means of completing the ruin of a good, interesting, and industrious people. At last, Louis came to the determination of resigning his crown in favour of his infant son, Napoleon Louis. On the 1st of July he signed an act of abdication and a proclamation to the Dutch people; and then fled with his children into Bohemia, to seek an asylum in the dominions of the Emperor of Austria. To all this audacity Napoleon replied by a decree, dated July 9th, the first article of which was—"Holland is re-united to France!"

Events had occurred in England from which greater political changes were expected than ever resulted from them. By the non-attendance of George III. at the opening and closing of the session of parliament, and by other indications, it had long been suspected that the king was suffering under his old distressing malady. In the autumn of the preceding year, 1809, when his majesty entered upon the fiftieth year of his reign, it was determined to celebrate the anniversary as a grand national jubilee. The government, under Mr. Perceval, took the lead; but the call was eagerly and unanimously responded to by the municipalities of the kingdom, and by other public bodies and societies; and the great mass of the population hailed the 25th of October with every possible demonstration of loyalty, attachment, and respect. It was truly a national festival, and a gay and beautiful one, for that October month was more than usually fine and bright. The jubilee was observed as a holiday in every city, town, village, and hamlet; there was illumination and joy throughout the land; but the joy did not reach the interior of the old monarch's palace; for grief was there, and sickness, and the apprehension of death, and of what was worse than death. The king's mind had been over-wrought and over-excited by the Austrian war, which had then finished so disastrously, and by the Walcheren expedition, which was then terminating in such failure, and, as it was thought, in such disgrace. The nomination of the Earl of Chatham to that command had been completely a court nomination; and George III. is said to have reproached himself now for yielding to his own and the queen's partialities in favour of an amiable man who had proved himself to be unfit for the command. To an eye predisposed to despondence the whole aspect of affairs abroad was gloomy enough. Other causes of distress and agitation of a more private and domestic nature existed at the time of the jubilee, or were super-

added shortly afterwards (materials of which the spirit of faction caught hold, and turned to atrocious uses; but the grief of griefs in the bosom of the old king was the declining health of his youngest child, his darling daughter, the Princess Amelia, who had long been in a very precarious state. The king himself had long been suffering under a disorder of the eyes, and was now well-nigh blind. In the summer of 1810 the Princess Amelia was removed to Windsor in a state of great suffering. Her fond father visited her every day. When she felt that her end was approaching, the princess ordered a ring to be made, inclosing a lock of her hair, with her name on the inside, and the words "Remember me when I am gone." The mournful token was made and delivered. The next day when the king came to her bedside, and darkling, held out his hand to her, the princess put the ring on his finger silently. He felt the ring, he understood all that it imported, he controlled his agony; but, when he had quitted the chamber of death, his intellect was found to be quite overset. This was on the 20th or 21st of October, 1810. The Princess Amelia lingered till the 2d of November; but, though she missed her father's daily visit, she knew not the sad condition into which her fatal present had thrown him. On the 25th of October, the anniversary of the king's accession to the throne, it was publicly announced that his majesty was again attacked by the mental malady under which he had before laboured. Parliament met on the 1st of November, and after some adjournments, and examinations of physicians, both houses proceeded to regulate the necessary regency. The debates were long and laborious. At last, on the 30th of December, Mr. Perceval proposed the same limitations and restrictions on the powers of the regent as were carried by Pitt in 1788. They were contained in five resolutions, four of which were forthwith carried, the fifth being postponed till the next day.

A.D. 1811. There was no time for keeping Christmas holidays. On the 2d of January the fifth resolution, which concerned the care of his majesty's person, was settled and carried, though not as ministers had framed it. The five resolutions were then taken up to the lords, who passed them all with one trifling alteration. The ceremony of installing the Prince of Wales as prince-regent took place in Carlton House on Wednesday, the 6th of February. Ever since the 1st of November, the existing Tory cabinet had been universally considered as doomed. It was now expected that the regent would throw himself into the arms of his old friends and associates of the Whig party; but upon many and weighty considerations he declared that he would retain his father's ministry; and his decision was cer-

tainly acceptable to the great majority of the nation. *

On the 12th of February—six days after the installation of the regent—the session of parliament was regularly opened, not by the prince in person, but by commission. No speech from the throne since the beginning of the war had been more warlike. In the debates on the address, Lord Grenville explicitly declared his conviction that it was impossible to expect success in such a war—that, in a contest so unequal, the money and resources of this country must be expended with certain loss. The address, however, was carried in both houses without a division, and with far less opposition and oratory than might have been expected.

Soon after his installation it was reported that the regent intended to restore the Duke of York to the office of commander-in-chief of the forces. The universal voice of the army said, Re-appoint the Duke of York; thus seconding, or even anticipating the wishes of the regent. Accordingly, on the 26th of May, the duke's re-appointment was gazetted, and without any outcry. Even the opposition newspapers were nearly all silent on the subject. The duke signalized his return to the war-office by establishing regimental schools on the Bell system. The supplies voted for the year amounted to £56,021,869. Out of this sum £20,276,144 were appropriated to the navy, £21,269,940 to the army, £5,012,378 to the ordnance, £2,100,000 to subsidies, &c., for Portugal, and £400,000 as a subsidy to Sicily.

Acting at their own discretion, and on their own responsibility, our ministers had sent out reinforcements and other succours to Lord Wellington, at the moment when nothing was settled, and when it seemed doubtful whether they might not be displaced in four-and-twenty hours by their opponents, who had certainly induced people to believe that their first important proceeding would be the recall of our army from the Peninsula. In many particulars Perceval was not a good war-minister, and his cabinet was censurable for delay and indecision, and a proneness to adopt half measures; but their manly conduct at this critical moment entitles them to the admiration and gratitude of those who believe that it would have been disgraceful and ruinous to abandon the Spaniards and Portuguese, and that the only chance, not only for the continent of Europe, but also for England herself, lay in the prosecution of the war. If the contest in the Peninsula, which was draining the life-blood of France, had been given up at the beginning of 1811, there would have been no Russian war in 1812; the Emperor Alexander would have temporized, and would have endeavoured to avert hostilities by complying with the will of Napoleon.

But all the reinforcements which Perceval and Lord Liverpool had determined to send at their own peril did not exceed 7000 men, and these did not arrive until the beginning of March; while, in the month of January, Soult moved with 20,000 men towards the southern frontier of Portugal, to relieve and co-operate with Massena. Soult, who had thus begun to move two months before Wellington received his reinforcements, captured the fortress of Olivença on the 22d of January, marched forward for Badajoz, defeated a Spanish army under General Mendi-zabel on the 19th of February, and then, without further hinderance, sat down to besiege Badajoz. Before Soult could quite complete this operation, Massena commenced his retreat, having so wasted and eaten up the country that he could no longer remain where he was. He evacuated Santarem during the night of the 5th of March, and was closely followed by Wellington. Wherever the French attempted to make a stand they were beaten; and every day of the retreat added to their miseries. On the 21st of March, Massena reached Celorico, and re-opened his communications with the garrison he had left at Almeida, and with the Spanish frontier near Ciudad Rodrigo. At Celorico the headlong retreat of the French and the hot pursuit of the allies may properly be said to have terminated. Every horror that could make war hideous had attended this dreadful march. The retreat of Massena was more disastrous to the French even than Soult's retreat of 1809. Finding that Soult could not come up, and that he could not maintain himself even on the extreme frontier of Portugal any longer, Massena, after suffering some further loss in an affair at Sabugal, crossed the Agueda into Spain on the 6th of April. And thus terminated the third French invasion of Portugal. Their total loss had been immense: including the sick and wounded, Lord Wellington calculated it at not less than 45,000 men.

The English and Portuguese army were placed in cantonments between the Coa and the Agueda, and the blockade of Almeida was commenced. Lord Wellington had expected that the Spaniards at Badajoz would make a good stand against Soult; but there was cowardice and imbecility, if not downright treachery, within those walls, and General Imaz surrendered on the 11th of March, when Marshal Beresford was preparing to move to his relief. After the unexpected fall of Badajoz, Soult put his troops in motion to cross the Guadiana and the southern frontier of Portugal; but intelligence reached him from Andalusia which induced him to give up the command to Mortier, and to repair with all haste to Seville. While Soult had been engaged near the Guadiana, General Graham (the late veteran and

venerable Lord Lynedoch) had issued from Cadiz with the greater part of the British and Portuguese garrison, and had embarked with the intention of landing on the Andalusian coast, and of throwing himself upon the rear of the French army blockading Cadiz. Graham landed at Algeciras, and commenced his march back upon Cadiz by Tarifa. He had previously been promised the co-operation of a Spanish army; but the troops which joined him merited not the name, and their general, Lapeña, took the superior command over the head of Graham. On the 5th of March, the Spaniards kept aloof and allowed the English and Portuguese to fight Marshal Victor with 8000 men and a formidable artillery

Mortier, advancing from Badajoz with the troops which Soult had left him, made an incursion into the south of Portugal, but was soon driven back by Beresford. Between the 9th and 15th of April the allies recovered the fortress of Olivença, and two or three important positions. On the 2d of May, Massena, powerfully reinforced, re-entered Portugal, his first object being to relieve Almeida. The allies barred his passage at Fuentes de Oñoro; and there he was beaten again on the 3d of May, and again on the 5th, and by very inferior forces; for the army of Wellington was reduced to 32,000 infantry, 1200 cavalry in bad condition, and forty-two guns, while Massena had 40,000 foot, 5000 horse, and thirty pieces of artillery.

The loss of the allies also did not exceed 1500 men, while that of the enemy was about 5000. The French fled in disorder across the frontier, and Almeida was evacuated.

Bonaparte, before this, had become convinced that Massena was not the man to drive Wellington out of Portugal, and he had sent Marshal Marmont to supersede him. But Marmont, who now arrived, could do nothing more than continue the retreat which Massena had begun; and, retiring to Salamanca, he put the disheartened army into cantonments.

Marshal Beresford was now besieging Badajoz without the *matériel* necessary.

Soult hastened to raise this siege; and his movements led, on the 15th May, to the bloody battle of Albuera, where again "the Spaniards could not be moved," and where all the fighting fell to the British and a few Portuguese brigades. At the end of the conflict, only 1500 unwounded men remained out of 6000 unconquerable British soldiers, who had contended with the French for possession of the hill of Albuera. The total loss of the allies in killed and wounded was about 7000 men, of whom more than two-thirds were British; the French were computed to have lost 9000.¹ With his army lopped, and maimed, and spiritless, Soult did nothing on the 16th; on the 17th a

FUENTES DE OÑORO.—From a drawing by W. Telbin

on the heights of Barrosa. Those heights were carried by the British bayonets, and in less than an hour and a half Victor was in full retreat. It was one of the hardest battles ever fought in the Peninsula, or in any other part of the world. Graham, who went into action with only 4000 men, lost 1243 in killed and wounded. Victor's loss was estimated at more than 3000, including more than 440 that were taken prisoners. But, except the honour gained to our arms, no important result followed the battle of Barrosa. Soult, from Seville, reinforced Victor, the blockading army, and the army of Portugal under Massena, who had now retreated as far as Salamanca.

¹ "All that I have published about Lord Hardinge at Albuera came from himself, and was given to me expressly for my history. Lord Hardinge's great merit was not so much the conception of pushing the fourth division and Abercrombie's brigade into renewed action, but in the resolution not to let Marshal Beresford's desponding view of the crisis prevail. He saw the battle might still be won if all the spare troops were pushed on, and decided for Beresford that it should be so. But it was 'dark or night, and had it been night, Beresford a better

judgment would have been justly extolled. Sir Lowry Cole, yielding to urgent exhortations executed one part of Hardinge's conception, as Colonel Abercrombie did the other parts, and with both it was an intrepid resolution—with Cole morally so as well as physically. He had been posted with positive orders at an important point; he was menaced by an enormous body of cavalry, he could not see the exact state of the battle on the hill above, but he knew it to be almost desperate for the allies; he could not know what reserves Soult had in hand, he could not

British brigade came up and joined Beresford, and on the morning of the 18th the French marshal began another retreat. On the 19th Lord Wellington arrived at Albuera, with two fresh divisions; and then the siege of Badajoz was recommenced, but with the same lamentable deficiency of means. On the 10th of June his lordship was called back to Portugal by the intelligence that Marmont was marching from Salamanca to join Soult. With admirable promptitude Wellington took up a position near Campo Mayor, along the menaced frontier of Portugal. The two French marshals joined their forces; but notwithstanding their great numerical superiority they ventured no attack, and our great captain was not again engaged during the year 1811.

General Hill, who had now the command on

GENERAL LORD HILL.—From a portrait by H. W. Pickersgill, R. A.

the Guadiana, advanced into Spanish Estremadura, surprised, surrounded, and completely routed General Girard, on the 20th of October, at Arroyo Molinos, took 1500 prisoners, all the artillery, baggage, &c., and cleared the whole of that country (except Badajoz) of the French. In the meanwhile the disconnected Spanish armies had continued to seek pitched battles and to find sure defeats.

Before the close of this year it was made evident to the world that the continuance of the friendship between the Emperors Napoleon and Alexander was an impossibility. The grand

be sure that an infantry column would not sweep round the hill and join the cavalry to fall on his right flank. Yet with all these dangers staring him in the face, he mounted the hill to attack more than double, it might be three times his own numbers, supported by a powerful artillery, and already half victorious. It was a great action, and so was Hardinge's stroke of genius, for which he has been long and justly eulogized.—Sir Wm. Napier, letter to the *Times*, Sept. 1856

VOL. IV.

duchy of Warsaw had become little else than a vast garrison for the French, or a vanguard to their prodigious armies; or, if it were more than this, it was a centre of intrigues and machinations, all hostile to Russia. Bonaparte, too, had given no slight offence to the czar by dispossessing his near family connection, the Duke of Oldenburg, of his territory, contrary to the treaty of Tilsit. But, perhaps, the cause which contributed most of all to the quarrel, or which most hastened on the open rupture, was the continental system, to which Russia could not submit without ruin, and to which Alexander could not have attempted to adhere without incurring the risk of some of those summary proceedings wherewith the Russians had been accustomed to remedy the mischievous polity of their sovereigns. The nobility and great landholders of the country soon discovered the unchangeable truth, that nations cannot sell unless they buy; that this excluding continental system, which prohibited the purchase of British manufactures, colonial produce, &c., shut them out from the best market they had for their own produce, and prevented their exporting by sea what they grew on their own vast estates. The complaints of his powerful subjects had induced Alexander to issue, on the 31st of December, 1810, a ukase, by which colonial and other goods were allowed to be introduced into the ports of Russia, unless they clearly appeared to be the property of subjects of Great Britain. Such a restriction was futile, and was, as a matter of course, intended by the government of Alexander to be so: it was evaded with the greatest ease, and the trade with England might almost be said to be re-opened once more. Complaints uttered by the French ambassador at St. Petersburg were soon followed by arrogant and most insolent menaces. Some of the Parisian *littérateurs* in the pay of Bonaparte, who had formerly been employed in writing eulogiums of the just and magnanimous Emperor Alexander, were now set to work to traduce him, his whole family, his court, his country, and his people; and, between the autumn and winter of 1811 and the spring of 1812, as many and as atrocious calumnies were produced against the czar as had been issued against the unfortunate Queen of Prussia just before the opening of the Prussian war of 1806.

Bonaparte had driven from his presence Talleyrand and every other able and acute statesman, together with almost every man that presumed to entertain or express opinions opposite to his own; yet still it is said that a few sensible counsellors, men attached to his interest, as it involved their own, ventured gently to remonstrate against his present mad project, to represent the undecided state of the warfare in Spain, the frightful

drain made upon the population of France, as well as upon that of Italy and other dependent states, by that warfare, the sullen aspect of all the north of Germany, the spirit displayed particularly by the students in the German universities, the progress making by patriotic political societies in nearly all parts of Germany, the doubtful attitude assumed by Bernadotte, the insecure nature of the tie which bound Austria to him, and the wonderful and sudden influence which might yet be exercised on the continent of Europe by English subsidies. But the Man of Destiny frowned down these prudent advisers, or silenced their remonstrances with trenchant argument or rapid declamation. We look in vain for any new encouragement which he could have found anywhere, except in the predicted bankruptcy of England, and the now manifested intention of the United States of America to brave the maritime power of Britain, and rush into a war against the country to which they owed their origin, their language, and every high quality which distinguished them as a people. He considered that this American war must inevitably act as a capital diversion in his favour; and he hastened to negotiate an intimate alliance between the United States and France—between the model republic of modern times and the destroyer of republics old and new; between a people who had laid it down as a fundamental principle of their constitution and government that conquest by force of arms was unjustifiable and inadmissible, and a people and a man who had been conquering or overrunning, not only their neighbours, but nearly all the countries of Europe, for eighteen years.

A.D. 1812. The parliamentary session was opened on January the 7th, with the speech of the prince regent, delivered by commission. The speech dwelt upon the favourable military events of the past year. With reference to the subsisting differences between Great Britain and America it was stated that the discussions had not been brought to an amicable close; but that no measure of conciliation should be left untried, which might be found consistent with the honour of the empire, and the commercial and maritime interests of the country. The Marquis Wellesley, who was dissatisfied with some of his colleagues, and who was supposed to have contracted some engagements with the opposition, resigned on the 18th of February; and thereupon Lord Castlereagh returned to office, and succeeded the marquis as secretary for foreign affairs. The regent wrote a letter, which was purposely made public, to his brother the Duke of York, stating that he wished to see “a vigorous and united administration, formed on the most liberal basis,” and authoriz-

ing the duke to communicate the sentiments to Lord Grey, who would make them known to Lord Grenville. The Duke of York did what he was desired to do, and showed the regent's letter to Grey and Grenville; but they both flatly refused to join the Perceval administration. From this moment (with the exception of a moment or two of party hope and expectation) the Whigs began to revile the Prince of Wales whom they had so long flattered and applauded, and to applaud the Princess of Wales whom they had so long reviled, or treated with contempt or indifference. On the other side, the Tories seemed to renounce all their old sympathies for the princess, and to be determined to drive that unhappy, ill-advised, and imprudent lady, not only from court and the society of her daughter, but also from the country.

On Monday, the 11th of May, about five o'clock in the afternoon, as Mr. Perceval was entering the lobby of the House of Commons, a man, bearing the outward appearance of a gentleman, shot at him with a pistol: the ball entered his left breast and pierced his heart: he staggered, fell to the ground, and expired in less than ten minutes. The assassin did not attempt to escape; he went calmly to the fire-place, laid down his pistol, and acknowledged to every one that he was the person who had done the deed, saying that it was perfectly justifiable, and that no man save himself had ever known of his intention. And indeed it appeared immediately that no other person had been concerned with him, and that there was no mixture of political feeling in his motives. The name of the man was Bellingham, his condition that of a decayed merchant and unprosperous Liverpool broker. In a commercial visit to Russia some considerable time ago he had undergone serious losses, which he attributed to violence and injustice; he had repeatedly addressed Lord G. Leveson Gower, who had been our ambassador at St. Petersburg; and he had presented memorials to the treasury, soliciting a compensation for losses which, not having been incurred in the course of any public service, were considered as affording him no title to compensation. Perceval had refused, as was his duty, to listen to these applications; “but he could hardly have accompanied his refusal with any harshness, for few men had ever less harshness in their nature than he had; and yet this seems to have been all that had provoked this most savage act.” The murder was committed on the Monday; on the Friday following (it being session time) Bellingham was brought to trial at the Old Bailey, and convicted of the murder; and on the Monday morning of the next week, before nine o'clock, the murderer was hanged, and his body in the hands of the

surgeons for dissection, his heart, it was said, still beating faintly. Thus the whole of this dismal tragedy was enacted within one short week.

The public character of Perceval was much underrated, and his private character little understood. As a minister he had shown courage at a moment when courage was most wanted, and when timidity and hesitation must have brought on the most ruinous and degrading effects. His private character seems to have been not only without a blemish, but rich in some of the high and generous virtues. His disinterestedness seemed to be proved by the poverty in which he died.

Lord Liverpool, upon whom nearly the whole weight of government fell, was instructed by the regent not to make new overtures to Lords Grey and Grenville, but to attempt to reinforce the cabinet by bringing back the two former members of it, whose loss had been severely felt. Liverpool accordingly applied to Mr. Canning and to the Marquis Wellesley, who both declined his overtures, alleging the continued difference of opinion upon the Catholic claims, and upon the scale on which the peninsular war ought to be carried on. On the 22d of May all the ministers tendered their resignations to the regent. Various negotiations were opened. It was again found needful to apply to Lords Grey and Grenville. These two lords demanded a sweeping change in the household, and the right of placing comparative strangers about the regent's person. The regent refused to make this sacrifice, and hereupon the treaty ended. Nothing, therefore, was left—and perhaps nothing better was desired, not merely by the court but also by the country—but for the regent to go on with the old ministers, and to fill the post of premier with one of that body.

The warmest of the Whigs were compelled to confess that general opinion was at present decidedly against their party. On the 8th of June, the Earl of Liverpool acquainted the House of Lords that the prince regent had been pleased to appoint him first lord of the treasury, and to authorize him to arrange and complete the cabinet. Thus Liverpool became premier in lieu of Perceval; Earl Bathurst succeeded Liverpool in the double and onerous offices of secretary for the colonies and secretary at war; Lord Sidmouth (Addington), who had been so long out of office, and who had once figured as premier, was brought back as secretary for the home department; the Earl of Harrowby became president of the council in lieu of Earl Camden (who, however, remained in the cabinet, without office, and was elevated to the rank of marquis); Mr. N. Vansittart became chancellor of the exchequer; Lord

Melville (the son and successor of the old lord who had held that office so long, and on the whole so much to the benefit of the navy) succeeded Mr. C. Yorke as first lord of the admiralty; the Earl of Buckinghamshire took Lord Melville's place of president of the board of control; Lord Castlereagh remained secretary for foreign affairs; Earl Mulgrave master-general of the ordnance; and Lord Eldon lord high-chancellor. In the non-cabinet appointments and in the law appointments there were several changes. In the ministry of Ireland the Duke of Richmond continued lord-lieutenant, and Lord Manners lord high-chancellor; but the chief secretaryship, which had been held by Mr. W. Wellesley Pole, was now conferred upon Mr. Robert Peel.

On the 17th of June, Mr. Vansittart, the new chancellor of the exchequer, brought forward the budget, not as his own work or plan, but as that of his lamented predecessor. The plan intimated the design and the determination of giving more vigour to the war. In the preceding year the supplies proposed and voted amounted to £56,021,869; but now the total proposed and voted was £62,376,348. A number of petty new taxes were imposed, and two more enormous loans were raised.

On the 30th of July the parliament was prorogued by commission; and on the 20th of September it was unexpectedly dissolved.

We turn to the conflict of arms, which was more extensive, more terrible, and more decisive than in any preceding year. Great as were the British interests involved in that quarrel, and strange as is the history of the new American war, it was a mere episode in a grand epic, a by-scene in a busy drama. We shall not therefore depart from the usual order of our narrative, but proceed to the great events passing in the Peninsula.

Lord Wellington, who had found necessary rest and tolerably good quarters for his fatigued troops, put himself in motion as soon as it was time to move. He had not been idle during his stay on the Coa: there might be rest for the army, but there was none for him. During the latter months of 1811 he had been preparing with all possible silence and secrecy the means of re-capturing Ciudad Rodrigo, the possession of which still served the French as a basis of operations on one of the frontiers of Portugal. Marshal Marmont never guessed the intention to fall upon Ciudad Rodrigo in the midst of winter. On the 6th of January, Wellington suddenly moved his head-quarters forward to Gallegos, and on the 8th, part of his army crossed the Agueda and invested Ciudad Rodrigo without encountering any obstacle. By the 19th two

practicable breaches were made, and that very evening orders were given to storm the place. There was no time to lose, for it was known that Marmont was now hastening forward to the relief. But for this circumstance Ciudad Rod-

rigo might have been reduced with very little loss to the besiegers. In consequence of this interruption, the ordinary rules of siege had to be neglected, and lives expended to avoid the loss of minutes. The British advanced with

CIUDAD RODRIGO — From a painting by W. Telbin

their usual courage and defiance of danger, and their hardihood only the more exposed them to the storm; but, though the first assailants were struck down in heaps by the heavy thunder-shower of shot and shell, the torrent of onset suffered little interruption. The breach was carried, the ramparts were gained, the place was won; and the French, after making their last stand in the streets, fled up to the castle, where the governor afterwards surrendered. But the ardour of the victors, which had been transported to absolute frenzy by the terrible resistance, did not cool down with success, on the contrary, they gave way to the wildest excesses, in which all discipline was thrown off; the soldiers who had drunk themselves to intoxication, shot each other in their indiscriminate fury, and menaced their officers, and for a time they were as dangerous to their friends and leaders as they had lately been to the enemy. It was a foul blot upon the heroic record of the capture of Ciudad Rodrigo. In this terrible siege and storm, the allies lost 1200 soldiers and ninety officers, of whom 650 men and sixty officers had been killed or wounded at the breaches alone. On learning the fall of the town, which had occurred in half the time that had been originally calculated, Marmont, instead of attempting to recover it, retired to Valladolid.

Having recovered Ciudad Rodrigo, Wellington resolved to attempt to recover Badajoz also before the French should be in force to oppose him. Here again the greatest secrecy and caution were

required. Stores were collected and movements made unsuspected by the enemy; and on the 16th of March the place was invested. On the 25th an advanced work was taken by storm, and on the 26th two breaching batteries opened on the town. On the 6th of April three breaches were reported to be practicable, and orders were given for storming the place at ten o'clock at night. The plan of attack was the most daring that could be devised, and could only have issued from a great successful commander at the head of an army in which the utmost reliance could be placed. Four simultaneous assaults were to be made on different quarters of Badajoz, and each division had its place on the map and its specified mode of onset. The night was dark, and the air thickened with exhalations from the rivers, but all was quickly illuminated with the lurid glare of musketry, artillery, and lighted carcasses; and as each attack advanced or was driven back, its progress could be marked by the predominance of the French *vive* or English *huzzah*. Ladders were flung down but as quickly replaced, mines were exploded and storming parties whirled into the air, but other parties took their place, while the assailants were in every case met by a courage and devotedness equal to their own. Difficulties also were to be encountered which had not been anticipated, for Badajoz had been strengthened by new and strong defences through the admirable skill of Phillipon, its French commander. Even the tops of the breaches were bristled with sharpened sword-blades fixed in massive beams,

that were chained together and set deep in the ruins, while the ascent in front was covered with loose planks, studded with iron points, on which the escaladers were impaled when they lost their insecure footing. In two short hours 2000 brave men had fallen. The assault still went onward, and it was not until daybreak, and after a loss of killed and wounded greater than that of the most important of his victories, that Wellington was master of Badajoz. But here, alas! the same wild excesses were repeated, and with aggravations, that had tarnished the glory of the capture of Ciudad Rodrigo, and many who had survived that night of horror, lost their lives in the vain attempt to prevent the excesses of their comrades. For two days and nights Badajoz continued to be a hell of violence and murder, of lust, intoxication, and plunder, and it was only when the fiendish frenzy had done its worst, and been exhausted by its own violence, that silence succeeded and order was restored. It is melancholy to think that our countrymen will never be able to read the record of these two captures without having their exultation deadened by feelings of compunction and shame! On the 8th, Soult had collected

his army at Villafranca, but, hearing of the fall of the place he had intended to relieve, he began, on the morning of the 9th, long before daylight, to retreat once more to Seville. Again the French were warmly pursued by the British cavalry, who cut up Soult's rear-guard at Villa Garcia.

At another quarter, where the French were not the besieged, but the besiegers, they suffered discomfiture and loss, if not shame. Since General Graham's expedition with Lapeña, which had terminated unprofitably, but for the British not ungloriously, at Barrosa, some attention had been paid to garrisoning Tarifa, the old town on the Straits of Gibraltar. In the last days of the year 1811, Tarifa was invested by about 5000 men, whose operations were covered by another strong corps posted at Vejer. The place was garrisoned by about 1800 men, under the command of Colonel Skerrett. It appears that about 1000 of the men were British, the rest being Spaniards. On the last day of the year 1811 the French attempted to storm, but, numerous and bold as they were, were repulsed. During four days they kept up a continual fire the walls were knocked to pieces, the little town was laid

BADAJOS, from the North Bank of the Guadiana.—From a drawing by Capt Elliot, 1812

completely open, but they would not venture to try another assault, and on the night of the 4th of January they withdrew hastily, humbled and disordered, leaving behind them seven pieces of cannon, two heavy howitzers, and all the carriages and stores collected for the siege.

As soon as he obtained possession of Badajoz (on the 7th of April), Lord Wellington endeavoured to put the place into a good state of defence. But his lordship had short time to bestow upon these cares, for Marmont was making himself strong in the north, and was blockading both the Spanish fortress of Ciudad Rodrigo and the

partially ruined fortress of Almeida. Leaving General Hill in the south, his lordship, on the 13th of April, moved the main body of his army back to the north. Upon this Marmont gave up his two blockades, collected his troops within the Spanish frontier, and retreated to Salamanca. By a happy combination of rapidity, daring, and skill, General Hill attacked, and carried, by a brilliant *coup de main*, the strong forts which the French had erected at Almaraz on the Tagus to protect a bridge of boats which secured the communications between their armies of the north and south. By this operation Marmont was cut

off from Soult, and Soult from Marmont. On the 13th of June, Lord Wellington completed his preparations for an advance into Spain, and broke

amphitheatre, while at their extremity rose the steep rocky Arapiles, standing alone like a gateway to the amphitheatre, and forming the great points of observation, from the summits of which each commander watched the motions of his rival, and directed the movements below. But the great blunder of Marmont was a movement towards the Ciudad Rodrigo road, by which his left wing was entirely separated from the centre; and Wellington, who had been watching like an eagle from his aerie, saw that the day was his own. He gave the word of command, and instantly his troops poured down from the hills into the basin, and the battle commenced.

SALAMANCA, from above the river Zurguon — from Roscoe's Tourist in Spain

up from his cantonments between the Coa and the Agueda, with about 40,000 men, leaving General Hill on the Tagus near Almaraz, with about 12,000 more. On commencing his advance, his lordship was justified in calculating upon a chance of out-manceuvring Marmont, whose conduct had not impressed him with any very high notion of his military genius or capacity; and any brilliant success in this part of Spain was almost sure to compel Soult to raise the blockade of Cadiz, if not to evacuate the whole of Andalusia. Marmont was out-manceuvred, and on the 22d of July he was most thoroughly beaten in the great battle of Salamanca, which was fought on the heights near the town of that name. This was the greatest victory which Wellington had obtained in the Peninsula, and as such it demands a particular notice. There had been much manœuvring on the part of Marmont to cross the right of the allied army, and for this purpose he endeavoured to take possession of two solitary hills, called indifferently the Arapiles or Hermanitos, which were at a little distance from his own left and the allied right; but his purpose was discovered mid-way in its accomplishment, and on English troops being sent to prevent it, a race commenced, and afterwards a struggle, between the two parties, at the end of which each had possession of a hill, or Arapile, while only half a cannon-shot's distance lay between them. This movement, which occurred at day-break, occasioned fresh manœuvres, so that before the engagement the two armies confronted each other with an oval basin between, formed by different ranges of hills, like the barriers of an

Thus Marmont was caught at the very moment when he was in the midst of a complicated evolution, and during the conflict his troops were never able to recover from the consequences of this fatal step they were separated into three divisions too far apart to support each other, and were attacked, thrown into confusion, and routed in detail, while they were vainly struggling to reunite and form a new order of battle. Marmont himself was struck to the ground, and severely wounded by the explosion of a shell, while the fight was at the hottest; and Clausel, who succeeded to the command, could do little more than withdraw the army from utter destruction, and superintend the retreat. So quickly, too, was this great battle fought and ended, that in the words of a French officer, Wellington "had defeated forty thousand men in forty minutes." Headlong as was their flight, the French were followed very closely the whole way from Salamanca to Valladolid. Their loss in this remarkable battle was very severe. three generals were killed, four wounded; one general, six field-officers, 130 officers of inferior rank, and nearly 7000 men were taken prisoners; their total loss in killed and wounded could not be ascertained, but there was no disguising the fact that they left two of their eagles and six colours in possession of the British. They also abandoned twenty pieces of artillery, several ammunition waggons, &c. The field of battle was very thick with dead. The allies alone had 694 killed and 4270 wounded, out of which number 2714 were British, 1552 Portuguese, and all the rest—that is to say, four—Spaniards. The proportion of officers was very

great; Generals Beresford, Leith, Cole, Spry, and Cotton were wounded. Marshal Marmont, having been severely wounded, gave up the command to General Clausel, who now retreated towards Burgos, with almost incredible speed.

The victorious British general entered Valladolid on the 30th of July; and by the 12th of August he was in possession of Madrid. Joseph Bonaparte was on his way to join Marmont with 20,000 men when he learned the terrible catastrophe of Salamanca. He was now a fugitive, making for the left bank of the Tagus, with the intention of rallying his army between Aranjuez and Toledo. In consequence of this bold movement upon Madrid, Marshal Soult raised the blockade of Cadiz, destroying the works which the French had constructed with an enormous expenditure of money and labour; and, abandoning the whole of Western Andalusia, he concentrated his forces in Granada. Soult's retreat was very disastrous; his rear-guard was attacked by an allied force of English and Spanish, who issued from Cadiz, drove it from San Lucar, and took Seville by assault, although eight battalions had been left to maintain that city. In his march to Granada by Carmona, Soult suffered further loss from excessive heat, fatigue, scarcity, and the occasional attacks of armed bands of peasantry. General Hill, in the meanwhile, had advanced from the Guadiana to the Tagus, connecting his operations with those of Lord Wellington. On Hill's approach Joseph Bonaparte

abandoned the line of the Tagus, and fell back from Toledo to Almanza in Murcia, to keep himself in communication with Soult in Granada and Suchet on the borders of Valencia and Catalonia. By the close of August, Hill occupied Toledo, Ypez, and Aranjuez, thus covering the right of the allied main army, and guarding all the roads which led from the south of Madrid.

The situation of Lord Wellington in the Spanish capital was, however, very critical. As usual, there was no hope of effectual assistance from any of the ill-appointed and worse commanded Spanish armies. He had been promised

that an Anglo-Sicilian expedition should be sent from Sicily to the eastern coast of Spain, and in sufficient force to clear that coast, if not the whole of Catalonia, Valencia, and Murcia. Much less than this would have compelled the French to withdraw altogether to the Ebro. But after the plan had been settled and agreed to, there arose various misunderstandings, differences of opinion, and delays. At length, towards the end of July, some days before Lord Wellington moved from Valladolid to Madrid, General Maitland and his Anglo-Sicilians arrived at Port Mahon in Minorca, exciting the hopes of the Spaniards and the fears of the French. Having joined 4500 vagabonds to his original force of 6000 men, Maitland proceeded to the coast of Catalonia, and anchored in the Bay of Blanes on the 1st of August. But instead of landing and attempting the siege of Tarragona, Maitland and a council of war determined to run down the coast to Alicante, the safety of which was supposed to be endangered, in consequence of a defeat which the Spanish general O'Donnell had recently sustained in its neighbourhood. The hearts of the Catalanian patriots died within them as they saw the British fleet quitting their shores. On the 10th August, Maitland landed

his troops at Alicante—Suchet, who was in sight, retiring to the Xucar. Our Anglo-Sicilians and the worthless Majorcan division occupied the country from which the French retired; but in less than a week Maitland received intelligence that Suchet had been joined by King Joseph, and that Soult was in rapid march with his army of Andalusia to join the king and Suchet; and

GENERAL VIEW OF SEVILLE.—From a drawing in the King's Collection, British Museum.

thereupon he found it necessary to evacuate all the country he had recovered, and to fall back to Alicante. Within that town and some works in front of it the Anglo-Sicilian expedition was cooped up, without the chance of effecting any powerful diversion in favour of Wellington.

It was vain to think of remaining at Madrid, where, if the allied army had not first been starved, three or four French armies, forming a total of 120,000 men, must have closed round it and cut off all retreat. The alternative left to Wellington was either to move to the north against Clausel, or to move to the south against Soult. He determined on the first of these movements, hoping that, although Clausel had now received large reinforcements, he should be able to give him some such lesson as he had given to him and Marmont at Salamanca—the doleful remembrances of which battle were known to have taken all their confidence out of the French infantry. Leaving two divisions under Hill near Madrid, his lordship marched with the remainder, on the 1st of September, back to Valladolid, which he re-entered on the 7th. Continuing his march towards Burgos, he fell in with the Spanish army of Galicia, which was found to be less than 10,000 men, undisciplined, ragged, and deficient in equipments. On the 19th of September the allied army entered Burgos, the French falling back to Briviesca, but leaving 2000 men, under General Dubreton, in the castle of Burgos. The possession of that fort was necessary for the security of the allied army in its present advanced and insecure position, and Wellington directed it to be invested forthwith, though he was ill-furnished with siege artillery, and well knew that the castle, strong by its natural position, had been fortified by the French with great care. The siege was very unsuccessful, and a series of assaults cost the lives of many of our brave men. On the 18th of October, as Wellington was preparing to renew his assaults, he learned that Soult and Joseph were advancing with 70,000 men. He was therefore under the painful necessity of abandoning the siege and of effecting a junction with Hill, who at the approach of Soult retired slowly towards Salamanca. On the 21st of October the allied army retired to Palencia, where it was joined by a fresh brigade from England under Lord Dalhousie. A third French army from the north, under the command of Souham, was now close upon Wellington, harassing the rear-guard. Yet with most admirable generalship his lordship extricated himself without loss, effected his junction with Hill, and returned to his unassailable frontier positions. By the 20th of November the main body of the British and Portuguese were distributed in their old cantonments within the frontier of Portugal,

between the Agueda and the Coa; and Hill's corps moved into Spanish Estremadura, into cantonments near Coria, and towards the Tagus.

The Spanish generals, who had done absolutely nothing to assist him, impudently condemned Lord Wellington for not keeping Madrid, and for not taking the castle of Burgos. In England harsh criticisms were uttered in the spirit of party and of malevolence or ignorance. The opposition again predicted that his lordship must inevitably be driven out of Portugal. His own brief and manly words are the best defence or explanation of his conduct. "I am much afraid," said he, "from what I see in the newspapers, that the public will be much disappointed at the result of the campaign, notwithstanding that it is, in fact, the most successful campaign in all its circumstances, and has produced for the common cause more important results, than any campaign in which the British army has been engaged for the last century. We have taken by siege Ciudad Rodrigo, Badajoz, and Salamanca, and the Retiro has surrendered. In the meantime the allies have taken Astorga, Consuegra, and Guadalaxara, besides other places. In the ten months elapsed since January this army has sent to England little short of 20,000 prisoners; and they have taken and destroyed, or have themselves retained the use of, the enemy's arsenals in Ciudad Rodrigo, Badajoz, Salamanca, Valladolid, Madrid, Astorga, Seville, the lines before Cadiz, &c.; and, upon the whole, we have taken and destroyed, or we now possess, little short of 3000 pieces of cannon. The siege of Cadiz has been raised, and all the country south of the Tagus has been cleared of the enemy. We should have retained still greater advantages, I think, and should have remained in possession of Castile and Madrid during the winter, if I could have taken Burgos, as I ought, early in October, or if Ballasteros had moved upon Alcazar, as he was ordered, instead of intriguing for his own aggrandizement. . . . I see that a disposition already exists to blame the government for the failure of the siege of Burgos. The government had nothing to say to the siege. *It was entirely my own act.* In regard to means, there were ample means, both at Madrid and Santander, for the siege of the strongest fortress. That which was wanting at both places was means of transporting ordnance and artillery stores to the place where it was desirable to use them. The people of England, so happy as they are in every respect, so rich in resources of every description, having the use of such excellent roads, &c., will not readily believe that important results here frequently depend upon fifty or sixty mules more or less, or a few bundles of straw to feed them; but the fact is so, notwithstanding their

incredulity. I could not find means of moving even *one* gun from Madrid. As for the *two* heavy guns which ——— endeavoured to send, I was obliged to send our own cattle to draw them; and we felt great inconvenience from the want of those cattle in the subsequent movements of the army." As for the security of Portugal, his lordship could be under no apprehension. With Badajoz in the hands of the allies, with Hill beyond the Guadiana in Spanish Estremadura, and with no French force in Andalusia, or anywhere in the south, to march against him, the southern frontier of Portugal was safe. With regard to the northern frontier, where his lordship and the main army were stationed, although letters were intercepted from Joseph, which ordered Soult to make Portugal the seat of the war, it was clear that that marshal would not again approach the line of the Agueda, or re-enter a country where he, his predecessors, and successors, had met with nothing but calamity and loss. Ciudad Rodrigo being in our possession, and Almeida being re-established, it was no easy matter for any enemy, however fresh and bold, to penetrate by that entrance. There was a pause in the war in this quarter, which lasted not only through the remainder of the winter, but through the spring of 1813.¹

At Alicante the Anglo-Sicilian army—in which there were not 2000 British soldiers—continued to be shut up. General Maitland resigned in the month of November, and was succeeded by General Mackenzie. But General W. Clinton soon came down from Sicily, and took the command. Clinton would have introduced more activity, but he was checked by the jealousy of the Spanish governor. On the 2d of December, General Campbell arrived from Sicily with 4000 men, and took the command, thus making the fourth general-in-chief in four months! On acquainting himself with Suchet's formidable position on

the Xucar and with other discouraging circumstances, Campbell declared that it would not be prudent to attempt anything until the arrival of

ALICANTE —From Chapuy, L'Espagne

Lord William Bentinck, who was reported to be coming from Sicily with still more considerable reinforcements; but his lordship never arrived until the 3d of July, 1813. We have omitted, and we must continue to omit, the minor but very brilliant operations of the navy under our Cochranes, Hostes, and other heroes, who rendered very important services to the armies in Sicily, in the Peninsula, and other parts of the globe. In squadrons or in single ships our enemies were so completely defeated that scarcely a hostile flag could be found in the open sea, so that our sailors were obliged to search for captures upon the coasts and in the rivers of those countries with which we were at war. This kind of service familiarized them to land operations, of which our hardy tars had very little previous conception, and they were now expert in attacking batteries, by which they powerfully supported our military expeditions. Everywhere victory was steady to our sea-flag, save only in our new contest with the United States of America, in which, through a deplorable mismanagement of means, some dirt was thrown upon our national standard. To this war we must now direct attention.

¹ Speaking of Wellington at this time, Maurel says.—"The following trait of character shows the man. The raising of the siege of Burgos was the only serious check he had received in this campaign. It might be supposed that a general who was forced to retire after brilliant successes, and who was at the time threatened by great and serious danger, would be little disposed to speak the truth at his own expense, and that he would naturally lay the blame on every one else, in a first burst of indignation. Yet this would be a mistake. Wellington wrote a very long account of the siege of Burgos, and he enumerates, in the completest and most unsparing manner, all the faults that he attributed to himself. We meet with the following observations in his correspondence:—'I have neglected such and such means of success; I have been guilty of a fault in taking thither the most inexperienced instead of the best troops; I did

not sufficiently watch over the execution of the orders that were issued,' &c. As for the operation viewed in itself, he says, with his sublime frankness, 'I see that a disposition already exists to blame the government for the failure of the siege of Burgos. The government had nothing to say to the siege; it was entirely my own act.' Here we have the man. This is his mode of settling accounts with his government and with fortune. This is the reason why all the documents that he has left possess so great a value. In his admissions, every word that occurs is an instinctive protest against falsehood, against the lack of integrity, against a slippery conscience, and against every kind of quackery. For this reason, this man will gradually force the admiration and the respect of the very persons who think themselves the most firmly rooted in their hatred of him."—*The Duke of Wellington: his Character, his Actions, and his Writings.*

CHAPTER VIII.—CIVIL AND MILITARY HISTORY.—A.D. 1812—1813.

GEORGE III.

Causes of offence between Britain and America—America favoured by the Whig opposition in England—Condition of the American government—Plans of the Americans to man their ships with British seamen—Umbrage occasioned in Britain by the practice—Ripening of events for war with America—Ineffectual attempts at conciliation—Reasons of the American president for going to war—War declared—Preparations of the Americans for the conquest of Canada—Unprepared state of Canada—The war commenced by the capture of Fort St. Joseph—First campaign of the Americans in Canada unsuccessful—Their successes by sea—Affairs of Europe—Sweden allied with Russia—Bonaparte persists in his purpose to invade Russia—His assembly of kings at Dresden—His immense army for the Russian war—Summary of his Russian campaign—Negotiations and subsidies of Britain in aid of Russia—War with America continued—Large supplies voted by parliament—State of the war in the Peninsula—Wellington appointed commander-in-chief of the Spanish armies—His limited means for action—His great victory over King Joseph at Vittoria—Encouragement to the allied powers derived from this victory—Disasters and defeats of the French in the Peninsula—Wellington advances upon the French border—Soult sent to oppose him—Unsuccessful efforts of Soult—The inactive expedition from Sicily to Alicante—Its effects in checking the progress of the French in the Peninsula—Its further proceedings and failure—Bonaparte's exertions to renew the war—Advance of the Russian armies—They are joined by Prussia—Their unsuccessful negotiations with Bonaparte—Bonaparte defeats the allies at Lützen and Bautzen—He enters Dresden—An armistice—Terms of a proposed treaty rejected—British influence and money increase the difficulties of Bonaparte—Defeats of the French armies in Saxony—Bonaparte's retreat—His unsuccessful efforts to retrieve his disasters—He crosses the Rhine and returns to Paris—The French become weary of the war—Insurrection in Holland against French rule—The Prince of Orange recalled by the Dutch—Congratulations in parliament at the successful aspect of the war—Pecuniary aids of the British government to the allied powers—Parliament adjourned.

EVER since their fortunate issue from a struggle (their war of independence) which had long seemed so hopeless, and which was in fact nearly as hopeless as ever when the government of Lord North, dismayed by Lord Cornwallis's surrender, and still more so by the strong array of the British opposition, consented to negotiate and to give them all they asked, our American brethren had shown a confidence, a vanity, and presumption, very distasteful to all Englishmen who loved their country, and very irritating to all of them who did not despise the display. If there was a brotherhood between us, it had become a brotherhood of Cain. Our descendants, whose population was constantly fed by fresh emigrants and adventurers from the mother country, and whose wastes were partially filled and tilled by these emigrants—the citizens of the United States, who had no language, no literature, no venerable tradition, no fame as a people, except such as they inherited from Old England, and shared with Englishmen—persisted in the rancorous hatred which had accompanied the war, were the first and foremost to traduce the name of England, to libel the genial cradle from which they sprang, to heap abuse, not only upon our national policy and form of government, but generally upon our national character. The

French Jacobins themselves did not speak more contemptuously of us, as an enslaved king-ridden and priest-ridden people, than did these Anglo-American republicans; nor did Bonaparte himself ever throw more disgusting personalities into a public and a national quarrel. These feelings of animosity, which ought not to have been expected from the party which had been successful in the contest, could not fail of provoking an angry and unwholesome reciprocity from some portions of the English people; but we have the facts confessed, and publicly avowed by more than one of the leaders of the American revolution, who came over to this country after the peace of 1783, to negotiate treaties of commerce, &c., that the British government was desirous and anxious to throw a veil over the past; that so far from wishing to recover the dominions it had lost, our government, together with the great majority of the nation, were of opinion that those dominions ought not to be accepted, even if the Americans were disposed to make a voluntary surrender of them, or to return to their ancient allegiance; that henceforward the two countries would do best apart; that by establishing relations of amity, trade, and commerce, there might be a mutual interchange of advantages; that the most earnest desire of England was to preserve peace, and to give conciliation a fair trial.

While this was the feeling of successive Bri-

tish ministries and of the great majority of the nation, there was a minority of the people of England, comprising most of the Whig opposition, who professed to rejoice that the Americans had succeeded, and that we had been humbled and defeated in their revolutionary war; who made themselves on all occasions the panegyrists of the tyro-republicans and their newly-created institutions, and who kept pointing to the meteor which had risen in the western world as to a glorious luminary which must shed beneficent light and warmth upon all the countries of the globe, and eventually count many of those countries as its satellites, or as imitative bodies revolving round it and copying its bright example. Civil and religious liberty, according to this minority, had fled from all the antiquated countries of Europe, and was fast flying from the shores of Britain, to seek a shelter beyond the western waves, and to find a home among the primeval forests of North America. For many years the United States were, to the busiest and most emphatic of our writers, more than an Atlantis or a Utopia. Even men of less ardent fancies and of less revolutionary tendencies were interested in watching the working and result of the greatest political experiment made in modern times, and wished that the American system of republicanism should be allowed a fair trial. The reaction came afterwards—long afterwards; but from about the year 1780 to 1790, when the progress of the French revolution distracted and then absorbed attention, all the countries of Europe joined in fostering the self-conceit of the Anglo-Americans. Little was heard but praises, more or less extravagant, of transatlantic virtue, *straight-forwardness*, and *simplicity*. The French made an apotheosis for Franklin even while he was living in the flesh among them, and frequenting their *petits soupers*, and their *soirées*, literary, scientific, political, and fashionable, in his plain bob-wig and shoes without buckles. A saying often used by Bonaparte at a later period might have been reversed at this time—*Cette jeune Amérique m'ennuie!*

The citizens of the United States paid the French back in admiration and praises when they overset the kingly government and built up a republic on a foundation of blood and dirt. Feasts were given in the States to commemorate the execution of Louis XVI., who had been their benefactor, and who had hurried on his own destruction by interfering in their quarrel, and by sending his subjects to study in their school. Washington, who retired from the presidency in 1796, after having vainly attempted to set some limits to democracy, was compelled to confess, that when once the spirit of revolution and change begins to act among a whole people, it is

impossible to say where it will stop; and he died in 1799 with the sad conviction that America could not exist long as a nation, unless she lodged somewhere a coercive or restrictive power which should pervade the whole Union. The Jeffersons and Madisons who followed him thought, on the contrary, that democracy ought to be unlimited and illimitable; that the French revolutionists and levellers were the best models to follow; and that the English must ever be the worst enemies of the republicans of the West. From the commencement of our war with France there had been numerous quarrels, and not a few actual collisions. It can hardly be denied that the commanders of our ships of war were occasionally rash; but our government constantly displayed a gentle and conciliating temper; whereas the authorities of Washington were invariably dogmatical and insolent, conceiving that their neutrality was worth any price, and that England must submit to any outrage rather than break with them. At the same time these Americans themselves submitted to a succession of injuries and insults from the French, and that too without any disturbance to the amity and partiality they professed for *La Grande Nation*. They were bullied in turns by the Girondins, the Jacobins, the Directory, Consul Bonaparte and Emperor Napoleon; yet, with the exception of a little blustering, which ended in words, they continued to favour the French, and to annoy the British cruisers and squadrons as much as they possibly could. Framing for themselves a new law of nations and a new maritime code, they fitted up privateers for the French; they insisted that free ships make free goods, that their ships were exempt from search, be the cargo what it might or whose it might; that no war or combination of circumstances ought to interrupt any portion of their trade; and that they had a right to carry provisions and stores to any port of France, even though that port were blockaded by the British.

Another and an inevitable cause of quarrel arose out of our impressment system, and out of the American system of converting, by the shortest and least ceremonious processes, British seamen and other subjects of his majesty into republican citizens of the United States. By the constitution of most of these federal states, five years' residence gave the rights of citizenship to every foreigner, and converted any Englishman, Frenchman, Spaniard, German, Dutchman, or native of any other old country, into an American citizen. But this five years' residence and probation had become a mere theory: in practice, five months, or weeks, or days, or even hours, sufficed for the transmutation; and ingenious crimps employed themselves in seducing British

seamen from their ships, from their allegiance, and from their nationality, by promising them a few dollars more wages than they obtained in our national or mercantile navy. There was a well-known Yankee adventurer of this description who boasted that he had, within a given time, made more American citizens than had proceeded from all the prolific matrons of the state to which he belonged—and not babes and sucklings, but full-grown able-bodied men, citizens that sprang into life, as the republic herself had done, in a state of ripeness and perfection, without going through the antecedent stages of existence. In Boston, in New York, in nearly all the large seaport towns of the Union, there were *bureaux*, or register-offices, or manufactories of American citizens, where English deserters and others, upon payment of a small fee, received a certificate of citizenship. In most cases this was done in a barefaced manner, with the sanction or connivance of the local government; but in some cases tricks and jugglings were resorted to in order to save appearances, and perhaps, also, to soothe or cheat the delicate consciences of some of the lawgivers. There was an old woman in one of these seaport towns who was mother or foster-nurse to a host of these Gracchi. She, too, had a conscience, and tried to cheat it and the devil also. She kept a big cradle, made for the purpose of rocking full-grown British subjects who were to be converted in a hurry into American citizens, in order that, when testimony should be called for to prove their birth, she might with a safe conscience swear she had known them from their cradle.¹ To escape from our press-gangs many of our seamen fled from our merchant vessels, where they were liable to be seized, entered American trading vessels as natives or citizens of the United States, and found skippers and shipmates ready to swear they were such. The common descent and common language of the two nations made discovery very difficult; the English runagates soon picked up a few Americanisms, a few of the common flowers of rhetoric, and the nasal twang was to be acquired in less than five years. But at times it would happen that the reported American citizen would have, on the fleshy part of his arm, those indelible marks which sailors used to love to produce with puncturing and gunpowder—a blue piece of tatoo, giving his real English name, and the name of the British ship in which he had served; and it happened still more frequently

that among the officers and crew of some English man-of-war searching the suspected American vessel there would be some that could recognize and swear to the identity of the newly and irregularly made American citizen—who could detect in many a Jonathan a real Jack, that had either deserted from the king's service, or had transferred himself from our merchant service, for the reasons above-mentioned, or for other reasons equally weighty. Yet even here a lapse of time or strong resemblances might deceive, and grievous though involuntary mistakes might be committed. And, besides, some of our more hasty officers, irritated by the notorious practices of the Americans, and by the frequent desertion of their men, might occasionally be not over-scrupulous in examining identities or in seizing sailors reported to be Englishmen. Our government, however, always disclaimed such practices, and never refused satisfaction when it was fairly proved that the seamen so seized were natives or *bona fide* citizens of the United States. Jefferson sternly rejected a proposal made by our government, that the true American seamen should always carry about with them certificates of their citizenship. The English minister must have known how such certificates were procured, but, such as they were, he offered to cause them to be respected. Jefferson held that the *simplest* rule would be, that a vessel being American should be evidence that all on board of her were Americans also, or that the flag ought to proclaim the citizenship of the whole crew, and not allow of any search or press. This principle was altogether inadmissible.

There were many intervenient heart-burnings, and not a few insults difficult of digestion, and which possibly might not have been digested by England if it had not been for the critical state of the war carrying on against Bonaparte; but it was not until the year 1807, when Jefferson was for the second time president, that the war-whoop was again raised against Great Britain. Bonaparte's Berlin decree, against which the Americans had never presumed to offer any serious remonstrance (Jefferson was engaged at the time in a friendly correspondence with the government of the devourer of republics, in order to obtain through his all-commanding means the cession from Spain to the United States of Florida), had, in the eyes of the British government, rendered necessary a retaliation, and had produced fresh orders in council, intended to support our maritime rights and commerce, and to counteract Bonaparte's continental system, the basis of which was the Berlin decree. As on other occasions, the American wrath was kindled, not against the first cause, but against the almost inevitable effect of that cause—not against France, who had made

¹ This piquant anecdote is told by a distinguished English diplomatist, who resided a long time in the country, and who was calm and considerate in judging of the government, and of the character and habits of the American people.—See *Notes on the United States*, by the Right Hon. Sir Augustus Foster, Bart., London, 1841 (unpublished), as quoted in *Quarterly Review*, No. cxxxv.

the grand innovations in national law, and who had trampled upon the rights of all neutrals, but against Britain, who resorted to measures for self-defence, and with the object of abrogating the most monstrous system that ever European conqueror had attempted to impose.

The bickerings at sea, the mutual manifestoes and embargoes, the stoppages to trade, and the diplomacy which followed, cannot be narrated here. In the month of December, 1807, Jefferson succeeded in carrying a resolution that all trade and intercourse with foreign nations should be suspended; and matters remained in this state down to the declaration of war in June, 1812—an interval which the American government employed in adding to the number of its gigantic frigates, and which the commercial classes spent in a hopeless struggle against bankruptcy and ruin. To the last moment the British government continued to negotiate and to testify an anxious desire for peace. They modified the orders in council in favour of the United States; and on the 16th of June, 1812, Mr. Brougham (now Lord Brougham), the most eloquent of the advocates for the revocation of the orders, moved in the House of Commons an address to the regent, beseeching him to recal or totally suspend the said orders in council, and to adopt such other measures as might tend to conciliate neutral states. Lord Castlereagh then declared that it was the intention of government to conciliate the United States; and, accordingly, on the 23d of June, there appeared in the *Gazette* a declaration from the regent absolutely revoking the orders in council as far as they regarded America. But by this time President Madison had not only made up his mind for war, but had commenced military operations.

It has been usual to say that the revocation came too late; that if our government had conceded it only a few weeks or a very few months earlier, there would have been no war with America. Now Madison had been treating with Bonaparte's government ever since the end of 1810; he had agreed to the preliminaries of a treaty with that government early in the summer of 1811; and the whole course of his conduct, and his passionate desire to illustrate his presidency by annexing Canada to the United States, were proofs demonstrative of his determination to brave a war with England. The truth is, that Madison and his party had nicely calculated on which side lay the greater amount of profit to be obtained, or whether the United States would gain more by going to war with England than by putting herself in a state of hostility against Bonaparte and his edicts. As for the cogent logic of fear, or as to any immediate apprehensions from the "invincible" armies of the Man

of Destiny, they could now have gone for nothing, for the French had no fleets left to convey great armies across the Atlantic—they could scarcely show a ship at sea anywhere. "Everything in the United States," says the historian of our navy, "was to be settled by a calculation of profit and loss. France had numerous allies; England scarcely any. France had no contiguous territory; England had the Canadas ready to be marched into at a moment's notice. France had no commerce; England had richly-laden merchantmen traversing every sea. England, therefore, it was, against whom the deadly blows of America were to be levelled."¹ In April, 1811, when (according to French authorities) Madison's envoy at Paris got the St. Cloud revocation, and got other assurances from Bonaparte, the great storm gathering in the North, and which was destined to accelerate that conqueror's ruin, was not yet discernible to the eyes of American statesmen; when it became visible to them it was rather too late to retract, if Madison and his party had been inclined so to do; but it would appear that there was no such inclination, and that the president and the whole party felt inwardly convinced that the Man of Destiny would prevail over Russia as he had done over Prussia and Austria, and the more surely from Prussia and Austria being now his allies and assistants, and sending, like nearly every country in Europe, their troops to fight under the conqueror's orders. These Americans had cultivated the friendship of Russia; they had sent envoys to St. Petersburg, who had fallen down on their knees as if to worship the throne of the czar; they had shown a strong leaning of affection to the Russian legation at Washington, and Jefferson had declared in his most emphatic style, that he firmly believed the Emperor Alexander to be not merely the best of sovereigns (for that were but a poor compliment according to his republican notions), but the best and most virtuous of men—"one enthusiastically devoted to better the condition of mankind"—and one who had "taken a peculiar affection to America and its government;"—but, notwithstanding all this, they believed, and they now hoped, that Alexander would be crushed as the Emperor Francis had been, and that Bonaparte would soon date his decrees from St. Petersburg as he had done from Vienna and Berlin.

On the 1st of June, President Madison sent an awfully long message to both houses of congress, enumerating all the provocations received from England, commencing from the very beginning of the existence of the United States as an independent nation, reviving differences which had been long since considered as settled, putting in new pretensions and causes of quarrel, inventing

¹ James.

some facts, and distorting others, giving a false colour and character to the conduct of the British government, misrepresenting the temper and feeling of the British people, and cleverly jumping over all the provocations, insults, and serious injuries which America had received from republican, consular, and imperial France, and to all of which she had so meanly submitted. On the 4th of June, probably because that day was the birth-day of our poor, old, blind, and distraught king, who had once been his sovereign—Madison laid before the two houses copies of the correspondence which had passed between his government and Mr. Foster, the English envoy at Washington, intimating that from that correspondence it would appear that Great Britain was determined neither to revoke her orders in council nor to concede any important point. Stormy and terrible were the debates which followed; loud were the boastings of one party, and dismal the predictions of the other. On the 18th of June, two days after Mr. Brougham's friendly oration in the House of Commons, they came to their resolution and declaration. Quibbling to the last, they did not declare war as it is usual to declare it; but they declared that the United States and Great Britain were, and had for a long time past been in an actual state of war! This determination was carried in the house of representatives, by seventy-nine against forty-nine. The supporters of war were chiefly from the western and southern states to Pennsylvania inclusive; the advocates for peace were chiefly from the eastern and northern states. The ominous note of dissonance was again heard, the eastern and northern states complaining that their interests were sacrificed to the passions and the interests of their neighbours. When the news reached Boston, that city, though the cradle of the American revolution, put on mourning, and muffled its church bells. The same tokens of distress and grief were displayed in other towns of the east and north; but at Baltimore, where, as in other parts of the southern states, swarms of privateers were all ready to pounce upon the British West India trade, the exulting and furious mob perpetrated cruel atrocities upon some of the opposers of the war.

The president had resolved to begin with the conquest of all Canada. Early in the year 1812, months before the hostile declaration, and while Madison was constantly assuring our envoy that he wished to continue amicable negotiations, the van of the invading army was assembled near the Detroit frontier: it was 2600 strong, was well provided with artillery, and was under the command of Hull, who passed with the Americans for a great general and strategist. To defend the far extending frontiers of Upper and Lower

Canada, and to do garrison duty in the interior of those vast provinces, we had only, of regular force, about 4000 men, and some of these were invalids: the Canadian militia then incorporated in the two provinces amounted to about the same number. Sir George Prevost, the commander-in-chief of these forces, was, if not an old woman, assuredly no general. But fortunately we had in the upper province an officer of energy and ability, the gallant and still lamented Major-general Brock. This officer, knowing of the gathering of Hull's force on the Detroit frontier, and seeing that war was certain, sent discretionary orders to a British officer in charge of Fort St. Joseph to act either offensively or otherwise against the enemy at Michilimachinac, as he should find advisable; and that officer, on the 17th of July, a month all but a day after the declaration of war at Washington, captured the American place, with its garrison of sixty men and seven pieces of ordnance. This was the first operation of the war, and was attended with very important consequences.

Hull and his republicans crossed our frontier above Detroit, being preceded by a boastful proclamation, in which he spoke of success as certain, and in which he invited and incited the *oppressed* citizens of Canada to throw off their allegiance to a king, and become citizens of the republic. Hull's first serious disappointment was to find that his proclamation was laughed at, and that the Canadians of all classes were loyal and firm. He had not advanced far from the frontier before he was hedged up in a corner, with his retreat and supplies alike cut off; and on the 10th of August this great strategist capitulated with 2600 men and thirty-three pieces of cannon. The republican general, Van Rensselaer, who followed him with 1400 men, was not more successful; he was beaten and made a prisoner at Queenstown in October, and his entire corps was surrendered. Such was the result of Madison's first Canadian campaign; such the first success of his project to make, in his own phrase, "*territorial* reprisal for *oceanic* outrages." The loss on the side of the British and Canadians would have been very inconsiderable indeed, if it had not included that of the gallant Brock.

Madison's success on the ocean, where success could scarcely have been hoped for, was somewhat more consoling. Under the name of frigates, he had put to sea ships that were equal in force to most of our ships of the line. Too many of our frigates left on the American station or in the West Indies were old and weak—were of that description which our sailors contemptuously called "*jackass frigates*." More British ships of the line and the largest of our frigates, with full crews and the best appointments, ought to have

been sent to the American leviathans that were afloat under the fictitious name of frigates; but our admiralty did not take these necessary steps, and left our frigates exposed to very unequal contests. One of these combats may serve as a fair specimen. On the 19th of August a battle was fought between our frigate the *Guerrière*, Captain James Richard Dacres, and the United States frigate *Constitution*, Captain Isaac Hull. The American frigate, only seventeen days from port, was in the most perfect condition, with her stores ample, and her powder fresh; she had 476 picked men; in height, in length, she far exceeded her opponent, and the weight of her broadside was one-half heavier. The *Guerrière* was old, and absolutely worn out with long cruising. She was on her way home to be repaired or condemned; her bowsprit was badly sprung, her mainmast had been struck by lightning and was in a tottering state, her gunner stores were deficient, and what remained of her powder had lost its strength from damp and long keeping. She had on board only 244 men and nineteen boys; yet the gallant young Dacres fought the big *Constitution* for nearly three hours. A flag thus lowered could carry no honour to the victors. The republicans were very desirous of taking the *Guerrière* into port as a trophy, but the poor frigate was so rotten and so shattered in her hull, that by daylight of the morning after the action she was found to be sinking. Having removed the prisoners on board, Hull gave orders to set her on fire; and she soon blew up. Although they returned to port without their trophy, the American captain and his officers and men were applauded to the skies, were honoured with the thanks of the government, and were presented with 50,000 dollars as a reward for their wondrous exploit. As for the Americanism of their tars, nearly one-half of the seamen of the *Constitution* were natives of England or Ireland—were renegades that might have been disposed to fight the more desperately (as many such deserters and traitors were found to do on other occasions) from their dread of the yard-arm or the gibbet, if their present comrades and brethren should be beaten and they themselves captured. It appeared in evidence on a court-martial that these British subjects on board the *Constitution* were leading men or captains of guns. Several of them were personally known to some of the officers of the *Guerrière*. In fact, there were on board the *Constitution* so many men whom the crew of the *Guerrière* considered as their countrymen, that the American captain became seriously alarmed lest some feeling of compunction and remorse, some natural return of the love of country, should induce the renegades and deserters to join the captured crew

of the *Guerrière*, overpower him and his native Americans, and carry the *Constitution* as a prize into the British port of Halifax. Hull kept his prisoners manacled and chained to the deck during the whole of the night after the action, and during the greater part of the following day.

We showed at the close of the year 1811 the temper and policy of Bernadotte as Crown-prince of Sweden, who had devoted himself to the interests of the nation over which he was called to rule, the disposition of the Russian cabinet, and the fixed determination of Bonaparte to attack the Emperor Alexander in his own vast and remote dominions, because that sovereign would not ruin his country by enforcing the Berlin and Milan decrees. He treated Bernadotte like a revolted subject and traitor: he summoned Sweden as a vassal, to enforce his decrees against the British trade; he seized and confiscated fifty Swedish merchantmen; and lastly, in January, 1812, he sent Davoust, one of the roughest and most brutal of his generals, to take possession of Swedish Pomerania and the isle of Rügen. This aggression induced Bernadotte, who had been corresponding with Russia before, to sign a treaty of alliance with the Emperor Alexander. The treaty was signed in March, 1812; and in an interview which took place between the Gascon and the czar, their plan of resistance was settled.

The astute Fouché once more interposed between Bonaparte and his ruin. He presented a memorial full of facts, arguments, and even eloquence; but, together with other advice from better quarters, it was thrown away upon the pride and conceit of the Man of Destiny, who seemed now but a foredoomed man. "I regulate my conduct chiefly by the opinion of my army! With 800,000 men I can oblige all Europe to do my bidding. I will destroy all English influence in Russia, and then Spain must fall. My destiny is not yet accomplished; my present situation is but the outline of a picture which I must fill up. I must make one nation out of all the European states, and Paris must be the capital of the world!" Such, we are told, was the rhapsody which he returned to his friendly remonstrants and advisers. Though his head was clear, both head and heart were possessed by a sort of monomania; and, just before the campaign and during its progress, as well as after its final termination, he betrayed symptoms of an alienation of mind, and of a disordered state of stomach and of general health.

Before quitting Paris, Bonaparte directed Maret, now Duke of Bassano and minister for foreign affairs, to write a letter to Castlereagh, proposing negotiations with England on the basis of the *uti possidetis*. He now professed to be

willing to grant nearly everything that he had refused during the negotiations which preceded the rupture of the peace of Amiens, but he would not relinquish his hold upon Spain, and insisted that his brother Joseph should continue to be its king.¹

Early in May, Bonaparte grossly insulted the Russian minister at Paris, and sent him his passports. On the 9th of May, the Emperor of the French, with his young Austrian empress, set off for Dresden. Obedient to his summons, the kings of his own making, Bavaria, Würtemberg, Saxony, Westphalia, and other tributary princes, met him in the fair Saxon capital. Thither also repaired the Emperor of Austria, with his empress; and the King of Prussia, who could not bring his queen, for she had been slain by the evil tongue and evil doings of Bonaparte and his agents. His Prussian majesty had been already obliged to sign a treaty which placed 20,000 men of his diminished army at the disposal of Bonaparte. The Emperor of Austria now engaged to furnish 30,000 men to act against Russian Poland. After brilliant festivals, and balls, and plays, wherein Talma played to a parterre or pit of kings, Bonaparte quitted Dresden and his wife, and posted to Thorn, where he arrived on the 2d of June. His immense army was already assembled in Poland, chiefly between the Vistula and the Niemen. Europe had never seen such a condensed host: there were 270,000 French, 80,000 Germans of the Confederation of the Rhine, 30,000 Poles, 20,000 Italians, Lombards, Tuscans, Venetians, Romans, Neapolitans, and 20,000 Prussians. in all 420,000 men! On the 24th and 25th of June, this immense army, in three large masses, crossed the Niemen, then the boundary of the Russian empire, and entered Lithuania, without meeting with any opposition.

From an army so numerous, so composed of the *élite* of European troops, and led by the first man of the age, nothing less than prodigies of victory and conquest were expected. But the result of this memorable campaign may be summed up in a brief space. With an army reduced by sickness, sanguinary battles, and the operations of the Cossacks, to 120,000 men, Bonaparte reached Moscow to encounter famine, solitude, and an universal conflagration. He began his retreat from that burning capital on the 19th of October, and was soon overtaken by all the hor-

rors of a Russian winter. On the 14th of November, when he left Smolensk, he had only 40,000 men able to carry arms. On the 5th of December he stole away from the wretched remains of his troops, to commence a rapid flight towards France. He reached Paris on the 18th of December at night. The loss of the French and their auxiliaries, in the whole of the Russian campaign and retreat, is estimated at 125,000 slain in fight; 132,000 died of fatigue, disease, hunger, and cold; and 193,000 prisoners, including 3000 officers and forty-eight generals. They had left behind them 900 pieces of cannon, and 25,000 waggons, cassoons, &c.

The British government had greatly exerted itself in aid of the Russians. A treaty of peace between England and Turkey had been concluded in 1809, and at the beginning of the present year Mr. Stratford Canning speedily, and with great ability, negotiated a treaty between Sultan Mahmoud and the Emperor Alexander, which enabled Russia to withdraw from the Danube an army of 30,000 or 40,000 men, and to bring that army upon the flank of Bonaparte's flying and disorganized forces. In the month of July a treaty of peace and amity between Great Britain and Sweden, the ally of Russia, was ratified; and in the month of August, when Bonaparte was penetrating into the heart of the Russian empire, with victory in his van, a treaty of peace and union was ratified at St. Petersburg between Great Britain and Russia. The Russian fleet, which would have been frozen up and rendered almost helpless, if left in its own ports, was brought over to winter in England. It was chiefly English money or English credit which set the armies of the Emperor Alexander in motion. A French officer who accompanied General Lauriston to the Russian head-quarters once said to us, "We had been led to believe that your credit was gone, that England was bankrupt; but, when I found everywhere that your bills of exchange and bank-notes were received and passed as if they had been gold, I trembled for the result of our daring enterprise!" English aid, both privately and publicly, was promptly given to the Russians who had suffered in the war. We have a distinct recollection of the generous sympathy and enthusiasm with which a large subscription was raised in the city

¹ Speaking of Napoleon at this time, Miguet says:—"It was in 1812 that the decline of his empire was manifest. All were weary of his domination. All those by whose concurrence he had been raised took part against him. The priests had secretly conspired since his rupture with the pope. Eight state-prisons had been officially erected for the dissidents of this party. The mass of the nation also showed itself as weary of his conquests as it had formerly been of factions. It had expected from him attention to private interests, the increase of commerce, respect for the interests of humanity, and it found itself oppressed by con-

scriptions, by imposts, by the blockade, by the prevotal courts, and by the 'consolidated taxes,' the inevitable consequences of his conquering system. He had no longer for adversaries only the small number of men who had remained faithful to the revolution, and whom he called *ideologists*, but all those who, without any precise opinions, wished to realize the material advantages of a better civilization. Abroad, the people groaned under a military yoke, and the humiliated dynasties aspired to restore themselves. The whole world was ill at ease, and a check naturally led to an universal insurrection."—*Hist. of French Revol.*

of London, for the purpose of rebuilding the city of Moscow.

Parliament, with a newly-elected House of Commons, assembled on the 24th of November. Its most noticeable measures previous to the Christmas recess were a grant of £100,000 to the Marquis of Wellington, and a grant of £200,000 for the relief of the sufferers in Russia.

A.D. 1813. After some stormy debates in the commons on the American war, in which the opposition not only blamed the ministry for the negligent manner in which the maritime part of the conflict had been conducted, but also charged them with having been the aggressors, and with having provoked an unnecessary and fatal contest, Lord Castlereagh, on the 18th of February, moved an address to the prince regent, expressing entire approbation of the resistance proposed by his royal highness to the unjustifiable claims of the American government, a full conviction of the justice of the war on our part, and the assurance of a cordial support from that house. The opposition renewed their censures, but they were too weak to try a division; the address was agreed to, *nem. con.*, as was another in the House of Lords to the same effect.

The budget was introduced on the 31st of March. The requisite supplies of the year were stated at more than £72,000,000, out of which England and Scotland were to furnish more than £68,500,000. This was a larger amount than had been voted in any preceding year; but the American war promised to be expensive, and it was generally felt that at this decisive moment we ought to put forth all our strength, in order to finish the contest in Spain, to prolong our aid to Russia, and to give encouragement and assistance to the other nations of the Continent that should rise and throw off their chains. All the estimates were voted by immense majorities. Among the ways and means were war-taxes to the amount of £21,000,000, a fresh loan to the same amount, and a vote of credit for £6,000,000.

The Russian catastrophe not only prevented Bonaparte from reinforcing his marshals in Spain, but it also obliged him to recall the best of them, and the only one among them whose generalship had cost Lord Wellington any very serious thoughts. This, of course, was Marshal Soult, who, early in the year, was removed from the Peninsula, to oppose the Russians, then about to advance through Germany to the banks of the Rhine. Soult, however, took only 20,000 men with him, thus leaving about 70,000 men to oppose Wellington, besides the army of Suchet in the eastern provinces. The army of Portugal, as it continued to be called, was now placed under

the command of General Reille, who had his head-quarters at Valladolid; the army of the centre, under Drouet, was distributed round Madrid; and the army of the south had its head-quarters at Toledo. Generals Clausel and Foy commanded separate divisions in Aragon and Biscay. Before the campaign began, Andalusia and Estremadura in the south, and Galicia and Asturias in the north, were entirely free from the French.

Doing at last what they ought to have done at first, the Spanish provisional government, with the consent and approbation of the cortes, made Lord Wellington the commander-in-chief of the Spanish armies, and took some measures to improve the discipline and effectiveness of their troops. In the main, however, these things remained but as a good intention; for the regency had hardly any money except what they received from England, the insurrections and wars of independence in the South American colonies stopping at the fountain-head the supplies which Spain had been accustomed to receive from that quarter; and the pride, ignorance, and indocility of the Spanish commanding officers, and the slothfulness and indiscipline of the Spanish troops, were evils not to be remedied of a sudden, or in the course of one trying campaign. And therefore the only army upon which Wellington could rely for field operations consisted of about 63,000 British and Portuguese infantry, and about 6000 cavalry. His lordship commenced active operations about the middle of May, making the allied army enter Spain in three separate bodies; the left under Sir Thomas Graham, the hero of Barrosa, the right under the indefatigable Hill, and the centre under his own immediate command. The combined movements of these three divisions were so well managed that the French were taken by surprise. By the 20th of June, the whole of the allied army was beyond the Ebro and concentrated near Vittoria. On the 19th the enemy, commanded by Joseph Bonaparte, having Jourdan as his major-general and director, had taken up a strong position in front of Vittoria. They were attacked there on the 21st, and were more thoroughly beaten and cut up than ever they had been before by Lord Wellington. The intruding Joseph had a very narrow escape; his travelling carriage, his papers, his fine wardrobe, some of his women, much of his plunder, and his splendid side-board of plate, were taken, and several of his attendants were captured, or cut down, or shot in their flight by the revengeful Spaniards. The French army rallied at no point of its line, and they carried off with them only one gun and one howitzer. "The soldiers of our army," said Lord Wellington, "have got among them about £1,000,000 sterling

in money, with the exception of about \$100,000 which were got for the military chest." Among the innumerable trophies of the field was the baton or marshal's staff of Jourdan. Lord Wellington sent it to the prince regent, who gave him in return the baton of a field-marshal of Great Britain. Of arms and materials of war there were taken 151 pieces of brass ordnance, 415 caissons, more than 14,000 round of ammunition, nearly 2,000,000 musket-ball cartridges, 40,668 lbs. of gunpowder, fifty-six forage-waggons, and forty-four forge-waggons. When the battle began, the numerical strength of the two armies was about equal. But on the side of the allies the Spaniards, though they behaved better

than they had hitherto done, were not to be compared with French soldiery. The French had in many actions made greater slaughter of a Spanish army, but they had never, in any one instance, reduced an army even of raw volunteers, to such a state of total wreck as that to which their own army was now reduced. They saved themselves from destruction or from captivity by abandoning the whole *matériel* of the army, and by running like a mob.¹

The news of this decisive battle of Vittoria gave strength, spirit, and union to the allied armies acting against Bonaparte in Germany, dissipated the last misgivings and indecisious of Austria, broke up the congress assembled at

GENERAL VIEW OF VITTORIA — From a painting by W. Tellier

Prague, which before would have treated with the French, and have left them in possession of many of their conquests; and it gave to the voice of the British government and its envoys a vast increase of consideration and influence. Without

this battle of Vittoria and its glorious results in June, there would have been no battle of Leipzig in October.

King Joseph hardly once looked back until he had reached the strong walls of Pampeluna,

¹ By the time that the battle of Vittoria was fought Napoleon had lost in Spain 140,000 men. Most of these must have perished in the perpetual warfare the French had to wage with the guerrillas. The author of *Lights and Shadows of Military Life*, written by a Frenchman, and edited by the late General Sir Charles Napier, gives some interesting notices of this warfare.—"In Spain we never travelled singly, the first tree would have served as a gibbet for the imprudent wight who should have ventured alone upon any road. It was necessary to go in bodies, with advanced guard and rear-guard always ready to fire. But in travelling in Spain we were obliged to make frequent halts. At each town some portion of the convoy found themselves at the place of their destination, the column, thus weakened, needed fresh reinforcements before it could pursue its route. Half, nay, I may say almost the whole of the French army was occupied in escorting couriers. We had garrisons in all the towns and in all the villages upon the highroads, and very often midway between them there had been erected little forts, block-houses, redoubts, each occupied by perhaps a hundred soldiers. All these posts, all these garrisons, furnished a greater or less number of men for escorts according to the presumed force of the bands of insurgents that were in the environs

This service was extremely arduous, and it may be affirmed that it caused the death of more Frenchmen than the most sanguinary pitched battles. We were masters of all the towns and villages upon the road, but not of the environs at the distance of 100 paces. It was a war of every day, of every hour. If the escort was numerous and well commanded it met with nobody in its way, in the contrary case, the enemy appeared on every side of us. It may be said that in Spain he was everywhere and nowhere.

"The reports that reached us respecting his force and his movements were scarcely ever true, whereas he was apprised day by day, hour by hour, of what we were doing. We were counted in every village, and the enemies' leaders always knew which was our weak side. For the rest, these bands fled before a few riflemen. Unless greatly superior in number, they would not dare to attack us boldly, and in this case they had the immense advantage of surprising us in ambushes. The country is so broken by mountains and precipices that it is impossible to guard the roads properly. When a chief of guerrillas had come back from an expedition his whole band dispersed, the arms were hidden, and each returned to his home, after agreeing to meet again on such a day, perhaps twenty or

in Navarre, among lofty mountains, the offshoots of the Pyrenean chain. He did not stay there long. A French garrison was left at Pampeluna as well as San Sebastian; but both places were very soon invested by the allies. Except on the eastern coast, where Suchet kept his ground with about 40,000 men, there was not a spot in all Spain where the French could move or show themselves.

Some portions of the allied army went right through the mountain passes in pursuit of the French; and upon the 7th of July, the last divisions of the army of Joseph Bonaparte, after being driven from the very defensible valley of San Estevan, descended the reverse of the Pyrenees, and entered France. Lord Wellington then became master of the passes of San Estevan, Donna Maria, Maya, and the renowned Roncesvalles; and his sentinels looked down from the rugged frontier of Spain upon the level and fertile plains of France, which lay in sunshine at their feet as if inviting their approach. Thus, in five and forty days from the opening of this memorable campaign, Wellington had conducted the allied army from the frontiers of Portugal to the confines of France; he had marched 400 miles, had gained one of the completest of victories, had driven the French through a country abounding in strong positions, had put the intrusive king to a flight which was to know of no return, had liberated Spain from everything but the evil consequences of Spanish folly, impatience, vanity, and presumption; and he now stood as a conqueror upon the skirts of France.

Bonaparte felt the need of Soult's services in Germany; but, seriously alarmed for the safety of his own southern frontiers, he sent away that marshal from the grand army with very extraordinary powers, with a sort of *alter ego* character, and with the title of "Lieutenant of the Emperor." Soult was to take the entire command of the defeated troops, to re-equip them, to gather formidable reinforcements, to lead his masses speedily against Wellington, to clear the French frontier and the passes of the Pyrenees, and to relieve Pampeluna and San Sebastian, and drive the allied army behind the Elbro. And all this Soult

undertook to do; or he thought it expedient to tell the army that he had undertaken it, and that his hopes were good. He flew through Germany and through France, giving his urgent and imperative orders, and collecting all manner of disposable forces: and on the 13th of July he reached the southern frontier, and took the command of the disorganized fragments of Jourdan's army. But after the faintest gleams of success in the Maya and Roncesvalles passes, Soult failed completely, and after several sanguinary battles among the Pyrenees, which greatly thinned his army, was driven back to France by the 1st of August. During these "Battles of the Pyrenees"—they were ten in number—Sir Thomas Graham, with a considerable part of our army, was engaged in the siege of San Sebastian, being as usual badly provided with *matériel*, and having hardly any sappers and miners. On the 30th of August, a French column attempted to relieve this place, but the spirit of the men had so sunk that they allowed themselves to be beaten by a corps of Spaniards. On that same day San Sebastian was stormed and taken. This town, built on a low sandy isthmus, with the river Urumea on one side, the harbour on the other, and the cone-shaped Monte Orgullo behind, had the advantages of her position so greatly strengthened by walls, bastions, and batteries, most of them lately constructed, that it was able to maintain a formidable and protracted resistance. The castle surrendered on the 8th of September, with 2500 men in it; but this terrible siege had cost the allies nearly 4000 in killed and wounded. Also, on the 31st of October, the 4000 French in Pampeluna, having lost all hope of relief, surrendered to Lord Wellington's tried and steady friend Don Carlos de España, who had latterly commanded the blockading forces.

On the 10th of November, our troops began to descend from the Pyrenees into the valleys on the French side. Soult now occupied a very strong position on the Nivelle. Some affairs of posts followed; and on the 13th General Hill with 13,000 men repulsed and defeated Soult with 30,000. Then, in despair, the French marshal retired into his entrenched camp. Nothing of

thirty leagues off. The French set out in pursuit of them, they did not meet with a creature; and the Paris newspapers proclaimed to all Europe that such or such a general had, with an intrepidity deserving the highest admiration, driven the brigands into their mountains; that they were a cowardly crew, unworthy to bear arms, &c. But all these fine official phrases did not prevent the brigands, as they were termed, from assiduously pursuing their vocation. By harassing us incessantly they fatigued our men, who fell ill. They occupied half the army in protecting couriers, and very frequently a battalion was not sufficient to escort a letter!

"The great art in partisan warfare is always to attack, and never be forced to accept battle. The guerrillas made it their study not to be found when we looked for them; to pounce upon us like vultures when we least expected them; and it

must be confessed that they effectually performed their task. Sometimes it happened that they were hanged when taken in arms: this was the dark side of their calling, the reverse of the medal; but they served the French who fell into their power in the same manner; nay, they frequently carried their reprisals to the most revolting barbarity. On several occasions they flayed alive the prisoners whom the fortune of war had thrown into their hands; many of these miserable wretches were sawed asunder between two planks: one of my friends was buried alive in the ground, all but his head, which served as a mark for the savages to play at bowls. One might fill volumes with the atrocities committed on both sides in this graceless war; but I can affirm, without fear of being contradicted by any one, that we were always less cruel than the Spaniards."—*Lights and Shadows of Military Life*, p. 282, 285-287.

importance occurred on the Nivelle during the few remaining days of the year 1813, for the allied army had need of rest and reinforcements.

While the grand allied army under Wellington had been gathering all these laurels, the badly-

of considerable ability. Murray found that the *morale* of this heterogeneous *corps d'armée* was exceedingly bad, and that fierce jealousies and quarrels were raging between the British and Spanish soldiery, and between the latter and the Sicilian and Calabrian corps in our pay. Being, however, ashamed of the long inaction at Alicante, Sir John Murray, early in March of the present year (more than two months before Lord Wellington commenced his brilliant advance from his Portuguese cantonments), moved into the mountainous district of Castalla, drove Suchet's outposts before him, and placed his own advanced post about Biar. In April, Suchet took the field in force, and on the 12th marched against the advanced post which Sir John Murray had established in the pass of Biar, drove it in, and captured two mountain guns. Then, rushing

SAN SEBASTIAN — From a painting by W. Telbin

organized expedition which had been sent from Sicily and from the Balearic Islands to the coast of Spain, and which had been under the command of so many generals in a short space of time, had done nothing to reflect honour on British arms. But this fault lay more with the British government, and the Spanish commanders and functionaries, and the bad composition of most of the auxiliaries or mercenaries which Lord William Bentinck had sent down from Sicily, than with the British generals who, one after the other, had the misfortune to command such troops and to serve under such disadvantageous and perplexing circumstances. There was failure—perhaps there was disgrace: but this great consideration is ever to be borne in mind—that but for the presence of this allied force on the eastern coasts and in Catalonia, Suchet, the most successful of all the French generals in the Peninsula, might have started from Valencia, have traversed the breadth of Spain, and either have joined Jourdan and King Joseph with 30,000 fighting men before the disastrous and decisive battle of Vittoria, or have joined Soult when he had forced his way back into Spain through the Pyrenean passes, and was hammering at the allies in order to force his way onward to Pampeluna. After the command of the allied forces in the east had been tossed from hand to hand like a shuttlecock, it was given to Major-general Sir John Murray, who was considered an officer of spirit and

through the pass, but with only three divisions of infantry and two brigades of cavalry, Suchet, on the 13th, attacked Sir John Murray, who had chosen and occupied an excellent position in the mountainous country of Castalla. The French reached the upper slope of the mountain; but a close steady volley from the British 27th, and a bayonet-charge by the same regiment, drove them down again with considerable loss. Some of the Spaniards behaved well, and supported this charge of the 27th, which so disheartened Suchet that he made no second attempt, but retreated immediately through the pass of Biar, and thence by the road by which he had advanced. Just at this moment, owing to some absurd apprehensions on the part of Lord William Bentinck and our ministers at home, that Murat might invade Sicily with part of the Neapolitan army, and place that island in jeopardy, 2000 British troops were withdrawn and sent back to Sicily. At the end of May, Sir John Murray quitted Alicante by sea, and carried the army back to Catalonia, to besiege Tarragona. This enterprise ended in a total failure, not unattended with disgrace. Lord William Bentinck now arrived, and took the command of this unlucky army. After some manœuvring and a very little fighting, Suchet removed the French garrison, destroyed the fortifications, together with a part of the town of Tarragona, and retreated behind the Llobregat. This was in the middle of

August. The allies now entered the desolate city, and made the convenient port of Tarragona the rendezvous of the British fleet. Making an imprudent advance, Lord William Bentinck sustained a severe check at Viliafranca in September. Shortly after these operations his lordship returned to his political and diplomatic duties in Sicily. He was succeeded in the command by General W. Clinton, who found this allied army of the east doing nothing and incapable of doing much. When Clinton proposed to invest Barcelona the Spaniards refused to assist him.

In other quarters nearly every day of this year had been a day of crisis. On his return to Paris, on the night of the 18th of December, 1812, Bonaparte found that conspiracies had broken out even in his capital during his absence in Russia; that in many parts of France the people had testified great joy at the several times falsely reported news of his death; that discontent or absolute disaffection had shown itself in different directions, and among various classes; and that some of his marshals and generals were not exempted from the suspicions of his secret police. The new conscriptions were, however, enforced with the utmost rigour; the militia or national guards were drafted into the skeleton battalions of the regular army; some of the guards and other troops were immediately recalled from Spain; the sailors of the useless French fleets were regimented and sent to serve on land—no possible means were neglected to swell the military force, and to enable the foiled conqueror of nearly all Europe to retrieve his fortunes by one tremendous and decisive campaign. And to such an amount were his forces swollen that, in the year 1813, Bonaparte had (counting all his troops, in all quarters, and of all services) from 700,000 to 800,000 men under arms. Out of this number he collected in Germany, early in the spring, an army of 350,000 men.

The Emperor Alexander had lost little time in putting his armies in the track of the fugitive enemy. He took the field himself in the very midst of that horrible winter, and flew in sledges over the snow from Petersburg to Wilna, where, on the 22d of December, 1812, his now concentrated army and his hordes of Cossacks saluted him with the most enthusiastic hurrahs. From Wilna the Russian army advanced in two grand divisions, the one taking the direct road by Warsaw, the other taking the road by Königsberg and the northern provinces of Prussia. The majority of the Poles now received Alexander as a deliverer; the Prussians, with so many wrongs to avenge upon the French, welcomed the Russians with transports of joy; and such was the national enthusiasm and the rage against Bonaparte, that no attempts of the Prussian king and

government could possibly have prevented or delayed the junction of the Prussian with the Russian troops. General Yorck, who commanded the 20,000 Prussians who had been sent to serve as a contingent force in the invasion of Russia, had behaved with rare sincerity and moderation. He was serving against his will and against the will of his sovereign, he was serving against the dearest interests of his country; and, when the retreat from Moscow became a *débâcle*, he was so placed, in the line of retreat, that if he had only moved his corps the French loss must have been still more frightfully increased, while, if he had turned his arms against them and had fallen upon them in their confusion—as many of his officers and nearly all his men wished him to do—not one out of every ten of the French fugitives that afterwards rallied and made head in Germany would have escaped. But Yorck remained true and steady to the treaty which bound his master to the French, until the moment when his sovereign revoked his orders, and declared that treaty to be broken by Bonaparte. The French still occupied Dantzic, Glogau, Stettin, and other Prussian fortresses on the Oder; they had 30,000 men near Posen, and a strong garrison in Berlin. Frederick William was in a manner besieged in his own capital, and most of his troops were scattered in the midst of French cantonments and formidable French garrisons. Notwithstanding, on the 22d of January, his Prussian majesty suddenly quitted Potsdam and repaired to Breslau, where he could give the hand to the advancing Russians, and correspond directly, or confer personally, with the Emperor Alexander.

After an interview with the czar, Frederick William sent to Bonaparte to propose an armistice, the conditions of which should be that the French should evacuate Dantzic and all the Prussian fortresses they occupied on the Oder, and retire behind the Elbe into Saxony, in return for which the Emperor Alexander would stop the march of his victorious armies, and remain behind the Vistula. But this proposition was indignantly rejected by the Emperor of the French, who well knew that, in his case, to recede was to fall. On the 28th of February, or as soon as he learned the rejection of his proposition by France, Frederick William concluded a treaty of alliance offensive and defensive with Russia. This treaty, being ratified at Kalisch, became the basis of the *sixth coalition* against France. By the treaty Prussia engaged to furnish 80,000 men, without counting her *levées en masse*; and Russia promised 150,000 men. Austria was invited to join the league, which as yet proposed little more than the liberating of all Germany; but the court of Vienna, though it

increased its armies, and collected an imposing force in Bohemia, close to the frontiers of Saxony, professed a desire to remain neutral.

The Russians now blockaded Dantzic, and advanced from the Vistula to the Oder, where they were joined by the Prussian general Bulow and his veterans. Eugene Beauharnais fled before the allies; and he was sorely molested on his retreat by the Prussian insurgents and pulks of Cossacks. On the 4th of March, Berlin was

clear of the French the whole of Pomerania and Mecklenburg, and then inundated the country on the Lower Elbe. This carried the flames of insurrection into other states and populous cities. Beauharnais repulsed the Russian division of Wittgenstein, dispersed, on the 5th of April, a corps of observation established at Magdeburg, threatened the road to Berlin, and stopped for some days the advance of the allied van. After this check, however, the allies advanced and

occupied Leipsic. Beauharnais had been rapidly reinforced by troops from all parts of France and from Italy; and now, on the 25th of April, when his stepfather arrived from Paris, the line of the Elbe was defended by a force far superior (numerically) to any that the Emperor Alexander and Frederick William had near to it. As soon as he reached his army Bonaparte determined to resume the offensive, hoping to strike a grand blow before the allies should have time to collect their forces in one great head, and by a single battle to recover Leipsic, Dresden, Berlin. Some of the Russian generals, in command of divisions which had been too widely scattered, were taken by surprise; other commanders, both Prussian and

COSSACKS.—1 Cossack of the Line 2, 3, Cossacks of the Don.—From Military Costumes of Europe and drawings in possession of the Earl of Kinnaird

evacuated by the French; even Dresden was evacuated on the 27th of March; and, after having reinforced some of the French garrisons left in the countries from which he had fled, Beauharnais rallied behind the Elbe with about 40,000 men. But every day brought some fresh proof of the detestation in which the French were held throughout Germany—brought some unquestionable evidence that the fire was at last kindled in the great Teutonic heart. Fifty, a hundred insurrections broke out simultaneously; and day and night the cold March air was filled and warmed by the patriotic songs of the German students, who had thrown away their pens and books for swords and muskets, and who were calling upon all classes—upon every man or youth of the Germanic breed—to follow their example, and aid in expelling the oppressors and demoralizers of their country. Körner's "Men and Cowards," and "Song of the Sword," wrought more miracles than the "Marseillaise Hymn." Germany had slept and dreamed for an unseasonably long time, but her wakening was sublime and full of hope. Ten thousand Cossacks under Tettenborn, aided by the insurgents, swept

Russian, were too far in the rear to know of the rapid approach of Bonaparte, who, on the 2d of May, fought and won—but not without immense sacrifices—the battle of Lützen. On the 21st he attacked the Russians and Prussians again, and obliged them to retire from the well-contested field of Bautzen. But in both these affairs Bonaparte had been on the very verge of a defeat: the two victories led to no decisive result; the allies retired in good order, losing few prisoners and no guns. Bonaparte bitterly complained of this; but his generals observed to one another that these were no longer the days or the troops of Marengo, Austerlitz, or Jena, when one battle decided the fate of a war.

On the 14th of June, Great Britain made herself a party to the coalition, or to the treaty concluded between Russia and Prussia.¹ Some Eng-

¹ On July the 8th, a convention, known by the name of the Convention of Peterswalden, took place between Great Britain and Russia. On September the 9th, a triple treaty of alliance between Russia, Austria, and Prussia, was ratified at Toplitz; and on the 3d of October a preliminary treaty of alliance between Great Britain and Austria was signed at the same place. The court of Denmark could not yet free itself from its French toils, and on the 10th of July, when the French had gained the

lish officers of the highest rank repaired to Germany and to the head-quarters of the allies, and abundant assistance was promised. The best present aid we could give was to find full employment for the large body of veterans still left in Spain. This was understood by the allies; but Lord Wellington surpassed all the expectations they had formed of him, high as those expectations indubitably were.

The allies withdrew both from Leipsic and from Dresden; and Bonaparte entered the fair capital of Saxony. He now consented to an armistice, which was to extend from the 5th of June to the 22d of July. Austria still professed goodwill, and an anxious wish to mediate; and Metternich himself hurried to Dresden, to proffer his good offices, and to act with the whole weight and authority of the cabinet of Vienna. He proposed that the French should entirely evacuate Germany, and that the Rhine should be the boundary of the French empire in that direction. The successive revolutionary governments of France, and Bonaparte himself, had repeatedly declared that the Rhine, the Alps, the Pyrenees, and the seas, were the natural boundaries of France; Metternich did not ask him to give back Savoy in the Alps, or his vast conquests and annexations beyond the Alps; the only point he insisted upon being the renunciation of everything beyond the Rhine. But Bonaparte arrogantly and resolutely refused either to give up the ground he had occupied beyond the Rhine, or to abandon the Confederacy of the Rhine, which was nothing more than a French combination against the independence and security of Austria, Prussia, and all Germany. True to his old practice, when Bonaparte found that insolence and bullying would not do, he tried the effects of cajolery and temptation. He would not think of offering or promising to give back to Austria her large and rich possessions in Upper Italy; but he tempted her with the promise of Dalmatia and all the poor and rugged Illyrian provinces, hinting that they might be extended, both inland and along the sea-coasts, at the expense of Austria's ancient foe, the Ottoman empire. Spurning the contemptible bait, Metternich replied that things had come to that pass that Austria could no longer remain neutral; she must either be with France or against France.

battles of Lutzen and Bautzen, when the star of Bonaparte seemed again to prevail and while the congress of plenipotentiaries were assembled at Prague, a reciprocal treaty of alliance and guarantee between France and Denmark was ratified at Copenhagen. It could not but happen that the Danes should be made to pay afterwards for this conduct of their government. But there was more than this: on the 3d of September, when Bernadotte and his Swedes, far away from their own frontiers, were advancing with the allies into the heart of Germany, Denmark declared war against Sweden!

Such, however, was the awe in which some of the advisers of the European sovereigns still stood of the mighty means and military genius of the ruler of the French, that conferences for a peace were resumed at Prague, Bonaparte engaging to prolong the armistice till the 10th of August; nor was the unmanly and now irrational diffidence fully dissipated until the news of Wellington's great achievement at Vittoria was carried through Europe and across the mountains of Bohemia. The diplomatists of the allied powers then sounded a higher note; the armistice expired on the 10th of August, and Austria joined the allies.

Months before the declaration of Austria the British government had sent very important aids into the north of Germany; it called upon his majesty's old and not unattached subjects, the Hanoverians, to rouse themselves into action and join the common cause; it furnished with a liberal hand money, arms, ammunition, stores, clothing, &c., not only to the Hanoverians, but to the Prussians, and also to the Swedes, who were about to commence operations from the southern shores of the Baltic. Lord Castlereagh's brother, Sir Charles Stewart (the late Marquis of Londonderry), was despatched to the seat of war, charged, on the part of his sovereign, with all the correspondence relating to the Prussian, Swedish, and Hanoverian armies. Sir Charles had especial letters of authorization to Bernadotte; and during the natural doubts and vacillations of that extraordinary Frenchman, that soldier of fortune and enthroned man of the revolution, he hardly ever quitted him. The Hanoverians flew to the arms which were offered to them by England with enthusiasm. In addition to our immense supplies of military stores, our government allotted £2,000,000 sterling to sustain the operations of Bernadotte and his Swedish army, and £2,000,000 more was given as a direct aid to Russia and Prussia. At the same time £500,000 was granted to Russia, in order that she might give equipment and efficiency to her fleet. Upon these largesses Russia undertook to raise her force in the field to 200,000 men, and Prussia to raise hers to 100,000. Even now, but for English money and English credit, and the promptitude of our manufactories in producing arms and all the materials of war, the allies would have failed in their campaign.

A series of battles was fought about Dresden on the 24th, 25th, and 27th of August, between the Austrians and Prussians on one side and the French and their German and other auxiliaries on the other. Bonaparte was decidedly successful. But, in rashly pursuing the allies into the mountains of Bohemia, Vandamme, with a corps of 30,000 men, was cut off and surrounded, and

was finally made prisoner at Kulm, with about 8000 of his men. Oudinot was beaten at Gross Beeren by the Swedes and Prussians commanded by Bernadotte. Ney, who was sent to replace Oudinot, only succeeded to his misfortunes, being soundly beaten in the battle of Dennewitz, which was fought on the 6th of September, in the neighbourhood of Berlin. The Prussian Blücher, too, was now taking vengeance for all he had suffered in and after the campaign of Jena. On the Katzbach, in Silesia, he routed the French opposed to him, and dislocated Bonaparte's base of operations. The King of Bavaria now made a separate peace with Austria: the King of Saxony and ex-Grand-duke of Warsaw was more steady, but his Saxon troops, like the rest of the German auxiliaries, began to desert from the French. At last, after a painful struggle between pride and necessity, Bonaparte turned his back to the

narrow bridge, or rather a succession of bridges, the allies, after a desperate struggle with the French rear, burst into the town, and, the bridge being blown up to prevent the allies from pursuing those who had already passed over it, 25,000 Frenchmen, caught in the town as in a trap, were compelled to lay down their arms and surrender as prisoners of war. The retreat from Leipsic was almost as disastrous as the retreat from Moscow. The French army was completely disorganized. On the 1st of November Bonaparte was at Frankfurt. But he could find no rest at any place on German soil. At last he reached the Rhine, and passed over the 70,000 or 80,000 men, who were all that remained to him out of the army of 350,000 with which he had opened the campaign in the month of May. Having placed this fragment of the grand army on the left bank of the Rhine, he set out for

Paris, where he arrived late on the evening of the 9th of November.

About 80,000 men, whom Bonaparte had left behind him in Magdeburg, Stettin, Dantzic, and other Prussian fortresses, all surrendered to the allies, a little sooner or a little later. Dantzic held out the longest; but even that strong garrison capitulated on the 24th of December. In Paris the humbled conqueror found none but gloomy faces. Of a sudden the French had become weary of the trade of war. So long as victory and conquest followed the standard of their

THE MARKET PLACE, LEIPSIC, during the Fair

allies, and began his retreat upon Leipsic with a dispirited army. He was closely followed by Russians, Austrians, Prussians, and Swedes. At Leipsic he determined to make a final stand. 'Give me but one victory,' said he, 'and Germany may yet be saved.' He fought two bloody battles at Leipsic, but neither of them was a victory for him. On the 16th of October the first battle took place: it was fought gallantly on both sides, but the allies had now a great superiority in numbers, and the French were repulsed and driven close upon the ramparts of the city. On the 18th the second battle was fought: the French divisions soon lost ground; 10,000 Saxons raised the patriotic shout for Germany, left them in a body, and went over to the allies. After this nothing remained but flight; and even for flight it was too late an hour. Bonaparte made his dispositions to effect his retreat towards the Rhine; but, while his army was filing out of Leipsic, on the morning of the 19th, by a long

emperor, so long as the national vanity was elated and the expense of the war supported by the countries into which it was carried, the great body of the nation could, with a wonderful facility, reconcile themselves to the tremendous loss of lives and of limbs: but defeat, reverse, disgrace quickened their domestic feelings, made them ask for their brothers and their children, and rendered, for the first time since the revolution, the war odious in their sight. They had previously borne nearly twenty years of almost incessant war, and every year, every separate campaign, however glorious or successful, had witnessed the immolation of immense numbers; and all this they had borne with a light heart and with very little murmuring—*Nos enfans sont morts sur les champs de la victoire, et pour la gloire de la France* [Our children are dead upon the fields of victory, and for the glory of France]—but one single year of disaster had changed their tone, and now it was—*Nos moyens, nos frères, nos enfans*

sont sacrifiés à l'ambition d'un tyran [Our means, our brethren, our children are sacrificed to the ambition of a tyrant]. The suddenness of the change is, in itself, a full proof of its cause and origin. The legislative body, which had so long been timid and submissive, now ventured to murmur and remonstrate. Bonaparte rated them in his peculiar manner, and told them that France had more need of him than he had of France—that in three months all their enemies would be driven from their territories, or he would be dead.

Although some men had reappeared in their secret sessions, who both felt that the imperial throne was not worth three months' purchase, and who now wished its overthrow, the senators voted and decreed whatever was bidden. They had already passed a decree for a new conscription of 300,000 men, including all those who had escaped the conscriptions of former years; and they had nearly doubled the taxes. But the people were worn out by the tremendous sacrifices they had already made: their newly-found repugnance to the horrors of war continued, even to the evaporation of their patriotism.

Bonaparte had said before this, that rather than give up Holland, he would sink it under the sea. But by this time nearly the whole of that country was freed from his intolerable dominion. Several previous attempts had been made; and at the beginning of the present year, when all the consequences of the Russian campaign were known, an extensive insurrection had been planned at Amsterdam in favour of the long-expelled Prince of Orange. This spontaneous and premature popular insurrection was quenched in blood. But when news arrived of Bonaparte's defeat at Leipsic, and of his ruinous retreat thence, the Amsterdam confederates and other bands of patriots resumed their labours. At first they proceeded with great caution and secrecy; but on the 15th of November, when a portion of the grand allied army was close upon their frontiers, the people of Amsterdam rose in a body, hoisted the Orange colours, and proclaimed the sovereignty of that house. The French authorities thought proper to quit the city. The confederates appointed the zealous Orangeist Count Styrum governor of the Hague in the name of the Prince of Orange; and the new governor issued a proclamation in the name of his prince announcing the happy change. So completely had the country been drained of its native troops and resources during the three years and a half that it had been annexed to France, that Count Styrum and the confederates could scarcely muster 1000 Dutch soldiers; and they had no arms, ammunition, accoutrements, military stores, artillery, or horses. They sent deputies over to London to tell the Prince of

Orange that his nineteen years of exile were over, and to invite him back to assume the government. Favoured by wind and weather, this deputation reached the British capital, where they excited a fresh joy and exultation, on the 21st of November. By the 25th the Prince of Orange had embarked in a British man-of-war; and he proceeded to his native country with the assurances of the British government that every necessary aid should be given to him, whether in troops or arms, money or military stores. The prince entered the city of Amsterdam on the 1st of December. In their reverses the French committed many shameful outrages. Some of them fled into Belgium, but others threw themselves within the formidable walls of Bergen-op-Zoom. Measures were promptly adopted for the formation of a Dutch army; and within the short space of four months 25,000 men were raised, armed, and equipped.

The Swiss authorities had entered into a convention with the Austrian generals on the 19th of December, engaging to allow a free passage through Switzerland. Thus the eastern, as well as the southern and northern frontiers of France, were left open to the allies.

Our imperial parliament, assembling much earlier than usual, met and discussed this great crisis of the civilized world. On the 4th of November the session was opened by the prince-regent in person. After a brief allusion to the king's continued indisposition, the speech from the throne passed to the subject of the great and splendid successes with which his majesty's arms and those of his allies had been blessed in the course of the present year.

The speech was received with universal assent and joy; the voice of opposition was charmed into silence, or into open and hearty concurrence; so much unanimity had not been seen in parliament for a very long time; in both houses the addresses were carried without the slightest opposition. Lord Castlereagh, with a not unbecoming national pride, detailed some of the exertions which England had made in the course of the present year. When the grand campaign of the allies began in the north, every party was poor, and needed immediate supplies of money; the great arsenals and storehouses of Europe were still in the hands or under the control of the enemy. The British government had lost no time in supplying all wants. Independently of the glorious services of our own army in the Peninsula, independently of the direct aid that had been given to Spain and Portugal, indirect aid had been afforded to the Spanish and Portuguese armies to a great extent. The aid which had been granted to Spain alone, during the last year, in money, stores, &c., amounted to about

£2,000,000 sterling. During the last two years, Portugal had received in the same way £2,000,000. For Sicily, £400,000 had been voted; for Sweden, who had well earned the money, £1,000,000. There had been paid in subsidies to the great allied powers nearly £4,000,000. Russia had received £2,000,000, which had enabled her to join the common cause with so immense an army; and the aid given to Prussia had enabled her to

double the amount of the force for which she originally pledged herself, or to throw into the field 200,000 men. Austria, upon taking the field, had been accommodated with bills of credit of £1,000,000 sterling, together with 100,000 stand of arms, and a large quantity of military stores. In the mere article of small-arms, in addition to the great expenditure and waste of our own army, we had, in the course of the year, sent 500,000 muskets to Spain and Portugal, and 400,000 to other parts of the Continent, as subsidiary aid. Wherever a government or a people had stepped honestly forward, and had asked

for assistance, it had been promptly given by England. This promptitude, and this display of our prodigious resources, which, after so many years of war, were found to be greatest, most matured, and best systematized when they were most needed, had encouraged the friends and dismayed the enemies of Britain. It was not to be supposed that the war, even now, could be terminated without further exertions on the part of England; nor would his lordship calculate that the expenditure of the next year would fall below the standard of this year. In round numbers he estimated the sum necessary for military expenses on the Continent for the year 1814 at £10,000,000, namely, £4,000,000 for the Peninsula, and £6,000,000 for Germany, &c. During the year, the entire British force under arms, in

all parts of the world, exceeded 230,000 men; yet, notwithstanding our heavy losses in the Peninsula and among the Pyrenees, the sacrifice of human life was but a small per centage on the whole.

It was resolved at the same time not to decrease, but rather to increase the naval forces of Great Britain; and that 140,000 seamen and 31,000 marines should be employed for the ensuing year. They had

turned their attention rather tardily to that quarter; they had been obliged to send a very large fleet into the Baltic, and to scatter their ships in almost every sea, and in all the four quarters of the globe; but now ministers had adopted schemes for sweeping the American flag from the ocean.

The parliament had been assembled early with a view to a long prorogation. It was on many accounts not advisable that a popular assembly should continue publicly debating the great question of war and peace during the last critical stages of the war; but what was of still more im-

LORD CASTLEREAGH — From a portrait by Sir Thomas Lawrence

portance was, that ministers should be relieved, for a short season, from their parliamentary attendance and toils, and be so enabled to devote an exclusive attention to the last act or the last scenes of Bonaparte. The great business in hand was to terminate the war; there would be time enough to deal with other business afterwards, when men's minds would be less agitated. Upon the 26th of December, Lord Castlereagh moved the adjournment of the house till the 1st of March, 1814; and a similar motion was made by ministers in the House of Lords. In both places some strong objections were taken. The ministerial motion was, however, carried in both houses without a division; and thus the government was enabled to devote its whole attention to the arduous task in hand.

CHAPTER IX—CIVIL AND MILITARY HISTORY.—A.D. 1814—1815.

GEORGE III.

Closing acts of the war—Advance of Wellington into France—He defeats Soult at Orthez—Louis XVIII proclaimed at Bordeaux—Suchet leaves the Peninsula with his army—Soult makes a stand at Toulouse—Battle of Toulouse—Wellington enters the town—Treacherous sortie of the French from Bayonne—They take Sir John Hope prisoner—Last efforts of Bonaparte—Their hopelessness—Manifesto of the allied powers offering peace to France—The conditions—The allies close upon France—Bonaparte continues the campaign—His successes and reverses—Paris capitulates, and the allies enter the city—Return of the Bourbons to France—Provisional government appointed—Bonaparte abdicates—He retires to Elba—Treaty of peace between the allied powers and France—Its conditions—Remnants of the war—Holland and Belgium cleared of French troops—Denmark punished for its adherence to Bonaparte—The King of Sardinia restored—Austria resumes possession of Venice—The pope restored—Ferdinand placed on the Spanish throne—The congress of Vienna—Tidings of Bonaparte's flight from Elba—The war measures resumed—Bonaparte's preparations to return to France—His march to Paris—His preparations for a fresh warfare—He commences the campaign—Engagements at Ligny and Quatre-Bras—Battle of Waterloo—Its principal movements—Final and entire defeat of Bonaparte—He abdicates in favour of his son—The exception refused—Paris occupied by the British and Prussian armies—The Bourbons resume the government—Bonaparte attempts to escape to America—He surrenders to Captain Maitland—He is brought to England in the *Bellerophon*—His death in St. Helena—Bloodless character of the Bourbon restoration—Deaths of Labédoyère, Ney, and Murat—Temporary occupation of France maintained by the allied powers—Exactions made upon it for the expenses of the war—Large British grants for the support of the allied armies in France.

HE last act of the drama was played off with wonderful rapidity. We shall adhere to the course we have lately followed, and give precedence to the operations in which Lord Wellington and the British army were immediately engaged, for these events appertain most to English history. The operations of this comparatively small army had lost none of their importance and not an atom of their glory, by being brought into comparison with the mightier masses of the allies gathered on the Rhine and the borders of Switzerland. Wellington and his army, moreover, were at the beginning of the year farther advanced on the soil of France than any of the allies. Instead of sending reinforcements, our government thought it proper to recal some of Wellington's battalions, with some of his best officers. Thus, at the close of 1813, they had recalled Sir Thomas Graham, in order to send him into Holland, to take the command of the British forces gradually collecting there. They appear to have contemplated a still greater reduction of the noble little army which had revived all the brightness of our military fame, and given to it a new illustration; but, if they ever seriously entertained this unwise project, they yielded to the remonstrances, or rather to the plain, straightforward, unceremonious statement of facts made to them by our great captain.

As soon as his lordship could get his supplies, and could put his army in motion, he commenced

a series of operations intended to drive Marshal Soult, not only from his entrenched camp under the walls of Bayonne, but also from all the country on the left of the Adour. Early in February, in spite of the badness of the weather and the roads, he, by a succession of brilliant movements and partial engagements, drove Soult before him, making him abandon the Bidasoa altogether, quit his entrenched camp and cross the Gave d'Oléron, an affluent of the Adour. On the 27th of February he fell upon the marshal's army, concentrated at Orthez, routed it, and pursued it to the banks of the Adour. On the 1st of March, Wellington's head-quarters were at St. Sever, beyond the Adour. Through the victory of Orthez and this rapid advance, the French garrison in Bayonne was left to its own resources, and the highroad to the important city of Bordeaux—a city teeming with royalists and counter-revolutionists—was thrown open to the allies. Sir John Hope, with a division of the army, immediately invested Bayonne; and Marshal Beresford was detached with two divisions to occupy Bordeaux. On the arrival of Beresford the mayor and most of the inhabitants of Bordeaux, of their own accord, proclaimed Louis XVIII.

On the 18th of March, Lord Wellington advanced his victorious army to Vic Bigorre, and Soult retreated to some good positions at Tarbes. It was thought that the French marshal would stand and fight a general battle here, but he did not, continuing, on the 20th, his retreat towards Toulouse, where he arrived on the 24th. The

Victory could not be gained upon such ground, and in the teeth of so many strong works, without great loss: 600 of the allies lay dead on the field, about 4000 were wounded. There is the usual diffi-

culty in striking the balance of loss: Soult confessed to 3900 in killed and wounded; and, as his people had fought in good part under cover, and had not contended long after they had lost their

VIEW OF TOULOUSE — From a painting by W. Telbin

redoubts, fortified houses, and entrenchments, it is probable that his army suffered somewhat less than the allies. Before the hour of *Ave Maria* the allies were established on three sides of Toulouse, and the French were driven by Sir Rowland Hill from their exterior works in the suburb on the left of Garonne within the ancient walls of the town.

On the night of the 11th Soult evacuated Toulouse by the only road which was yet open to him, and retired by Castelnaudry to Carcassonne. He left behind him in the town 1600 wounded men, three generals (Harrispe, Baurot, and St Hilaire), various pieces of artillery, large quantities of ammunition, and stores of all descriptions. All these were taken by the allies. On the 12th Wellington entered Toulouse, to the infinite joy of the inhabitants, who were thus relieved from the dread of a siege. His lordship found the white flag of the Bourbons flying, and all the authorities and a large proportion of the inhabitants wearing white cockades and scarfs. And in the afternoon of that day the English Colonel Cooke and the French Colonel St. Simon arrived from Paris, with the news that the allies had entered the French capital, that a provisional government had been established in the name of Louis XVIII., and that Bonaparte had abdicated at Fontainebleau, as far back as the 4th of April, or six days before the battle of Toulouse was fought.

On the 14th of April, four days after Soult's defeat at Toulouse, General Thouvenot, who commanded in Bayonne, chose to make a desperate *sortie* upon the unprepared allies, who had

received the intelligence from Paris, and who believed that the beleaguered French, who for some time had been very inactive, had the same information, and would feel the inutility and barbarity of shedding more blood for a cause that was now lost. The real state of affairs at Paris had been communicated to Thouvenot by General Sir John Hope the day before, and judging of other men by his own generous nature, Hope evidently could not conceive that the French general could be capable of what must now be considered a base surprise, a savage spite, and a wilful shedding of blood. The investing forces were quiet in their positions and cantonments, and many of them were buried in sleep, and dreaming of a speedy return to their own countries, when the French, long before it was daylight, sallied from the citadel of Bayonne in great strength, rushed upon the village of St. Etienne, and upon the allied pickets in the centre, and gained some momentary advantages, bayoneting the surprised men, killing Major-general Hay, and wounding Major-general Stopford. Sir John Hope, ever foremost when there was danger, mounted his horse, and galloped up in the dark to direct the advance of more troops to the support of the pickets. He was presently surrounded, his horse was shot under him and fell, he received two very severe wounds, and before he could extricate himself from under his horse he was made prisoner. For some time the opponents could only distinguish each other's ranks by the flashing of the muskets. The fighting was very severe; but it was terminated by British bayonet charges: the French were driven

back, the little ground which had been lost was all recovered, and by seven o'clock our pickets were re-posted on their original points. But between killed and wounded and taken, the allies had lost 800 men. It was, under the circumstances, scarcely a consolation to know that the French had suffered at the least as severely. This was the last affair of the war; but the battle of Toulouse was the last real battle, and the winding-up of Wellington's war-doings with Soult.

We now turn to the military operations in other parts of France. Of his old army the Emperor of the French had upon the Rhine no more than 70,000 or 80,000 men to oppose the allies, who advanced upon that frontier with 160,000 men, and who had numerous reinforcements coming on in rapid advance through Germany. The new conscription remained very unproductive, and such of the conscripts as were brought in, being for the most part beardless boys, were of small present value in war. From Italy not a man nor a musket could be drawn, for Murat had joined the allies, and, with the Austrians, was overpowering Eugene Beauharnais. No assistance was to be expected from any other part of Europe; since the overthrow of the Danes by Bernadotte, Bonaparte had ceased to have an ally. Some of his counsellors and advisers—some of the ex-Jacobins—spoke of the marvellous things which had been done by the population in 1792-3, when France was invaded by the Prussians, and recommended levies *en masse*. But he felt the difference which existed both in the spirit of the French people, and in the spirit and number of the allies (things altogether different now from what they were in the earlier days of the revolution). He had always spoken contemptuously of popular risings, and had always adhered to the opinion that no insurgents, no levies in mass, could stand against regular armies, if those armies were not commanded by absolute fools or traitors. And his utterly despotic and military form of government had gone far to diminish the capability of the population in this respect, and to break the springs of the national character. The people too, from the habit of long possession, had ceased to dread that the fruits of the revolution would be torn from them; they no longer thought that the restoration of the Bourbons of necessity implied the restoration of church property and the property of the aristocracy—a dread which made a large part of the population rush to arms in 1792. Besides, Bonaparte detested any direct appeal to the people. On the 23d of January he again conferred the regency on Maria Louisa. Poor Joseph, the fugitive ex-King of Spain, was named lieutenant of the emperor in Paris. On the 25th of January the emperor quitted Paris

to put himself at the head of his army, which was now collecting in Champagne, in the plains of which the two armies of Schwartzemberg and Blücher were on the point of effecting their junction. It is not easy to estimate the actual force which Bonaparte headed at the end of January and the beginning of February. From the ingenious way in which French writers arrange their narratives, and suppress details about junctions and reinforcements, it is made to appear that Bonaparte contested the interior of France, and defended the approaches to his capital for two months, with only the 70,000 or 80,000 men whom he withdrew from the Rhine. But this is ridiculous. After deducting from the preposterously exaggerated French estimates of the numbers of the invaders, and after adding a great many thousands of men to their estimate of the force which Bonaparte opposed to the allies, the facts will still remain that their force, though far more scattered, was numerically far superior to his, and that the defence he made was brilliant, and even marvellous. The genius of the man seemed to revive in his despair. Now, too, he displayed, as he had done in his early Italian campaigns, the greatest intrepidity or fearlessness, exposing his person in nearly every affair, in the hottest fire, and in the closest and most terrible parts of the fight.

Long before they approached the Rhine (on the 9th of November, 1813) the ministers of the allied powers put forth a diplomatic note declaring that the coalized sovereigns were unanimously agreed as to the weight and consequence which France, as a nation, ought to hold in Europe, and were ready to leave her in possession of what she called her natural limits—the lines of the Rhine, the Alps, and the Pyrenees. And nearly a month after this (on the 1st December, 1813), when Bonaparte had ordered a new levy of 300,000 conscripts, the allied powers issued at Frankfort a declaration or manifesto, repeating their offers of peace, upon condition that the French should remain quiet and satisfied with those natural limits, which were wider and inclosed more territory than had ever been possessed by any of the Kings of France. Caulaincourt, who in 1805 had played so important a part in the seizure of the Duc d'Enghien, who was now Duke of Vicenza, and who had succeeded Maret, Duke of Bassano, as Bonaparte's minister for foreign affairs, was sent to the head-quarters of the allies, but without any conditions upon which they could treat. The sovereigns, however, agreed that a congress should be held at Chatillon-sur-Seine, where the representatives of Bonaparte might treat with their ambassadors, and settle, if possible, the firm basis of a peace. Though they now spoke somewhat less distinctly,

they seemed still to offer "those natural limits," which France would never cease to claim. On the 5th of February, this congress commenced its deliberations at the place appointed. Russia was represented by the Count Rasomowski; Prussia, by the Baron Humboldt; Austria, by Count Stadion; England, by Lord Castlereagh; and France, by Caulaincourt.¹ These plenipotentiaries continued to assemble and hold long and repeated conferences until the middle of March; the demands of the allies and the concessions of Bonaparte fluctuated according to the various turns and events of the campaign; but during the whole of this period military operations were never for one moment suspended. At first the demands of Caulaincourt were very high; as his master lost ground in the field, his tone was lowered; but never, until the very last moment, when Bonaparte was absolutely vanquished, and when a vast portion of the French nation was declaring for the Bourbons, did Caulaincourt offer such concessions as would have reduced France to her proper dimensions.

Without alluding to the army of Lord Wellington, which had held its ground in the south for months, the northern and eastern frontiers of France were broken through weeks before Bonaparte quitted Paris to take the field. Towards the end of December, Prince Schwartzberg crossed the Rhine near Basle, and, traversing Switzerland with all the gentleness he had promised, invaded Alsace; other Austrians followed, crossing the Rhine near Basle and Schaffhausen; and some of the allies marched through Soleure, Berne, and Vaud to Geneva, and thence by the valley of the Rhone towards the great French city of Lyons. The Russian army of General Wittgenstein crossed the Rhine near Rastadt on the night of the 1st of January, and spread its pulks of Cossacks far into France. Blücher, defeating Marshals Marmont and Victor, threw his Prussians and the troops of the late Confederation of the Rhine across that river, at three different points lower down the river, between Coblenz and Mannheim. The French abandoned an entrenched camp and nearly all their fortresses on the left bank of the Rhine without a struggle; but, as most of these troops were kept together by marshals and officers of reputation, they must either have joined Bonaparte's army, or have assisted him by joining those detached corps which were scattered over a wide surface of country; to distract the attention of the allies or to secure communications. By the middle of January one-third of France was invaded.

¹ Lord Castlereagh was assisted by his brother, General Sir Charles Stewart (the late Marquis of Londonderry), and by Lords Aberdeen and Cathcart.

Bonaparte's first great object in taking the field was to throw himself between the armies of Schwartzberg and Blücher, to prevent their junction, and defeat one of them before the other could get to his assistance. This was his old and unvaried plan of operation, and his rapidity and the nature of the country now rendered it, for a short time, rather successful. On the 27th of January he gave the allies a serious check; on the 29th he beat Blücher at Brienne; and on the following day he attacked the Prussians again, and with some advantage, at La Rothière; but on the 1st of February he was himself defeated with terrible loss at La Rothière, by columns of Prussians, Austrians, Russians, and Bavarians. On the 17th of February he gained some trifling advantage over Schwartzberg near Naugis; for more than two months he held at bay the various armies of the allies; but the odds were too many against him. By a bold movement he placed himself in the rear of the allies; but the allies marched upon Paris, and after a stubborn resistance, on the 30th of March, took possession of the whole line of defence which protected that city on the north-eastern side. The empress had left it for Blois, and Joseph Bonaparte, after the battle of the 30th, quitted Paris also. Marshal Marmont, who had glided between the army of Schwartzberg and the capital, made a faint attempt to defend the heights in front of Paris; but he was driven back under the walls of that city, and then he asked for an armistice. This led to the immediate capitulation of Paris, which the Emperor Alexander and the King of Prussia entered on the 31st, amidst the acclamations of the Parisians, and a wondrous waving of white handkerchiefs, and a shouting of *Vivent les Alliés! Vivent les Bourbons!* Bonaparte now came fleeing back to the relief of the capital; but he came too late: Paris was already in the undisturbed possession of the allies. Several of his old generals now told him the unpalatable truth that he ought to abdicate, as the conferences at Chatillon had been broken up, and as the allied sovereigns declared that they would no longer treat with him. He hurried into the gloomy old palace of Fontainebleau, which not long since had been the prison of the pope, and shut himself up with his maddening reflections.

Meanwhile the counter-revolution went on in Paris, and in other towns in France, at the charging pace. Many preparations had been made for it while Bonaparte was contending against the allies in Champagne and in the valleys of the Seine and Marne. On the 21st of February the Comte d'Artois, who had been the first of the royal family to emigrate, arrived at Vesoul, with the rear-guard of the grand allied

army, and issued a proclamation, telling the French people that the day of their deliverance was at hand; that the brother of their king had arrived among them; that there should be no more tyranny, no more war, no more conscriptions; and this proclamation being sent to Paris, had been printed at a private press, and pretty widely distributed. On the 12th of March the Duke of Angoulême had entered Bordeaux. On entering Paris the Emperor Alexander went straight to the mansion of M. de Talleyrand, and there, for the present, took up his abode. On the next day the King of Prussia, Prince Schwartzberg, Prince Lichtenstein, Count Pozzo di Borgo, and some other generals and diplomatists of the allies, assembled in Talleyrand's house, and opened conferences with him and the Emperor Alexander. There could no longer be any doubt as to the proper answer to be given to the question which had been so incessantly asked throughout Paris in the months of December and January—*Qu'en pense M. de Talleyrand?* Talleyrand now thought that it was the end of the end. He readily agreed with the allied sovereigns that it would be insanity to treat with Bonaparte, and that the best assurance of peace for Europe, and the greatest blessing for France, would be the immediate restoration of the Bourbons, with a mild and limited form of government. On the 1st of April, the senators assembled under the presidency of M. de Talleyrand, and proceeded, with a rapidity equaling that of some of their emperor's late marches, to pronounce and decree that Napoleon Bonaparte, in consequence of sundry arbitrary acts and violations of the *constitution*, and by his refusing to treat with the allies upon honourable conditions, had forfeited the throne and the right of inheritance established in his family; and that the people and the army of France were freed from their oaths of allegiance to him. A provisional government was then formed, consisting of Talleyrand, Dalberg, Beurnonville, and some others. On the invitation of the provisional government, all the members of the *corps législatif* who chanced to be in Paris assembled in their house or chamber on the 3d of April, and assented to the decree of the senate. Marshals Ney, Berthier, Lefebvre, Oudinot, Macdonald, and Bertrand, waited upon Bonaparte at Fontainebleau. Ney, who was deputed to speak for

them all, recommended an immediate abdication. Maret and Caulaincourt were present, and could not deny that this step was no longer a matter of choice. "Is this the advice of the generals?" said the fallen emperor. "Yes, sire," replied Ney. "Is it the wish of the army?"—"Yes, sire," was Ney's answer. Bonaparte immediately retired and signed an act of abdication. In this first act, however, there was a reservation in favour of the rights of the empress and his son. By a second act, which was forced upon him by his marshals, the provisional government, and the allies, he renounced unconditionally for himself and his heirs the thrones of France and Italy. The Emperor Alexander proposed that he should retain the title of emperor, with the sovereignty of the island of Elba, and a revenue of 6,000,000 of francs to be paid by France. This was agreed to by Prussia and Austria; and Britain, though no party to the original treaty, and not quite approving of it, afterwards consented to accede to it. On the 20th of April, Bonaparte left Fontainebleau for his Mediter-

THE PALACE OF FONTAINEBLEAU.—FROM ANECDOTES OF FONTAINEBLEAU

anean island. At Fréjus he embarked in an English frigate. It was on the 4th of May, that the *Undaunted* arrived at Porto Ferrajo, the humble capital of his miniature empire. On surveying his new dominions from the summit of one of the highest hills, whence the sea was visible all around him, it is said that he shook his head with affected solemnity, and exclaimed in a bantering tone, "*Eh! il faut avouer que mon île est bien petite!*" [Ah! it must be confessed that my island is a very little one]. But, if the allies had taken the map of the world, and had carefully studied it for the purpose of finding a place where the most dangerous of men should have the most opportunities of corresponding with his friends, both in France and Italy, and should have the best means and facilities for attempting

new mischief, they could not have found a place so suitable as the island of Elba.

On May the 3d, two days before Bonaparte made his solemn entry into Porto Ferrajo, poor Louis, who had been happier with his books and chosen friends in his English country-house, made his solemn entrance into Paris.

On the 30th of May the allied powers of Great Britain, Austria, Russia, and Prussia signed at Paris a treaty of peace and amity with France, as represented by her restored monarch. The treaty secured to France the integrity of its boundaries as they existed on January 1, 1792; and it even granted (in order to improve and strengthen these boundaries) certain augmentations of territory on the side of Germany, on the side of Belgium, and on the side of Italy. The contracting parties agreed that an increase of territory should be given to Holland; that the lesser German states should be independent, and united by a Germanic federal league; that Switzerland should continue to enjoy its independence under the government it had chosen; and that Italy (beyond the limits of the Austrian dominion, which was to be restored) should be composed of sovereign independent states. Of the two great stumbling-blocks, the Cape and Malta, which had been thrown in the way of previous negotiations with England, the Cape of Good Hope had been secured to the British crown by a separate treaty with Holland; and by this present treaty of Paris, the island of Malta and its dependencies were admitted as belonging of right to Great Britain. But, on her part, Great Britain bargained and agreed to give back to France all the colonies, factories, &c., possessed by her in 1792, with the exception of Tobago, St. Lucia, and the Isle of France; and at the same time she bound herself to restore several islands and colonies to Spain, who was incapable of keeping them. Pondicherry was of course given back (to become, if time and accidents should serve, a hot-bed of intrigue, insurrection, and war); and France was to enjoy all the facilities of commerce with our Indian empire which the British government granted to the most favoured nations, only binding herself on her part not to erect any fortifications in the establishments restored to her in that country. Her former rights of fishery on the bank of Newfoundland, &c., were all to be restored as they were by the peace of 1763. Portugal, our ally, was to give up to France all that she held of French Guiana, &c. As the best test they could offer of their moderation, as the best proof they could give of the sincerity of their repeated declarations that they meant no ill to France, that they waged war, not against the French people, but only against Bonaparte, the allied powers agreed that their armies should

evacuate the French territories, and that the French prisoners of war should all be restored as soon as possible. And by the beginning of June, France was completely evacuated by the foreign armies, and left to manage her own affairs. As far as regarded France, the arrangements of this treaty of Paris were considered as final; but there remained to be made other settlements of the most extensive and complicated kind; the greater part of Europe required re-organization, and her past misfortunes and bitter sufferings demanded some preconcerted defences and guarantees for the future: and it was therefore agreed, in a special article of the treaty of Paris, that all the powers engaged in the late war should send plenipotentiaries to a congress to be holden at Vienna, for the object of completing the pacific dispositions of the present treaty, and of preventing, as far as human policy could, the recurrence of war and devastation.

A few words must suffice for the inferior and dependent operations of arms, and for the re-establishment of the old governments of the Continent. First for Holland and Belgium:—Bernadotte, with a mixed army of Swedes and Germans, reached Cologne in Germany, and pushed forward some troops into Holland, to reduce some of the strong fortresses which the French still held, and to co-operate with the weak English force under Sir Thomas Graham. Several of these places surrendered upon summons; but, on the 7th of March, Graham, in attempting to carry by escalade and storm the formidable works of Bergen-op-Zoom, was repulsed with a lamentable loss. The French game was, however, up in that country; and the corps of General Wintzingerode soon pushed forward into Belgium as far as the field of Waterloo. When Belgium was entirely freed from French troops, the country was left under the military government of the Austrian general Vincent; and at first it was imagined that the Emperor Francis would reclaim these old hereditary dominions of his house. But Austria had had quite enough of these distant and disconnected and generally discontented subjects; and had resolved to give up all Belgium rather than involve herself in fresh troubles by asserting her old sovereignty. The Belgians, if left to themselves, were far too weak to resist their neighbours the French; and therefore it was conceived by the allies that the best thing that could be done for Europe and for Belgium itself would be to unite that country to Holland, under the mild and constitutional government of the house of Orange. In the month of August the Sovereign of the Netherlands made his arrangements with the Prince-regent of England, resigning all the rights of the Dutch to the Cape of Good Hope, but getting back Demerara, Esse-

quibo, Berbice, the immense island of Java, the rich island of Sumatra, and nearly every one of the colonies and settlements we had taken from them, whether in the West or East Indies, except the settlements in Ceylon.

The magnanimity which was shown to France was not extended to her weak ally Denmark. The conduct of that court nearly all through the war had been calculated to leave hostile feelings in the mind of England and of other powers. Denmark was to be punished for her obstinate adherence to Bonaparte, and Sweden was to be rewarded for the exertions she had made in the common cause at the critical moment. To bring the Frenchman, Bernadotte, into the field, and to keep him there, the allies had promised to annex Norway to his dominions. The fortunate Gascon had himself pretty well secured the fulfilment of this promise by conquering a good part of Denmark in the autumn of 1813, and by imposing his own convention. A party among the Norwegians aimed at a separate independent sovereignty, and offered some slight resistance; but at a general diet of the nation, a great majority voted (on 20th October) for the union of Norway with Sweden, with the proviso and condition that their constitution should be punctually observed.

As some continental gratification to the royal family of England and Hanover, their ancient home was somewhat enlarged, and raised to the titular dignity of a kingdom under the rule of his Britannic majesty; but with the Salic bar to the succession when it should fall to a female.

While Murat had been co operating with the Austrians under Marshal Bellegarde in driving Beauharnais out of Lombardy, Lord William Bentinck, with a mixed armament of English, Sicilians, Calabrians, Greeks, Albanians, &c., had gained possession of Genoa, the French garrison having capitulated on the 18th of April. A few days after the departure of the viceroy Beauharnais, who had been obliged to conclude a convention with the Austrians, Marshal Bellegarde took possession of Milan; and the Austrian general, Count Bubna, then marched into Turin, the capital of Piedmont, and declared the intention of the allies to restore that country and Savoy to the King of Sardinia; and, on the 20th of May, his Sardinian majesty entered Turin and established his government on the old basis. Not one member of the continental coalitions had adhered more steadily and faithfully to his engagements, or had suffered more severely from them. The allies had resolved that he should now receive some reward, and that the territories of the Genoese republic, which joined Piedmont, and which shut that fine and productive country from the sea, should be united to his dominions. Few, very few, of the Genoese complained of this at

the time; and, in the course of a very few years, the last murmur of discontent had almost died away, the Genoese people having found that they, as well as the Piedmontese, were gainers by the incorporation. It would have been well for the future prospects of Italy if the King of Sardinia had gotten more, and the Emperor of Austria had gotten less. In addition to his old possessions in Lombardy, Francis laid his hand upon Venice, which had only been his for a short period, and by virtue of a foul treaty with France, and upon other cities and states which had never been his at all, as Brescia, Cremona, Guastalla, Parma, Piacenza, &c. Having then nothing to hope from his further detention, Bonaparte had, on the 22d of January, sent an order to Fontainebleau that the pope should leave that place the next day and return to Italy. Pius VII. set off accompanied by an escort, and was taken by slow journeys back to his native country, where he was received by all the populace and by the devout Catholics of all classes with rapturous joy.

Murat, agitated by doubt and dread, suspecting his new ally Austria, and knowing that he was suspected by her, distrusting most of his Neapolitan generals, and alarmed at the Carbonari, who were crying for a constitution, and at the plots and movements of the royalists, who were calling for the restoration of King Ferdinand, returned rather hastily to Naples, withdrawing his garrison from the castle of St. Angelo at Rome, but reinforcing his garrison at Ancona, and leaving some of his troops beyond the frontiers of the States of the Church. On the 24th of May, the pope made his solemn entrance into Rome, and restored the old ecclesiastical government. The popular joy was ecstasie.

Few of these restored governments were good, but that of Spain was the worst of them all, though probably not worse than the regimen of the Spanish cortes and liberales would have been, if circumstances and the temper of the army and people had allowed them to continue in possession of their power. Between them and the royalists and religious bigots it was a question of force, and the bigots and the royalists proved the stronger. On the night of the 11th of May, General Eguia, a fierce royalist, seized all the liberal members of the cortes that he could find in Madrid, and threw them into prison. The whole body fell helpless, unresisting, and unlamented by the people. On the 12th of May, Ferdinand entered his capital, and was received with demonstrations of popular joy and enthusiasm, inferior in degree only to what had been displayed by the Italian peasantry and the populace at Rome on the arrival of the pope.

The legislative measures of this short parliamentary session are of little historical importance.

The budget of the year was laid before the House of Commons on the 13th of June. The whole amount of supplies exceeded £75,600,000. The session was closed on the 30th of July by the prince-regent in person. The autumnal session presented no matter of great interest. It was opened on the 8th of November by the speech from the throne, which was again delivered by the regent in person; and on the 2d of December the houses adjourned till the 9th of February next. In the month of August the Duke of Wellington proceeded to Paris as ambassador of Great Britain to Louis XVIII.

A.D. 1815. The great congress of Vienna began to assemble at the opening of the year; and in the month of January the Duke of Wellington repaired thither. Our parliament re-assembled in February. The opposition, which had already expressed a strong and indignant disapprobation of the forcible transfer of Norway from Denmark to Sweden, now censured with equal severity the annexation of the worthless republic of Genoa to the dominions of the King of Sardinia. Parliament had got over these matters, and was discussing subjects of home policy, regulating the reduction of the militia, &c., as if all fears of war were over, when England and Europe were startled, as at a thunder-clap, by the intelligence that Bonaparte had escaped from his narrow insular dominion, to repossess himself of his old French empire. An address to the regent was carried in both houses without any division upon it; and the nation at large felt as strongly as parliament that nothing was left for England to do but to draw the sword again, and never sheathe it until Bonaparte should be consigned to some safer place than Elba. The parliament continued sitting till the battle of Waterloo falsified the sinister prophecies of those who had voted against the new war, because it would be as long as the last. Subsidies, or aids in money given under other names, were voted to a large amount, and the budget of the year was raised to very nearly £90,000,000.

The astounding news of the flight from Elba was announced to the diplomatists of Europe sitting in congress at Vienna by Talleyrand. There was no hesitation there as to what was to be done. The representatives of the allied sovereigns immediately agreed to join their forces again, in order to frustrate Bonaparte's attempt, and to maintain entire the treaty of Paris. On the 13th of March the ministers of the eight powers assembled at Vienna, including the ministers of the King of France, signed a paper, by which they declared Napoleon Bonaparte an outlaw, a violator of treaties, and a disturber of the peace of the world, and delivered him over to public vengeance (*vindictæ publicæ*). It was

very soon agreed that Britain should furnish 125,000 men, Austria 300,000, Russia 225,000, Prussia 236,000, the various states of Germany 150,000, and Holland afterwards agreed to furnish 50,000. On the 23d of March, Austria, Russia, Prussia, and Great Britain confirmed the treaty of Vienna, by which they bound themselves to make no separate peace, and to conclude neither cessation of hostilities nor any convention whatever, except by general consent. On the morning of the 29th of March, four days after signing this treaty, the Duke of Wellington left Vienna, in order to examine the military state of affairs in Belgium, which country, as of old, was quite sure to be the first battle-field. He arrived at Brussels on the night of the 4th of April; and, rapidly as he had travelled, he had found time to observe the condition and spirit of several bodies of the allied armies.

The essential points of the famous escapade from Elba are soon told. If Bonaparte had ever gone thither with the intention of stopping, he had changed his mind in a very short time. He had not been one month in the island ere he commenced a secret but most active correspondence with his friends both in France and Italy. This correspondence became still more active as his friends and agents reported to him the return of the French prisoners of war from Russia, Poland, Prussia, Saxony, England, Spain, &c., and related that the temper of these veterans was unchanged, that their devotion to glory and to their emperor was as great as ever. Several of these returned prisoners, men as well as officers, passed over from time to time to Elba, to offer their services to enter his guard, and to speak of the attachment of their comrades to their old chief, and of their contempt for the Bourbon king, who could not mount a horse, and who was a great discourager of the military profession, as he wanted nothing but peace. From the day of his departure there had been an incessant activity among his partizans both in France and Italy. He wrote to Murat, who was still powerful and still a king, to tell him that the lion was not dead, but only sleeping! Murat prepared for the *réveiller*. This brave dragoon had no political steadiness or courage; he conceived that his brother-in-law must prove the stronger in the new contest, and he engaged to march against his recent allies, the Austrians, in the plains of Lombardy.

It was on the 26th of February, 1815, that Napoleon embarked with a body of about 1000 men, composed of some of his old guards who had followed him to Elba, of some Italians and Elbese, some Corsicans and others, comprising about 200 dragoons and about 100 Polish lancers, with saddles, but without horses. On the 1st of

March he landed at Cannes, a short distance from Fréjus. The Provençals neither welcomed him nor attempted to oppose him. There were no king's troops in the neighbourhood. He hurried through Provence into Dauphiny, "the cradle of the revolution;" and there the people began to flock round his standard. Still no troops joined him, and he felt uneasy. It was at Grenoble that the first defection in the army took place: Colonel Charles Labédoyère, who had been promoted by Louis XVIII., and who was now in command of the 7th regiment of the line, joined the emperor. The rest of the march to Paris was a triumphant one: the Bourbons were abandoned by the whole army. Marshal Ney, who was sent by King Louis to stop the emperor's progress, and who had sworn that within a week he would bring Bonaparte to Paris in an iron cage, went over to him with his entire force. On the 19th of March, Bonaparte slept in the old palace of Fontainebleau; and at midnight the king fled from the Tuileries for the fortified town of Lisle, near the Belgian frontier. At half-past nine, on the night of the 20th, Bonaparte, with his gray great-coat, stepped from his carriage into the Tuileries; a number of generals and officers took him on their shoulders, and carried him up to the state-apartments, while the soldiery and a part of the mob rent the air with cries of "*Vive l'Empereur!*"

Thus far all had seemed to go well; but the triumph was soon damped. It was impossible not to see that, with the exception of some of those faubourg mobs which he hated and feared, the people of Paris were silent, lukewarm, cautious, or averse. Then came brother Lucien, with his tail of constitutionalists and liberals, including Carnot and *Fouché*, protesting that the promises and pledges he had given must be kept, that the French people must have more liberty than they had enjoyed under the empire or under the restoration, that France could no longer do without a free constitution, and, finally, that the liberals would do nothing for him unless he granted a new constitution. Bonaparte said that there would be time for making a good constitution hereafter, when he should have dissolved by victories the European confederacy against him; that now every thought ought to be given to the means of raising money and troops, the casting of artillery, the manufacturing of arms, ammunition, &c. But the liberals stuck to their point; the constitution must come first, their exertions in his cause afterwards: and, accordingly, though sorely against his will, Bonaparte proclaimed a sort of constitution, under the very unpromising title of "*Acte Additionnel aux Constitutions de l'Empire*." On the 4th of June—three days after, Bonaparte, his great officers of state,

marshals, generals, &c., had taken their oaths to this constitution at a grand celebration, called a Champ de Mai, but held in the Champ de Mars; and in the month of June the two new chambers opened their session. The chamber of peers, appointed by the emperor himself, and composed principally of men who owed their rank and fortune to him, at first seemed disposed to be as submissive as the senate had formerly been. The chamber of representatives showed at once a very different disposition, raising the voice of criticism and censure which the man of the people had never been able to bear. Their session was a very short one; and the first serious business the two houses or chambers did was to pronounce the dethronement of Bonaparte. After eleven weeks' sojourn in the capital, matters stood with him much as they did when he arrived; he could count confidently on the devotion and bravery of his old army, but he could not hope that the rest of France would do much for him. His distress, or doubts, were increased by the dismal news which came howling to him from beyond the Alps. Murat, instead of waiting for his *mot d'ordre*, had thrown off the mask as soon as he learned the departure from Elba, had rushed towards Upper Italy like a madman, had been beaten by the Austrians, abandoned by his own army, and put to an ignominious flight from his kingdom of Naples, many weeks before Bonaparte was ready to commence operations on the frontiers of Belgium.

On the night of the 11th of June, just a week after the opening of the two chambers, Bonaparte quitted Paris to open the campaign. His countenance, which had long been clouded, brightened as he sprung into his travelling carriage, and as he said, or as he is reported to have said, "*Je vais me mesurer avec ce Villainton*"—(I am going to measure myself with this Wellington). He had assembled an army of about 125,000 men, chiefly veteran troops, of whom 25,000 were cavalry, and 350 pieces of artillery. With this force he crossed the Belgian frontier on the 15th June, and on the very next day the stern conflict began.

In the meantime the Duke of Wellington had raised his force in the field to about 76,000 men, of whom not near one-half were British. The duke's head-quarters were at Brussels, the capital of the country, which it was Bonaparte's first object to gain. On the duke's left lay Marshal Blücher with the Prussian army, estimated (after the junction of Fülów's corps) at about 80,000 men. Blücher's head-quarters were at Namur. The two armies were, of necessity, far apart, spread over a wide extent of country. Besides by-roads, Bonaparte had no fewer than four great paved roads by which he could make his advance upon the British; and, until he had

made his selection, it was impossible for Wellington to tell which road he would choose: but the charge that the duke was not only out-manceuvred and out-generalled, but actually taken by surprise, is a gross mistake. Ney, Soult, and Grouchy held commands under their emperor.

The opening of this terrible three-act drama, that was to be closed with the rout of Waterloo and the utter downfall of Napoleon, commenced on the 15th of June. The aim of Bonaparte was in the first instance to take the Prussians by sur-

MARSHAL BLÜCHER.—From a portrait by L. Wolf

prise, and if he failed to crush them, at least to separate them from the British, and then overwhelm the latter with his whole force. Accordingly, so early as two or three o'clock in the morning, his foremost columns were put in motion, and at dawn they reached the Prussian out-posts, which they drove in, and then crossed the Sambre in four bodies in the afternoon. The Prussian general, Ziethen, in command of the advanced guard, was unable to resist the weight of such an onset, and therefore retired; but his retreat was accompanied with hard fighting, step by step, that the main army might have time to concentrate; and this was effected by Blücher upon the Sombref, where his forces occupied the villages of St. Amand and Ligny, while Bonaparte established his head-quarters at Charleroi. During this preliminary skirmishing, Ney was detached by the emperor with his left column, consisting of 45,000 men, to continue his march along the road which leads from Charleroi to Brussels, advance upon Quatre-Bras, and separate the communication between Wellington and Blücher. This Quatre-Bras, which was to be a renowned name in military history, was nothing more than a farmhouse,

but it formed the intersecting point of the roads from Charleroi to Brussels, and from Nivelles to Namur. Ney in his march encountered Prince Bernard of Saxe-Weimar, who commanded a brigade of the Netherland forces at Frasné; and from this post the prince was driven by superior numbers, and obliged to fall back upon Quatre-Bras, which house he made as effectual for resistance as a castle, having been also opportunely reinforced by the Prince of Orange. Thus the night of the 15th closed, and as yet the communication between the British and Prussian armies had not been interrupted.

During these events the Duke of Wellington had not been inattentive; but still, it was impossible to move to action until he ascertained the quarter upon which the storm was to burst. At length, when the tidings were sent to him that the Prussian outposts were driven in, he issued orders for his army to be got into readiness. Still he had to wait until he ascertained that this was the real point of attack, and of this he was only certified by the fact that the French troops were collecting into a mass in the valley of the Sambre. It was now evident that the real attack was to be on Charleroi; and at five o'clock in the afternoon, the duke issued orders from his hotel in Brussels for the march of his army to commence. Having thus done all that could be effected for the present, and as some hours would elapse before these orders could be distributed through the various corps, he went with a number of his officers to a ball which was given by the Duchess of Richmond. It was a splendid and happy festival, and most of the revellers were unconscious that a volcano was about to heave beneath their feet; but, aware that he had taken every precaution which circumstances permitted or prudence could adopt, the "Iron Duke" maintained his wonted impassive equanimity. About midnight, and while enjoyment was at the height, orders were quietly issued among the general officers, and afterwards among the subordinates; and without bustle or leave-taking, they dropped off one by one and two by two, to take their places at the head of their musters, and be in readiness for the march. Such was the ball at which the duke was said, for years afterwards, to have been caught, and all but hopelessly crushed—the thoughtless, improvident revel from which the gay officers who had followed his example were hurried unprepared to the dance of death on the field of Waterloo. But it was impossible that such greatness as that of Wellington could escape from detraction and calumny. It is the ordeal through which all that is truly good must pass before it can be hallowed as a model and exemplar for a world that will always need such incentives.

On the morning of the 16th the deadly trial was to be commenced in earnest. The plan of Napoleon was to overwhelm Blücher at Ligny, by an attack which he should conduct in person, while Ney was to give battle to the British at

the ground between Quatre-Bras and Charleroi, that had been lost on the evening of the 15th. On finding this, and apprehending no immediate danger, Wellington, who had arrived two hours afterwards, repaired to Blücher, who was stationed

at a wind-mill five miles off, between Ligny and Bry, with the army of Napoleon manœuvring in the distance; and here the two commanders held brief and hasty counsel, after which the duke returned to Quatre-Bras. During the day, Picton arrived with the fifth division, and was soon followed by the Duke of Brunswick's corps and the Nassau troops, but this was not until the battle had fairly commenced. Ney had, in the meantime, brought up his main body, consisting of 40,000 men, to oppose whom there were not as yet more than 19,000 of the allies in the field, 4500 of whom were British infantry. At a little after three o'clock in the afternoon, when the allied troops had scarcely got time to form in order, Ney commenced his attack with two heavy columns of infantry, a large body of cavalry, and a numerous, well-served artillery, but at this critical moment Picton's "fighting division," 12,000 strong, arrived, and threw themselves into the contest. Still, the weight of the French columns carried them onward, several squadrons of the Brunswick cavalry were put to flight, and hastily formed squares of the infantry broken through, when the third English division arrived, and confronted the attempt of the French to obtain possession of the wood of Bossu, and the outbuildings in front of Quatre-Bras. This attempt was successfully baffled, but the British, in following their advantage too

Quatre-Bras, and defeat, or at least keep them in check until the Prussians were destroyed, when the whole French force could be finally directed against Wellington. Accordingly, at five o'clock in the morning, the encounters of the previous night were renewed; but the Prince of Orange kept his ground, repelled the skirmishers of Ney's advanced guard, and recovered part of

eagerly, were in turn encountered, and sent reeling backward by the French cuirassiers. The battle was now at the hottest over the whole range of action, and it seemed as if even yet the French might ultimately prevail, when the coming of the Brunswickers equalized the numbers as well as the chances of the contending armies. The French at last were driven from the wood,

driven from the neighbourhood of the farmhouse, and compelled to retreat in confusion, when Ney at this juncture resolved to call up his reserve from Frasné: but he was confounded to learn that this force, upon which his last hope was set, had been called away by the emperor for the attack upon the Prussians. The French marshal had thus failed in the great object of his attack: he was obliged to leave the British in possession of the field, and had thus been hindered from turning Blücher's right, and separating the communication between the Prussians and the British. Had Ney succeeded in this battle of Quatre-Bras, the Prussians at Ligny would have been enveloped by the whole French army, and their total ruin insured.

Even as it was, the state of affairs at Ligny had a sufficiently ominous aspect; for there a conflict had been going on of a more important and more sanguinary character than that which was raging at Quatre-Bras. Bonaparte was there in person; and as Blücher had not been joined by the Prussian corps under General Bülow, his forces were inferior in number to those which the emperor brought against him. In this state of things he was attacked at three o'clock in the afternoon, and in spite of a desperate resistance, especially at the villages of St. Amand and Ligny, the brave old "Marshal Forwards" was obliged to give ground, and fall back from his position at Sombref. But he did not retreat far, while every step was a contest; and as he adventured his aged person with all the fire of his early days, his horse was shot under him; he was galloped over by the French cuirassiers, who did not recognize him in the tumult; and he owed his rescue to the fidelity of Nostitz, his aide-de-camp, who covered and concealed him as he lay stunned and bruised upon the ground. In the same battle, Colonel, afterwards Lord Hardinge, who was with Blücher, had his left hand shattered, and was obliged that night to undergo amputation of the arm. After having done all that a desperate resistance could effect, and having lost from 11,000 to 12,000 men, the Prussians did not retire until nine o'clock; and although it was dark night, their retreat was conducted in perfect order to the neighbourhood of Wavre, where they were joined by Bülow. This movement, indeed, was effected so admirably during the darkness, that the French were ignorant of it, and attempted no pursuit, so that it was only with the return of morning that the retreat of the Prussians was known, and not till noon that their particular route was ascertained. Bonaparte then detached Grouchy with 32,000 men to pursue them, while he turned his attention to the coming conflict with Wellington. In the meantime, although the British had successfully

maintained their position, the retreat of the Prussians necessitated a corresponding movement on the part of the duke, to keep open his connection with Blücher, and accordingly he fell back upon Waterloo, where he would be only twelve miles distant from the Prussians, and certain of their support. On this he could rely, as the plans and combinations necessary in the event of such a movement had previously been settled between him and Blücher. His selection of Waterloo was made in consequence of having examined the ground some months previous, and ascertained its advantages as a battlefield. It was upon this spot, also, that the great Duke of Marlborough had pitched for a similar trial, and where he probably would have gained a great victory but for the pragmatic interference of the Dutch field-commissioners, who obliged him to alter his arrangements. The retreat of the British from Quatre-Bras was made at midday on the 17th, and they experienced no molestation, except from a large body of French cavalry, that had been engaged the day previous against the Prussians at Ligny. These, however, were confronted, charged, and ridden down by the weight and strength of our household cavalry under the command of the Earl of Uxbridge, after which the march was continued undisturbed. When the British troops reached Waterloo, nothing could be more dismal than that night's bivouac. It was a night of heavy rain, accompanied with thunder, lightning, and violent gusts of wind, while nothing but the miry ground and drenched corn-fields afforded a shelter and a resting-place to recruit both officers and soldiers for the toils of the morrow. It was, indeed, a stern preparative for the worst extremities of battle, in which the latter would be welcomed as a relief. On the same day, and during the night, the junction was made between the troops of Ney and those that had been at Ligny with Napoleon.

The 18th of June dawned, when the great trial of arms was to be settled. It was Sunday—the day consecrated to peace and rest, to brotherly love and heavenward devotion. The army of Wellington mustered in all 72,720 men, while that of Napoleon was not less than 80,000. But the disparity of materials was still more startling than that of numbers. Of the duke's force only 36,273 were British, many of whom had never yet been under fire; 21,000 were Belgian and Nassau troops, whose military character was somewhat doubtful; the rest were Hanoverians and Brunswickers, generally reckoned inferior to the soldiers of France, and not a few of whom were but raw recruits. On the other hand, Bonaparte's army consisted almost wholly of French veterans, confident in their great leader, who had so often mar-

shalled them to victory. Of guns, also, they had 270, while Wellington had only 120. All this constituted an inequality that was contemplated by onlookers with dismay. The duke drew up his army on a range of gentle eminences, called the heights of Mont St. Jean, and in front of the village of Waterloo, extending about a mile and a half from east to west, and in connection with five roads, the chief of which led to Brussels. His extreme left rested on the hamlet of Ter-la-Haye, protected by a deep ravine; his centre was posted between two roads leading from Genappe and Nivelles; his left centre was a little in the rear of the farm La Haye Sainte, and his right centre in the rear of the farm Hougoumont, near the Nivelles road, which formed the key to the position of his right wing. His ground was open in front; his flanks were defended by deep ravines; and even

close combat is the very devil." Another error of Bonaparte's was, that the Prussians were still in full retreat with Grouchy in pursuit, and that therefore there was no chance of their coming to the support of Wellington.

A little after ten o'clock on that Sabbath morning, an ominous stir was visible along the French lines: it was the preparation for an attack upon Hougoumont, the possession of which was necessary for Bonaparte's design of breaking the centre of the allied army, or turning one of its flanks, and destroying it in detail. At half-past ten, the French left wing in three columns, numbering 30,000, under the command of Ney, advanced in the direction of Hougoumont; and at eleven o'clock the battle commenced in earnest, by a desperate attempt to win this key to the right of Wellington's centre. At the same time a tremendous cannonade commenced up on the whole allied line, which the French kept up during nearly the entire day, to support those charges of horse and foot on which they mainly depended for overwhelming their opponents. But the wood, garden, and outer fences of the farmhouse were lined with skirmishers, who checked the advance of the French tirailleurs; and when the heavy French column succeeded, they were encountered by a detachment from General Byng's brigade of guards, and by a British battery that opened upon them from the heights above.

HOUGOMONT.—From a sketch by R. Blackie, 1844.¹

though his strong position should be turned, Mont St. Jean remained as the centre of support for a second; while if this also failed, he had behind it the forest of Soignes, reaching almost to the town of Brussels. Not above a mile from the British position, and in front of it, the French were drawn up on a range of heights, their right crossing the Charleroi road at the farm of La Belle Alliance, and their left resting on the Genappe road, the ground rising behind them, and terminated by thick woods. When he rode out in the morning to reconnoitre the British position, Bonaparte was astonished to see so few troops, and imagined that Wellington had retreated, and that what he saw was but the rear-guard ready to follow. General Foy, who from experience in Spain knew better, replied, "Wellington never shows his troops; but if he is yonder, I must warn your majesty that the English infantry in

The advancing columns brought up their heavy artillery, and replying with a still heavier fire, they gained the wood, driving before them the Nassau battalion that guarded it, gained the hedge inclosures of the farm, and approached the garden, where, however, they were brought to a stand by the felled trees with which every entrance was guarded, and by the volleys of musketry that issued from loop-holes that had been made in the walls of that ancient mansion. Aware of the importance of this position, the French repeatedly attempted to wrest it from the British; but as often as they renewed their attack, they were repelled by volleys of musketry from the building, and discharges of case-shot from the batteries, which inflicted fearful destruction upon the closely wedged masses of troops that confronted

¹ In the walls of the orchard may be seen the loopholes for musketry made by the British troops.

them. The French were compelled at this point to retire, and Hougoumont for the time was saved; while the guards, issuing from their inclosures, quickly recovered the grounds and wood from which they had been at first dislodged.

The battle now raged with equal violence over the whole field. There was no manœuvring; and while Bonaparte's effort was to overwhelm his enemy by weight or rapidity of onset, the aim of Wellington was to maintain his ground until the promised aid of Blücher should turn the scale, and enable him to become the assailant. The French cannonade was incessant, but that of the British was equally destructive, as it was admirably served. A large force of French cavalry was now massed together; and expecting that his two centre divisions were to be attacked, the duke ordered them to form into squares; but finding this movement only a feint, and that the squares suffered from the cannonade, he withdrew them behind the ridges for shelter. Mistaking this for a retreat, several French columns under Count d'Erlon were sent to attack the left of the allied position, while a hot and heavy fire was renewed upon Hougoumont, to mislead the attention of the British. At first the attempt of D'Erlon was successful; the Belgian brigade was driven from its post, and the life-guards sent to its support were compelled to retreat, while the brave Picton fell as he was ordering his men to charge. It was a critical moment—the allied left wing might have been separated and enveloped; but the steady fire of the infantry checked D'Erlon's progress; while a charge of cavalry, headed by Lord Uxbridge, broke his troops, and drove them back in confusion. After this discomfiture, the attack on Hougoumont, at first a feint, became a reality, and every former attempt was redoubled to win it, so that Wellington was obliged to reinforce the defenders of the wood and the old château with 4000 men. The contest at this point every moment became more desperate, and under the close heavy discharges of musketry and artillery, the corn-stacks in the farmyard and the building itself were set in a blaze, and the battle was continued among the flames. But the French at last were driven out by the Coldstream guards under Colonel Woodford, and the position was once more secured.

Thus more than four hours of hard fighting had been spent, in which the French had made no progress, and the British had not lost a single foot of ground. Bonaparte now resolved to try the allied left centre, in the hope of breaking it, for which purpose it was necessary to carry the position of La Haye Sainte. Between three and four o'clock such large masses of troops were collected and hurled against this point as at first to bear down opposition; the defenders were destroyed, the

farmhouse was won; and following their advantage, a large body of French cuirassiers, who were in a hollow that defended them from the range of the British guns, made a charge upon the squares, hoping to ride them down, and thus cleave the army asunder. But in spite of the well-tempered plates of steel by which they were protected, they fell in heaps before the close volleys of these unshaken squares; and on retiring, they were pursued and driven back with utter discomfiture to their main body. This repulse only occasioned greater efforts; they returned to the charge, and carried the farmhouse of La Haye Sainte, after they had killed or wounded every man of the light battalion of the German legion who defended it. Bonaparte now endeavoured to follow up this success with charges of cavalry: he hurled them by troops, by squadrons, by whole masses again and again upon the British infantry, in hope of dividing their lines or breaking their squares; but at every charge they were met by an impenetrable forest of steel, and at every onset hundreds were impaled by that deadly array of bayonets. Even when these charges were found unsuccessful, the French cavalry, the Polish lancers, and heavy, steel-clad cuirassiers walked their horses in front, or upon the sides of the squares, as coolly as if they had been on parade, although amidst showers of bullets that strewed the ground with their dead and wounded—but watching for the slightest break or opening through which they might dash, and shiver these ranks by a well-directed blow. But still not a square was broken, not a single troop yielded or gave back: every man stood firm in his appointed place, equally prepared to die or to conquer. At length these fierce riders were encountered in their own fashion, and by a braver and better-appointed cavalry than themselves. The British horse had as yet been kept in hand, and allowed to do little beyond the few charges we have mentioned, the chief reliance of Wellington having been placed upon the unflinching squares that had hitherto resisted every onset; but now his splendid cavalry were called into action, composed of English horses and men, with whose weight, strength, and spirit their antagonists had no chance, either in a charge or hand-to-hand encounter. The order was given to collect and bring up the brigade of British heavy cavalry, consisting of the life-guards, the royal horse-guards, and the 1st dragoon-guards, under the command of Lord E. Somerset, and to charge the enemy's horse, already wearied with their fruitless attempts against the British infantry. And terrible beyond all the others was that charge; cuirassier and light horseman went down and disappeared as beneath a torrent, and in a few moments nothing was to be seen of these splendid mounted troops of Na-

pooleon, the heroes of so many victories, except trodden masses of the dead and dying, or a few groups of scattered fugitives, and 2000 prisoners whom the brigade brought with them when they returned from that decisive onslaught.

Such were the events and changes that had crowded eight terrible hours of conflict and slaughter. It was a struggle commensurate with its object; for not even the fate of a kingdom, but the liberties of Europe were trembling in the scale. As such, it had been no cool, deliberate trial of marching and manœuvring, but an eager grappling on both sides, and a death-struggle which only one party could survive; and as yet the allied army held its own, or if there was any difference, the advantage was in its favour. But there were still resources left for a last and crowning effort, as a large portion of the British reserves were still almost untouched, while, on the other side, the old imperial guard, that force which hitherto had conquered wherever it fought, and to which Napoleon had owed so many of his victories, had not yet been brought into action. The time also had come which, if not secured, could only be followed by the useless death-throe, for symptoms already announced that the Prussians were advancing, whose mere entrance upon the scene would decide the trial at issue. The old guard was therefore called up, to make the last and decisive attack upon the British left centre, near the farm of La Haye Sainte; and they were cheered by the sight of Bonaparte placing himself at their head, and his call of "Let every one follow me!" They thought he was to lead them in person, and in the hope, every man felt his strength doubled; but after ten minutes' marching, he turned aside with his staff into a hollow between La Belle Alliance and La Haye Sainte, that was sheltered from the British artillery, and committed them to the command of Ney, who led them into action. It was seven o'clock when this great movement commenced, and the old guard marched forward through a destructive fire that thinned their ranks at every step; while the British themselves were protected from the answering fire with which the advance was covered, in consequence of the orders of Wellington to lie down on the ground behind the low range of hills in their front, until the word of command was given. The old

guard advanced in two massive columns, and when they were near enough, the duke gave the signal—not, however, in the melodramatic words,

THE FARMHOUSE OF LA HAYE SAINTE, the Gate shattered with Musketry.
From a view by S. Wharton, 1816.

"Up, guards, and at them!" but in his own simple, matter-of-fact style, through his aide-de-camp. Officers and men started up at the summons, and the enemy were suddenly confronted by General Maitland's brigade of English guards, and by General Adams' brigade, who were rapidly moved over the brow of the hill, where they were formed four deep by the duke in person, and flanked with artillery. Their first volley made the imperial guards stagger, but only for a moment; they advanced with their wonted confidence, when a second and more terrible discharge within fifty yards' distance was poured in among them, while they were in the act of deploying; and before they could recover and form, a heavy united charge of the English guards threw them together, and drove them in a confused mass *pele mele* down the hill. These terrible imperial guards, the last hope of victory, were thus baffled and broken; and Bonaparte, who sat on horseback in the hollow, like a rigid statue of bronze, watching their motions with an intense gaze, no sooner beheld their confusion, than he exclaimed "They are mixed, they are mixed!" in accents of despair. To add to his hopelessness, the sound of Bulow's cannon was heard on the right of the French army, the Prussian ranks were seen advancing, and Blucher himself with his whole force was at hand. Encouraged by this decisive prospect, Wellington became the assailant, and moving forward with his whole line of infantry, supported by his cavalry and artillery, he bore down upon the broken ranks of the enemy, and completed their overthrow. This charge was so decisive, that 150 cannon and all their ammuni-

tion were captured in the single onset. There was no more fighting; that "Grand Army" of Bonaparte—the last of all, and the most desperate of all—never again stood nor attempted to rally anywhere: all the rest of the work was headlong, unresisted pursuit, slaughter of fugitives who had entirely lost their military formation, and capture of prisoners, artillery, and spoils. The army was destroyed, as an army, before the pursuit began: its organization was lost with the defeat of the guard: if it had not been so, the pursuit by the Prussians could not possibly have been such easy duty—there could not have been so perfect a *débâcle*. In the retreat, and in the three battles they had fought within three days, the French lost in killed and wounded more than 30,000 men; but, what was of still more importance, their spirit was beaten out of them, and that army was indeed too thoroughly broken up ever to join again.

In the meanwhile the British and their allies, by the broad moonlight, were counting their dead and picking up their wounded. The loss

the night of the 20th, to find that his chamber of representatives was now far more hostile to him than the *corps législatif* had been on his flight from Leipsic. His first thoughts were how he could break up the constitution he had sworn to on the 1st of June; how he could get rid of the two chambers, and to seize the absolute and undivided power of a dictator. The chambers, anticipating his blows, declared their session permanent, and demanded his abdication. Napoleon signed an act of abdication, in favour of his son Napoleon II., on the 22d of June; and he determined to abide by it, or at the least to give up a hopeless struggle. He knew that the armies of all Europe were marching against him; that, while Wellington and Blücher were on the north-eastern frontier, the Austrian general Frimont was marching through Switzerland and Savoy to attack on that frontier; that Prince Schwartzberg was now ready to pour enormous forces across the Rhine; and that the Emperor Alexander was not far off with 200,000 Russians. The allies could have put 800,000

men into France before the end of the month of July!

After his abdication Bonaparte retired to Malmaison, where his wife Josephine had died. The chamber of peers set up a provisional government, consisting of Caulaincourt, Quennet, Grenier, Carnot, and Fouché—a most strange jumble of men and principles. Fouché, who had ten times more craft, cunning, and ability than all his four colleagues put together, had seen clearly, ever since the battle of Waterloo, that the restoration of the

MONUMENTS ON THE FIELD OF WATERLOO.—From *Belgique Monumentale et Pittoresque*

had been immense, and in some corps almost unprecedented. The British and Hanoverians alone had 2432 killed and 9528 wounded in the battle of Waterloo. These numbers being added to the losses sustained at Quatre-Bras on the 16th, make a total of near 15,000 men put *hors de combat*, in an army of about 36,000 men! If we deduct some 4000 or 5000 men of this army who were not actually engaged in either of the two battles, we shall find that one-half of this army was killed or wounded. The loss in officers was quite proportionate to the loss in men; more than 600 officers, British and Hanoverians, were killed or wounded at Waterloo alone.

The first man that carried to Paris the news of his irretrievable disaster was Bonaparte himself. Leaving his brother Jerome on the frontier to try and rally some of the remains of the army, he flew to the capital, where he arrived during

Bourbons was an inevitable necessity; and he shaped his course accordingly. This strange provisional government, which assumed to itself all the powers of France, must have been more hateful and humiliating to the fallen emperor than all the rest of his disgraces; yet still he lingered at Malmaison for nearly a whole week, and until the advance of Wellington and Blücher rendered his further stay impossible.

The British and Prussian armies met with hardly any the feeblest resistance on their march upon Paris. On the 1st of July, Wellington took up a position a few short miles from the capital, with his right upon the heights of Richebourg, with his left upon the forest of Bondy. Blücher crossed the Seine at St. Germain as Wellington advanced; and on the 2d of July the right of the Prussian army was at Plessis-Piquet, its left at St. Cloud, and its reserve at Versailles. On

the 2d of July, the so-called army of Napoleon II. offered some resistance to old Blücher; and there was even some hard fighting on the heights

of St. Cloud and Meudon and in the village of Issy; but the country people remained neutral, and the Prussian corps of General Ziethen sur-

PARIS, from near the Pont Royal, looking up the Seine ¹—From Chapuy, *Voyages dans l'Ancienne France*.

mounted every obstacle. On the 3d of July, at daybreak, the French renewed the attack, and attempted to recover the village of Issy; but they were repulsed with considerable loss. No attempt was made to check the approaches or molest the positions of the British. The provisional government and Marshal Davoust now yielded to necessity, and to the terms which the Duke of Wellington had proposed to their commissioners three days before, with this important addition, that the city of Paris, the heights of Montmartre, and all its other defences, were to be put quietly in the possession of the British and Prussian armies. Officers accordingly met on both sides at St. Cloud; and on that night a *military* convention was concluded by three French officers, one English officer, and one Prussian officer; and on the following day it was approved by the Duke of Wellington, by Marshal Blücher, and by Davoust, who acted on the part and in the name of the French army, and the ratifications were exchanged. On the same day, and almost before his signature to the deed was dry, the duke wrote to his government, "This convention decides all the military questions at this moment existing here, *and touches nothing political*." The French troops, as by this agreement bound, had all evacuated Paris by the 6th, and had begun their march towards the Loire. Labédoyère is said to have gone with them, or to have followed them beyond the Loire. But Marshal Ney fled from Paris in disguise on the 6th,

with a passport given to him by Fouché, under a feigned name. This is proof enough that Ney did not consider himself included in the convention or capitulation.

On the 7th of July, the British and Prussian armies took possession of Paris, without any outward or visible sign of that *beau désespoir* with which they had been so often menaced. The English established themselves in the Bois de Boulogne, where they formed an encampment; the Prussians occupied some of the streets and along the quays on the Seine. On the 8th, Louis XVIII. re-entered Paris, escorted by the national guard. The allies having refused to acknowledge Bonaparte's right to abdicate in favour of his son, the Bourbons immediately resumed the government. By the advice or command of Fouché and his provisional government, Bonaparte repaired to Rochefort, where he was to embark for the United States. General Becker had been sent to escort him to the coast, apparently with orders not to allow him to escape to the country beyond the Loire, or to remain long in any part of France. At Rochefort the fallen conqueror saw that the country was tranquilly submitting to the Bourbons, and that the sea, covered with English squadrons and cruisers,

¹ On the left are the Tuileries and the Louvre; in the centro distance the Ile de la Cité, and the cathedral of Notre Dame; in the distance to the right is the tower of the Pantheon, or St. Geneviève; the bridges in receding order are Pont Royal, Pont des Saints Pères, Pont des Arts, at the end of which is seen the Palais des Beaux Arts; Pont Neuf, and Pont au Change.

offered him no chance of escape to America. The *Bellerophon* ship of the line, Captain Maitland, and some of our frigates, were in the roads. There were two or three small armed French vessels in port; but their officers told him that they could neither fight nor escape from the English ships. He then bargained with a Danish merchant vessel, and devised how he might conceal himself in the hold of that craft; but the honest Danish skipper—who might have taken his money, have led him alongside one of our cruisers, and have safely abided the consequences—told him that concealment would be impossible if the English searchers boarded: and this hopeless project was given up. He then talked of making a still more desperate essay—of attempting to cross the Atlantic in a *chasse-marée*, or small coasting vessel; but this, too, was given up, on the representation of the sailors. That such dangerous projects were ever entertained for a moment is, by itself, proof enough of the worth of the assertion that Bonaparte voluntarily sought the shelter of the British flag, not merely in the hope, but in the confident expectation that he should be allowed to reside in England, free as any English subject, and under the protection of our laws. He went on board the British ship because he could go nowhere else, and because he could not have safely stayed many hours longer where he was; he went on board the British ship because every other plan and hope had failed him. On the 10th of July, he sent off Las Cases and his evil satellite Savary with a flag of truce to the *Bellerophon*. Loaded with the blood of the Duc d'Enghien, Savary dreaded more than any of them the being arrested and delivered up to the Bourbons. To the demand that the emperor should be received as the free and voluntary claimant of British hospitality and protection, Captain Maitland replied, "that his instructions forbade him this, but that if Napoleon chose to proceed to England, he would take him there on board the *Bellerophon*, without, however, entering into any promise as to the reception he might meet with there, as he was in total ignorance of the intentions of the British government as to his future disposal." This offer was made by Captain Maitland, in his second interview with Las Cases, on the 14th of July; but Napoleon had already the day before written a letter addressed to the Prince-regent of England, saying that "he came, like Themistocles, to claim the hospitality of the British people, and the protection of its laws." Captain Maitland offered to despatch General Gourgaud to England with this letter immediately, repeating at the same time to him, "that he was not authorized to stipulate as to the reception of Bonaparte in England, where he must consider himself at the dis-

posal of the prince-regent." On the 15th, Bonaparte went on board the *Bellerophon* with his suite, saying to the captain as he put his foot on the quarter-deck, "I come to place myself under the protection of your prince and your laws." On the 24th the ship entered Torbay. On the 31st, Admiral Lord Keith and Sir Henry Bunbury, under-secretary of state, arrived from London to announce the final resolution of the British government—that the island of St. Helena should be the future residence of *General Bonaparte*. He protested vehemently against this determination, saying that he was not a prisoner of war—that he had come of his own free-will on board the *Bellerophon*—that he wished to be allowed to remain in England as a *private citizen*. On the 6th of August, however, he acknowledged to Captain Maitland that "he had certainly made no conditions on coming on board the *Bellerophon*, that he had only claimed hospitality, and that he had no reason to complain of the captain's conduct, which had been that of a man of honour." On the 7th, Napoleon removed from the *Bellerophon* to the *Northumberland*, Sir George Cockburn's flag-ship, which was appointed to carry him to St. Helena. It was a place from which he could not escape so easily as from Elba, being far from France and Europe, and an island of which Britain exclusively held the key, our country having possessed it since the time of Charles II. It was also a pleasant, picturesque, and especially a healthy residence, as had been proved by the thousands of British subjects who had made their abode in it. Indeed, no residence could have been found more favourable for one whom it was judged necessary to shut out from communication with Europe, and whom a humane enemy were still anxious to spare. He landed on that island on the 16th of October, and died there on the 5th of May, 1821, in the 52d year of his age. He died of the same disease which killed his father, namely, a schirrus in the pylorus. As far back as the year 1802, the tokens of this hereditary disorder had been observed. Some of the worst symptoms of the disease had shown themselves in an entire derangement of the stomach and digestive organs during the Russian campaign, and afterwards at the time of the battle of Leipzig. Upon opening the body the cause of death was made apparent—a large ulcer spread over a great part of the stomach.

The faults committed, or allowed to be committed, by the Bourbons at the restoration of 1814 did not include any over severity, or cruelty, or bloodshed; and, if we consider the wrongs which the family had suffered, or the execrable barbarities which had been practised upon some members of that unfortunate family, including the Duchess of Angoulême, who had survived

them, and who now returned to Paris, it must be confessed that the abstinence from vengeance was altogether astonishing. Many of the members of the national convention, who, in defiance of all law, had voted the deaths of Louis XVI., Marie Antoinette, and the Princess Elizabeth, were living in France, and were left to live there undisturbed. Many notorious scoundrels, who had played the part of jailers and tormentors in the Temple, were permitted to live in Paris: not one was brought to the scaffold, not one was transported, hardly one was exiled. All who had acquired titles, honours, estates, and by whatsoever means, were allowed to retain them without inquiry or question. It was the first time that a revolution, or a counter-revolution, had happened in France without being followed by torrents of blood. At the restoration of 1815 it was deemed necessary to be more severe, but even now the severity was very limited. In order to render their resistance the more desperate, Labédoyère and others had talked among the Bonapartists of an interminable list of proscriptions, of the guillotine *en permanence*, as in the reign of terror! Yet when the avenging royal ordinance was published (on the 24th of July), it was found to contain only fifty-seven names; and of these only nineteen were threatened with capital punishment or trial before a military tribunal. The first name on the black list was that of Ney; the second was that of Labédoyère. In the lighter part of the list were the names of Soult, Carnot, Vandamme, &c.; they were merely ordered to quit Paris within three days, and retire into the interior of France, to places to be indicated to them, where they were to remain under inspection until the chambers should decide which of them ought either to depart the kingdom or be delivered up to legal prosecution. It was explained that such of these individuals as should be condemned to exile should be allowed to sell their property in France, and freely carry the proceeds with them. Labédoyère and Ney were the only two that suffered death.

Nearly two months before Ney was shot in the garden of the Luxemburg Palace, Murat, a kinder and better man, was shot in the courtyard of a filthy Calabrian castle. He had landed upon that coast on the 8th of October with twenty-eight men, with the mad design of recovering his kingdom. He was presently surrounded by the people of Pizzo, knocked down, wounded by ball and dagger, gashed in the head and face, lacerated, tortured, and then thrown into prison to abide the vengeance of the Bourbon king Ferdinand. He fell on the 13th of October, in the forty-fifth year of his age.

Terrible reports had been spread by the Bona-

partists as to the intentions of Russia, Austria, and Prussia towards their unhappy and *betrayed* country. At one time it was confidently reported that the congress of Vienna, which continued sitting, had determined to disannex from France not only the whole of Alsace, but also the whole of Lorraine and of Franche Comté. At length the congress of Vienna settled the conditions: treaties and conventions were signed at Paris by Louis XVIII. on the 20th of November. The allies took no territory from France, and made none but the most trifling alterations in her frontier lines. But, in order to retain a powerful hold upon France during a season of probation, they determined to keep temporary possession of seventeen of the frontier fortresses for a term not exceeding five years, and which circumstances might reduce to three years; and to maintain in these fortresses and in other parts of the kingdom an army of allied troops not greater than 150,000 men, to be paid and supported by France. The allied sovereigns also exacted payment at least for some of the enormous expenses they had incurred; but they limited their demand to the narrow period of the "Hundred Days," the period from Bonaparte's landing at Cannes to his defeat at Waterloo, and fixed the total sum, to be divided among all of them, at 700,000,000 francs. Nor was France to pay this very limited contribution at once, or even at short intervals, but in easy instalments. She was, however, made to regorge some of the plunder she had accumulated during her career of conquest: the pictures, the statues, the rare manuscripts, which had been lodged in the museum in the Louvre, were now at last returned to Italy, Belgium, Germany, Spain, and Portugal.

Other sums of money were subsequently exacted from France, but the burden of supporting the 150,000 men was reduced to the lowest limit. As a new French army was organized, upon which Louis XVIII. considered that he might rely, 30,000 of the allies, or one-fifth of the whole army, were withdrawn in the year 1817, although only two years had yet elapsed; and it was determined that the whole of that occupying army should be withdrawn as soon as *three* years were completed. But the French were made to pay some indemnities for the spoliation inflicted on their neighbours during the revolution, and indemnities to some states for the expenses of the war. These conjoint amounts made up another 700,000,000 francs, or about £28,000,000 sterling, and there were some other items which may have carried the whole sum to be paid by France, by instalments, for the bloody freak of the "Hundred Days," to about £60,000,000 sterling. England, satisfied with the discharge of the private claims of her subjects upon the French govern-

ment, gave up her public share of the indemnities, which amounted only to some £4,000,000 or £5,000,000, to the King of Holland and the Netherlands, to assist him in restoring and repairing that great barrier of fortresses, which had been devised by our own great Dutch-born king, William III., to check the power of France on that side.

In the course of the year 1815, before any sums could be procured from the government of Louis

XVIII., the British government was obliged to send still more money to the allied sovereigns, whose then enormous armies must otherwise have lived at large on the French people, or on the peoples through whom the retiring portions of them had to march; and it was the grant (we believe in some cases it was idly called *loan*) of £4,000,000 or £5,000,000 of English money that smoothed many difficulties, and forwarded the homeward march of 650,000 men.

CHAPTER X.—CIVIL AND MILITARY HISTORY.—A.D. 1813—1820.

GEORGE III.

The American war—Defeat of the Americans in naval engagements—Combat of the *Shannon* and *Chesapeake*—Encounters by land—Attempts of the Americans to conquer Canada—They capture York—They are surprised and defeated by Colonel Harvey—Their defeat at Sackett's Harbour—Advance of the Americans on the Detroit frontier—They are defeated by Colonel Procter—Defeat of General Harrison by Colonel Procter at Fort Meigs—Dilatory proceedings and misconduct of Sir George Prevost, the commander-in-chief—Defeat of an English flotilla on Lake Erie—Procter defeated by General Harrison—Upper Canada almost lost by the insane orders of Sir George Prevost—General Vincent disobeys his orders and recovers the frontier—The Americans driven from Upper and Lower Canada—Defeat of the Americans on their own frontier—They make fresh preparations for the conquest of Canada—Various encounters—Defeat of the Americans near Fort Niagara—Advance of the British on the city of Washington—They defeat the Americans at Bladensburg—They destroy Washington—They compel the town of Alexandria to capitulate—General Ross killed in a rash attack on Baltimore—Losses of the Americans—Sir George Prevost continues inactive—His blundering attempts when he rouses himself to action—His disgraceful failures and retreat—He is recalled to England for trial—Loss of the Americans by these attempts on Canada—Advance of the British army on New Orleans—Their unsuccessful battle before the town—Their plans of attack on New Orleans defeated—Death of General Pakenham, their commander—Failure of their attempt on the city—Retreat of the British army to their fleet in the Gulf of Mexico—First overtures of the British for peace disregarded by the Americans—The war party in America daunted by the disasters of Bonaparte—Peace found necessary for the United States—Treaty of peace between Britain and America concluded at Ghent.

At sea, the American successes, such as they were, may be said to have closed with the year 1812, or with the first year of the war. Some larger and more suitable British frigates were sent out, and in every action which followed, where there was anything like an equality of force, the Americans were beaten without much difficulty; and, wherever the superiority of force lay on our side, they were beaten with perfect ease. The most memorable of these frigate fights was that which was fought on the 1st of June, 1813, between the *Shannon* and the *Chesapeake*. It lasted fifteen minutes, only eleven of which were spent in firing, and it was terminated by the English boarding and capturing the American ship. The circumstances are known to almost every Englishman. It was a battle upon challenge, sent into Boston harbour by the captain of the *Shannon*, the gallant Broke; it was a battle where the ships were equally matched, or rather where there was a slight superiority of force on the side of the Americans;

it was a battle fought within sight of the American shore, close into Boston harbour, where several armed American ships were lying, and where a public feast was preparing to honour the triumph of the officers and crew of the *Chesapeake*; it was a battle wherein the Americans had every incentive to exertion, and they did their best. But, although the forte of the *Shannon* lay in her admirable gunnery (Captain Broke had sedulously trained his people to the use of their guns, and spent his own money to make up for the niggardliness of the government, and supply his men with plenty of ammunition to practise with), it was not by the fire of her guns, but by boarding, that the *Shannon* beat the *Chesapeake*, hoisted "the old ensign over the Yankee colours," and led her away in triumph before the eyes of all her friends ashore.

The capture of that immense frigate, the *President*, which had had many narrow escapes, was the last naval contest; and took place some weeks after the signature, in Europe, of a peace between Great Britain and the United States, but before

the news of that event had reached America. After a hard fight with the British frigate *Endymion*, the *President* bore away from the action under a crowd of canvas, but three hours after she was encountered by the British frigate, *Pomone*, to which she made a signal of surrender. At this instant a third British frigate, the *Tenedos*, came up on the *President's* starboard side, and soon after the *Endymion* overtook her late antagonist. All chance of escape was thus cut off from the *President*, and nearly a third of her crew was killed and wounded when she yielded to the captors.

By land, the republicans continued to show how much their hearts were set upon annexing Canada to their dominions. In spite of the defeats, losses, surrenders, and disgraces of the year 1812, they renewed their attempt in 1813. By a sudden movement by water, York, now Toronto, on Lake Ontario, was taken, by General Dearborn, who was supported by an American freshwater flotilla, under Commodore Chauncey. General Sheaffe, who had about 700 men, British regulars and Canadian militia, and a few Red Indians, drew off his regulars, and left the rest to capitulate within the town, wherein considerable public stores were lost. The great lakes now became the most active scene of warfare—of an amphibious sort of warfare—for the same men often fought one day on water and the next day on land; now in extemporized fir-flotillas, and now in forts or in positions on the banks of those lakes. This had been foreseen and ought to have been provided for, as nearly everything depended on the establishment of a naval superiority on the lakes. Our squadron on Lake Ontario had been left miserably weak, and the efforts to increase its strength were not proportionate to those made by the Americans. In 1813, when the first action of any consequence took place on that lake, Sir James Yeo was, indeed, strong enough to defeat Commodore Chauncey, and to capture two schooners of the American squadron or flotilla; but the Americans avoided a general action, until some new vessels they had laid down should be completed.

The republicans, after embarking the captured stores of the town of York, sailed for Niagara, and concentrated 6000 infantry, 250 cavalry, and a good train of artillery upon that point. Their flotilla had the water all to itself; and under its destructive fire General Dearborn made good his landing on the Canadian shore. Our troops and the Canadian militia, outnumbered, as four or five to one, were compelled to give way and evacuate Fort George, after making a gallant stand and suffering a heavy loss. General Vincent, our commander on the Niagara, retired up the river, collected the small garrisons

of Fort Erie and other posts, mustered about 1600 bayonets in all, and gained a good position in Burlington Bay, near what is now the city of Hamilton, in spite of the efforts of the enemy to intercept him. On the evening of the 4th of June (1813), Vincent saw the Americans approaching his position by the lake shore. On the following morning, intending to attack Vincent in this position, with 3500 men and nine pieces of artillery, they encamped within five or six miles. Lieutenant-colonel Harvey, the British deputy adjutant-general, reconnoitred this republican camp, and then proposed to surprise it by night. General Vincent agreed: and, at the dead of night, the halves of two British regiments, mustering precisely 704 men, rushed with fixed bayonets into the American camp, headed by Colonel Harvey. The surprise was complete; the republicans fled in every direction, leaving two general officers, 100 prisoners, and four field-pieces behind them.

In the meanwhile, Sir George Prevost, waking from a long slumber, agreed to go with Sir James Yeo and his squadron, to make an attack upon Sackett's Harbour, and destroy the forts, the arsenals, and the dockyard, where the Americans had a frigate almost ready for launching, and several other vessels; but when this wavering and spiritless general reconnoitred the place he would not venture an attack, and returned across the lake towards Kingston. Then he changed his mind and went back to Sackett's Harbour; and (but not without more wavering and loss of time) our troops, about 750 strong, were landed. The Americans were presently driven at the bayonet's point into some loop-holed barracks and forts; and so panic-stricken were they that they immediately set fire to their new frigate, their naval barracks and arsenal, and destroyed a gun-brig and all the stores which had so recently been captured at York. While the arsenal was in flames, while the Americans were fleeing through the village, and when the complete success of the assailants was certain, Sir George Prevost sent a precipitate order for retreat, merely because a momentary resistance was offered by a party of Americans who had taken refuge in the log-barracks! If the destruction at Sackett's Harbour had been completed, we should have deprived the Americans of every prospect of obtaining the ascendancy on the lake. Sir James Yeo, after carrying Sir George Prevost and his troops back to Kingston, proceeded to the head of the lake with reinforcements for General Vincent. As soon as he approached, the American army, which had never recovered from the effects of Colonel Harvey's night attack, fled along the lake shore until they reached Fort George, at the mouth of the Niagara river,

where their general, Dearborn, evacuating all the Canadian bank of the Niagara, shut himself up in a strong entrenched camp, with about 5000 men. Something was expected from the energy and enterprise of General Vincent, but Major-general Rottenburg, who had been appointed governor of Upper Canada, assumed the command as Vincent's superior officer, and during the months of July, August, and Sept. (1813), nothing was done by the British in this quarter.

Before attacking the Niagara frontier, the republicans had commenced offensive operations on the Detroit frontier and on Lake Erie. By the end of January they had overrun the Michigan territory, and had advanced one wing of this army towards the village of Frenchtown, twenty-six miles south-west from Detroit. This American wing was about 1200 strong, and was commanded by Brigadier-general Winchester, an old officer who had gained distinction in their war of independence. There was nothing in its front but Colonel Procter, whose force was inferior, and of the most motley description. Sir George Prevost, as commander-in-chief, had strictly commanded Procter not to undertake offensive operations; but old Winchester's too bold advance gave Procter an opportunity which he was determined not to lose. With less than 500 regular troops, militia, provincial sailors, with four light guns and a band of 500 or 600 Red Indians, Colonel Procter gallantly advanced against Winchester and his Americans, surprised them by night in their quarters at Frenchtown, captured or destroyed one-half of them, and reduced the others to surrender upon promise of quarter. General Harrison, who commanded the rest of this army of invasion, was so dismayed at Winchester's disaster that, though still powerful in numbers, he abandoned his intention of advancing into Canada, and began to fortify himself near the rapids of the Maumee river, which falls into Lake Erie, near Toledo.

About the middle of April, Procter, now allowed to act on the offensive, embarked his entire force on board the flotilla on Lake Erie, made for the mouth of the Maumee, ascended that river, and landed troops, stores, and ordnance on the 28th of April, within two miles of Fort Meigs, the key of General Harrison's fortified camp. Procter had with him some heavy ordnance, 520 regulars, and 460 militia; the Indian warriors co-operating with him were about 1200. Harrison's force, well covered in his fortified camp, considerably exceeded that of Procter, who now erected batteries, and began to cannonade him from the opposite bank of the Maumee. The Americans responded to this fire with eighteen pieces of heavy ordnance, mounted in Fort Meigs. The English fired some red-hot

VOL. IV.

shot, but Harrison's block-houses, &c., would not take fire and burn, the wood being so very green. On the 5th of May, General Harrison's long-expected reinforcements made a rapid and sudden descent down the river in boats. They were 1300 strong, and under the command of General Clay. As the boats drew near, Harrison made a *sortie* to aid the disembarkation. For a moment the English batteries were in the hands of the enemy, together with some prisoners; but Procter, after pouring in one or two volleys of musketry, point blank, ordered a bayonet charge, and this charge not only repulsed those who had got into our batteries, but threw the whole of General Clay's force into confusion and headlong flight. The Indian warriors fell upon the fugitives; 550 were made prisoners, and the killed and wounded were estimated at as many more. After this brilliant affair the Indians returned to the Detroit frontier with their prisoners, their wounded, and their booty; the Canadian militia-men went home to attend to their farms; and Sir George Prevost had provided no regular force to support Procter's operations. That brave officer was therefore obliged to rest satisfied with what he had done, to abandon the notion of forcing Harrison to capitulate in his fortified camp, and to follow the Indians and the militia-men to Detroit.

The republicans now abandoned all intention of advancing against that frontier, until they could obtain a naval superiority on Lake Erie. Sir James Yeo had detached Captain Barclay, of the royal navy, to assume the command on that lake. Barclay was an officer of heroic courage and of distinguished ability; but the means put at his disposal were of the worst or most limited kind. He had been allowed to bring with him from the Ontario squadron only twenty-five regular sailors. But Sir George Prevost, who had shown so little alacrity in taking, told these brave men that the ordnance and naval stores they required must be taken from the enemy, whose resources must become theirs! But to take, one must have the power—to fight, one must have men proper for the service. On the 13th of July, Procter wrote to Prevost to tell him that "even 100 seamen pushed on immediately, would, in all probability, secure the superiority on this lake;" that he was already weakened on shore by his efforts to enable Captain Barclay to appear on the lake; that if he did not receive 100 seamen, he should be under the necessity of sending still more soldiers on board the vessels. On the 18th of August, Procter wrote again, telling the commander-in-chief that Captain Barclay had not received one seaman, and that the Americans were appearing on that part of Lake Erie in very superior force.

Still, a new fir-built vessel, called the *Detroit*, had been improvised, had been launched on the lake; "if we had but seamen, a few hours would place this district in security." "I entreat your excellency," added Procter, "to send me the means of continuing this contest!" And now it was that Sir George Prevost, instead of sending seamen, sent a letter, which, all the circumstances being considered, was ungenerous, insulting, absurd, and at the same time, horrible--horrible, as it went to inflame high-spirited officers, and to sacrifice the lives of brave men in a most unequal and hopeless contest. This precious commander-in-chief, who had so recently run away from Sackett's Harbour, wrote to Procter--"Although your situation may be one of difficulty, you cannot fail of honourably surmounting it, notwithstanding the numerical superiority of the enemy's force. The experience obtained by Sir James Yeo's conduct towards a fleet infinitely superior to the one under his command will satisfy Captain Barclay that he has only to dare, and the enemy is discomfited." And Barclay, to whom such a man as Prevost applied such a taunt, was a man of the Nelson stamp, and one who had lost a limb under that hero! General Procter said, in reply--"Your excellency speaks of seamen, valorous and well-disciplined. Except, I believe, the *twenty-six* whom Captain Barclay brought with him, there are none of that description on this lake. On board of his majesty's squadron there are scarcely enough hands (and those of a miserable description) to work the vessels, some of which cannot be used for want of men, even such as we have. . . . Seamen should be pushed on here, even by dozens."

At last Sir George Prevost did push on *forty* seamen, intimating his expectation that, as soon as this great reinforcement should arrive, Captain Barclay would "make his appearance on the lake to meet the enemy." But Barclay had now no option left him. On the 9th of September the last barrel of flour was consumed, and there was no alternative between his clearing the lake communication and the starvation of our troops. On the very next day, the 10th of September, the most desperate of all these lake actions was fought. Captain Barclay had the *Detroit*, which was rigged as a barque, and mounted eighteen guns; another three-masted craft of eighteen guns, a brig of ten guns, a schooner of fourteen, and two gun-boats, carrying, the first three guns, and the second one gun. These guns were not proper ship guns, nor was there any uniformity of calibre: they had been stripped from the forts on the Detroit frontier. One of the three-masted vessels, and the brig, had each guns of four different calibres on the same deck, from *twenty-four to two* pounders. For want of proper imple-

ments, the men were obliged to discharge these strange ship guns by snapping pistols over the touch-hole. The crews of the whole flotilla consisted of 61 British seamen, 85 Canadians, and 210 soldiers of two different regiments--total, 356. The American commodore, Perry, had two large brigs and eight schooners, heavily armed. The American squadron mounted altogether but fifty-four guns; but they were properly supplied with implements of gunnery, their guns were of better quality or of better assorted calibres, and, owing to the large proportion of their shifting and pivot pieces, they could present in broadside exactly the same number of guns as the British; while their aggregate weight of broadside was fully double that of their assailants. To complete his advantages, Commodore Perry had picked crews to all his vessels, particularly on board the *Lawrence*, his flag-ship, and her sister brig; and his total of men amounted, at the very least, to 580. It is not astonishing that the English flotilla was beaten; but it is astonishing that it should have been able to maintain the desperate contest for three long hours. The day was not lost until the first and second in command of every one of the English vessels had been killed or dangerously wounded. The heroic Barclay had lost one arm serving under Nelson, and now the other arm was mutilated before he quitted his deck. Of the ten experienced British seamen on board the *Detroit*, eight were killed or wounded. When every hope of success or of escape was gone, the second lieutenant of the *Detroit* (the first lying mortally wounded) ordered the colours to be struck. Two other English vessels struck about the same time; the rest of the flotilla were overtaken and captured in their retreat. The total loss on board the British vessels in killed and wounded was 135. The American loss in killed and wounded was 123. This catastrophe rendered inevitable the rapid retreat of General Procter and the Indian chiefs that were acting with him. They therefore abandoned all the positions on the *Detroit*, thus leaving the Michigan territory again in the possession of the Americans. But they could no longer retreat without fighting, for General Harrison passed over between 5000 and 6000 men to intercept them. The Indian allies had dwindled from 3000 to 500, and Procter's regular force consisted of about 500 effectives. The Americans gained what they do not hesitate to call a splendid victory. They killed the famed Indian chief Tecumthé, and cut up his skin into razor-strops, to be presented to Mr. Clay of Virginia, and to other bright ornaments of congress and the country.¹

¹ This is fact. Clay is said to have boasted of possessing such a razor-strop.

Once more the republican hopes ran high. They considered Upper Canada as almost conquered by the defeat of Procter; and their conviction was confirmed by the panic of Sir George Prevost, and by the orders he issued—orders which had the effect of disheartening the Canadians. Three American armies, or three gatherings of men which they called armies, were put in motion for different parts of the Canada frontier in the month of October. While Harrison proceeded along Lake Erie with his 5000 or 6000, General Wilkinson, taking his departure from Sackett's Harbour, crossed Lake Ontario with nearly 10,000 men, and effected a landing near Kingston; and a third force under General Hampton marched upon Montreal. General Rottenburg had left his command on the Niagara to General Vincent, and had moved with reinforcements towards Kingston. Vincent, destroying great quantities of provisions and stores, retreated to Burlington, where he was joined by the remainder of Procter's troops; and no sooner had Sir George Prevost heard of Harrison's success, than he despatched orders from Montreal to General Vincent to evacuate the whole of Upper Canada as far down as Kingston. If these mad, cowardly orders had been obeyed, Upper Canada would have been lost, the troops of Vincent and Procter would have been lost, with ordnance, ammunition, and stores; and Kingston also must have been lost, with its fortress, ships, and arsenal, for the place contained provisions for only seven days, and the depôt of provisions at York would have been lost before Kingston. But fortunately there were several officers of rank in General Vincent's army who took upon themselves the responsibility of disobeying the orders of the commander-in-chief. Vincent was persuaded to be disobedient; and the recovery of the Niagara frontier was the result. Nothing was ever more disgraceful than the panic of Sir George Prevost. The American corps were an undisciplined rabble, ready to fall into a panic themselves at any hostile movement or show of resistance. Hampton, Harrison, and Wilkinson were all put to a disgraceful rout. Only one of the three republican generals fought a battle, and he was beaten by a corps not a sixth part so numerous as his own, and lost, rather in the flight than in the fight, about 1000 men. By the middle of December both Upper and Lower Canada were entirely freed from the presence of the invaders. Some of them, before they fled back to their own country, committed sundry atrocities, which were soon afterwards avenged at Washington and elsewhere. They burned towns and villages to the ground, in order to punish the poor Canadians for their perversity and wickedness in not turning rebels and joining them. But the republicans could not

keep their own frontier free from invasion. Colonel Murray, with less than 500 men, crossed the water, attacked their fort of Niagara, at the mouth of the river of that name, carried it by escalade with a trifling loss, killed or took prisoners the whole garrison, and captured a large quantity of arms and stores. The American general, Hull, came hastily up to the town of Buffalo to check the further progress of the British: but, being attacked on the 30th of December by 1000 regulars and militia, and 300 or 400 Indians, he was entirely routed. All that part of their frontier was laid open and bare. Such armies as Hull's never rally: he had 2000 men when he came to Buffalo; but after the battle he could hardly collect 200.

While the Americans were struggling on the great lakes and on the outskirts of Canada, our blockading squadrons from the ocean sent light vessels far up several of their rivers, to seize or destroy the repositories of stores on the banks. In this manner the rivers at the head of the Chesapeake were all threaded in the course of the year 1813. These operations, to which nearly every part of the American coast on the Atlantic was exposed, relieved the monotony of the blockading service, and did something more—they increased the impatience of the inhabitants for reconciliation and peace, and greatly embarrassed and weakened President Madison's government. Before the end of the year 1813, some of the states declared in a very unequivocal manner that Madison was ruining the country, by persevering in a war which he had commenced without any necessity, and that rather than be denied any longer the advantages of a peace with England, they would sacrifice their advantages as members of the federal republic.

In the year 1814, the Americans once more made great preparations on the lakes for the conquest of Canada. They had scarcely one glimpse of success: the Canadians were more than ever loyal and on the alert, and reinforcements to the regular army arrived from Europe. In the month of April, a force under General Drummond embarked in Sir James Yeo's flotilla, crossed Lake Ontario, and stormed and carried the American frontier fort of Oswego. The garrison fled into the woods, after fighting for only ten minutes. The fort was destroyed, the barracks were burned; and the English troops were re-embarked. In May, an attempt was made to destroy some naval stores which the Americans were transporting to Sackett's Harbour, for the equipment of the flotilla there, but was repulsed with loss. At the beginning of July, a new republican hero, Major-general Brown, took the field, crossed the Niagara in force, obliged the garrison of Fort Erie to capi-

tulate, and advanced into Canada. As he approached the British lines of Chippewa, General Riall, with very inferior numbers, consisting partly of militiamen and Red Indians, made a sortie. A smart action followed, in which both parties sustained considerable loss, but in which the advantage clearly remained with the Ameri-

insular war came fairly into action, the very imperfectly disciplined republicans confessed their inferiority by retreat and flight. This battle was fought on the 25th of July (1814), at Bridgewater, close to the mighty cataract of the Niagara—so close that the dash and roar of the water were heard amidst the firing of twenty-four pieces of ordnance and 8000 muskets. The Americans engaged were estimated at 5000; the number of the British and Canadians did not exceed 3000. The Red Indians, our allies, ran away early in the battle. Our loss reached nearly 900 in killed and wounded. The republicans lost 1500. They retreated most precipitately to Chippewa, and from thence to Fort Erie, abandoning a camp they had fortified, and destroying their stores. On the 15th of August, Drummond was repulsed with great loss in a somewhat rash attempt to carry Fort Erie by storm.

On that same day rum was approaching the city of Washington, the nominal capital of all the United States, the seat of the central government, and the meeting-place of congress. Admiral Sir Alexander Cochrane, having on board the land troops of Major-general Ross, another hero of the Peninsula, entered the Patuxent river. At the proper point the troops were landed, and began to ascend the bank of the river on their way towards Washington, Admiral Cockburn, with a flotilla of launches, armed boats, and small craft, proceeding up the river on their flank. The American flotilla of Commodore Barney had sought refuge in the Patuxent; and as the British boats opened the reach above Pig Point they perceived Barney's flag flying in the headmost vessel, a large sloop, and the rest of his flotilla extending in a long line astern of this sloop. It was thought that Barney intended to dispute the passage of the river by fighting; but as Cockburn got near he discovered that some of the American ves-

cans. Riall retreated to a better position near Fort George. General Drummond, with part of Wellington's veterans, who had been embarked at Bordeaux after the battle of Toulouse, now came up and reinforced Riall. The American, Brown, counting on his superiority of numbers, which was still great, presumptuously risked a pitched battle in an open field. At first he gained a temporary advantage, during which General Riall was wounded and taken prisoner; but, when Drummond and the veterans of the pen-

sels were on fire. The British admiral called a timeous halt: the American craft barned fiercely, and blew up in succession. Sixteen were totally destroyed; the seventeenth fell into the hands of the British, little injured, together with about thirteen merchant schooners. Sailors and soldiers all believed that Commodore Barney had left his flotilla and his flag flying as a decoy, in the hope that the British would approach them precipitately, and so be blown up with them. In this light the incident on the Patuxent river was

noted down by the forces that were now getting close to Washington. On the 24th of August, Major-general Ross and his troops reached Bladensburg, a village within five miles of that capital. Here, on the right bank of the Potomac, and along a chain of commanding heights, 8000 or 9000 Americans were posted, to cover and defend their capital. President Madison was on the hills when the battle began; but he did not find it convenient to stay and see the battle finished, short as it was. To get at the position the British had to cross the Potomac by a single bridge, which the Americans guarded with artillery. But the bridge was carried in a trice by a light brigade, and then the rest of the troops passed over, deployed, and attacked the right and left of the enemy at one and the same moment. The whole affair did not occupy half an hour, and did not engage more than one British division, about 1600 strong. The Americans broke and fled, very few of them waiting to be either killed or wounded. That evening the British were in Washington, where they immediately began the work of destruction, which was the main purpose of the expedition. The president's house, the Capitol, the Senate-house, and House of Representatives, the treasury, the war-office, the arsenal, the dockyard, the rope-walk, were committed to the flames, and the great bridge across the Potomac and other public works were blown up and destroyed. A frigate ready to be launched, and a sloop-of-war, were consumed in the dockyard. Private property was to be respected, and strict discipline was to be observed by the troops. General Ross's orders to this effect were very positive, and the British accounts say that they were strictly observed. On the following night, the 25th of August, a leisurely retreat was commenced; and the British troops, having met with no molestation on their return, were re-embarked on the 30th. The town of Alexandria, lower on the Potomac river than Washington city, was attacked on the 27th of August, by Captain Gordon of the *Seahorse*, attended by other vessels. Fort Washington, built to protect the river at that point, was abandoned by its defenders after a very short bombardment. The town council of Alexandria agreed to deliver up all public property, and Gordon agreed to respect all private property. All the naval and ordnance stores, all the shipping and their furniture, were surrendered; and the captors loaded their own ships with spoil, and, stowing away the stores, &c., in twenty-one vessels which were found in the harbour, passed down the river, very little injured by the batteries, and got safely out to the *Chesapeake*. On the 12th of September, a very imprudent and unsuccessful attack was made on the strongly-fortified city of Baltimore, which cost the life of General Ross, and

the lives of a good number of his men; though here again a great force of Americans that attempted to defend the approaches of the town (within which there was a still larger force) was defeated and routed by a very inferior body of British regulars, and lost in killed and wounded some 600 or 800 men. The loud outcry made by President Madison proved how sensibly the Americans felt this desultory but destructive system of warfare. It allowed them no repose—it threatened every part of the coast at once—none could tell where the next blow would be struck. In the month of July, Colonel Pilkington took all the islands in the Bay of Passamaquoddy; and in another expedition, undertaken in September, the British sailed up the Penobscot river, took the fort of Castine, landed in a cove within three miles of the town of Hampden, defeated double their number, drove the Americans from a strong position, and compelled them to burn the *John Adams*, a fine frigate, which had run up the river for protection. They also captured the town of Bangor, and another fortified post, and reduced the whole district of Maine from Passamaquoddy Bay to the Penobscot river.

Sir George Prevost having now a large disposable force, including some of the finest regiments that had been trained under the Duke of Wellington, thought he could repay the Americans for their troublesome visits to Canada, by invading their most flourishing state, New York. Before moving, he ought to have made sure of the superiority on the waters of Lake Champlain. Nothing could better have contributed to this end, than the capture or destruction of the naval and other depôts at Sackett's Harbour; and this would have given him the mastery on Lake Ontario, which was an object almost as important as any that he could reasonably propose to himself in his more distant expedition. He had wasted some of the most valuable of the summer months in a camp at Chambly, while Sir James Yeo was blockading Sackett's Harbour (a doubtful sort of blockade, since the American commodore was already stronger than Sir James, and was only waiting to be made still stronger by the shipwrights and riggers hard at work in Sackett's Harbour); but, though Sir George had ample means of attack, and a few days' march would have brought him before the defences of that important arsenal, he made no effort whatever against it. When the veteran troops from Bordeaux landed, every man in the army, or in the provinces of Canada, expected that he would fall on. But no! there he continued to lie at Chambly doing nothing. The American government felt, though our commander-in-chief would not, that all other objects on the frontier were insignificant in comparison with Sackett's Harbour; and they sent

General Izzard, who now commanded on the Champlain frontier, with between 3000 and 4000 regular troops, to take post within it, and in its vicinity. This movement of General Izzard left nothing near the frontier of Lower Canada but some 1500 men, the very refuse of his army. From such refuse nothing was to be feared; the local Canadian militia would have been far more than a match for them. Sir George Prevost could not, therefore, plead that his inactivity in his camp at Chambly was owing to any apprehension of an attack on the frontier of Lower Canada. During the whole month of August, the peninsular troops, ready to march anywhere, and fit for any work, were detained in the camp for which Sir George had conceived so steady an affection. At last the note of preparation was heard; and now all eyes were directed towards Sackett's Harbour. But, says a truth-speaking man, "by a strange perversity of intellect, Sir George Prevost again shunned that place as a pestilence;" and Plattsburg, on Lake Champlain, was found to be the object of the expedition! To complete the certainty of ill-success, Sir George in person took the command of the whole army. The force was composed of a regiment of light cavalry, a numerous train of artillery, and three brigades of the best infantry in the British service or in the world, led by Major-generals Brisbane, Robinson, and Power, and amounting in all to 11,000 men. On the 3d of September, these troops began their march, which was so managed by Sir George Prevost, that, though the distance was only twenty-five miles along the lake shore, four days were consumed in performing it. On the evening of the 6th, the army arrived on the left bank of the little river Saranac, on the opposite bank of which stood the village of Plattsburg, and on a ridge above it the American defences, consisting of some stockades, three unfinished redoubts, and two block-houses, armed in all with from fifteen to twenty pieces of ordnance. The American flotilla of Lake Champlain lay at anchor in Plattsburg Bay. It was at first confidently expected, and then eagerly proposed to the commander-in-chief, that an assault should be made that very evening. The British troops were fresh, having made but a very short march; the American troops were that refuse of General Izzard's army, of which we have spoken, and some 3000 or 4000 militiamen, who had run in haste and confusion to the spot, and who would have run much more hastily back again if hotly and closely attacked. The defences were altogether very incomplete; the American flotilla, as a flotilla, could have done nothing, either to defend

the works or impede the attack. One veteran British brigade, with a few well-served guns, and a few congrève rockets, would have done the work in half an hour. But Sir George Prevost, after losing four days on a march, chose to halt for other five days in front of this American rabble, as if for the express purpose of allowing them time to complete their works, and gain confidence, and receive reinforcements. The reason he assigned was the presence of the American flotilla, which could do nothing to check what ought to have been his immediate object, and which was perfectly well known to exist where it was before he began his march from Chambly. For ulterior operations, beyond the possession of Plattsburg, the assistance of a British flotilla and our superiority on the lake were requisite, and the commander-in-chief ought not to have commenced his march before his flotilla was ready. After wasting months, he might have waited a few days longer in his camp; but, having displayed his plan of operation, and having advanced to Plattsburg, he ought to have attained so much of his object as the reduction of that place; and he might have attained it with ease, and without the slightest necessity for the aid of a flotilla. But Sir George was of that class of men who expect everything to be done by others, nothing by themselves: and nothing would he undertake until our crazy flotilla should arrive, and destroy that of the enemy. Poor Barclay's squadron on Lake Erie was as bad as we have seen; but Captain Downie's, on this Lake Champlain, was infinitely worse. Early on the morning of the 11th of September, Captain Downie came up boldly with his squadron, and announced to the army the preconcerted signal of the scaling of his guns. The firing was heard by every man in that army. Then, "Forward columns of attack?"—"No such thing!—there came the order for the troops to *cook!* Not a platoon had been permitted to form when our ships rounded the promontory, stood into the bay, and attacked the Americans. Captain Downie told his crew that the troops would presently storm the works on shore, and his people began the action with much gallantry. The gallant Downie was killed about ten minutes after the battle began, but his ship was courageously fought for two hours longer, under almost every disadvantageous and discouraging circumstance, the army all the while not stirring a foot. After a determined struggle of two hours and twenty minutes, the ship, the brig, and one sloop, which in fact had maintained the battle against the whole of the American squadron, were successively reduced to strike their colours.² Sir

¹ *The Letters of Veritas*; containing a succinct narrative of the military administration of Sir George Prevost, during his command in the Canadas, &c. Montreal.

² *James's Naval Hist.*; *Quart. Rev.*, No. liv.; Official Account by Captain Pring, who commanded the British brig in the action; *Annual Register*.

George Prevost was a passive spectator of the slaughter and discomfiture of these brave men. Once, indeed, he gave the order to advance, but he gave it only to recal it again, just as our light troops were getting close in upon the American works. But the disgrace to our arms was not yet complete. Sir George said that there was nothing now to be done; that to gain possession of Plattsburg would cost more than the place was worth, and that consequently the army must retreat! Stung into madness, 800 British veterans deserted from the camp. The retreat commenced on the very night of that fatal and for ever disgraceful 11th of September, with the abandonment of immense quantities of stores, ammunition, and provisions.

The one single ability which Sir George Prevost had displayed during his command in Canada, was that of blinding the eyes of the British government to his incapacity, or of shifting upon other men's shoulders the crushing weight of his own misconduct and accumulated blunders. But now the dust was cleared from the eyes of the government, the mist of his false representations was dispersed; Sir James Yeo preferred most serious charges against him, and particularly for his neglect to co-operate with Captain Downie, and he was immediately recalled, to answer at the bar of his offended country. Disease and a natural death saved him from the vengeance of military law; but as a warning and example, may shame and infamy rest upon his grave!

On the 17th of September of this same year (1814), the Americans in Fort Erie, being joined by volunteers from their militia, made an attack in force upon the intrenched position of General de Watteville. Being repulsed with loss, they evacuated Fort Erie, demolished its works, and retreated to their own shores. This entire evacuation of the Canadian shore of the Niagara terminated all operations in the upper province. In abandoning the Michigan territory, we had kept possession of the important key-post of Michilimackinac. In the summer of 1814 the republicans made a great effort to recover this post, and did not recover it. It is scarcely necessary to mention the paltry skirmishes and inroads which took place on the frontier of the lower province during the winter. In 1815 the news of peace arrived before the season of the year which allows of extensive military operations in those frost-bound countries. It has been calculated that in three years of warfare, the attempts to carry out the grand plan of President Madison, or to effect the subjugation of the Canadas, were attended with the loss to the republic, in killed, wounded, and prisoners, of nearly 50,000 men, besides an enormous expenditure of treasure and stores and warlike resources. In the course

of 1813, when the republican generals, Harrison, Hampton, and Wilkinson, were all in motion, co-operating in one great object, the frontiers of Canada were pressed upon by 30,000 men. Yet, when the conditions of the treaty of Ghent demanded restitution of all acquisitions which had been made by either party of the frontiers, the Americans had nothing but the defenceless shore of the Detroit to give in exchange for their fortress of Niagara and their key-possession of Michilimackinac.

In the last great land action of the American war, although there was no lack of courage, there was an almost incredible amount of imprudence and miscalculation. Not satisfied with ruining the trade of New Orleans, and all the towns upon the river Mississippi, by blockading that river, our commanders determined to ascend the river and attack the city of New Orleans. This town, upon the eastern bank of the Mississippi, is about 110 miles from the sea; it is built upon a narrow neck of land, confined on one side by the river and on the other by almost impassable morasses; and, though in itself unfortified, it is not easy to conceive a place capable of presenting greater obstacles to an invader. Below the town are some tremendous forts, which completely command the navigation of the river, the current of which is very heady and violent. The assaults could not possibly reach the town by water, and the march by land across the swampy country was difficult in the extreme. Our ill-fated expedition under Sir Edward Pakenham, went as far up the Mississippi as it could, and then landed. Three days were employed in landing heavy cannon, and making such preparations as were necessary. Having procured the *matériel*, one-half of the British army was ordered out on the night of the 31st of December, to throw up a chain of works: the men halted about 300 yards from the enemy's line; and here the greater part of them, laying down their muskets, applied themselves vigorously to their task, while the rest stood armed and prepared for their defence in case the Americans should sally. The night was dark, the British maintained a profound silence, and the Americans kept a bad watch, for it was the last night of the year, and rum and other means of conviviality abounded in the republican camp. In this manner six batteries were completed long before the dawn of New Year's Day, and thirty pieces of heavy cannon were mounted on them. There had not been much digging and trenching. Every storehouse and barn in the country was filled with hogsheads and barrels of sugar and molasses, and these barrels and hogsheads were used instead of earth. Rolling the hogsheads towards the front, the British soldiers placed them upright, to form the parapets of the bat-

teries. We had the sugar and molasses, the republicans had the cotton-bags and the unpressed cotton-bales, and hogsheds and barrels besides. The morning of the 1st of January, 1815, was very dark and foggy in those swamps and bogs of New Orleans. The day was considerably advanced before the Americans could distinctly discover how near the British had approached to their lines, or see the novel use they had made of their hogsheds of sugar. As the mist cleared away our batteries opened a tremendous fire. The first effect of this firing and of the astonishment of the Americans was seen in the breaking of the American ranks, in the dispersion of their different corps, which fled in all directions in the most visible terror and disorder. Even their artillery remained silent. By degrees the republican infantry rallied; and then their formidable artillery began to answer the British salute with great rapidity and precision. They landed a number of guns from a flotilla, they took every gun from every vessel in the harbour, they increased their artillery to a great amount, and they brought a heavy flank fire as well as a front fire to bear upon Pakenham's thirty cannon in battery. The hogsheds and casks were knocked to pieces, the sugar and molasses thrown all about, a good many of our artillerymen were killed and wounded, and some of our guns were knocked over. Moreover, towards evening our ammunition began to fail, and the incessant fire to slacken. The British were obliged to retire, leaving their heavy guns to their fate, but, as no attempt was made by the Americans to secure them, working parties sent out after dark removed such of them as were worth removing. Nothing could tempt the republicans to make a sally, or try their fortune in an open field. They knew their strength and their weakness, and they wisely kept behind their river and canals and bogs, and their breast-works of cotton-bales, trusting to their superiority in artillery and to their skill as riflemen.

A new plan of operations was invented: it was determined to divide the army, to send part across the river, who should seize the enemy's guns in battery there and turn them on themselves; while the remainder should make a general assault along the whole entrenchment. But, before this plan could be put into execution, it was necessary to cut a canal across the entire neck of land on which our army stood, to admit of boats being brought up for conveying the troops across the river. The men laboured by turns day and night, and at last by unremitted exertions they finished their canal on the 6th of January. The unexpected arrival of Major-general Lambert, with the 7th and 43d, two splendid battalions, mustering together 1600

effective men, raised the spirits of the besiegers. There also came up marines from the fleet, and a body of sailors ready to do or attempt anything. These additions raised Pakenham's force to about 8000 men. The number of armed Americans, of all classes, was estimated at 20,000; and every day brought them some reinforcement from the neighbouring country, from the killing regions of the Kentuckians, and from other parts far and near. Boats were ordered up to the newly-cut canal for the transport of 1400 men; and in these boats Colonel Thornton, with the 85th regiment, the marines, and a party of sailors, was to cross the river, and carry the terrible flanking battery, which mounted eighteen or twenty cannon. Thornton was to move in the darkness of night and in silence; he was to land at some distance from the American battery, to rush upon it and seize it by surprise in the dark, but not to begin his fire from it until he should see a certain rocket in the air, which would be the signal that Pakenham was commencing a general attack along the American lines.

This was the whole of Pakenham's bold plan. It was deranged by various circumstances. The boats could not arrive at the appointed time; the soil, through which the canal had been dug in so great a hurry, being soft, parts of the bank gave way, choking up the channel and preventing the heaviest of the boats from getting forward; these heavy boats again blocked up the passage, so that none of those which were behind could proceed, and thus, instead of a flotilla for the accommodation of 1400 men, all that could reach their destination were a number of boats barely sufficient to contain 350 men. And so much time had been consumed in getting these few boats into the river, that the dawn of day was beginning to appear before Colonel Thornton could get across. He made good his landing, and formed on the beach without opposition and alarm; but day had already broke, and Pakenham's signal-rocket was seen in the air while he and his 350 men were yet three miles from the battery, which ought to have been taken three hours ago. This was fatal to the plan; but blunders and negligences occurred in the main army. Besides their canal and their bales of cotton, the Americans had along their great line certain fixed, permanent ramparts. To mount these, and for laying down across the canal, Sir Edward Pakenham had ordered his attacking columns to be provided with ladders and fascines. But the order had been neglected; there was not a single ladder or fascine upon the field when the assault began, nor were any brought up until it was too late. The guns in the battery which Colonel Thornton was to take remained as Pakenham had seen them the preceding day: his signal-

rocket went up, but no fire was opened upon the enemy from that battery. The assault along the lines was, however, commenced under a tremendous fire of American artillery. On the left, a detachment of the 21st, under Colonel Rennie, stormed a three-gun battery and took it, this battery being in advance of the canal or ditch. On the right, a column, composed of the 21st and 4th, supported by the 93d, crossed the ditch without fascines or ladders; but to scale the parapet without ladders was scarcely possible. Some of the men tried it by mounting upon one another's shoulders, and in this way a few actually entered the works; but they were not supported in time, and were soon laid low by a concentrated crash of musketry. Right and left the columns of attack were compelled to give way; and as they ran back, the fire of the American artillery grew hotter and hotter, and some of the battalions betrayed symptoms of disorder and panic. Pakenham, leading on a fresh column of attack in person, received a slight wound in the knee from a musket-ball, which killed his horse under him. Mounting another horse, he again headed the troops, and he was seen, with his hat off, encouraging them on the crest of the glacis, when a second ball struck him, and he fell dead into the arms of his aide-de-camp. Generals Keane and Gibbs rode through the ranks, and endeavoured to encourage the assailants, till they were both carried off the field wounded, Gibbs mortally. Other officers were brought down by the keen American marksmen, who fired under cover, and with their rifles in rest. All was now confusion and dismay. Without leaders, without knowing what was to be done, almost without so much as a single subaltern officer left standing, the troops halted and opened, then began to retire, and finally the retreat became a disorderly flight. The strong reserve, however, closed up to cover the retreat, and give time for rallying; and so cautious were the republicans, that they would attempt no pursuit. They remained behind their strong lines, and merely plied their artillery. Thornton and his 350 men beyond the river did nobly, though it was too late. They drove the Americans, consisting in part of a corps of wild Kentuckians, from their positions; they drove three times their own number out of the battery; they took possession of their tents and of their eighteen pieces of cannon. The Americans, expecting no attack on this side of the river, had been taken by surprise, even though it was broad daylight; and the British soldiers, marines, and sailors had fought with the greater spirit from believing that Pakenham's attack (announced by the signal-rocket) was succeeding. But before they could turn the captured guns upon the enemy, Colonel Thornton learned the true state

of the case from the messenger who brought him an order to retreat immediately, recross the river, and join the main body of the army.¹ As Thornton retreated, the Kentuckians and their comrades began to return to their batteries; but, notwithstanding their great superiority of numbers, so very little stomach did they show for fighting in open ground, that they stopped by their recovered works, and gave no pursuit; and thus, under cover of some smoke which they raised by setting fire to a house, the British got back to their boats and crossed the river without molestation, carrying with them a good part of the American artillery which they had captured.

As soon as the whole army was reunited, a flag of truce was despatched by General Lambert, upon whom the command devolved, with proposals for a suspension of hostilities to collect and bury the dead. The Americans readily agreed to a truce of two days. General Lambert wisely abandoned the notion of making another attempt. But before he could begin a retreat, it was found necessary to make a road across an execrable morass some miles in extent. This work occupied nine days, during which the British army remained in position within cannon-shot distance of the American lines; and, although the fame of their success brought more and more volunteers to swell the force behind those lines, no sally was made—nothing was attempted beyond firing of long shots with their big guns. When General Lambert began to move off—which was not until the 18th of January, when the whole of the wounded, the baggage and stores, the civil officers, commissaries, &c., were well advanced on their way to the English fleet—nothing was abandoned except ten pieces of heavy artillery which had been mounted in front of the bivouac, and which were old ships' guns of little value, and extremely cumbersome, and these guns were rendered perfectly unserviceable before they were left. And such was the skill with which the whole retreat was managed, and such the shyness of the Americans—who even now would not quit their works or attempt any pursuit—that the whole of the army got safely back to the ships lying in the Gulf of Mexico, near the mouth of the Mississippi. It was every way a useless and lamentable expedition (peace had been concluded in Europe before it commenced), and it cost us nearly 2000 men and officers in killed, wounded, and prisoners.

The last action of the war was the capture of Fort Mobile, in the new Alabama territory of the United States, by General Lambert, who had

¹ *The Campaigns of the British Army at Washington and New Orleans, in the years 1814-15, by the author of The Subaltern* Fourth edition, corrected and revised. London, 1836.—Despatches of Generals Lambert and Keane.

so ably conducted the retreat from New Orleans, and by Admiral Sir A. Cochrane. The troops were landed as early as the 7th of February, and by the 11th the place was ours, the garrison surrendering as prisoners of war.

During the progress of the war, the British government had made several overtures, direct as well as indirect, for a reconciliation, and every royal speech at the opening of parliament had expressed—with a determination to yield or commit none of our maritime rights—regret for the quarrel, or a wish that it might not be lasting. At first the overtures were met as a confession of fear and weakness—as an avowal that we were sinking under the weight imposed upon us by a war with France in the Old World, and with the republic of the United States in the New World; and, when their ship-of-the-line-like frigates had made old British frigates strike, it was fancied that our spell was broken, that the trident was falling from our hands. Bonaparte's grand disaster in Russia, which was well known all over the United States early in the year 1813, damped, but did not destroy, the hopes of the war party; for they could not conceive that so gigantic a power as that of the Emperor of the French could be destroyed at one blow. They hoped that the Man of Destiny would prevail against all the embattled crowned *despots* of Europe, in the plains of Germany, in 1813. This hope was shattered by the battle of Leipsic. But in the beginning of 1814, when Bonaparte was fighting on the soil of France—when the armies of the allies were engaging, far from their own frontiers, in the very heart of the most warlike nation of Europe—they trusted that the star of Napoleon would shine forth again more luminous than ever. It was needful for them to cling to this hope, for the most ardent lover of this war with Britain well knew that it could not be continued without ruin to the United States, if Britain should be relieved from the great French war, and be enabled to direct her whole attention to this little episode in America. But Bonaparte was beaten inside of France, as he had been beaten outside of France; and the 1814 hope was finished by the capture of Paris, and the abdication of Fontainebleau. Then, and not until then, President Madison and his party utterly despaired of the policy they had adopted, and became really eager for peace. Before this time, however, the pupil of Jefferson had been compelled to pretend a wish to treat. On the 7th of January, 1814, he communicated to congress copies of a correspondence between Lord Castlereagh and Mr. Monroe. From these letters it appeared that Lord Castlereagh had proposed the appointment of plenipotentiaries to treat respecting terms of peace, either at London or at

Gottenburg, and that the American diplomatist, preserving his proper dignity, had acceded to his lordship's proposition, being authorized so to do by the president, who had made choice of Gottenburg for the scene of the negotiations. The anti-war and anti-French party bitterly assailed the president for not assenting to a like amicable proposition made on the part of Britain long before. They accused him even now of a design to protract the negotiations, and they told him that this delay would not be borne by the impatient and ruined people of the eastern states. Besides repeating the threat of breaking up the federal union, the people of these eastern states began to declare that they would contribute no money, no men, no stores to the armies set on foot by the central government; that they would keep their own militia at home for their own defence; that *perhaps* they might be driven, by their necessities, to seek a separate reconciliation with Great Britain, &c. So terrible, indeed, were these gales from the north-east, that President Madison, his government, and whole system were well-nigh blown away by them. Nor did the president escape without yielding to them: prostrating himself before the blast, he repealed his embargo and non-importation acts! This, he hoped, would tend to allay some of the discontents occasioned by the restrictions on commerce, and remove, at the same time, some of the evil and ruinous effects of those restrictions on the American revenue, which was already in a deplorable state. But England frustrated these hopes by the extension of the British blockade along the whole coasts of the United States, which was announced in April, 1814, by Admiral Cochrane. And throughout this last year of the war, Madison had no reason to complain, as he used to do in former times before the war began, that British blockades of coasts were merely paper blockades; for so closely were the rivers, the great outlets of America, watched—so incessantly was the coast scoured from south to north, and from north to south—so vigilant was the look-out, even close in shore, that a trading vessel could hardly put out to sea—nay, could hardly creep along the coast from one harbour to another—without the dead certainty of being captured by the British. The year 1814 must have been altogether a blank and black year for Madison. He saw Washington burned before his face, he could do nothing more on the side of Canada; great part of the province of Maine was wrested from the republicans by our expedition on the Penobscot river. He had scarcely a gleam of satisfaction, except in the results of Sir George Prevost's wretched Plattsburg expedition.

The negotiations for peace, which had been removed by mutual consent from Gottenburg to

Ghent, commenced in earnest in August, 1814. By means of various applications, and concessions not quite consistent with the severity of republican principles, though not inconsistent with American practice, Madison and his friends secured the mediation or friendly offices of the Emperor Alexander of Russia. So low was the state of public credit, that no loans could be negotiated. Six months of sternness and perseverance on the part of Great Britain would have taught the Americans a salutary lesson; twelve months' perseverance or energy in carrying out our blockade, and without any more expeditions by land, or any other risks and expenses, and the feeble ties which kept the northern and southern states together would have been snapped like a scorched thread. But it was a season of triumph and magnanimity in Europe: the Emperor of Russia was very magnanimous, Lord Castlereagh was very magnanimous, and the people of England were very forgiving, and cared more for a completeness of peace than for the prospective advantages to be derived from the wholesome chastisement which might have been inflicted (perhaps as much to the benefit of the Americans as to our own). The restoration of peace in

Europe, with the overthrow of the founder of the continental system, had indeed removed for the present many of the causes of differences between England and the United States; for example, we had no longer any present necessity to insist on our right of search, or on our right of excluding neutral vessels from the blockaded ports of an enemy. But we must deny that the prosecution of a war which could not by any possibility have lasted a year longer, would have been a useless expenditure of money, and an unjustifiable harshness on our part. The Americans had forced the war upon us in their way, and we ought to have finished it in ours. No principle ought to have been left unsettled—no question relating to boundaries or to anything else left open to be a perennial source of quarrel as soon as America should feel herself strong enough or bold enough to quarrel. As it was, the plenipotentiaries at Ghent resolved to waive every question at issue between us, and to take no notice whatever of the circumstance which had occasioned the war. On the 24th of December, 1814, they concluded and signed a treaty of peace and amity, which was ratified by both governments.

CHAPTER XI.—CIVIL AND MILITARY HISTORY.—A.D. 1815—1819.

GEORGE III.

Proceedings of the allied sovereigns at the period of Bonaparte's escape from Elba—They continue their proceedings—Their arbitrary partitions and allotments of states—Their refusal of justice to Poland—Easy conditions imposed upon France—Moderation of Britain amidst the selfishness of the allies—The Holy Alliance—Its origin and professed purposes—The prince-regent invited to join it—His refusal—Unfavourable state of Britain at the commencement of 1816—Financial difficulties—Popular disappointment on the return of peace—General destitution—The Spafields riot—Marriage of the Princess Charlotte—Piracies of the Algerines—Lord Exmouth sent to suppress them—Bombardment of Algiers—Terms of surrender exacted from the dey—Continuation of the public poverty and discontent—The prince-regent insulted by the mob—The five acts passed—Plan of insurrection by the reformers at Manchester—Its suppression—Other attempts frustrated—Knowledge possessed by government of the purposes of the insurrectionists—Means by which the knowledge was acquired—Death of the Princess Charlotte—New royal marriages—The suspension of the habeas corpus act removed—Improvement of the national prospects—Plans for the instruction of the lower classes—Removal of the army of occupation from France—Death of Queen Charlotte—Indian affairs—Nepalese war—Its commencement unfavourable to the British—Subsequent defeats of the Nepalese—Terms on which they are reduced to submission—The Pindarees—Their destructive incursions into the Company's territories—War commenced against them—The war interrupted by revolts of the Mahratta rulers against the British—They are conquered and their territories taken under British rule—Prosecution of the war against the Pindarees—They are extirpated—Ceylon—The King of Kandy deposed—The whole island submits to the rule of Britain.

ON the overthrow of Bonaparte, and his imprisonment in Elba, the great task of the allied sovereigns was to re-adjust the balance of power which the ascendancy of the French emperor had so rudely subverted; and it was in the midst of this difficult process, that the congress of Vienna was startled by the

tidings of Napoleon's escape from Elba. As if all had fallen into their hands, to be arranged according to their own pleasure, they had applied their political scissors to the map of Europe, and were enlarging or diminishing provinces and kingdoms as if these had been mere strips of paper, when the news suddenly arrived that the Man of Destiny had broken loose; that their old

master was in the field, and preparing to call them to a strict account. Their answer, too, could only be an awkward one, as their proceedings in congress had been characterized by a despotism in some cases more severe and offensive than his own. But the idea of their being so strangely outwitted and caught, appeared so ludicrous, that they received the assurance of the emperor's escape with a peal of laughter, and the truth of the witty saying of Talleyrand was universally recognized, "The grand charlatan has out-tricked the little ones." But no need was felt for the congress to dissolve, and they accordingly continued their proceedings, so that nine days before the battle of Waterloo their work of partition and dismemberment was finished, and their general treaty signed.

Of the work thus effected, and at so critical a period, a short notice must suffice. Their principal aim was to reduce France to her ancient and natural limits, to restore the Austrian and Prussian dominions, and to compensate those smaller states which had joined their cause, at the expense of those which had sided with Napoleon. While France was to be no greater than she had been in 1792, Austria was to be no less than she had been in 1805, nor Prussia than in 1806. But where the landmarks of so many great states had been erased or altered, such a restitution was impossible, without an amount of injustice equal to that which had occasioned the evil. This, however, occasioned very little scruple among those who had now the power in their own hands; and in effecting the work of reconstruction, they took for their criterion the number of souls and square miles, and the amount of revenue, irrespective of the habits, feelings, interests, or even the language and religion of those millions who were to be transferred from one dominion to another. In this manner the monarchy of Austria was restored at the expense of the dissolved kingdom of Italy and the reconquered provinces of Illyria, and by the return of cessions that had been made to Bavaria and Russia, so that, while her own Germanic population amounted only to 10,000,000, she had an addition of 18,000,000 subjects, composed of Hungarians, Italians, Illyrians, and Poles. With all this, she also obtained a most important seaboard by becoming mistress of Venice and the Adriatic. Prussia, originally a patch-work, had been so rent in the late war that to restore it to the old geographical condition was impossible; and therefore in lieu of Anspach and Baireuth, which could not well be subtracted from Bavaria, she obtained the duchies of Berg and Cleves. In return for her cessions to Austria, Bavaria got a part of the left bank of the Rhine, Würzburg, Aschaffenburg, and a part of Fulda. Han-

over ceded Lauenburg beyond the Elbe to Prussia, and received from Prussia in requital, Hildesheim, East Friesland, the lower district of Lingen, Meppen, a part of Eichsfeld, and some districts belonging to the Elector of Hesse. Besides these Germanic changes, by which principalities and dukedoms were moved as lightly as pawns upon the chess-board, arrangements equally arbitrary were made in other portions of Europe. Thus, Savoy and Piedmont were restored to Sardinia, with the additional boon of the old republic of Genoa. Bernadotte, for his services to the allies in the late war, obtained Norway, which now, in accordance with the promise made to him in 1814, was torn from Denmark, and annexed to his barren kingdom of Sweden, irrespective of the wishes of the primitive Norwegians, who were linked to the Danes by the ties of ancient brotherhood. A still more obnoxious union which the great powers compelled, was that of Protestant Holland to Roman Catholic Belgium, comprising a state of 5,000,000 inhabitants, under the sovereignty of the house of Orange, with the idea of establishing the ancient Netherlands into a new kingdom, as a barrier against French aggression and conquest. "The congress bartered provinces," says an eloquent living writer, "as if they were cattle-pastures, and computed men by the square league. A million of Saxons were ordered to forget their country, and become Prussians;—the Genoese were ordered to become Savoyards;—the Milanese, Austrians. With what indignation would Englishmen see themselves thus stripped of their old habits and privileges, and dis severed from their country by the diplomatic blade? How would the man of York listen to the order of congress that condemned him to be a Frenchman; or the man of Kent read the ukase that sunk him into a Russian serf, and bade him for the rest of his life to worship the boot of the czar? The whole transaction was a violence to law and nature. It must have broken up on the first shock of war. The Belgian insurrection is but a foretaste of the universal proof that the policy was as weak as it was *unchristian*, unlawful, and unnatural."

Amidst these restitutions there was one kingdom that had stronger claims than any, but which were treated with selfish indifference. It was Poland, once the greatest of European kingdoms; the bulwark of Christendom against Mahometanism and defender of Vienna against the Turks, and whose appeal for justice might well have been heard in the Austrian capital, which her valour had saved. This demand, indeed, England had made, and France to her honour had seconded it; and while the other three

¹ Rev George Croly, *Life and Times of George IV*

great powers were so liberally indemnifying themselves for their losses, it was thought that they might well atone for the great national iniquity they had committed in the partition of Poland. The high-minded and generous-hearted Lord Castlereagh was steady and earnest upon this subject; he recommended the reconstruction of the Polish nation, not only as matter of right and justice, but also as wise policy; and he predicted that the continuance of the old system would keep constantly alive a spirit of revolt and revolution; but his lordship found no real support in any one quarter, and the three great powers, Russia, Austria, and Prussia—but most of all Russia—were resolutely determined to keep and to enlarge such portions of Poland as they had possessed or claimed before the victories and conquests of Napoleon. There was, too, a very general conviction entertained throughout Europe, that the reconstruction of Poland was a political impossibility—that there remained not in that unhappy country the materials wherewith to form a nation and a government. Russia, by absorbing the grand-duchy of Warsaw, retained by far the greatest part of the country. Prussia and Austria could not agree as to the possession of Cracow; and therefore that city, with its very limited territory, was erected into an independent state, its independence being recognized and guaranteed by all the powers that were parties to the great treaty of Vienna. This was a sad error, sure to be followed by disastrous consequences. Surrounded on all sides by the three great partitioning powers, who could not but entertain a perpetual fear or jealousy of anything that bore the name or recalled the remembrance of Polish independence, Cracow, from the first, was doomed to an uneasy and precarious state of existence; she was watched, barred in, and dictated to, now by Russia, now by Austria, now by Prussia, and now by all three together. When the French, by the revolution of July, 1830, gave encouragement and impetus to the revolutionary spirit throughout Europe, and when the Poles began their ill-prepared, rash movement at Warsaw, Cracow was crowded with Polish emissaries and political propagandists: when that war of independence was ended by the Muscovite bayonet, Cracow gave refuge to many thousands of the proscribed fugitives, and within the walls of the city these desperate men formed new and most desperate plots and projects. From that

moment the three great powers adopted the principle that the existence of Cracow as an independent state was incompatible with the existence of their own tranquillity; and, having the power, and not having due regard to the solemn decisions

THE CATHEDRAL OF CRACOW

of congress and the clauses of the treaty of Vienna, they have now annexed Cracow to the dominions of the Emperor of Austria. All this might have been foreseen while the congress was sitting and when the clauses were written. There ought to have been a larger Polish independence, or none at all.

While a wild sense of justice, or political expediency, or selfish covetousness, was thus swaying the congress by turns, and producing such havoc on the rights of communities and nations, France, the great culprit, whose destiny seemed now in their hands, was more gently dealt with than might have been expected. But France though fallen was still powerful, and might not be provoked with impunity; the necessity for her existence, as a counterpoise and a check, where each of the great powers was doubtful of his ally, was of itself a guarantee for her safety. Accordingly, the terms imposed upon her were such as could scarcely have been expected from conquerors in the full flush of their success. These were that she should confine herself within the territorial limits she had possessed before the commencement of the revolutionary war; that she should pay by gradual instalments the moderate sum of 700,000,000 francs; and that she should support at her own expense, for a number of years, the army of occupation under the command of the Duke of Wellington. These conditions were little relished by a power that had so long been accustomed to dictate, and had no tendency to raise in popular estimation the new Bourbon sovereign who pledged himself to

their fulfilment. On the other hand, Britain, upon whom the chief burden had fallen, and who had expended nearly £200,000,000 on the last three years of the war alone, asked and obtained nothing but what belonged to her already, or which she might have secured with little effort. The republic of the seven Ionian Islands was placed under her protection, with a British lord-commissioner for its governor. She obtained possession of Malta and the Cape of Good Hope, and the cession of the colonies of Essequibo, Demerara, and Berbice. Although these, with Gibraltar, only confirmed her naval superiority, with which the other powers at present had no thought of competing, they might well have been bestowed without a grudge, more especially as to her fleets and her commerce they had owed those resources which had saved them from ruin and crowned them with success. Instead of demanding any commercial advantages or privileged establishments in the countries she had rescued, all that was asked was the assent of the assembled powers to the abolition of the African slave-trade, and to concert, without loss of time, such measures as were necessary for the purpose. To this they agreed, and with this she was satisfied.

In this congress of the great sovereign powers, originated the coalition called the Holy Alliance. Europe, that had for so many centuries been accustomed to an aristocracy of nobles, by which the spirit of popular liberty had been suppressed, and every country ruled and tyrannized over in turn, was now to witness, for the first time, an

aristocracy of kings, banded together for their mutual support in the maintenance of national order, and the government of their respective subjects. As something more, however, than mere force or political skill was necessary for the establishment of such a new system of kingly rule, the sanctions of religion were called to its aid; and hence the title of "Holy" which was bestowed upon the alliance, although this distinction does not appear to have been claimed by its original founders. The first members of the Holy Alliance were the sovereigns of Russia, Austria, and Prussia, but afterwards they were gradually joined by most of the other European rulers. The merit or demerit of first proposing this royal coalition is due to the Czar Alexander, who at his visit to Paris in 1815 had the idea suggested to him by that notable female enthusiast, the Baroness de Krudener; and as it was a theory well suited to the crafty, but sentimental and mystical spirit of the czar, he soon drew up the plan of an association for Christian potentates, by which they bound themselves to govern their subjects upon the divinely revealed rules of equity and justice. But their subjects might well guess in what fashion these rules would be interpreted by such royal casuists, when ambition or interest happened to predominate, and the subsequent histories of Poland and Italy gave practical illustrations of their comments.¹ As it was desirable that the Prince-regent of Great Britain should be enrolled among the kingly converts, an application was made to him to that effect. But his answer, which he wrote to each

¹ The terms of this Holy Alliance, known also by the name of "The Christian Treaty," were the following. It is worthy of notice that the partition of Poland had been devoutly prefaced by similar language, and the Empress Catherine's iniquitous proclamation wound up in nearly the same words:—

"In the name of the Most Holy and Indivisible Trinity: Their majesties the Emperor of Austria, the King of Prussia, and the Emperor of Russia, having, in consequence of the great events which have marked the course of the three last years in Europe, and especially of the blessings which it has pleased Divine Providence to shower down upon those states which place their confidence and their hope on it alone, solemnly declare that the present act has no other object than to publish, in the face of the whole world, their fixed resolution, both in the administration of their respective states, and in their political relations with every other government, to take for their sole guide the precepts of that holy religion—namely, the precepts of justice, Christian charity, and peace, which, far from being applicable only to private concerns, must have an immediate influence on the counsels of princes, and guide all their steps, as being the only means of consolidating human institutions, and remedying their imperfections. In consequence, their majesties have agreed on the following articles:—

"Art. 1.—Conformably to the words of the Holy Scriptures, which command all men to consider each other as brethren, the three contracting monarchs will remain united by the bonds of a true and indissoluble fraternity; and considering each other as fellow-countrymen, they will, on all occasions and in all places, lend each other aid and assistance; and, regarding themselves towards their subjects and armies as fathers of families, they will lead them, in the same spirit of fraternity with which they are animated, to protect religion, peace, and justice

"2.—In consequence, the sole principle in force, whether between the said governments or between their subjects, shall be that of doing each other reciprocal service, and of testifying, by unalterable good-will, the mutual affection with which they ought to be animated, to consider themselves as members of one and the same Christian nation, the three allied princes looking on themselves as merely delegated by Providence to govern three branches of one family, namely, Austria, Prussia, and Russia; thus confessing that the Christian nation of which they and their people form a part, has in reality no other sovereign than Him to whom alone power really belongs, because in Him alone are found all treasures of love, science, and infinite wisdom; that is to say, God our Divine Saviour, the Word of the Most High, the Word of Life. Their majesties consequently recommend to their people, with the most tender solicitude, as the sole means of enjoying that peace which arises from a good conscience, and which alone is durable, to strengthen themselves every day more and more in the principles and exercise of the duties which the Divine Saviour has taught mankind

"3.—All the powers who shall choose solemnly to avow the sacred principles which have dictated the present act, and shall acknowledge how important it is for the happiness of nations that those truths should henceforth exercise over the destinies of mankind all the influence which belongs to them, will be received with equal ardour and affection into this holy alliance.

"Done in triplicate, and signed at Paris, the year of grace 1815, Sept. 14 (23).

"FRANCIA.

"FREDERICK WILLIAM.

"ALEXANDER."

of the three sovereigns, on 6th October, 1815, might have been anticipated by any one who was at all aware of the nature of our government. He told them that "the forms of the British constitution, which he was called upon to maintain in the name and in the place of the king, his father, prevented him from acceding to the treaty in the form in which it had been laid before him." Personally, however, he declared "his entire concurrence in the principles they had expressed, and in the declaration they had made that they would take the divine precepts of the Christian religion as the unalterable rule of their conduct in all their social and political connections, and confirm the union which should always exist between all Christian nations." In this way the head of the British empire did not, and could not, become a member of the Holy Alliance. And it was well that thus it should be; for although there were many statesmen of the period who laughed at this alliance as an impracticable theory or devout imagination, there were others who looked more thoughtfully into the future, and were filled with anxiety and alarm. The last embers of the French revolution had apparently been trodden out, and those sovereigns who dreaded every popular step in advance as a revolutionary movement, were the infallible expounders and irresponsible judges of this new gospel of Christian rule. For years this combination of sovereigns was continued, although its title was suffered to fall into abeyance; and many of the worst conjunctions which afterwards occurred throughout Europe for the suppression of popular rights, might be traced to the surviving principles and spirit of the Holy Alliance of 1815.

On the commencement of the session of parliament in 1816, the prince-regent's speech congratulated both houses on the prosperous condition of the nation. This was nothing more than an echo of the expectations which had been formed by all classes of the community. The greatest of all wars in which Britain had hitherto been involved was brought to a successful termination; the ablest enemy that had ever menaced our national welfare was now disarmed and a prisoner. What then remained, but to sit down and enjoy the happy reaction of peace manifested in the universal prosperity which, even already, must have commenced like a spring-tide? But the parliamentary statements and discussions that followed were enough to sober this flattering delusion. There was indeed an excess in the revenue over that of last year by somewhat more than a million; but still, there would be a deficiency of supplies to the amount of £2,500,000, which the chancellor of the exchequer proposed to meet by an income-tax of

five per cent. upon property; while to make this impost popular with the many, all incomes less than £150, and farms paying less than this of yearly rental, were to be exempted. But so great was the hostility in parliament, and so numerous the petitions against it from the towns and mercantile communities, that it was abandoned. There was, indeed, such a confusion in the financial accounts of this period, that a deficiency not of £2,500,000, but £17,000,000, was alleged to be the correct estimate. The minister's statement, however, was supported by a majority of the house, and the necessary sum was obtained by a loan of £3,000,000 from the Bank of England, at three per cent. interest, on condition of the bank being permitted to make an increase of one-fourth to its capital. Another keen subject of parliamentary debate was the amount of the army estimates. Peace, it was declared, was conclusively settled, and whence, then, the necessity of so large a standing army? To this the ministers replied, that not only the situation of the Continent, but the great increase in the number of our colonial dependencies, was commensurate with the demand: even Ireland itself would need 25,000 men for her share in the distribution of our forces. For the support of the infant peace, until it had acquired strength and consistency of its own, something like a war establishment was still necessary, and the specified number of 176,615 men was voted, including the 30,000 stationed in France. With similar reluctance, and after a keen debate, 33,000 men were voted for the navy. So hostile, however, was public opinion to these unexpected burdens, that considerable reductions were made both in our military and naval establishments during the course of the year.

The first consequences of the recoil from war to peace continued to increase in severity both among the agricultural and commercial classes. An inclement season and deficient harvest pressed heavily upon the farmers; and the proprietors of the soil were burdened, not only with an undue weight of taxes, but also with the support of those multitudes whom the change had reduced to absolute pauperism. The rush of English goods to the Continent on the opening of the ports—the enormous supply of these beyond the demand—the restrictions that were laid upon them in foreign countries by prohibitory duties—and the very inferior prices at which they had to be sold—quickly induced bankruptcy among the merchants, and misery and starvation in the manufactories and workshops of Britain; while money also became scarce, by the sudden reduction in the expenditure of our government to less than two-fifths of its former amount. This scarcity was increased by the change in the cur-

rency, in consequence of which speculators in land were no longer able to avail themselves of those money accommodations on which they had formerly relied. These evils, so productive of dear food, reduced wages, and diminished employment, created discontent among the working classes, and afterwards riot and revolt, in which peasant and artisan were alike ready to blame their employers, and take redress into their own hands. Threatening letters were sent, houses, barns, and stacks were fired; while among the iron-work and manufacturing districts, especially those in South Wales and Nottingham, violent outbreaks ensued which demanded the interposition of the military. Thus matters continued till near the end of the year; and at this period the political elements that had been thrown in produced the explosion. William Cobbett addressed the "Journeymen and Labourers" of England, Scotland, and Ireland, in a very cheap and exciting periodical paper; and numerous demagogues, with far less ability, but with an energy and activity quite equal to Cobbett's, spread themselves over town and country, seeking for poverty and disaffection. Innumerable political clubs were again organized, and great public meetings were called, which could not be held without some riot or disorder. The worst of these riots occurred on the 2d of December, in an open space (now covered with streets and squares) called Spafields, on the north-east skirts of London. While orator Hunt was haranguing the mob from one waggon, orator Watson, junior, jumped down from another waggon, and with a tricoloured flag in his hand, and a ragged mob at his heels, rushed away through the streets, to storm and take the Tower of London. A halt was called on Snowhill at the shop of Mr. Beckwith, a gunsmith. Young Watson rushed in demanding arms, and presently shot a gentleman who happened to be in the shop, and who remonstrated with him. The shop was soon plundered and destroyed; and the mob proceeded along Cheapside, firing their recently acquired arms, "like children with a new plaything."¹ At the Royal Exchange they were met by the lord-mayor and Sir James Shaw, who behaved with admirable firmness, and who, being aided only by a few constables, secured several of the rioters. With diminished numbers—for many now took to their heels—the Watsonians or Spencean philanthropists proceeded to the Minories, where they plundered some more gunsmiths' shops; and from the Minories they marched to the Tower, which was summoned in form by some vagabond who had a sonorous voice. We need scarcely say that the gates of the fortress did not fly open upon such a summons. Fearing that the troops

might be upon them, the mob presently fled in all directions; and so ended this incoherent and insane insurrection.

While the national discontent and depression had been going on, the gloom had been temporarily lightened by a royal marriage, in which all classes heartily sympathized: it was that of the Princess Charlotte Augusta, daughter of the regent, and heiress presumptive of the British throne, to his serene highness Prince Leopold of Saxe-Coburg. Unlike such unions, it was entirely one of affection and choice; for the youthful couple had at first sight conceived a mutual regard for each other, which every further meeting had tended to mature. Happily, also, while the princess was the cherished hope of the nation at large, the noble and striking appearance of Leopold, his accomplishments and amiable character had so endeared him to the British people, that they cordially recognized him as the fittest partner for her whom they contemplated with pride as their future sovereign. No demur, therefore, was made to the very liberal settlement proposed for them; and accordingly an annual sum of £60,000 was voted to the pair during their joint lives, the whole to be continued to her royal highness if the prince should die first; and £50,000 to him if he should be the survivor; while £60,000 was granted by way of outfit. The marriage was solemnized on the 2d of May, and the frank readiness with which the regent, her father, had acceded to their union, tended in some measure to regain for him the popularity he had lost.

But a great national victory of this year, achieved as it also was on our favourite element and by the right arm of our conquests and triumphs, was better calculated than most events to cheer the public despondency. The piracies, man-stealing, butchery, and plunder which the Barbary states on the Mediterranean had been allowed to practise, had been for ages a standing reproach to Christendom. The dread of the naval power of England had for a long time secured British ships and subjects from the attacks of these barbarians; and if, now and then, a British sailor was captured and sold into slavery, it was while serving under some foreign flag. There were not wanting among us men of narrow hearts and narrower heads, who would fain have left these Barbary corsairs undisturbed, considering the immunity of the British flag as a great commercial advantage over the other European nations; but such thoughts found no place in the liberal mind of the nation; and Britain was the first to make a costly exertion for the abatement of a monstrous nuisance from which she herself was suffering nothing, and had nothing to fear. It has been well said that "the enterprise was still more distinguished for the generosity of its

¹ Charles Knight, *History of the Thirty Years' Peace.*

motives, than even for its brilliant success." Early in the spring of this year, Admiral Lord Exmouth, commanding in the Mediterranean, received orders to demand from the Beys of Tri-

poli and Tunis, and the Dey of Algiers, satisfaction and protection for the flags of the Ionian Isles, "which the congress of Vienna had left under our protection," and the flags of Naples and Sardinia, together with the total abandonment of Christian slavery. Tripoli and Tunis, taking counsel of their weakness, implicitly complied; but Algiers, relying on her great strength, offered only a partial satisfaction for the past, and refused or temporized for the rest.

Before taking any steps in fulfilment of his instructions, Lord Exmouth made all the arrangements necessary for an attack, which was to be the alternative if negotiations failed—a result much to be expected at Algiers, which had hitherto withstood so many formidable armaments. His lordship ordered Captain Warde of the *Banterer* to proceed to Algiers, and then carefully to observe the town, and the nature of its defences, to draw a plan of the works on the seaward side, to take soundings, to make his observations on the anchorage, &c. "Lord Exmouth's instructions on this occasion, and which were written with his own hand, afforded an admirable illustration of the forethought with which he provided for every contingency, and which was the chief secret of his constant success."² Captain Warde performed his difficult and important service with wonderful skill and secrecy.

The admiralty were greatly surprised when Lord Exmouth proposed to attack Algiers with only five sail of the line. Many naval officers,

upon being consulted by the board, considered those works as altogether unassailable by ships. His lordship was offered any force he required, but he firmly adhered to his first demand; for he had satisfied himself that five ships could destroy the great fortifications on the mole as effectually as a greater number, and with far more safety to themselves. After he had explained his plans, and marked the position which every ship was to occupy, the admiralty allowed him to act upon his own judgment. "All will go well," said this brave sailor and most excellent man; "All will go well, as far at least as it depends on me. I know that nothing can resist a line-of-battle ship's fire." On the 9th of August, the veteran was at Gibraltar. Here he found a Dutch squadron of five frigates and a corvette, commanded by Vice-admiral the Baron de Capellan, who, on learning the object of the expedition, solicited and obtained leave to co-operate. On Tuesday, the 27th of August, they came in sight of Algiers. As the ships lay nearly becalmed, Lord Exmouth sent Lieutenant Burgess in a boat, under a flag of truce, with the terms dictated by the prince-regent, and a demand for the immediate liberation of the British consul and some other persons whom the dey had cast into prison. At eleven o'clock A.M., Lieutenant Burgess was met outside the mole by the captain of the port, who received the communication, and promised an answer in two hours. In the meantime a breeze springing up, the fleet stood into the bay, and lay to, about a mile from the town. At two o'clock Lieutenant Burgess and the boat were seen returning with the signal that no answer had been given. The admiral's ship, the *Queen Charlotte*, instantly telegraphed to the fleet, "Are you ready?" And instantly the affirmative signal was displayed from every ship, and they all, English and Dutch, frigates and ships of the line, bore up to their appointed stations. The *Queen Charlotte* led to the attack. There was to be no firing from her until she came to anchor. The Algerines, confident in the strength of their works, also reserved their fire; indeed, they expected to carry the flag-ship by boarding her from their numerous gun-boats. The *Queen Charlotte* proceeded silently to her position; and, at half-past two she anchored, by the stern, just half a cable's length from the terrible mole-head. "The mole was crowded with troops, many of whom got upon the parapet to look at the ship; and Lord Exmouth, observing them as he stood upon the poop, waved to them to move away. As soon as the ship was fairly placed, and her cables stoppered, the crew gave three hearty cheers, such as Englishmen only can give. Scarcely had the sound of the last died away, when a gun was fired from the upper tier of the

Vol. IV.

eastern battery; and a second, and a third followed in quick succession. One of the shots struck the *Superb*. At the first flash, Lord Exmouth gave the order, "Stand by!" at the second, "Fire!" The report of the third gun was drowned in the thunder of the *Queen Charlotte's* broadside.¹

The Algerines replied with the fire of nearly 500 guns. The mole was filled with cannon, like the side of a line-of-battle ship, mostly disposed in a double tier, with ports below and embrasures above, but the eastern batteries, next the lighthouse, had an inner fortification, with a third tier of guns, making sixty-six in these eastern batteries alone. These different batteries on the mole mounted altogether about 220 guns, eighteen being twenty-four or thirty-two pounders, and two of them being sixty-eight pounders, upwards of twenty feet long. All these guns were brought to bear point-blank upon Lord Exmouth's ships of the line. Some of his lordship's frigates and

some of the Dutch frigates took up positions which three-deckers might have been justly proud of. There were a few bomb-vessels, whose shells were thrown with admirable precision by our marine artillery. There was no lack of courage and resolution on the part of the corsairs. Shortly after the commencement of the battle their flotilla of gun-boats most daringly advanced to board the *Queen Charlotte* and the *Leander*. At first the smoke covered and concealed them, but so soon as they were seen a few well-directed shot sent thirty-three out of thirty-seven of these Algerine gun-boats to the bottom. At four o'clock a large Algerine frigate was boarded and set on fire. As she burst into a flame, Lord Exmouth telegraphed to the fleet the animating signal, "Infallible!" Before seven o'clock all the vessels in port, except a brig and a schooner, were burning fast to the water's edge. As for the tremendous works on the mole-head, they had been ruined

GENERAL VIEW OF ALGIERS—FROM L'UNIVERS PITTORESQUE

by the single fire of the *Queen Charlotte*, a very few minutes after the combat had commenced. The fleet slackened their fire towards night, while the guns of the enemy became silent, and when the necessity was felt of husbanding their ammunition. The expenditure had been beyond all precedent. Our ships had fired nearly 118 tons of powder and 50,000 shot, weighing more than 500 tons of iron, besides 960 thirteen and ten inch shells. Such a fire, close, concentrated, and well directed as it was, nothing could resist. The mighty sea-defences of Algiers, with great part of the town itself, were shattered and crumbled to ruins. As the night darkened the breeze freshened, and a tremendous storm of thunder and lightning came on, with torrents of rain; while the flaming ships and store-houses illuminated all the ruins on shore, which increased the awfulness of the scene. In scarcely any former

general action had the casualties been so great in proportion to the force employed. In the British ships 128 were killed and 690 wounded; and the Dutch, who had behaved most gallantly, had thirteen killed and fifty-two wounded. The veteran commander-in-chief escaped most narrowly; he was struck in three places, and a cannon-shot tore away the skirts of his coat, breaking one of the glasses and bulging the rim of the spectacles in his pocket.²

On the 28th, at daylight, Lieutenant Burgess was sent on shore with a flag of truce, and with the same demands he had carried the preceding morning; our bomb-vessels at the same time resuming their positions. Lord Exmouth was immediately given to understand that all his demands would be submitted to. On the morning of the 29th, Captain Brisbane, of the flag-ship, went on shore, and had a conference with the humbled and

¹ Oaler, *Life of Lord Exmouth*.

² Oaler.

astounded dey. The negotiations were intrusted to Sir Charles Penrose. They were very short, for the Algerines could do nothing but submit and agree. The chief conditions were—the abolition of Christian slavery for ever; the surrender of all their slaves of whatever nation; and the dey's humble and public apology in person, for the insult he had given to the British flag.

Three thousand Christians were delivered from slavery, and sent to their own countries and homes. Leaving a ship to receive a few more, Lord Exmouth sailed for England on the 3d of September. Scarcely Nelson himself had been in hotter fires than Exmouth, yet his lordship declared that he had never been under a fire so hot and terrible as this at Algiers. "The fire all round the mole," said he, "looked like pandemonium. I never saw anything so grand and so terrific; for I was not on velvet, for fear they would drive on board us. Their copper-bottoms floated full of fiery hot charcoal, and were red-hot above the surface, so that we could not hook on our fire-grapnels to put the boats to, and could do nothing but push out fire-booms and spring the ship off by our warps, as occasion required. . . . I never saw any set of men more obstinate at their guns, and it was superior fire only that could keep them back. To be sure, nothing could stand before the *Queen Charlotte's* broadside. Everything fell before it; and the Swedish consul assures me we killed above 500 at the very first fire, from the crowded way in which their troops were drawn up, four deep, above the gun-boats, which were also full of men. . . . I believe they are within bounds when they state their loss at 7000 men."

With the commencement of 1817, the public depression occasioned by the reverses which peace had so unexpectedly introduced was not alleviated. Industry in all its commercial and agricultural departments was still under arrest, and bankruptcies continued to multiply: the rich were suffering under the high price of the common necessities of life, and an income-tax of ten per cent.; while the working classes, whose wages had fallen from fifteen to five shillings a week, could scarcely procure the scantiest means of living. The prevalent poverty and distress was laid hold of as an opportunity to propagate a spirit of discontent and disloyalty; and both from the press and the platform, remedies of the most anarchical and destructive kind continued to be recommended by mischievous demagogues, who attempted to demonstrate that no relief could be obtained unless the present order of things was swept away, and a new government established. These evils were sadly acknowledged in the speech from the throne at the opening of parliament, on

the 28th of January; and in reference to those attempts which were making to take advantage of such a state of things, for the purposes of rebellion and change, it was announced, that no precautions would be omitted for preserving the public peace and counteracting the designs of the disaffected. A melancholy comment upon this speech followed on the regent's return; for as he passed through the park, he was assailed by the mob with loud clamours and revilings; stones and other missiles were thrown at his carriage; and from the manner in which the windows were broken, it was alleged that this effect must have been produced by bullets discharged from an air-gun. This alarming fact was announced in the afternoon in the House of Lords by Lord Sidmouth, secretary for the home department, and the two houses by proclamation offered a reward of £1000 for the apprehension of the daring perpetrators. But they could never be found; the air-gun was supposed to exist only in apprehension; and it was declared that insult rather than assassination had been the purpose of the mob, who had used no worse weapons than stones or gravel.

On the following day there was fierce altercation in both houses on this subject of alarm; and while it was ridiculed by Lord Dudley under the title of the "pop-gun plot," the opposition both in the lords and the commons saw in it nothing more than an argument for retrenchment in every department of government. Further discussion was suspended by the intimation of Lord Sidmouth, that in three days he should present a message from the prince-regent on the subject of the alleged defection of large bodies of the people. The message was delivered on the 3d of February, and on its being referred to a secret committee of both houses, they made their reports on the 18th and 19th. In these, a declaration was given of the general state of the country, and of the societies or clubs either existing or to be established throughout the whole of Great Britain, which, under the pretext of parliamentary reform, had for their main object the eversion of all law, religion, and morality, and the plunder of all property. After detailing at length the several districts in which these associations existed, and the variety of their aims and principles, but all sufficiently revolutionary and dangerous, the panic became so great that no measures were thought too stringent for the prevention of the evil. Accordingly five bills, called the "Five Acts," were introduced and passed by large majorities, who seem at the moment to have thought that no sacrifice could be too great when the state itself was on the point of perishing. They were as follows:—1. A bill to extend to the person of the prince-regent the act for the better protection of his majesty's person. 2. A bill to revive the act

¹ Lord Exmouth, letter to his brother, as quoted by Oaker.

of 1795 against seditious meetings. 3. A bill to revive the act of 39 George III. against corresponding societies. 4. A bill to revive the act against such as seduce soldiers and sailors. 5. A bill to suspend the habeas corpus act. All these were successively carried before the end of March. The last and most dangerous of them all, which gave to the executive power the despotic privilege of imprisoning without trial, was not carried without a struggle, in which Earl Grey, Lord Wellesley, Lord Darnley, Sir Arthur Pigott, and other members of both houses, distinguished themselves by their opposition to the measure. Who were the traitors, it was asked, on whose account the whole nation was to be coerced? They were miserable wretches, reduced to the lowest poverty and distress. And what did they propose to accomplish? To produce insurrection without plan or concert, and effect parliamentary reform by some move in the chapter of accidents. There were acts of parliament enough for the trial and punishment of such misdemeanours without having recourse to such a remedy for their cure. Although the suspension of the habeas corpus act was decreed, it was to continue in force only till the 1st of July, and it only passed in consequence of the fresh alarms of meetings and conspiracies with which the ears of parliament had been assailed. The event dismayed the leaders and orators of reform, who had been so active and so loud in the propagation of their doctrines; and they either retired into obscurity, or maintained a cautious silence. Even Cobbett, the boldest as well as ablest of them all, was fain to withdraw to America, until the season of danger had expired.

Although the habeas corpus suspension act was passed on the 3d of March, it did not become law until the 29th, and during this interval an event occurred in Manchester which seemed to prove the suspension unnecessary. That great manufacturing city and emporium of the cotton-trade had suffered more than an ordinary share of the prevalent distress, and was therefore more deeply involved in radical conspiracies than most of the disaffected districts of England. Its reformers were only awaiting the leading movement of their brethren of London to be up and doing; but although repeated meetings had been assembled at Spafields after the unsuccessful attempt of Hunt and Watson, they had dissolved either in silence or a few harmless speeches. Impatient of these delays, the Manchester leaders proposed that their followers should assemble in a body near St. Peter's Church, provided with knapsacks and blankets, and march in a body to London, to lay their complaints and petitions before the prince-regent in person. To this they were encouraged by the report that a large array

of reformers was on its way from Scotland to join them, and the hope that their numbers would be vastly augmented from the large towns that lay in their line of march. On the morning of the day, about 10,000 or 12,000 were assembled, furnished with the prescribed accoutrements; a temporary platform was constructed on a cart, with the leaders of the movement seated around it, inviting people to subscribe and join them; but while the business part of the proceeding was hopefully going onward, the magistrates of the town, who had been on the watch, aided by a few soldiers, unexpectedly surrounded the cart, and swept off the chief reformers as prisoners, while the advance of a body of cavalry, who had also been prepared for the purpose, sent the multitude fleeing in all directions. A considerable number of these blanketeers, however, pushed forward on their march, and entered the town of Stockport; but here the police and military were drawn up to receive them, so that only about 500 reached Macclesfield; and by the time they arrived at the borders of Staffordshire, such captures and dispersions had been made on the way, through the provident arrangements of the magistrates, that the originally huge force of the men of the blanket and knapsack, which might have increased threefold, had dwindled down to about a score of stragglers. Of the shoals who were captured, most of the offenders, after a few days, were let off by the magistrates, on expressing their contrition, and promising to be peaceful for the time to come.

After this, there was a short cessation of these open tokens of popular discontent; but it was only that they might assume a more secret and far more dangerous character. Such was the case especially at Manchester, where an insurrection was planned for the 30th of March, in which a rising of 5000 malcontents was to be made, the military barracks attacked, and factories burned down, the attention of the soldiers in the meantime being distracted, either by real attacks or false alarms while the principal mischief was going on. But on finding that their plot was discovered, and that a sufficient number of troops had been brought into the town, the project was abandoned. Such was also the fate of a still more formidable insurrection, which was appointed to take place about the middle of May. From the great centres of poverty and political discontent, the counties of Derbyshire, Nottingham, and the West Riding of York, a new expedition was to march to London, not like pilgrims or paupers muffled in blankets, but with arms in their hands, which they either had prepared for the occasion, or expected to seize by the way; and in this warlike fashion they were to take by force the redress which had been denied to their petitions. But

here, also, the magistrates stepped in, and the design was crushed before it could proceed to action. Undismayed by this failure, a party of reformers, in the month of June, numbering not more than 100 men, assembled at Pentridge, a village to the west of the river Derwent, and not far from the direct road to Nottingham, and marched towards that town through Ripley and Eastwood. They expected to be joined at Nottingham by the discontented of that quarter, and imperiously demanded the surrender of arms at houses on the way; but on coming nigh the town, they encountered a body of hussars, by whom they were put to flight, while their captains were made prisoners. These insurrections prolonged the suspension of the habeas corpus act, which, by a fresh vote of both houses, was not to end until the 1st of March, 1818. This highly unpopular measure, also, of arming government with despotic power, for the suppression of popular insurrections, was not the only offence with which ministers were charged. Every meeting held by the insurgents, and every plan they devised, was made known to the authorities; and hence the readiness with which every rising had been suppressed. But this knowledge, however useful, had in many cases been obtained by an un-British system of espionage, and not a few of the members of these reform societies were alleged to be in the pay of government. In some instances, also, the ministerial spies were supposed to have been, not merely passive observers, but the most active fomenters of the discontent; and to have instigated the worst outbreaks of the revolt, that they might make their services to government more remunerative, or further the political purposes of their secret employers. It was well for Britain that this season of trial was now upon the close, and that a happier era was about to dawn. The struggle of the South American provinces for independence, which had been going onward since 1794, was now assuming a promising character, especially in Mexico and New Grenada; and in its final success, which was thought to be not far distant, British industry hoped to find a new sphere for the employment of its activity and resources. And at home, the revival of our commerce and manufactures, the restoration of mercantile confidence and security, and a propitious harvest, were about to lighten that public discontent which clamoured for anarchical change under the name of reform, and to suppress that rebellion of hunger-bitten necessity which, in every state, has always been found the most dangerous of all rebellions.

These hopes, however, were but distant, and chequered with such misgivings that something more immediate was needed to recal the loyalty of the people, which the last two years had so

greatly unsettled. And that restorative was vouchsafed, but in a manner which none could have expected or desired. It was the death of the Princess Charlotte. Amidst these political commotions, her amiable character had only the more endeared her to all parties; and the nation universally rejoiced in the prospect that she was about to give birth to a future sovereign of the British throne, who should ascend it when her own reign had closed in prosperity and peace. On the night of the 4th of November she gave birth to a male child, but it was still-born, and in a few hours after she herself expired. In this sudden manner the hopes of millions were crushed: the desire of their eyes was taken away with a stroke, and in every house there was mourning. In this case, also, the public anguish was deepened by the report that both deaths were attributable to medical indecision; and that during the long-protracted and dangerous period of labour, those necessary stimulants which the mere village practitioner would have successfully administered to the wife of the humblest cottager, were timidly withheld. She was buried on the 18th of November, and on that day there was a cessation of business not only in the capital but over the whole empire.

The succession in the eldest line of the royal family being thus extinct, and no heir presumptive being left of the numerous race, although twelve of the fifteen sons and daughters of George III. were still alive, four new marriages took place among them during the ensuing year. The first was that of the Princess Elizabeth, now forty-eight years old, to the Prince of Hesse-Homburg; the second was the marriage of the Duke of Cambridge; and the third and fourth, of the Dukes of Clarence and Kent, both of whom were married on the same day. Of all these marriages, that of the Duke of Kent to the Princess Mary Louisa Victoria, sister of the widowed Prince Leopold, was the most welcomed, as the duke was a favourite with the popular party; and if their wishes had selected him as the continuator of the Hanoverian succession, we know that in this case they were not disappointed.

As a breathing interval was given by the present tranquillity, and the fair hope afforded of a return of our national prosperity, the principal efforts of 1818 were to redress the grievances of the past and prevent their recurrence. On this account, as soon as the speech from the throne was read, the opposition in both houses demanded an instant repeal of the suspension of the habeas corpus act; and accordingly a bill to that effect was passed without delay. A bill of indemnity was also passed in favour of ministers for the steps they had been compelled to adopt during the late insurrections; for they continued to be

heavily blamed for their proceedings in the employment of spies, and the apprehension and punishment of rioters. Happily, for the present, there were no more plots to detect, nor outbreaks to suppress; for the people, having felt the uselessness of resistance, as well as obtained repossession of their rights and privileges, along with the *habeas corpus* act, were disposed to improve their condition by lawful means, rather than intrigue and violence. In cheaper food, in more abundant employment, and better wages, they had substantial proofs that the true season of relief had at last arrived, and that it depended upon their own industry to avail themselves of its benefits. The following picture of the general state of matters, by Mr. Windham Quin, in seconding the address in the commons, although somewhat too glowing, was in its main particulars substantially correct, and acknowledged as such by those who listened: "Last year strong men were to be seen in distress for want of work; now, wages have advanced; industry, which is the staple foundation of national wealth, has a fair field for its exertion. The country, if I may so express myself, feels an increased circulation in every artery, in every channel of its commerce. Last year the fires were extinguished in most of the iron works; now they are in full activity, and the price of iron has risen from £8 or £9 to about £14 a ton. The demand for linen, the staple of the north of Ireland, is unprecedented, both as to quantity and price. The funds are now eighty, last year they were about sixty-three. Money is most abundant, and when lent at mortgage to good security, lowering in rate of interest, and to be had at $4\frac{1}{2}$ per cent., at the same time that sales of land are effected at better prices than last year. Gold, too, has re-appeared, and the little request in which it is held, seems to declare, that a belief in the stability of our financial system is universal. Let me notice the return of confidence among all classes and descriptions of men—the farmer, the manufacturer, the merchant, all seem to feel its vivifying influence."

But something more than the return of national abundance was felt to be necessary for the establishment of peace and security. The late commotions, and the trials that followed, had disclosed a large amount of ignorance, vice, and irreligion among the lower orders, which, at every recurrence of public reverse, would be certain to produce the same disastrous consequences. The best safeguard of the state was the elevation of these classes through the means of education; and the commencement was made at the opening of parliament, by recommending that the sum of £1,000,000 sterling should be raised by exchequer bills for supplying the want of churches and chapels of ease, where the increase

of the population made this church accommodation necessary. This was a small sum as compared with the want; but it was justly calculated that the example of government, in this provision for religious instruction to destitute localities, would be extensively seconded by private benevolence. Another important step in this direction was Mr. (afterwards Lord) Brougham's motion for a committee of inquiry respecting the education of the poorer classes—the commencement of that great educational plan out of which so many public schools and literary institutions for the common people were afterwards produced. That such remedies were needful, was shown by the readiness of the operatives to continue their combinations for higher wages, and the disturbances that still continued to arise on that account, particularly at Burnley and Stockport, which required to be suppressed by the military.

The chief political event by which this year was signalized, was the full and complete reconciliation of the allied powers with France, by withdrawing their army of occupation. This occupation was a painful reminiscence of past wars and mutual injuries; it was galling to a high-spirited people like the French; and as long as it was continued, there was no assurance to Europe of international amity or a lasting peace. According to the terms of the original treaty, this military hold upon France would have continued two years longer, had not the present stability of the Bourbon throne, and the general tranquillity, given assurance that such a precaution was no longer required. A congress was therefore assembled at Aix-la-Chapelle during the autumn of the present year, where the Emperor of Russia, the King of Prussia, and the Emperor of Austria, with their principal ministers, the Duke of Wellington and the representatives of some other powers, agreed that the army of occupation might be safely withdrawn, and the nation left to its own control. A negotiation to this effect was accordingly opened by the allied sovereigns with Louis XVIII.; the pecuniary obligations of France were discharged; and the army, with its commander the Duke of Wellington, was recalled in October, after having been in France three years.

The death of Queen Charlotte was the principal event that occurred in England towards the close of this year. She died at Kew, on the 17th of November, in the seventy-fifth year of her age. Although her disposition was not of that ingratiating character which had made her royal husband so popular, yet the zeal with which she seconded the efforts of George III. to purify the English court, and the decorum which her example introduced into the social life of the great and the fashionable, will be felt and remembered, long

after the recollections of her pride and parsimony have passed away.

We now turn to events in India, where the British arms, although encountered by occasional reverses, had been steadily proceeding in their career of conquest. On commencing his administration as governor-general, on the 4th of October, 1813, the Earl of Moira, afterwards Marquis of Hastings, was obliged, almost immediately, to concert measures for the defence of our eastern empire, the frontiers of which were assailed by the Burmese in one quarter, and the Nepaulese in another. The first of these were kept in check for the present, and obliged to retire, but the Nepaulese were not to be so controlled. In May, 1814, and while negotiations were going on, they had treacherously attacked and murdered all the police-officers stationed in Botwul; and in the first campaign against them during the latter part of the same year, Major-general Gillespie lost his life in an unsuccessful attempt upon the fort of Kulunga, in the Doon district. Other reverses had been suffered by our troops in this disastrous campaign, by which the prestige of British invincibility was shaken, and the Nepaulese emboldened to bid it defiance. Nor was it difficult to account for these unfortunate results. The frontier of Nepaul, which was about 600 miles in length, and rugged and hilly, abounded in defensible positions; the people were brave and hardy; and the Ghorkas, the principal part of the population, whose chief trade was war and conquest, and who were so emboldened with success that they believed themselves invincible, had 12,000 soldiers, dressed, armed, and disciplined in imitation of the Company's sepoy. When the campaign was planned, our Indian government was lamentably ignorant of the country, and when our troops advanced upon it, they found the passes of hills, forests, and jungles, of which they had never heard, occupied by those hardy mountaineers, whose resistance was conducted with courage and no small portion of military skill. From all these circumstances, the Nepaulese war was considered to be the most arduous which the British had as yet waged in India; and, encouraged by his successes, the Ghorka commander had torn in pieces the letter of the British general, summoning him to surrender. But their pride and their confidence were tamed by a series of successes with which the operations of Sir David Auchterlony were attended; and the Ghorka Viceroy of Nepaul, yielding to necessity, agreed, in April, 1815, to an armistice, by which a large portion of their territory was surrendered to British military occupation. But when the terms of a treaty of peace were proposed, the viceroy protracted the negotiation to the close of the year, and finally

refused his signature. The war was therefore renewed, and on this occasion with every circumstance in favour of the British. They already occupied the whole of the low country to the

GHORKAS —From Fraser's Himala Mountains

banks of the Sutlej; they were now acquainted with the mountain passes and the nature of this new kind of warfare; and they were confident in the courage and skill of their leader, Auchterlony, by whom their campaign had hitherto been successfully conducted. He advanced in three columns towards the range of hills which forms the natural boundary of Nepaul; and when its few assailable passes were reached, which the Ghorkas had fortified, and were prepared to hold out to the uttermost, he penetrated through one of these passes which had been neglected, and totally routed them near Muckwanpoor, where they collected their whole army, in the hope of driving him back. In this battle, the Nepaulese troops not only behaved with great courage and spirit, but displayed an amount of military skill that seems to have astonished their conquerors. Their guns were fitted with tangent scales, an improvement that had been but lately introduced into our own artillery in India; and during the action they threw shrapnell-shells, which the French themselves were as yet unable to use. Muckwanpoor would soon have fallen, which would have opened up the way for an advance of the British upon the capital; but convinced of the hopelessness of further resistance, the Rajah of Nepaul submitted to the terms of peace. These were nothing more than had been demanded during the previous year, and which were now signed on the 2d of March, 1816. The rajah bound himself never to disturb the Company's frontiers, or the territories of any of its allies; never to advance any claim to the territories

which had formerly been disputed, or which were now ceded to the Company; never to retain in his service any British subject, or the subject of any European or American state, without the consent of the British government. A still more unpalatable condition, as being a badge of defeat and subjection, and threat of final subjugation, was yielded to by the proud Nepaulese: it was to allow the permanent residence of an English minister at their court, and to send accredited ministers of their own to reside at Calcutta. They also gave up the Turæe, a rich and spacious tract of territory lying between the Himalayan range of mountains and the Company's dominions, the possession of which by the British would suppress the incursions of the Ghorka chieftains, and confine them within the range of their own mountains. These articles, although so humbling, were executed by the Nepaulese with a fidelity seldom found among the nations of Hindoostan.

The disasters of the first campaign in Nepal encouraged the Pindarees to become assailants of the Company's territories. These men were not a distinctive race, but hordes of freebooters, collected from every country and creed, who were associated for the common purpose of devastation and plunder. As India was a soil fitted for the rapid growth of such evils, these Pindarees, who since 1805 had been growing in numbers, discipline, and audacity, could now muster in thousands, and make war, not upon petty villages, but cities and provinces, wherever booty was most plentiful. They were a light cavalry that could neither be avoided nor overtaken; the extent of their devastations was only matched by their cruelty, and the tortures they used on their victims, to wring from them their concealed gold and treasures; and as they had neither home nor country of their own, they were ready to settle upon the territories of those sovereigns who were willing to avail themselves of their services. Their chief settlement for the present was in the neighbourhood of Scindia and Holkar, from whose irregular bands they were largely recruited, so that in 1814 they could bring more than 40,000 horse into the field, all ready, like the Swiss, to sell themselves to the highest bidder, and, like the Scottish Borderers of old, to plunder friend and enemy alike. Their central situation at an equal distance from the three presidencies, facilitated their annual plundering expeditions against the British, whose line of posts along the frontiers they could easily penetrate; and with every year of late, these irruptions had been increasing in boldness and the wide extent of their devastations. At length, encouraged by the British reverses in the first Nepaulese campaign, a body of 8000 Pindarees crossed the Nerbudda, in spite of the cavalry

and infantry that watched them, and would have crossed the Kishna into the Madras presidency but for the swollen state of the river; but they swept along its rich and populous banks, leaving a highway behind them of massacre and havoc, retreating afterwards with perfect impunity. Another similar expedition was made soon after, in which, after crossing the Nerbudda, in one day they marched thirty-eight miles, and plundered ninety-two villages, while the next day they accomplished a march of equal length, and plundered fifty-four villages. During the twelve days of their stay in the Company's territories, they had also put 182 persons to a cruel death, mangled 505, and put 3603 persons to different kinds of torture. To repress these incursions and protect their territories, the Company, in 1816, established a line of defensive positions along the course of the Nerbudda, from Soonee to Serinagur, nearly 150 miles in length. This line, almost as soon as it had been completed, the Pindarees were daring and cunning enough to penetrate in three different bands, but without their former success; for they were overtaken, encountered, and so utterly broken and dispersed, that few of them recrossed the Nerbudda.

But something more decisive was needed against such enemies than a merely defensive warfare, and it was resolved, not only to crush the Pindarees, but to chastise all who had aided and abetted them. As this was a very comprehensive purpose, the plan was laid, and the preparations made upon an adequate scale. The territories in which the Pindarees abode were to be encompassed by a widely-extended cordon of the Company's troops, which were gradually to converge towards a common centre, surrounding and inclosing the marauders at every point. No sooner, however, had the different military divisions been put in motion for this purpose, than the plan was interrupted by the revolt of certain Indian powers, who, during this distant occupation of the British armies, hoped that the opportunity had arrived for re-establishing their own independence. The first of these was Bajee Rao, Peishwa of Poonah, who had repeatedly struggled in vain to free himself from the Company's control, and who was now encouraged to a decisive attempt on account of only one British brigade being left at Poonah. But Brigadier-general Smith, on hearing of Bajee Rao's rebellion, suspended his march against the Pindarees, and flew to the rescue of this solitary brigade, when it was surrounded, and on the point of being overpowered. This prompt arrival decided the fate of the peishwa; he was attacked, defeated, and deposed, and his territories were placed under British rule. A similar course

was adopted and a like fall experienced by Apa Sahib, Rajah of Nagpoor, who, in addition to his own troops, had a body of between 3000 and 4000 Arabs, men greatly superior to the Hindoo soldiers both in discipline and valour. But although the rajah's army was at least 20,000 strong, it was completely defeated on the 27th of November, 1817, near Nagpoor, by a British force of not more than 1400 men, and the rajah surrendered himself and his dominions to the victors.

These impediments being removed, the war against the Pindarees was resumed, and in every case with success, although the Mahrattas, alarmed at the growth of the British power, were now making common cause with these formidable marauders. This sympathy brought us once more into hostile contact with the two powerful Mahratta chiefs, Scindia and Holkar; and while the former escaped the punishment designed for him by temporizing and professing neutrality, the latter assembled his troops, and entered the field against the British. This event compelled Sir John Malcolm and Sir Thomas Hislop to unite their divisions, and turn aside from the Pindaree warfare; and after several skirmishes with the Mahrattas, they found, on approaching Mehudpoor, that Holkar's army was drawn up to receive them on the opposite bank of the Soopra. The British forced the passage of the river, and in the battle that followed, Holkar was so completely defeated that his power and hopes were broken, and he humbly sued for peace, which was granted to him in January, 1818. The terms deprived him of all further power to do mischief, by compelling him to become the dependant and ally of the British, to whom he was obliged, when demanded, to furnish an auxiliary force of 3000 cavalry, and without whose permission he could engage in no negotiations with any foreign power. Besides these conditions, he was obliged to cede a considerable portion of his territories to the conquerors. Thus, finally, was a combination of the native powers of India crushed, which, had it been formed more promptly, or executed in better concert, would have shaken the stability of our eastern dominion to its centre. In so very brief an outline, in which mere results only can be stated, no idea can be conveyed of the difficulties encountered by the British armies, and the extent of conquest by which their victories were rewarded. "Thirty hill-fortresses, each of which might have defied the whole Anglo-Indian army, fell in the course of a few weeks; and this vast Mahratta empire, which had over-shadowed the East, and before which the star of the Mogul had become pale, was annihilated."¹

The fate of the Pindarees, after their powerful allies had been suppressed, was delayed no longer. Robbers by profession, and the scourges of every country in turn—men whom no mercy could restrain or treaties and obligations bind, it was felt that in their case the humane usages of war must be dispensed with; and they were hunted down as criminals whose lives had already incurred the death-sentence, and whose extirpation both justice and necessity demanded. Accordingly, the widely-extended net which the British had thrown out, was drawn and closed together, and the scattered bands that sought in vain to escape were put to death in thousands. So complete was their destruction, that Sir John Malcolm, in his *Memoir of Central India*, thus writes of them:—"There now remains not a spot in India that a Pindaree can call his home. They have been hunted like wild beasts; numbers have been killed; all ruined. Those who espoused their cause have fallen. . . . A minute investigation only can discover these once formidable disturbers, concealed as they now are among the lowest classes, where they are making some amends for past atrocities by the benefit which is derived from their labour in restoring trade and cultivation. These freebooters had none of the prejudices of caste, for they belonged to all tribes. They never had either the pride of soldiers, of family, or of country, so that they were bound by none of those ties which among many of the communities in India assume an almost indestructible character. Other plunderers may arise from distempered times; but as a body the Pindarees are so effectually destroyed, that their name is already almost forgotten, though not five years are passed since it spread terror and dismay over all India."

During this Mahratta and Pindaree war events had taken place in Ceylon, by which that important island was established under the British dominion. It may be said to form the great threshold of our Indian empire, from its geographical position, being situated at the southern extremity of Hindoostan, from which it is separated by the Gulf of Manaar and Palk's Strait. On its transfer from Holland to the British, the latter found it held by a singular tenure; for while the ring of sea-coast was under European possession, the central portions were under the dominion of the native King of Kandy. Between this native independent sovereign and the new British rulers of the coast there could not fail to be misunderstandings and grounds of quarrel, so that since 1803 wars had occurred between them, in which the British were the principal sufferers. But the Kandian sultan had used his advantages with such cruelty, and had made his rule so oppressive to his own subjects, that even the

¹ *Journals of the Sieges of the Madras Army*, by Edward Lake, Lieutenant of Madras Engineers.

Singhalese themselves applied to the strangers for aid, which the latter, on account of their own grievances, were not slow to grant. The independent territory was invaded, and on the entrance of a British detachment into the capital, on the 11th of February, 1815, the town was found deserted of its inhabitants, while the king himself had fled both from the invaders and his own people. A few days after, the Singhalese apprehended and brought him to trial, and after deposing him for his numerous acts of cruelty,

oppression, and misrule, they unanimously transferred their allegiance to the British government. Thus easily, and without a drop of blood being shed, the whole island of Ceylon, the ancient Serendib of Arabian romance, became a portion of our Anglo-Indian empire. A rebellion of the natives which followed in 1817, was easily suppressed towards the close of the following year, and since that period, Ceylon has gradually been becoming one of the most valuable of our eastern possessions.

CHAPTER XII. —CIVIL AND MILITARY HISTORY.—A.D. 1819—1820.

GEORGE III.

Opening of the new parliament in 1819—Subjects of the royal speech—The Duke of York appointed guardian to the king—Motion carried for the revival of our criminal code—Motion on the national currency—Settlement of cash payments—Continuation of public discontent—Changes in the style and proceedings of the political reformers—Their alarm at the despotic edicts of the allied sovereigns—Increased demands of the reformers—Their public meeting at Manchester—It is assailed and dispersed by the yeomanry—Violence of the yeomanry on the occasion—Public meeting to condemn their proceedings—Trial and punishment of the leaders of the Manchester meeting—Passing of the “Six Acts”—Death of George III.

THE beginning of the year 1819 was signalized by the opening of the new parliament, which assembled on the 14th of January, and Mr. Mannors Sutton was re-elected speaker without competition. The royal speech congratulated parliament, and with justice, on the evacuation of France by the army of occupation, on the brilliant achievements of our armies in the East Indies during their late campaigns, and on the reductions that had been made in the expenditure for the army and navy. Mention was also made of the commercial treaty already existing between Britain and the United States of America, which was extended to a further term of eight years. But when the same congratulations alluded to the favourable state of the revenue, and the improved appearance of trade, commerce, and manufactures, it was felt that these were fallacious, or at the least premature. It was known that the most serious disturbances continued to ferment in the heart of the manufacturing districts, while the public income still fell short of the expenditure to the amount of £14,000,000.

In this state of feeling, the first question to try the temper of the new parliament, was the appointment of a guardian of his majesty's person, in consequence of the demise of the queen. For this office the Duke of York was proposed by Lord Liverpool, and the duke's right to hold it was universally admitted. But when it was

further proposed that the annual sum of £10,000, which the queen had enjoyed for the charge of the king's person, should be continued to her successor in the office, a violent opposition followed, and the measure was carried only by a small majority. Retrenchment was the order of the day, and at such a time it was no mere party or political outcry, but an urgent necessity. Connected with these provisions for the poor old king, who was unable either to understand or enjoy them, was the maintenance of the royal establishment at Windsor. For this £100,000 had formerly been allowed, which ministers offered to reduce to £50,000; but although such an establishment was represented as an absolute mockery in behalf of one who did not need a tenth part of it, the proposal of the ministers passed by a large majority.

A very important subject of this session was the revision of our criminal code. The sanguinary character of English law had long been a wonder and reproach among foreigners, as well as a matter of regret among the reflective of our own country; and it was felt that the time had come when the frequency of capital punishments might very safely be diminished. Repeatedly the subject had been brought before parliament by that upright and talented lawyer, Sir Samuel Romilly; but in consequence of his death in the preceding year, it was now adopted and advocated with equal ability by Sir James Mackintosh. The time also was favourable, on

account of a petition from the corporation of London, complaining of the increase of crime, and pointing out the advantage that might accrue from the commutation of capital punishments for others of less severity. This momentous inquiry it was resolved to consign to a committee employed upon the examination of prison discipline, when, on the following day, Sir James Mackintosh proposed that the examination of our penal code should have a distinct committee of its own. After showing the subterfuges which the severity of our laws occasioned, and the difficulty of obtaining a conviction, in consequence of which the worst culprits escaped and the statutes became a dead letter, he explained his views of those circumstances under which alone capital punishment should be administered, whereby not less than 150 offences needed to be expunged from the catalogue. His motion was carried, and before the end of the session a committee of inquiry was formed, of which he was appointed chairman.

Another very momentous affair of this session was the consideration of the national currency. The commencement of the war in 1793, and the return of peace in 1815, had equally produced an abrupt diversion of capital, which was keenly felt by the productive classes, and finally by the whole community. To this was added the want of money accommodations during the period of agricultural distress, in consequence of the Bank of England, at the return of peace, having been obliged to reduce its paper circulation, from the apprehension of soon being called upon to pay in gold. Country bankers were in like manner compelled to limit their issues, until the question of the resumption of cash payments by the Bank of England should be settled. It was no wonder that a subject of such vital importance to every individual should have given rise to about fifty debates and conversations in both Houses of Parliament. The principal parts of the government plan, which was finally adopted, were the following :—That it was expedient that the restrictions on payments in cash by the bank should be continued beyond the 5th of July, 1819, the term fixed by law; that a definite period should be fixed for the termination of the restriction, and that in the meantime certain preparatory measures should be taken; that provision should be made for the gradual repayment to the bank of £10,000,000 of its advances for the public service; that from the 1st of February, 1820, the bank should be obliged to give in exchange for its notes gold, assayed and stamped, in quantities of not less than sixty ounces, at the rate of 81s. per ounce; that from the 1st of October, 1820, it should be obliged to pay gold for its notes in the same manner, at the

rate of 79s. 6d. per ounce; that after the 1st of May, 1821, the rate should be 77s. 10½d. per ounce; that from the 1st of May, 1823, the bank should pay its notes on demand, in the legal coin of the realm; and that the laws prohibiting the melting and exportation of the coin should be repealed.

The session was closed by the regent in person, on the 13th of July. In the close of his speech he adverted to the seditious spirit still at work in the manufacturing districts; and notwithstanding the self-gratulations of ministers at the opening of parliament, the existence of such a spirit was too notorious to be denied. The extravagant hopes which the many had founded upon the return of peace had been disappointed; for its benefits, instead of being instant and immediate, were of slow growth, while low wages and high-priced provisions were still the order of the day. Under such circumstances, it was easy for restless demagogues to persuade the ignorant multitudes that their continued depression arose from a corrupt court, a venal ministry, and unjust taxes; and that the blessings of peace and the fruits of their own industry could not be realized until these obstacles were removed. These sentiments were trumpeted in speeches at popular reform meetings, and disseminated in pamphlets and broad-sheets, until they became unalterable truths in the eyes of those who cared for no other kind of instruction. At this time, also, several changes had occurred among them which foreboded an increase of danger to the government. They had assumed the title of radical reformers, indicating the root-and-branch work which they meant to follow out, instead of stopping at half-measures, and their avowed purpose to make the members of parliament the true representatives of the people, or, in other words, the puppets and mouth-pieces of their own party; they had introduced female reform societies, for the purpose of co-operating with the men, and instilling into the minds of their children “a deep-rooted hatred of our tyrannical rulers;” and finally, under the pretext of taking healthful open-air exercise after the close mechanical labours of the day, they met in bands at evening, and even at midnight, in the suburbs of the great towns, where their chief recreations consisted of military drill, of marching and counter-marching. No arms, indeed, were as yet brought to such meetings; but these apparently harmless parades would soon teach them not only where to find, but how to use them. In like manner, a cap of liberty became their favourite standard, and the French revolution their favourite theme of declamation.

While the minds of the working-class reformers of Great Britain were in this irritated state, the

proceedings of the allied sovereigns upon the Continent at this period exasperated them into double fury. Confident in their safety and power, now that their dreaded enemy was put down, and forgetful of the liberal promises they had made to their subjects while he was in the ascendant, these royalties were endeavouring to establish their rule more firmly than ever, by making it more despotic. This was distinctly evinced at the congress of Carlsbad, where the liberty of the press and liberal opinions in general were denounced, and menaced with severe penalties. In this way the Holy Alliance were redeeming their pledge, and governing upon the principles of Christian justice and humanity! The radicals took the alarm. They had persisted in believing that the regent was secretly a member of the alliance; that Lords Castlereagh and Sidmouth were the purchased adherents of these foreign despots; and that under such agencies the same restrictions which had been imposed upon the liberties of the Continent would be speedily introduced into Britain. This was a new theme for the popular advocates of reform, and a justification of bolder measures than had hitherto been contemplated; and not only annual parliaments, universal suffrage, and vote by ballot became their prevalent demand, but the propriety also of the use of physical force in obtaining these important concessions was boldly asserted. It was even queried in their more private meetings, whether the people had not a right to destroy the Bank of England, and to equalize all classes by an agrarian division of the landed property of the country. In such a state of things the government could not look tranquilly on, or its adherents be without alarm; and the commencement of open strife and bloodshed was nothing more than a question of time and place, which circumstances were sure to settle. This was done at Manchester on the 16th of August, 1819. The reformers of that city having convened a great public meeting on the 9th, with the object of proceeding, in their own way, to the choice and election of a parliamentary representative, were apprised by the magistrates that the object was illegal, and that such meeting was illegal; upon which the design was modified, and a meeting convened for the 16th, to petition for a sweeping reform in parliament.

A little before noon on the 16th, the first body of reformers began to arrive on the scene of action, which was a piece of ground called St. Peter's Field. These persons bore two banners surmounted with caps of liberty, and bearing the inscriptions—"No Corn Laws," "Annual Parliaments," "Universal Suffrage," "Vote by Ballot." The flags, after being paraded round the field, were planted on a waggon, on which the orators

of the day had taken their stand; but other flags appeared and remained stationary in different parts of the crowd. Numerous large bodies of radicals continued to arrive from the towns in the neighbourhood of Manchester till about one o'clock, all preceded by flags, and many of them came up in regular marching order, five deep, as if they had been well drilled and trained. Two clubs of female reformers advanced, one of them numbering more than 150 members, and bearing a white silk banner. There was a body of reformers who timed their steps to the sound of a bugle, with much of a disciplined air; there was another that had assumed the motto of the illustrious Wallace, "God armeth the Patriot." The multitude now amounted to a number roundly computed at 80,000, and the arrival of the hero of the day was impatiently looked for by the radicals. Nothing less than a fearful riot, with murder and plunder, was expected by the merchants, mill-owners, and the prosperous classes generally. At last orator Hunt made his appearance, and, after a rapturous greeting, was invited to preside. Mounting a scaffolding, he began to harangue his admirers. A band of special constables, who had taken up a position on the field without resistance, now disposed themselves so as to form a line of communication from a house where the magistrates were sitting to the stage or platform erected for Mr. Hunt. The orator had not proceeded far when the appearance of the yeomanry cavalry advancing at a brisk trot excited a panic in the outskirts of the meeting. The civic force entered the inclosure, and after pausing for a minute to recover their disordered ranks, they drew their swords and brandished them in the air. The multitude, by the direction of their leaders, gave three cheers, to show that they were undaunted by this intrusion, and the orator had just resumed his speech to assure the people that this was only a trick to disturb the meeting, and exhorted them to stand firm, when the yeomanry dashed into the crowd, making for the platform. That immense mob offered no resistance; they fell back on all sides, overturning one another. The commanding officer approached orator Hunt, and brandishing his sword, told him that he was his prisoner. Mr. Hunt, after enjoining the people to tranquillity, said that he would readily surrender to any civil officer on his showing his warrant. Mr. Nodin, the principal police-officer, then stepped forward, and, producing his warrant, quietly received Hunt into custody. A few other persons, against whom warrants had been issued, were likewise apprehended; others who stood in the same predicament escaped in the crowd. Some of the yeomanry then cried out, "Have at their flags!" and upon this the troop began to strike

down the banners, raised in various parts of the fields, cutting to right and left to get at them. The people scampered off in all directions, and the yeomanry spurred after them, losing all command of temper. There was then a dreadful scene of confusion; numbers were trampled under the feet of men and horses; many women as well as men were cut down by sabres; several were slain on the spot, and among these were a peace-officer and a female—for the undisciplined heroes scarcely knew what they were doing, and slew where they wished to save. The whole number of persons more or less injured was set down at between 300 and 400; but it should appear that this number is exaggerated by the suffering party, and that nine-tenths of the injuries received were of a very trifling nature. In their retreat the reformers threw stones and brick-bats at the yeomanry. It is said that some stones were thrown in the same direction before the yeomen charged the people, and that the riot act was read by the magistrates before a sword was used; but some doubt rests upon one, if not upon both of these assertions. The yeomanry was chiefly composed of a set of hot-headed young men belonging to rich families, who entertained a too great contempt and dislike of spinners, and weavers, and dyers, machine-makers, and other artisans, who made up the reform assemblage. The riot act *was* read, but it seems to have been read when nobody could hear it. In less than ten minutes from the first charge of the yeomanry, the ground was entirely cleared of its former occupants, and was filled by various bodies of military, both horse and foot. Mr. Orator Hunt, with the broken staves of two of his banners carried in mock procession before him, was hurried before the magistrates, who sent him to prison on a charge of high treason. He was soon locked up in a solitary cell; and the other prisoners were confined with the same precaution. Before night the town of Manchester was brought into a tolerably quiet state, military patrols being stationed at the end of almost every street.

As soon as the news of this riot and its suppression reached London, a cabinet council was held; and acting on the partial statements of the despatch, the thanks of government were returned to the magistrates, and to all the military engaged, for their prompt and efficient conduct in the affair. This was a signal for the opponents of government and friends of reform in London; and at a numerous meeting held in the Palace-yard, Westminster, on the 2d of September, at which Sir Francis Burdett and Mr. John Cam Hobhouse, his colleague in the representation of Westminster, were the principal speakers, the affair of Peter's Field was denounced as a massacre, and a foul attempt to destroy the liberties of

Englishmen; and an address founded on these resolutions was sent to the prince-regent. The opposite party were provoked by the occasion to call meetings of their own, in which counter-addresses were drawn up, justifying the suppression of the Manchester meeting, and offering to raise yeomanry corps for the support of government, and the maintenance of public order. Under such auspices the prisoners were brought to trial; but the capital charge of treason against them was abandoned, and imprisonment, from one to two years and a half, was the utmost punishment inflicted upon five of the chief leaders of the meeting. Still the alarm had been too great, and the supporters of government were too numerous to allow the present state of affairs to go on unchecked; and to obtain the restoration of order and secure the inviolability of their own property, they were but too ready to place an undue power in the hands of the ministry. The well-known "Six Acts" were introduced, and were carried by large majorities through both houses. In the lords they were proposed by Viscount Sidmouth; in the commons by Lord Castlereagh. They consisted of the following bills. 1. To take away the right of traversing in cases of misdemeanour. 2. To punish any person found guilty on a second conviction of libel, by fine, imprisonment, and banishment for life. 3. For preventing seditious meetings, requiring the names of seven householders to the requisition which, in future, convened any meeting for the discussion of subjects connected with church or state. 4. To prohibit military training, except under the authority of a magistrate or lord-lieutenant. 5. To subject cheap periodical pamphlets on political subjects to a duty similar to that on newspapers. 6. To give magistrates the power of entering houses by *night* or by day, for the purpose of seizing arms believed to be collected for unlawful purposes. The only one of these bills which passed without opposition was that for the prevention of secret military training. The entering of houses by night, and the restrictions on the press, were strongly objected to. These acts were to continue in force for the term of five years.

The year 1820 commenced with gloomy auspices in the political horizon. On the 21st of January, the humane, benevolent, and popular Duke of Kent died, leaving behind him an infant daughter, Alexandrina Victoria, who now so happily occupies the British throne. Only eight days after the duke's death, the great bell of St. Paul's again sent forth its deep knell, to announce a demise of still higher importance, for his father, the king of the realm, had departed.

George III. died in Windsor Castle on the night of Saturday, the 29th of January, 1820, in the 82d

year of his age, and (counting the ten years of the regency) in the 60th year of his reign. For some years before his death he had been totally blind; and it does not appear that any temporary return of reason allowed him to comprehend and rejoice at the issue of the momentous struggle in which he left his country engaged in 1810, when his malady drove him into retirement. We only know that when others desponded his hopes were high, and that, so long as he had reason, he never despaired of the final triumph of England. No man within his realms had a more thoroughly English heart, or a more ardent desire to promote the welfare of the people and the interests and honour of the country. Unpopular in his youth and earliest government, he

became endeared to the people in the midst of the misfortunes of the first American war; and perhaps no sovereign had ever been more popular than he was during the last twenty-five years of his reign. The time is not yet come for drawing up an impartial, dispassionate, and complete character; but it may be well remarked now, that nearly every circumstance concerning him which has been brought to light of late years, and nearly every conversation which has been reported, or letter written by him which has been published, have tended to clear away the prejudices of former times, and to raise our estimate, not merely of the goodness of his heart and intentions, but also of the powers of his intellect, and of his capacity for public business.

CHAPTER XIII.—CIVIL AND MILITARY HISTORY.—A.D. 1820—1822.

GEORGE IV.—ACCESSION, A.D. 1820—DEATH, A.D. 1830.

Accession of George IV.—Question of Caroline's right to the title of queen—The Cato Street conspiracy—Its purposes and proceedings—Apprehension of the conspirators—Their trial and punishment—Troubles occasioned by the radical reformers in Scotland—Inability of the British reformers to follow out the model of the French revolution—Manifestations of independent spirit in the new parliament—Changes affected in the penal code—Brougham proposes his plan of education—Proposal for the removal of restrictions on free trade—Queen Caroline's return to England—Popular triumph of her reception—The reformers identify her with their cause—Unsuccessful attempts of ministers to compromise with her demands—Her trial—Depositions of the witnesses—The queen proclaimed not guilty—Movements of parliament in the direction of reform—Motions for parliamentary reform—Motion for the removal of Roman Catholic disabilities—Its defeat through the opposition of the Duke of York—Approaching coronation of George IV.—Demands of the queen to be crowned along with him—They are refused—Her attempts to be present at the coronation—Her repulse from Westminster Hall—Her last illness and death—The funeral procession—Riot with which it is accompanied—Visit of the king to Ireland—Its inutility—His visit to Hanover—Parliamentary proceedings of 1822—Troubles in Ireland—Irish famine—Motion of Canning in behalf of Roman Catholic peers—Its rejection in the lords—The king departs on a visit to Scotland—Suicide of the Marquis of Londonderry—Indecent behaviour of the mob at his funeral—The Duke of Wellington sent as British delegate to the congress of Verona—Peaceful tone of the British government at the congress—Proceedings of the congress in the affairs of Italy, Spain, and Greece—Its empty and unmeaning character—The king's visit to Scotland—Enthusiastic nature of his welcome—Benefits resulting from the visit.

HE accession of George IV. to the throne was merely nominal, for virtually he had been king for the last ten years; but the glories of his regency, through the success of our arms, had eclipsed whatever could be expected from his sovereignty, surrounded as he was by political and domestic troubles, which his new position could only tend to aggravate. He had also passed the bright meridian of life, and at the period of his accession was laid upon a bed of sickness, from which it was at one time feared he would never rise. Even his assumption of the royal title was accompanied with a great embarrassment. George IV. was king, but who was queen of Great Britain? In the alteration of the form of prayer in

the church service, the name of her who was legally queen-consort had been omitted; and as Princess of Wales her allowance from the civil list had ceased with the death of George III. It was now asked in parliament whether she, their queen, was to be supported according to her high station, or left to wander in beggary through foreign lands. It was a perplexing question both for her friends and enemies, as the former saw no need for the claim of a title which they considered as hers by law already, while the latter were unwilling to concede it. A vote, therefore, of a royal yearly allowance was passed in her favour without a division, but also without specifying her royal right and title to such allowance. On the close of parliament, by commission, on the 28th of February, the lord-chancellor, in his

speech on the occasion, turned the public attention into a new channel, by announcing that a fearful conspiracy had been just detected, sufficient to justify the late passing of the obnoxious "Six Acts," and to open the eyes of the most sceptical to the dangers in which the country was involved.

The danger alluded to was the Cato Street conspiracy. Its chief leader was Arthur Thistlewood, once a subaltern officer in the West Indies, then a resident in France during the hottest of the revolution, and finally an associate of the Watsons in the Spafields riot, for which he was tried but acquitted; and on his acquittal, he had

sent a challenge to Lord Sidmouth, for which of fence he was visited with fine and imprisonment. On obtaining his liberty, he contemplated the mad design of assassinating the ministers, seizing the Bank, the Mansion House, and the Tower, and establishing a provisional government; while his only instruments for the accomplishment of such a vast design, were a handful of needy, ignorant, desperate men of the lower orders, who were more likely to attempt a burglary than effect the overthrow of a government. But one of their number, Edwards, was in the pay of the home office, and through his information every step of the conspiracy, until it had ripened into action, was fully known to the ministry. After various meetings and many delays, the conspirators learned from Edwards that there was to be a ministerial dinner at Lord Harrowby's house, in Grosvenor Square, on Wednesday, the 23d of February, upon which Thistlewood exclaimed, "As there has not been a dinner so long, there will, no doubt, be fourteen or sixteen there; and I it will be a rare haul to murder them all together." The plan which he settled was, that on the morrow, which was the day of the dinner, one of their number should go to the house, with a note addressed to Lord Harrowby; that on the door being opened, the rest should rush in, and dividing themselves into two parties, one was to be employed in securing and binding the servants, while the other should enter the dining-room and effect the massacre, being also furnished with bags, in which they were to bring away the heads of Lords Castlereagh and

Sidmouth, in token of their success. While the murderers were thus employed, other detachments were to fire the cavalry barracks, by throwing fire-balls into the straw sheds, and then attack the Bank and Tower, which they would take with the aid of the mob, who were expected to rise in their favour. During the whole of Wednesday Lord Harrowby's house was watched, to ascertain that no soldiers or police were admitted; and preparations for a banquet were apparently carried on there till eight o'clock, while a strong detachment of the Coldstream guards and Bow Street constables were gathering upon the

rendezvous of the conspirators, to surprise and apprehend them. The place was a wretched stable-loft, the ascent to which was by a ladder, in an obscure street called Cato Street, near the Edgeware Road; and while Thistlewood and his gang were preparing for action by the glimmering light of one or two small candles, the soldiers and constables rushed into the room. Instantly the lights were extinguished, a scuffle ensued, shots were fired and wounds inflicted; and in the confusion nine of the party were secured, while Thistlewood and

GEORGE IV.—From a portrait by Sir T. Lawrence

the rest escaped, but several of them, with their leader, were captured within three days after. In the trials which followed, Thistlewood, along with his principal accomplices, Ings a butcher, Davison a creole, and Brant and Tidd, shoemakers, were convicted and sentenced to death, with the horrible accompaniment of decapitation; but to the last they gloried in their fate as martyrs to the cause of liberty, and declared that one of their chief purposes was to avenge the "Manchester massacre," a declaration that secured for them an amount of popular sympathy which the atrocious nature of their plot would have extinguished.

Although such a foul, unnational conspiracy stood alone, and could find no imitators, the discontent in which it originated was still prevalent in the manufacturing districts, and overt acts of rebellion were not unfrequent. Such was the case in the West Riding of Yorkshire, where there were midnight trainings of the disaffected, with the collecting of firearms and manufacturing of

pikes, which had continued during the winter, as a preparation for a general rising; but when the time came, not more than 200 or 300 assembled at Huddersfield, and on the advance of a body of cavalry they fled, leaving their pikes and green flag behind them. In Scotland the cause of radicalism was equally rampant; and in Glasgow the walls were placarded with proclamations, supposed to proceed from a committee for the formation of a provisional government, requiring the manufacturers to suspend their employments till further orders from the committee—an imperious command, but readily obeyed by the weavers and colliers of Glasgow and Paisley, so that the streets were filled with thousands of loitering artisans, wondering at the mysterious mandate, and talking of a coming revolution. Happily, no worse outbreak resulted from this alarming state of matters in the north, than a paltry skirmish at Bonnymuir, where a party of armed radicals gave battle to a troop of cavalry and yeomanry, but were dispersed, after several of their number had been wounded, and nineteen taken prisoners. In all these cases, however, although there was a close imitation of the combinations, purposes, and manifestoes which had characterized the revolutionary proceedings of the French, there was an absence of that violent and sanguinary spirit with which they had been accompanied, and which had formed the source both of their crimes and success. The British reformers were new to revolutions, and were inapt imitators of their more oppressed and less scrupulous and reflective types upon the Continent. In every case, also, government kept a watchful eye upon the disaffected; and both through informers and professional spies, whom it appears the ministry did not scruple to employ for the purpose, they were warned of every intended movement, and enabled to crush it at the commencement.

The demise of George III. having occasioned a dissolution of parliament, the new elections were marked by few acts of violence, although in many cases party contests were keen; and from the late exposures of unconstitutional proceedings connected with the suppression of political riots, as well as from the increase of numbers added to the opposition, there was little promise that the new House of Commons would prove as compliant as the old. Of this an indication was given by a movement in the way of parliamentary reform. This was a bill for the disfranchisement of the corrupt borough of Gram-pound, which had been moved in the last session by Lord John Russell, and which now passed the second reading. The subject of the amendment of our criminal code was now brought forward by Sir James Mackintosh, in six bills, founded

on the suggestions of the committee of inquiry appointed during the last session; and of these bills, after much discussion, three were successfully carried, and passed into law. By this change, private stealing in shops to the value of forty shillings—the residence of gipseys for more than one year in the realm, or of notorious thieves taking up their abode in Cumberland or Northumberland—or for any person to be found disguised in the Mint, or injuring Westminster Bridge, were no longer punishable as capital crimes. Other acts hitherto capital were also modified into simple felonies; such as the receiving of stolen goods; the abduction of any maid, wife, or widow, for the sake of her fortune; the destroying of trees, breaking down the banks of rivers, or wounding cattle; the sending of threatening letters; and all the capital offences that had been connected with the laws of bankruptcy and the marriage act—the punishment of death in all of these many cases being changed into transportation, imprisonment, hard labour, or fine. It will be seen from the above enumeration, that this purifying sweep of the sponge over the defiled pages of our statute book was fully needed, while it will readily be surmised that much more still remained to be accomplished. Mr. Brougham also brought forward his comprehensive and national plan for the education of the poor, but without success; and owing to the jealousy of the dissenters, it had finally to be abandoned, but not until it had awoken a spirit of inquiry, by which the good that had been sought was to be effected by other agencies. And not the least important change that had commenced during the session, was that which had reference to free trade. During the war, when Britain by her maritime superiority had engrossed the carrying trade, and enjoyed a monopoly of commerce, our merchants had rejoiced in this profitable exclusiveness. But now that the war was ended, a period of stagnation had succeeded, and it was felt that a new impulse must be given to commercial industry, even though it should be at the cost of removing these restrictions, and admitting every nation into full competition with ourselves. The attention of parliament was called to the subject by petitions from the cities of London and Glasgow in favour of free trade, and the propriety of a change in our commercial policy was suggested in the House of Lords, on the 26th of May, by Lord Lansdowne, who moved for a committee of inquiry concerning the foreign trade of the empire. He was seconded by the Earl of Liverpool, and the motion was unanimously carried.

It was at this stage that every public movement was arrested by the entrance of a new personage on the scene. By the advice of

Mr. Canning, the Princess Caroline had retired to Italy in 1814. Of the life she had been leading during her exile there was many an unfavourable and even foul report; and although the "Delicate Investigation" had been extinguished, a new one had followed her in her wanderings, and all the reports that were multiplying against her were collected, and sent to London, as fresh matters of accusation, should circumstances compel such a step. Our ambassadors, instructed from home, refused to recognize her as Princess of Wales, and the courts at which they resided were closed against her entrance. But when her name was struck out of the Liturgy, and the recognition of her rank as queen withheld at the accession of her husband, she felt as if her silence would justify her condemnation—that she must come to England to demand an open trial, and vindicate her innocence and her claims. She may have felt, too, that from the irritated state of public feeling and the unpopularity of George IV., the bulk of the nation, right or wrong, would be ready to advocate her cause. Mr. Brougham, her principal legal

adviser, received her commands to meet her in France. He left London on the 1st of June, bearing the following proposition to the queen, which had been placed in his hands by Lord Liverpool, the premier: "The king is willing to recommend to parliament to enable his majesty to settle an annuity of £50,000 a year upon the queen, to be enjoyed by her during her natural life, and in lieu of any claim in the nature of jointure or otherwise, provided she will engage not to come into any part of the British dominions, and provided she engages to take some other name or title than that of queen, and not to exercise any of the rights or privileges of queen, either with respect to the appointment of law officers, or to any proceedings in courts of justice. The annuity to cease upon the violation of these engagements, viz., upon her coming into any part of the British dominions; or her assuming the title of queen; or her exercising any of the rights or privileges of queen, other than above excepted, after the annuity shall have been settled upon her."

VOL. IV.

The princess, who ever proclaimed that she was supported by the consciousness of her own innocence, rejected these propositions with disdain, and declared that she would presently be in England to confront her enemies, and to appeal to a generous people. She was at Calais, on her way to London, on the 5th of June, and the intelligence was conveyed to Whitehall by telegraph. A cabinet council was assembled hereupon, and it sat through nearly the whole night. On the next morning—the morning of the 6th—

QUEEN CAROLINE.—From a portrait by James Lonada's

the king went in state to give the royal assent to such bills as had passed parliament; and this being done, he left Lord Liverpool to deliver the following message to the lords:—"The king thinks it necessary, in consequence of the arrival of the queen, to communicate to the House of Lords certain papers respecting the conduct of her majesty since her departure from this kingdom, which he recommends to the immediate and serious attention of this house."

The papers referred to were laid on the table in a green bag, which was sealed. This was

the famous green bag which made such a figure in the chronicles of the day. A similar message was delivered to the commons by Lord Castlereagh. Both ministers announced the intention to move an address to the king, and to refer the papers to a secret committee on the following day. The lords were silent; but in the commons there was some vehement debate. On the 7th, Lord Liverpool proposed that the papers should be submitted to a secret committee of fifteen peers, to be appointed by ballot. Lord Liverpool, however, announced that the course to be pursued against the queen could not be an impeachment for treasonable conspiracy, seeing that Bergami, the alleged partner in her guilt, being an alien, was not amenable as a traitor to the crown of England; and that to constitute conspiracy there must be at least two criminals. The secret committee was appointed by ballot on the following day.

While this was passing in the lords there was another vehement debate in the commons. Mr.

Brougham presented a message from the queen, which set forth that she had come to claim her rights and maintain her innocence; that she protested against a secret tribunal appointed by her accusers; and finally, that she appealed to the justice of the House of Commons. Lord Castlereagh declared that ministers were neither persecutors nor prosecutors in this matter; and that the illustrious personage would not and could not be judged without an open inquiry and examination of witnesses. Mr. Canning, who entertained a kind and generous feeling towards the princess, solemnly vowed that he would never place himself in the situation of her accuser. The same eminent orator and statesman declared that he would take no further share in these deliberations; and, finding the cabinet resolved to proceed, he very soon resigned his office.¹ Mr. Wilberforce moved the adjournment of the question to the next day but one, in the hope that during the interval some amicable arrangement would prevent a disgusting investigation, which might go far to taint the public morals, and which could not but degrade the two contending parties—the king as well as the queen. This motion was agreed to, and for several days there was silence in the house upon the subject.

Caroline of Brunswick had landed at Dover from the ordinary packet on the 6th, accompanied by Alderman Wood and Lady Ann Hamilton. Her entry into London was a kind of triumph, for she was received with joyful acclamations by the common people, and an immense mob followed her carriage, shouting, "The queen for ever!" and heaping vituperations and curses upon the heads of her husband's ministers. On the 14th, the somewhat radically composed common council of the city of London presented an address, congratulating her majesty on her arrival in this country. The example was speedily followed; and for many months the metropolis was kept in a ferment by addresses and processions, got up by all manner of people, of trades, and of bodies corporate and not corporate, in honour of the queen's happy return. In truth, from the first moment of her arrival, all the discontented and disaffected, all the radicals and all the reformers of whatsoever kind—all who wished for change, and all who wished for commotion and strife—rallied round this hapless, reckless woman. The cries for annual parliaments, universal suffrage, and vote by ballot, were all drowned in the louder shouts of "Long live the Queen!" "God save the Queen, and destroy her enemies!" For any one to have intimated in the streets of London a suspicion of her innocence and spotless purity, would have been to make a very perilous

experiment on the popular temper. It was very soon observed that the hosts of her admirers and champions were not made up of the respectabilities, and that the most ardent of her followers and processionists marched from the lower parts of the town, from St. Giles's and the Whitechapel suburb. With a very few exceptions, the ladies of rank, station, and character were exceedingly shy of her, whatever may have been the Whig politics of their husbands, or the speeches by them delivered in parliament; and the warmest of her supporters and panegyrists in the two houses showed no anxiety that their wives and daughters should visit her majesty in her own house. By a certain party, or rather by two certain parties—the Whigs and the Radicals—she was seized upon as an instrument proper to work out their own designs. They calculated that through her means the unpopularity of the king might be brought to a climax, and the long-seated ministry utterly overthrown. They were therefore determined from the first to set their faces against any amicable arrangement or compromise; to support her flagging spirits by incessant addresses, processions, and highly-seasoned compliments; and to prevent, by every means in their power, her withdrawing from the conflict. They had brought her to the stake, and they were resolutely determined upon keeping her at it. Yet apart from these political views, and wholly unconnected with them, there was a strong and generous feeling in a very considerable part of the community in favour of the unhappy princess. The heart of the people revolted at anything like oppression exercised upon a woman; her illustrious birth, the misfortunes of her family (her father and her brother had both fallen in battle during the late revolutionary war), her own misfortunes and sorrows, which had commenced from the hour of her union with George, Prince of Wales; her natural kindness, benevolence, and generosity of disposition; the long state of abandonment in which she had been left by her husband; her husband's youthful profligacy, the irregularities of his mature age, and certain connections which he was notoriously maintaining at the very moment he was causing his wife to be charged with adultery;—all these, and many other facts and circumstances, pleaded powerfully in behalf of Caroline of Brunswick.

The utter failure of the attempt to arbitrate was announced to the House of Commons on the 19th of June. Upon this the government pressed proceedings. On the 26th of June, whilst the secret committee was still sitting, Lord Dacre presented a petition from the queen, in which she protested against any secret inquiry, demanded time to bring her witnesses from abroad, and requested to be heard by her counsel. Messrs. Brougham,

¹ In the autumn of 1816, Mr. Canning had accepted office as president of the board of control.

Denman, and Williams being allowed to present themselves at the bar of the house, dwelt eloquently upon the hardships of the queen's case, and on the necessity of delay. On the 4th of July the secret committee gave in its report. On the next day Lord Dacre presented a petition from the queen to be heard against the report by her counsel. This was refused; and Lord Liverpool, in pursuance of the report, brought in a bill of pains and penalties, intituled "An act to deprive her majesty Queen Caroline Amelia Elizabeth of the title, prerogatives, rights, privileges, and exemptions of queen-consort of this realm, and to dissolve the marriage between his majesty and the said Caroline Amelia Elizabeth." The bill was read a first time, and a copy of it was ordered to be sent to the queen.

We have no space for details of proceedings, or for the eloquent pleadings of Brougham and Denman. On the 19th of August, Lords Grey and King made successive attempts to quash the investigation by motions; but the respective divisions were 181 to 65 and 179 to 64. After these divisions had taken place, the attorney-general stated his case in support of the bill. His statement occupied two days, the 19th and 21st of August. As it was ending, on the 21st, drums, trumpets, horns, and the shoutings of a tremendous multitude, announced the approach of her majesty. She entered the House of Lords. Then, in her presence, the examination of witnesses was commenced; and then—in a very few minutes—there was an incident and a scene. Upon hearing the clerk of the house call the name of Teodoro Majocchi, the third witness, the queen started from her seat with a faint cry, and rushed out of the house. This man had been her servant, and a close eye-witness of most of her proceedings for a long time. It was assumed by some that her emotion and her cry proceeded from conscious guilt, taken by surprise at the production of such a witness; it was reasoned by others that she might have been excited only by disgust and indignation at the ingratitude and treachery of an old servant.

The scandalous investigation went on, and day by day the disgusting reports of proceedings and examination of witnesses filled the newspapers, until it came to this—men who regarded the purity of their wives and daughters interdicted the journals in their houses. On the 7th of September the case against the queen was closed; and an adjournment took place to allow time to her counsel for preparing her defence. On the 3d of October, Mr. Brougham delivered the defence at great length and with astonishing eloquence and effect. He was ably followed by Mr. Williams. The examination of the queen's witnesses continued till the 24th of October. When

it was closed, Mr. Denman went over the whole case with vast ability, and with equal boldness. The witnesses against the queen had in some instances prevaricated; and although a good deal of their testimony was perfectly convincing (and particularly to such persons as had lived in Italy and were conversant with Italian manners), the case, in the apprehension of what was perhaps the majority of the nation, was left in that state which Scotch lawyers call "not proven." Yet none but political fanatics or utter enthusiasts in generosity and charity could doubt but that this daughter of a most ancient and illustrious house had, during her foreign sojourn and rambles, behaved with the greatest levity and indecorum. Those who judged of her with most severity were travellers who had followed her footsteps, or who had lived in Italy at the time that she had resided in that country; those who judged most favourably of her were such as had never quitted their own shores, who knew nothing of foreign life, and who knew nothing of her foreign story except what they took upon trust from the newspapers of the day. Dr. Lushington supported Mr. Denman. The king's attorney and solicitor-general occupied the 27th, 28th, 29th, and 30th, in replying. The bill of pains and penalties was read a second time on the 6th of November, by a majority of 123 to 95. The house having gone into committee, a discussion was raised on the divorce clause of the bill. Some bishops, and other supporters of the bill, resisted this clause from religious scruples, or from the dread that the queen would recriminate upon her husband. In fact, such recrimination had been threatened by Mr. Brougham at the very outset of the proceedings. But a parliamentary manœuvre was resorted to; the opposition peers voted for the divorce clause, and it was carried by a majority of 120 to 62. This majority proved highly injurious on the third reading. Many peers who would have voted for the bill without the divorce clause, voted against it when the divorce clause was made a part of the bill; and thus, on the 10th of November, the third reading was carried by only nine votes, the numbers dividing being 108 against 99. Lord Liverpool declared that, looking at this small majority, and at the state of the public feeling, he and his colleagues abandoned the bill. The house adjourned to the 26th of November. On that day, just as Mr. Denman was commencing to read a message from the queen, the usher of the black rod presented himself at the bar; and at this unexpected apparition, the speaker left the chair, and, followed by ministers and the members of the ministerial party, proceeded to the House of Lords, there to be informed that the session of parliament was prorogued by his majesty. And thus ended, in

defeat and disgrace to the king, an indecent, obscene contest, which had filled right-minded men with unutterable disgust, and which had made every Englishman residing or travelling on the Continent hold down his head and blush for his sovereign and his country.

The parliament of 1821, which commenced its session on the 23d of January, was characterized by the exhibition of a new spirit. From the late commotions it had perceived what was absolutely needed for the progress of the age and the wants of the nation, and that neither peace nor order could be assured until the demands of the nation were complied with. But before any step in this direction could be taken, it was felt that the present ministers must be got rid of; and for the purpose of defeating them, the Whigs coalesced with the Radicals, and adopted the queen's name as their watchword and signal of attack. Here, however, their calculations were at fault, for the queen's popularity was now on the wane. Calm reflection had succeeded the wild enthusiasm that had welcomed her to England, and her trial had convinced many of her warmest adherents that however free she had been from actual guilt, her conduct had been chargeable with much imprudence and indecorum. Accordingly, when Lord Archibald Hamilton moved for a vote of censure on ministers, for the omission of her majesty's name in the Liturgy, the motion was defeated by a large majority. Another motion of Lord Tavistock, for a direct censure on the whole of their proceedings in the case of her majesty, which was brought forward for the purpose of procuring the ejection of the ministers, was in like manner defeated. Thus also it fared with the third and last effort, by which it was proposed to replace her name in the Liturgy; it was decisively negatived. A more important proceeding was the introduction of the subject of parliamentary reform, which had been dinned into the ears of the legislature by the long and loud outcry from without, and which could no longer be safely neglected. One motion on the subject, which defeated itself by its own violence, was that of Mr. Lambton (afterwards Lord Durham), who proposed to divide the kingdom into elective districts, extend the franchise to every householder, and limit the duration of parliaments to three years. Another, and a more moderate one, was that of Lord John Russell, who proposed to extend the right of election to the more populous towns that were still unrepresented, and to disfranchise every borough which might thereafter be convicted of corruption. It was lost, indeed, but the subject itself was too firmly implanted to be rooted out, and after years of blight and storm, it was to produce the desired fruits. An earnest even already was afforded of this result, by the disfranchisement of the

borough of Grampound, from which the right of election was transferred to the county of York. It was a most important feature in the history of this session that the cause of parliamentary reform had commenced in it. Another question which in like manner was to wait its time, and be successful at last, was that of Catholic emancipation, which was brought forward by Mr. Plunkett on the 28th of February, and supported by Mr. Canning. It consisted of two bills, one for repealing Roman Catholic disabilities; the other, for securing the safety of the Protestant church, and the Protestant succession to the crown. They were thrown out in the lords, chiefly through the protest of the Duke of York, the presumptive heir to the throne. "Educated," said his royal highness, "in the principles of the Established church, the more I inquire, and the more I think, the more I am persuaded that her interests are inseparable from those of the constitution. I consider her as an integral part of that constitution; and I pray that she may long remain so. At the same time, there is no man less an enemy to toleration than myself; but I distinguish between the allowance of the free exercise of religion, and the granting of political power." By these sentiments the duke took the place of his venerated father, and was recognized as the head of those who were opposed to Catholic emancipation.

While these important parliamentary proceedings were going forward, the tables of both houses continued to be inundated with petitions in behalf of the queen. The opening speech had recommended a suitable provision to be made for her, instead of that which she had enjoyed as Princess of Wales; but she had expressed her firm determination to accept of no settlement while her name was omitted in the Liturgy. Not deterred by this declaration, £50,000 had been voted to her for life; and after some demur, the pressure of poverty prevailed: she consented to accept the boon, and by doing so lost much of that popularity which her previous rejection had procured for her. But the coronation, which her arrival had delayed, must now be solemnized at every risk, for George IV. valued the pomp of royalty more than even its power, and he could not feel himself "every inch a king" until his head had been surmounted by the crown. The 19th of July was therefore fixed for the pageant; and here the queen had determined to take her final stand. On the 25th of June, she lodged her claim to be crowned, like her royal predecessors, and her claim was ably supported by her law advisers, Messrs. Brougham and Denman; but after a long antiquarian and historical exploration, it was found that the coronation of a king did not necessarily imply that of his consort, and that

since the reign of Henry VIII. only six out of thirteen queen-consorts had been crowned; so that, on the strength of these precedents, her claim as a right was rejected. Caroline then wrote to Lord Sidmouth, stating her determination to be present at the ceremony, and desiring that a suitable place should be provided for her accommodation; and when this was refused, she made a similar application to the Duke of Norfolk, as Earl-marshal of England, but with the same result. Rejected in these appeals, she now tried one that looked like downright insanity; she requested the Archbishop of Canterbury to crown her alone on the following week, while the Abbey of Westminster was in preparation for the final ceremony, which could be done without further national expense. But to her letter containing such a singular request, the astonished primate returned the following brief reply:—"The Archbishop of Canterbury has the honour to acknowledge with all humility the receipt of her majesty's communication. Her majesty is undoubtedly aware that the archbishop cannot stir a single step in the subject matter of it without the commands of the king."

The coronation took place, with unwonted splendour and magnificence, on the 19th of July. The queen resolved to be present, or to make a scene by seeking admittance in the eyes of the people. It is said that the more prudent of her friends endeavoured to dissuade her; but it is to be apprehended that most of those who surrounded her, and who were making use of her merely for party or factious purposes, without any regard to the shock her feelings might sustain, strongly urged her to go down to the Abbey. She went, and stopping before the Abbey door, was there refused admittance by the door-keepers and military officers on guard. She then wandered round the Abbey walls, in a vain search of some other entrance, and having thus exhibited her humiliation, she retired through the dense multitude, applauded by some, but hissed and hooted and called foul names by others. It has been concluded that this was her death-blow; but for many months she had been living in a state of excitement sufficient to kill a younger and stronger woman. She expired at Brandenburg House on the 7th of August; having directed that her only epitaph should be—"Here lies Caroline of Brunswick, the injured Queen of England." Blood was shed almost over her coffin. Ministers had ordered that the funeral procession, which was to proceed from Brandenburg House towards Harwich (where the body was to be embarked for Brandenburg), should make a circuit, in order to avoid passing through the populous parts of London, where some rioting was to be feared. On arriving at Kensington,

the procession, finding every road but that leading through London blocked up or barricaded by the mob, was obliged to take part of the forbidden route, intending, however, to get into the high north road by passing through Hyde Park. The park gate by Apsley House was found closed and barricaded, but it was soon forced open by the military; and, followed by a rabble, the funeral procession moved up to the Cumberland gate of the park. This upper gate was also barricaded, and the mob seemed to be determined to prevent its being opened, for they stood in a dense mass behind their barricade, and some of them threw stones and pieces of brick-bat at the soldiery. A conflict ensued, in which two of the mob were shot dead on the spot—one by a common soldier, and one by an officer of the guards. The gate being at length forced open, the procession would have moved along the Edgware Road, and have soon reached the quiet open country; but the mob renewed the conflict with a very unusual show of resoluteness; their shouts and shrieks were terrific; and to prevent bloodshed, the directing civil magistrate, Sir Richard Birnie, after consulting with some of the military, gave orders that the mob should have their own way. The corpse was then borne right through London, and no very serious mischief happened. But the government forthwith dismissed Sir Richard Birnie, and also deprived that distinguished officer, Sir Robert Wilson, of his commission in the army, for having remonstrated with some soldiers and an officer on duty. Sir Robert's disgrace or deprivation continued until the accession of William IV.

After the coronation, the king was impatient to visit the more distant parts of his dominions; and on the 11th of August—four days after the queen's decease—he set sail for Ireland, and landed at Howth on the following afternoon. His arrival threw the Irish into a delirium of loyalty, and they hoped all kinds of impossible blessings from the event, of which boundless plenty and uninterrupted peace occupied the foreground. It is needless to add how their hopes were disappointed, and how the reaction only deepened the general poverty and disorder. Heralded by shouting mobs, and scattering his smiles and compliments among all classes, he entered Dublin on the 17th; and when the accounts reached him of the riots at the funeral procession of the queen, he expressed himself in no gentle terms about his ministers, for not making better arrangements for the maintenance of the public tranquillity. The king left Ireland on the 7th of September, after making a proclamation exhorting the people to mutual agreement; but at his departure the national disturbances were resumed with double violence, while this unmeaning visit was blamed by the Irish as the cause of their suf-

ferings and misfortunes. After resting a few days in London, George IV. embarked at Gravesend, on the 20th of September, to visit his Hanoverian dominions, the capital of which he entered on the 11th of October, after travelling from Calais, where he landed, through Lisle, Brussels, Osnaburg, and Nieuburg. Here he spent ten days, and here also he enjoyed the pleasures of a second coronation; while he secured the affections of his German subjects by adopting their manners and using their language, so that, unaccustomed to such royal condescension from their former sovereigns, they regarded him as the *beau idéal* of a patriot king.

Notwithstanding these royal tours and public pageantries, which at other times might have arrested public attention and animated the national spirit, the general depression still continued, and the year 1822 had arrived without realizing the hopes which seven long years of peace seemed to have warranted. Considerable distress was felt among landlords and farmers. Owing to the accelerated return to cash payments, which the government had insisted upon, the value of money rose, and the prices of agricultural produce fell still lower. There had been great county meetings, and many petitions had been presented to government, praying for some relief to the agricultural distress. To increase their strength, ministers opened the doors of office to the Grenville-Wynne party. Lord Grenville retired from public life, and the Marquis of Buckingham, as chief of the party and leader of the landholders, was created a duke. Mr. Charles Wynne was made president of the board of control. At this time Lord Sidmouth also retired, and was succeeded in the home department by Mr. Peel. This latter change proved of inestimable benefit to government and the country. Lord Wellesley, who entertained very liberal principles, was appointed Lord-lieutenant of Ireland, in the place of Lord Talbot.

The king opened the session of parliament on the 5th of February. His speech dwelt upon the distresses of the landed interest, and upon a new spirit of riot and outrage in Ireland; and his majesty recommended parliament to consider of the best means to restore order and law in that country. The Marquis of Londonderry (Castlereagh), who had succeeded to this title upon the death of his father, introduced two bills for re-establishing the insurrection act, and the suspension of the *habeas corpus* act in Ireland. Both were passed without difficulty.

Lord Wellesley had the satisfaction of soon seeing an end put to the Irish outrages; but he could not control the seasons; and a dreadful famine came on, produced by the failure of the harvest, and especially of the potato crop. The

southern and western counties suffered most. Government hastened to abate these horrors, sending over £500,000 to be placed at the disposal of Lord Wellesley, and to be dispensed by him in charitable relief or in public works. Private benevolence came to the aid of national generosity. Great subscriptions were raised in England and Scotland; and wherever there was an English colony or settlement, or any place where a few Englishmen were congregated, some money was raised for the suffering people of Munster and Connaught.

It was conceived that Mr. Canning, by his conduct in the matter of the unfortunate queen, had given mortal offence to the king. The fact may be doubted. Mr. Canning was now appointed to succeed the Marquis of Hastings as Governor-general of India. As an exciting and noble leave-taking of the House of Commons, this illustrious orator, on the 30th of April, moved for leave to bring in a bill which should restore to Catholic peers their right of sitting and voting in the House of Lords. He had spoken so frequently on the Catholic question, that it seemed difficult for him to introduce any fresh matter or novel illustration; but the genius of Canning was never so bright as now; and genius can make old things new, and give fresh, vivid, and startling illustrations to that which is trite. He was strongly opposed by Mr. Peel, who professed himself unable to discover any valid reason for exempting Roman Catholic peers from political restrictions to which a whole community, professing the same religion, were subject by law. Mr. Charles Wetherell was against partial concessions to the Catholics. If this bill passed, Catholic commoners would naturally expect to be admitted into parliament next year, and without restrictions. He would rather deal with the measure of emancipation *in toto* than in this mutilated form. Mr. Canning's bill passed the commons by a small majority of five voices, but it was thrown out by the lords.

Early in the session Mr. Brougham moved that the landed interest should be relieved by an extensive reduction of taxes. This motion, being opposed by ministers, was negatived. On the 18th of February Lord Londonderry procured the appointment of the agricultural committee; and, on the 29th of April, in pursuance of a report of this committee, his lordship proposed a plan of relief—the repeal of the annual malt-tax, and a loan of £1,000,000 by exchequer bills to the landed interest, upon the security of warehoused corn. This scheme of relief was ultimately agreed to.

The chancellor of the exchequer (Vansittart) produced some financial schemes, which were not very successful, and which were afterwards re-

modelled; but in the course of the session an important reduction of taxes, exceeding £3,000,000, was effected.

The king in person prorogued parliament on the 6th of August, and on the 10th he embarked at Greenwich for Scotland. As his majesty was sailing from England to Ireland he had received the news of the death of his wife; and now, as he was sailing from England to Scotland, he received intelligence of a death which affected him much more—the deplorable suicide of Lord Londonderry. This high-spirited and, in private life, most amiable nobleman, had been overwrought and over-excited. As the king left London for Scotland, the Marquis of Londonderry withdrew, in a very excited state, to his pleasant villa at North Cray, in Kent, and there, on the 12th of August, he destroyed himself by cutting the carotid artery with a sixpenny penknife, which he had bought for the purpose a day or two before. Thus lamentably perished, in the fifty-fourth year of his age, an honest and fearless minister, one of the handsomest and most elegant of men, whether of his own or of any other time—the most amiable and attaching of men in private life—the warmest, and at the same time the steadiest of friends. A shameless rabble rout, with their heads muddled by gin and radical newspapers, set up a demoniacal yell as his lordship's coffin was removed from the hearse to be conveyed into the interior of Westminster Abbey. But let not this un-English display rest upon us as a national reproach; it was but the deed of a few ruffians and drunkards, and the universal disgust expressed at it cleared the national character.

The death of Lord Londonderry compelled a remodelling of the cabinet. The place of leader in the House of Commons was left vacant, and must be filled. Who could presume to fill it while Mr. Canning was in life, and yet in England? Prejudices and objections were removed, all obstacles were levelled by the necessity of the times, and Mr. Canning, relinquishing his splendid India appointment, took the high office of secretary for foreign affairs.

The Duke of Wellington consented to fill Lord Londonderry's place at the congress of Verona, and repaired to Italy early in October. Mr. Canning, as secretary, may have somewhat modified the foreign policy of Lord Londonderry, and may have entertained the earnest wish of restricting despotism and of encouraging constitutional principles on the Continent; but the time had not come for action; England was not disposed to bully when she could not act; the liberal party on the Continent generally—all pupils of the French school, violent, anarchic—had little real claim on the sympathies of Englishmen; and

the Duke of Wellington acted at Verona precisely as Lord Londonderry would have done if he had lived to be there: he protested against conduct and views which he considered wrong or excessive, he refused the countenance of his government to the hostile projects entertained by Russia, Austria, Prussia, and France against the Spanish constitutionalists, and he recommended to those sovereigns circumspection and moderation in other quarters. Up to this point there had been, and there could have been, very little change effected by Mr. Canning, who had been for so very short a time in office. The bolder tone in foreign policy was adopted at a later period. Now, peace was to be preserved, and no stronger measure resorted to than that of an occasional protest. Lord Londonderry had been equally prepared for protests, and neither more nor less anxious for the preservation of peace. A certain party, who had been eternally clamouring for peace when war was necessary, would have now rushed into war when a continuance of peace was indispensable; and in such a war as they contemplated, England would have had no other ally than a disorganized band of revolutionists, Carbonari, and other secret-society men and anarchists. As if to precipitate a war of this kind, an amount of insult was heaped upon the heads of the continental sovereigns which has perhaps never been surpassed. Their system and procedure had in many instances been most censurable, but the liberals ought to have come in for a share of the blame; and if these intemperate, and, in good part, unprincipled reformers had been enabled to establish a system of their own, it may be doubted if Europe would have been benefited by the change.

On the question of a possible interference in the affairs of Spain, Mr. Canning was very decided; though even here he did not contemplate any resort to war. He wrote to the Duke of Wellington:—

“If there be a determined project to interfere, by force or by menace, in the present struggle in Spain, so convinced are his majesty's government of the uselessness and danger of any such interference—so objectionable does it appear to them in principle, as well as utterly impracticable in execution, that when the necessity arises, or (I would rather say) when the opportunity offers, I am to instruct your grace at once frankly and peremptorily to declare, that to any such interference, come what may, his majesty will not be a party.”

Strong opinions were expressed in the congress of Verona as to the origin and tendency of the Spanish revolution, which was considered as the proximate cause of all the other revolutions of the years 1820 and 1821, with the single excep-

tion of the rising of the Greeks against their Ottoman masters. It was urged by the sovereigns and ministers of Russia, Austria, Prussia, and France, that no governments would be safe if military revolt was to be sanctioned; that civil political reforms were begun with a bad grace by the soldiery; that if some check were not put to secret societies the whole of Europe would be disorganized; that the liberals of Spain were exercising far more cruelty and oppression than had ever been known under the unconstitutional government of Ferdinand VII.; that the example set by these revolutionists must produce disastrous effects in other countries, and that their excesses would be fatal to their own country, ending in anarchy and carnage, which no man could contemplate without horror, and of which none could calculate the possible or probable duration. France, as bordering upon Spain, and as containing within her own bosom the ready elements of discord and civil war, considered herself most immediately interested in this question. She advanced many arguments in justification of an interference by force of arms; but she did not openly declare, at the congress of Verona, that she was determined to attempt such interference.

As to the re-settlement of Italy, which had been completely effected before the congress of Verona assembled, England had little to say and nothing to do. Yet was it made evident to all in that congress that the British government and people would have beheld with satisfaction a settlement of that beautiful peninsula made upon less despotic principles.

The affairs of Greece, which will come under notice hereafter, were submitted to much discussion; but the congress then ended without adopting any very positive resolutions on that head. The Greeks were left to continue their struggle for independence, and no remonstrance was offered to the Turkish government on the dreadful cruelties exercised by some of its armies against a Christian people. In truth, that Christian people had betrayed a spirit quite as cruel as that of the Mahometans. Some serious apprehensions had been entertained of a war between the czar and the sultan, for the Russians were co-religionists of the Greeks; they had lent a selfish assistance to the Greeks in their former insurrections; and ever since the days of the Empress Catherine they had counted upon the Greeks as powerful instruments for opening their own way to Constantinople. This war between Russia and Turkey was prevented for the present by the deliberations at Verona; and this in reality was the one great act of that great congress, which left other things to run their natural course, and which advanced no new principle nor

proposed any new arrangement whatsoever. The style of compliment adopted in this congregation of sovereigns bordered in some instances upon the ridiculous. The old Bourbon, Ferdinand of Naples, though he had his good qualities, and no small share of humour and untrained sagacity, was notoriously the least educated, and the most thoughtless, indolent, and ignorant king in all Europe; but, as he chanced to be the oldest of the kings that met at Verona, they called him the Nestor of that royal congress. Upon the whole, the grand assemblage may be said to have been a vapid, unmeaning affair. The wordy and flowery Chateaubriand, who was present as a French negotiator, has turned it into a book, and into a romance.

The visit of George IV. to Scotland, viewed as a conciliatory act of royalty, was of greater importance than political calculations could have promised. It gratified the national pride of the Scots, and roused their old feudal affections for the descendant and representative of their ancient dynasty of kings. It edged anew the loyalty of the well-affected, and abated the rancour of political discontent and the extravagances of radical reform. No king had visited their bleak and barren land since the undesirable advent of Charles I. in 1617; and on account of this neglect, it was felt as if Scotland was unthought of, or merely regarded as an English province or county. When tidings, therefore, arrived that their sovereign was about to visit them, every town, village, and hamlet—the remotest of Scottish isles and the most secluded of Highland straths—were roused at the intelligence, and all poured forth their populations into the ancient capital of the kingdom, to grace his court and welcome his arrival. It was an occasion on which the regal bearing and frank debonnair manner of George IV. had their fairest field for action, and the people forgot his faults and follies in the elegance with which he played his part, and the cordiality with which he received their enthusiastic homage. On the 14th of August, the royal yacht and its accompanying war vessels cast anchor in Leith Roads; and on the following day the king landed, and went in state to Edinburgh, and to the home of his ancestors, the venerable palace of Holyrood, while not only every street, window, and house-top, but the neighbouring fields, Arthur's Seat, Salisbury Crags, the Calton Hill, might be said to contain the population of the kingdom itself, who with a nation's universal voice welcomed his coming among them. It was a reception such as might well compensate for the scoffs and groans of the London mobs. During his sojourn of a fortnight in Scotland, the king, who took up his residence in Dalkeith Palace, within six miles of Edinburgh, held frequent

levees at Holyrood, and in that brief space he purchased an amount of popularity which years of substantial favours, if churlishly accorded, would have failed to secure. Nor was this visit without its substantial benefits, independently of the public impulse it had imparted. Several of the Scottish peerages had been attained through the rebellions of 1715 and 1745, and their hereditary owners were still in the condition of commoners, through the errors of their grandfathers and great-grandfathers. But now their case was taken into account, and in the following year the attainders were reversed, by which they were restored to the rank of nobility. It was a boon happily selected, by its appeal to the ancient feudality and historical remembrances of Scotland—feelings to which her people clung the more intensely, that they still formed part and parcel of their national identity. Another

gift fully as national was accorded during the same year. From the wide extent of the Highlands, and the smallness of the population, the parish churches were few and far between, so that many persons found it difficult to partake in the public ordinances of religion, and whole families were utterly deprived of them. An act of parliament was accordingly passed in 1823, for the erection of forty or more churches in the more destitute of the Highland localities, with a manse for the minister, and a stipend of £120 a year. In this way the religious and presbyterian, as well as the patriotic feelings of the Scots, were gratified by the visit of George IV. It was an auspicious introduction to the happy change which was to commence in less than a quarter of a century, when Scotland was to become not a place of casual advent, but a home of royalty.

CHAPTER XIV.—CIVIL AND MILITARY HISTORY.—A.D. 1823—1826.

GEORGE IV.

State of the country at the commencement of 1823—Peaceful policy of Mr. Canning—French invasion of Spain—Spanish revolution—British protest against a foreign invasion of the Spanish colonies in America—Inutility of British interference in behalf of Spain—Prohibition of a French conquest of the Spanish-American colonies—Motion on the Catholic claims—Quarrel on the question between Canning and Brougham—Improvements in our penal code—Parliamentary resolutions in behalf of negro slaves—Uproar occasioned by them in our West India colonies—Rebellion in Demerara—Case of the Rev. John Smith—Gratifying prospects at the commencement of 1824—Sudden influx of prosperity—Pacific policy of Britain in its foreign relationships—Parliamentary proceedings in favour of free trade—Renewal of the alien bill—Spanish affairs—The Dey of Algiers reduced to submission—War in Africa with the Ashantees—Charles X. becomes King of France—Suppression of unlawful associations in Ireland—Duke of York's opposition to the Catholic claims—Removal of restrictions on free trade—Abatement of taxes—The mercantile crash of 1825—Its causes—Its alarming effects—Remedies adopted by government—Gradual abatement of the panic—A dearth—Means adopted to supply the deficiency—State of Portugal—Its new constitution—A fresh revolution menaced through French and Spanish aid—Necessity of British interference—Mr. Canning's eloquent speech on the occasion—A British expedition sent to Portugal—The revolution prevented—Unfortunate state of the affairs of Greece—Nefarious proceedings of speculators with the contributions for Greek aid—Indian affairs—Burmese war—Its origin—Aggressions of the Burmese—Their defeat in several encounters—Rangoon captured by the British—Sir Archibald Campbell's successes over the Burmese near Rangoon—He defeats them at Kemendine—Death of the Burmese commander—His army disperses—Continuation of the campaign—Melloon captured by the British—Victory of Sir Archibald Campbell over the Burmese at Pagham-mew—The Burmese sue for peace—Terms on which it is granted—Advantages of the treaty to the British empire in India.

HE year 1823 opened with better prospects for the country than those of several years past. In the financial report it was announced that the revenue exceeded the expenditure by £7,000,000, of which £5,000,000 was to be applied to the payment of the debt, and the remaining £2,000,000 to the reduction of taxes. Trade and manufactures were improving, and the distresses of the farmers abating; while the government of Mr. Canning, now secretary for foreign affairs, was strengthened

by the accession of two of his supporters to office. These were, Mr. Frederick Robinson, who was made chancellor of the exchequer in the room of Mr. Vansittart, who became Lord Bexley, and Mr. Huskisson, who was appointed president of the board of trade. The violence of radical reform, and the frequency of mob-meetings had also abated; the spirit that had inspired them was finding a more chivalrous outlet in volunteerings upon the fields of Greece, Spain, and Portugal, and vehement protests against the proceedings of the Holy Alliance. But to secure the promised

benefit, a peaceful policy was necessary, and to this Mr. Canning strictly adhered. He had no sympathies with the congress of Verona, although it was necessary for the present that Britain should be represented there; and as for that dangerous conspiracy of kings against the liberties of nations—the Holy Alliance—his hopes were, that by silently withdrawing from it the aid and countenance of Britain, it would dissolve and pass away.

The session of parliament was opened by commission on the 4th of February, and the speech gave general satisfaction. This was especially the case when his majesty declared that he would be no party to those proceedings of the congress of Verona which sanctioned the interference of foreigners with the internal affairs of Spain, and that he would use his best endeavours to avert the calamities of war between that country and France. But France had decided for war; and the armed *cordon sanitaire* became an army of invasion, that crossed the Spanish frontiers for the purpose of suppressing the liberal constitution which the patriots of Spain had enforced upon their king at the sword-point, and for restoring that unworthy Bourbon to all the despotic power which he had so grossly abused. This aggression roused the opposition in the British parliament, more especially as they had hoped that this would be a signal for an armed intervention in behalf of Spain, and a remonstrance with the Holy Alliance, by whom the invasion was encouraged. But such interference, besides incurring the risk of a fresh European war, would have been useless for Spain, the bulk of whose population knew nothing about liberty, and preferred the old regime of priestship and kingship. It was necessary in this case for Mr. Canning to explain and justify his principle of non-intervention, and this he did on the 14th of April. He showed how all the attempts of British mediation had failed, and how necessary it was to adopt a system of entire neutrality. He then pointed out the conduct which must be pursued in reference to Portugal and the South American colonies of Spain, in the event of certain contingencies. Should Portugal unite with Spain in repelling the French, Britain would have no call to interfere; but if Portugal, remaining quiescent, should be attacked, we must then come forward to support the independence of our ancient and faithful ally. As for the South American colonies, it was clear that Spain, though still claiming them, had lost all power over them. If in the course of the war, Mr. Canning added, France should capture any of them, so that it became at last a question whether they should be ceded, and to whom, it would be necessary for all parties to know the mind of the Bri-

tish government upon the subject, which was to the following effect:—that she “considered the separation of the colonies from Spain to have been effected to such a degree, that she would not tolerate for an instant any cession which Spain might make of colonies over which she did not exercise a direct and positive influence. To such a declaration the British government had at last been forced.”

These sentiments of forbearance were little relished by the friends of Spanish patriotism, both in parliament and out of it; and, notwithstanding their past experience, their hopes of the regeneration of Spain were as high as they had ever been at the commencement of the peninsular war in 1808. Their national pride was touched, as they had looked upon their own country as the champion of liberty, and the bright exemplar of nations that were struggling to be free. The invasion of Spain also was so wanton and unjustifiable, that every heroic and disinterested feeling was enlisted on the side of the oppressed. Indignant remonstrances followed, and a motion was made in the upper house, by Lord Ellenborough, for an address to his majesty, strongly condemning the conduct of France and the other allied powers, as well as of the British cabinet, in requiring Spain to alter her constitution at their dictation; but it was shown that ministers had used every effort to prevent this attack upon Spanish liberty, and the motion was thrown out by a very large majority. The same was the fate of a similar motion introduced into the House of Commons, after a debate which lasted three nights. On this occasion, Mr. Canning's arguments were so eloquent and convincing, and his statements so clear, that he satisfied the house that everything had been done which duty and sound policy required in our transactions with Spain and the allied powers. To avoid the shame of a defeat, the opposition members sought to leave the house in a body; but their purpose being perceived, some ministerial members called for a division, and about twenty found themselves shut up in the lobby, while attempting to make their escape. They were therefore obliged to pass muster as an opposition, and were out-voted by 372. Subsequent events showed the wisdom of our forbearance in regard to the affairs of Spain. Within a month after Mr. Canning had advocated and explained its propriety, the French army entered Madrid, having traversed the country almost without resistance; the royalists themselves being fully a match for the constitutionalists, the Spanish revolution was swept away, and the king was restored amidst the welcomes of his subjects, and the plaudits which they bestowed upon the French as his liberators. Nor was the warning to Britain contained in Spanish affairs

exclusively; for as soon as the French army had advanced into Spain, their march was a signal to the Portuguese royalists, headed by the queen, and her second son, Dom Miguel, who on the 2d of June destroyed the flimsy constitution which had been set up, and Miguel, by the deposition of his father, became king, with absolute irresponsible power.

Having been so successful in their Spanish aggressions, which they had commenced with doubt and hesitation, the French now contemplated the reconquest of the Spanish American colonies, for the purpose of restoring them to the dominion of the mother country. But here the forbearance of Britain was at an end, and Canning interposed. "We will not," he said, "interfere with Spain in any attempt which she may make to reconquer what were once her colonies, but we will not permit any third power to attack or reconquer them for her." Accordingly, in October, he applied to the French government for an explanation of its intentions regarding these colonies. The answer of the French minister, the Prince de Polignac, was in the true spirit of the Holy Alliance school of politics. He could not understand, in the present divided and distracted state of these colonies, what was meant by recognizing their independence, and thought that giving such a recognition while there was no solid established government among them, would be nothing less than a real sanction of anarchy. It was for the interest of humanity, he added, and especially of the colonies themselves, that the European governments should concert measures for stilling the contentions of these remote regions, and restoring them to a principle of union in government, whether monarchical or aristocratical. To this the reply of Mr. Canning was, "that however desirable the establishment of a monarchical form of government in any of these provinces might be on the one hand, or whatever might be the difficulties in the way of it on the other hand, his government could not take upon itself to put it forward as a condition of their recognition." The hopes of conquests in South America, whether for Spain or herself, which France had entertained, were dispelled, and her warlike preparations for the purpose arrested. Having thus vindicated the right of a people to choose the form of government under which they preferred to live, instead of having one thrust upon them by a foreign power, the British government recognized the independence of these colonies, by appointing consuls at their different ports, an example which was soon afterwards followed by the United States of America.

This was the most important parliamentary business of the session; the rest of it may be dis-

missed with a more summary notice. On the 17th of April, Mr. Plunkett moved for a committee on the Catholic claims, but the motion was lost. This incident would be unworthy of mention, but for the quarrel it originated between the two most distinguished members of

GEORGE CANNING — From a portrait by Sir T. Lawrence

parliament. Mr. Canning, during the debate, was reproached by Mr. Brougham with monstrous truckling and political tergiversation, in having accepted office by the abandonment of the Catholic question, upon which the accused party slowly and indignantly exclaimed, "I rise to say that it is false!" The expression was utterly unparliamentary, and the speaker interfered, but for no persuasion would Mr. Brougham explain away his imputation, or Mr. Canning retract "his sentiment." By the law of the house, the two recusants would have been committed to the custody of the serjeant-at-arms; and by the law of modern honour they would afterwards have been compelled to bring their quarrel to deadly arbitrament. Happily, however, the knot was loosed by an unusual stretch of explanation, when it was alleged that the charge of Mr. Brougham referred, not to the private, but political character of Mr. Canning. Such an event, however, arising out of the Catholic controversy, showed that the worst parts of the *odrum theologicum* are not necessarily confined to clerical conclaves.

The great work of purifying our penal code was still going onward, and on the 21st of May, Sir James Mackintosh moved several resolutions, the first of which was the abolition of the penalty of death for larcenies committed in shops and dwelling-houses, and on navigable rivers.

His proposals were negatived; but four bills were afterwards brought in by Mr. Peel, by which the sentence of death was exchanged for hard labour in several offences short of murder. In the same month a bill passed for the abolition of the barbarous and ignominious law respecting the funeral of suicides; and it was now judged sufficient that they should be buried in private, without the usual religious rites. In the same month, Mr. Peel's currency bill of 1819 came into operation; but the Bank was prepared for the difficulty, and had already commenced its payments in specie.

During the session, the advocates of the abolition of negro slavery were not idle, and on the 15th of May, Mr. Thomas Fowell Buxton moved, "That the state of slavery is repugnant to the principles of the British constitution, and of the Christian religion, and that it ought to be abolished gradually throughout the British colonies, with as much expedition as may be found consistent with a due regard to the well-being of the parties concerned." It was expected that this resolution being adopted, not only the present condition of slaves would be ameliorated, but that all their children born after a certain assigned date would be declared free. Mr. Canning, who upon the question of abolition steered a middle course, proposed resolutions which on the whole were favourable to the motion of Mr. Buxton. These were declaratory of the fitness of immediately ameliorating the condition of the British slave population, of the hope that such amelioration might fit the slaves for freedom, and of the desire of the house that these objects should be accomplished at the earliest period that was consistent with the safety of all parties. These resolutions were carried without a division; and although they fell short of the mark, they were hailed with triumph by the abolitionists, who had thus got more than they really expected. But very different were the feelings of the West India interest, who saw in these resolutions the defeat of their cause, the approaching extinction of negro slavery, and the subversion of what they claimed as their rights of property; and in the sugar islands of Jamaica and Barbadoes, and in Demerara, the planters refused compliance, indignantly talked of rebellion, and threatened to establish their own independence. These were big, and in most cases empty words; but in Demerara a deed was done during this year which showed what they would have attempted had their power but seconded their wishes—a deed, also, which, more than any other, tended to deepen the odium of negro slavery, and accelerate the progress of emancipation. John Smith, a Methodist clergyman, had officiated as a missionary in that colony for seven years, and

his negro flock were distinguished for their sobriety, orderly conduct, industry, and piety. But just before these regulations came into action, the governor of Demerara commenced a crusade against all sectaries, by issuing a prohibition of negroes attending public worship, except by means of a pass from their owners; and as this was a virtual prohibition of attending any church except that by law established, the negroes rose in rebellion, but without committing bloodshed, and in two days after the rebellion was suppressed with unrelenting severity. And now came the trial of Mr. Smith, who had nothing to do with the rebellion, and whose teaching had inspired it with so gentle and forbearing a character; and although nothing could be established against him, he was condemned to death. He was not publicly executed, indeed, the sentence being remitted by the home government, but before the remission arrived he died of an imprisonment so close and unwholesome, that it was nothing else than an execution by protracted torture. Even his widow had to attend the funeral of her martyred husband by stealth, for the governor had prohibited her performance of this last duty, and had ordered her apprehension if she attempted it; and when two negroes of Mr. Smith's congregation attempted to rail in and cover over the grave of their pastor, the brickwork was dislodged, and the paling torn down by official orders. In no way could the slaveholders and their supporters have more effectually damaged their cause, and insured its destruction; the guilt of a martyr's death was laid at its door, and the public voice of Britain pronounced its condemnation.

Although the previous year had been an improvement upon the past in the progress of our national recovery, the prospects of the nation at the opening of 1824 were more gratifying still; employment for the working classes was abundant, and food was at a moderate price. The cotton and woollen manufactures were in great demand, and the opening of the South American markets promised a large increase to our commerce. Even the complaints of the land-owners, who were benefited by this mercantile reaction, became less loud and frequent. From the statement of the chancellor of the exchequer it also appeared that there was an improvement in our finance, so that there remained a clear balance of £1,710,985 over the expenditure, independently of the established sinking fund of £5,000,000. The removal had been gradual, but since the peace of 1815, £20,000,000 of taxes had been repealed. This increased the incomes of individuals and the means of industrial activity. The public prosperity was evidenced in the vast increase of domestic comfort, in the abundance of capital,

and in the consequent low rate of interest. The Bank of England reduced its rate on advances, and other great companies followed the example. In this rapid falling of interest in the money-market, capitalists were induced to seek foreign investments, which promised a higher percentage. There was scarcely a state in the Old or the New World for which loans were not raised on our Stock Exchange. Ten, fifteen, twenty, twenty-five per cent., without good security, was preferred to the humble three and a half or four per cent., with the infallible security of the British government and the national faith. In the prosperity of this year was prepared the panic of 1825.

Parliament was opened by commission on the 3d of February; and the opening speech congratulated the United Kingdom on the prosperity it was enjoying, and on the state of public affairs at home and abroad. The Marquis of Lansdowne deplored the fate of Spain, and censured the British cabinet for not remonstrating with more energy, and for not advancing more rapidly towards a recognition of the independence of South America. In the commons Mr. Brougham went over the same and some more ground, censuring the Austrians in Italy as much as Ferdinand and the French in Spain; but in the midst of these censures the orator expressed, more strongly and pointedly than had ever been done, the belief that the amount of our national debt must preclude us from war. "England," said he, "stands bound over in recognizances of £800,000,000 to keep the peace." This expression, which could have been uttered only by a man of genius, sank deep in the public mind, and was often quoted in bar of the foreign policy which Mr. Brougham and his party continued to recommend. If that policy had been pursued war would have become inevitable, or England must have sunk to the degraded character of a bully—to a protest-uttering machine—to an encourager of insurrection and revolution abroad, but devoid of the means or intention of supporting her friends and disciples. The opposite policy of Mr. Canning was sanctioned by large majorities.

The new chancellor of the exchequer announced that the public revenue continued to improve. Further steps were taken towards the free-trade system. The protecting duties between Ireland and Britain were repealed; the laws respecting the silk-trade were altered; and the absolute prohibition on foreign manufactured silks was removed, and a considerable blow thus struck at smuggling. Commercial treaties were entered into with the Netherlands, Prussia, and Sweden. It was agreed that the four per cents. should be reduced to three and a half. Injudicious bounties,

which had never done any good, were removed. It had been a reproach to the British government for many ages that so little had been done for the encouragement either of literature or of the fine arts. In a trading country everything had been left to be done upon the commercial principle, or by private effort and private munificence. Ministers would not see—and they will not yet see—that the commercial principle is altogether inapplicable to the production of many of the highest intellectual things which a nation requires. In the course of this session, however, the sum of £57,000 was voted to the purchase of Mr. Angerstein's collection of pictures for the public, to serve as the foundation of a national gallery.

The renewal of the alien bill was resisted by Sir James Mackintosh and others. The powers granted by the bill seemed, however, necessary at a time when England was becoming the refuge of half the fiery spirits of the Continent, and the bill was renewed; yet were its powers exercised in only one single case, and that case had no relation to politics. The refugees from Italy and Spain were treated with especial kindness and hospitality by government as well as by the people: had it not been for public and private charity, many thousands of them must have starved in the streets of London. Pity it is that more of them did not, during their long residence in England, learn more moderation and political wisdom than they have since shown! Seven years of exile and proscription would have been more than compensated for, if the men who have since revolutionized and ruled in Spain had learned the real workings of a constitutional form of government, and the means by which a people is fitted for such government.

The offence of engaging in the slave-trade was now declared piracy, subject to be punished with death. A dangerous spirit of insubordination manifested itself amongst the negroes in our West Indian colonies, arising out of the mistaken idea that parliament had decreed their emancipation, and that the colonial houses of assembly were opposed to the execution of the measure. The session of parliament was closed by the king in person on the 25th of June.

Much as the intervention of the French in the affairs of Spain had been abused, it was indisputably owing to the presence of their troops that the mad vindictive fury of the royalists was restrained, and that any tranquillity was enjoyed in the country. By a third convention, concluded in the month of December, the number of the French army of occupation was reduced to 22,000 men. No period was fixed for the duration of this occupation. An insane attempt made by Valdez and some other constitutionalists upon

Tarifa, ended in court-martials, extensive shootings, and imprisonments.

The Dey of Algiers had been at least as unable as he had been unwilling to put a stop to piracy and Christian slavery. He involved himself in a quarrel with the British consul, who was constantly remonstrating with him; and when an Algerine ship was examined and captured for having seventeen Spanish slaves on board of her, war was declared against the Algerines. On the 24th of July, Sir H. Neill, our admiral in the Mediterranean, appeared off Algiers, with twenty-two ships of war, bombs, &c. The heart of the dey failed him; he implored to be allowed to negotiate; and he forthwith bound himself very solemnly to observe, and cause to be observed, every clause of the treaty which his predecessor had concluded with Lord Exmouth in 1816.

There was a new war on a grand scale in India,

to be more fully mentioned hereafter, which was proceeding with a good prospect of ultimate success; and there was a war on a very small scale on the coast of Africa, which was attended by disastrous circumstances. Being much troubled by the plundering and warlike Ashantees, Sir Charles Macarthy, the governor of Cape Coast Castle, prepared to march up the country against them. The barbarian king summoned all his vassal states to his standard, calling on them to arm against the English "the very fishes of the sea;" and he sent a message to tell Sir Charles that if he moved on he would flay off his skin and make a war-drum of it. Sir Charles did move, and it is said that the fierce African did by him what he had threatened. On the 21st of January, the governor—a very corpulent man, who had acted with remarkable want of military judgment—and the small force with him, were

CAPE COAST CASTLE.—From a view by W. Bartels 1841

surrounded in a hollow near the bank of a river, by 10,000 Ashantees. Sir Charles received a mortal wound in the breast from a musket-ball; and there was a terrible slaughter of officers and men. A hasty retreat was made upon Cape Coast Castle. On the 21st of May, Major Chisholm gained a victory over a great Ashantee army, but not until the barbarians had fought with great spirit for five hours. The king now died; but his brother, who succeeded him, was not less inveterate in his hostility to the English. He sent a message to Colonel Sutherland, who now held the command, importing that "if the walls of Cape Coast Castle were not high enough, the colonel ought to build them higher; and that if they were not sufficiently furnished with cannon, he ought to land those belonging to the ships of war; but that all he could do would not prevent the king from throwing the whole into the sea." Notwithstanding various threatening movements, the Ashantees did not venture upon an attack. After burning and destroying all the

villages near Cape Coast Castle, they withdrew a short distance into the interior. On the 4th of July a few fresh troops arrived from England; and on the 11th another fierce and long battle was fought. The Ashantees, who showed 16,000 fighting men on the field, suffered a terrible loss, and many of their greatest chiefs were killed or wounded. They very faintly renewed the combat on the 12th; but on the 20th they withdrew altogether.

Louis XVIII. of France died on the 16th of August in this year, and was succeeded by his brother, the Count d'Artois, under the name of Charles X. The first act of the reign of this unfortunate prince was of a popular character—it was an act of grace towards the anarchists, who, five years afterwards, drove him from his throne and from his country for ever. He published a decree, declaring that he did not judge it necessary to maintain any longer the measure which had been adopted under different circumstances against the abuses of the liberty of the press; and that

he, therefore, by the advice of his council, ordained that "the ordonnance of the 15th of August last, which enforced anew the laws of the 31st of March, 1820, and the 26th of July, 1821, should cease to have effect;" and thus the censorship of the newspaper press ceased once more in France. M. de Villèle was continued in power, and no material alteration was made in his cabinet. A very large portion of the press called Charles X. "the noble son of France, the model of honour and loyalty, the best prince that could have been called to reign over a loyal people."

The sixth session of the existing parliament was opened by commission on the 3d of February, 1825, and in the speech a gratifying picture was given of the state of public affairs, both foreign and domestic, with the exception of Ireland. There the Catholic Association had acquired such power as to occasion serious alarm to the ministers; but they felt that they could not justly suppress it, without suppressing the Orange societies also. Accordingly, a bill was introduced by Mr. Goulburn, "to amend the acts relating to unlawful associations in Ireland," which, after a keen opposition through four nights, was carried by a large majority. The Catholic Association accordingly closed its existence, but only to revive under a different but still more dangerous form, and to pursue bolder measures than ever. So little was the cause of Catholic emancipation affected by the passing of this bill, that the subject of the removal of civil disabilities from the Roman Catholics was again brought into parliament, and passed through the commons, the majority largely increasing at each step of the three readings. But on the 23d of April, and before it had passed its third reading, the Duke of York, while presenting a petition against it from the dean and chapter of Windsor to the lords, uttered his memorable protest, which for the time arrested the progress of the bill. "To the last moment of his life," he said of these claims, "he would oppose them, so help him God!" This decisive declaration from the heir presumptive to the throne, who was supposed also to express the sentiments of the king, was so effectual, that when the bill was brought into the House of Lords, it was lost by a majority of 178 to 130.

A more successful measure, effected during this session, was the removal of restrictions on the system of free trade. Already some concessions had been yielded in the trade between our colonies and the mother country, by which the former were allowed to participate in the advantages which had been exclusively confined to the latter. But this was not enough; and it was now alleged that the still continuing restrictions were equally injurious to the mother country and the colonies. In this state the whole

subject was brought under the review of parliament by Mr. Huskisson, on the 23d of March. It was against a great amount of old-established prejudice and many individual interests that he boldly took the field; but he successfully demon-

WILLIAM HUSKISSON

From the portrait by R. Rothwell, M.R.H.A.

strated, in a long and able speech, that those manufactures which had been the most highly cherished had languished the most—that excessive duties, while they produced disappointment to the manufacturer, and fraud against the exchequer, had only benefited the smuggler—and that the only true wisdom, as well as source of real profit, was to reduce these duties, so as sufficiently to counterbalance whatever might be imposed upon the raw material. His arguments were successful, and his proposals were adopted. By these our colonial ports were opened to all friendly powers on the same footing, with a few modifications, as those of Jersey and Ireland. Our trade and that of our colonies with the countries of South America was to be encouraged, by extending to certain colonial ports the regulations and immunities of the warehousing or bonding system. The large fees, also, which were levied in almost all their ports for the benefit of public officers, were abolished. The duty on sugar imported from the Mauritius was lowered to the same rate as that from the West Indies, and corn was allowed to be imported from Canada for the limited period of two years, on the payment of a moderate duty. This was much, but it was only a part of Mr. Huskisson's plan, the rest of which he brought forward on the 25th. It referred to the reduction of duties on the cotton, woollen, and linen trade; on foreign paper, books, and glass; on metallic substances, especially iron, copper, zinc, and lead; on raw materials used in our manufactures; and on foreign imported

wool. Mr. Huskisson also proposed the removal of quarantine duties, the abolition of all fees on commerce with our colonies, and the removal of duties payable on the transference of ships, or the shares of ships, from one owner to another. Not a few members were apprehensive of the consequences of so many and such important changes in our commercial system; but these propositions were approved of by the majority, and afterwards, when embodied in bills, were unanimously carried. Parliament, indeed, was buoyant in the prospect of general prosperity, and could well afford to be liberal; and as the finances still continued to improve, so that there was a surplus of £1,000,000 beyond that of the present year, other taxes were lowered with equal cordiality, to the amount of £1,500,000. These were on hemp, coffee, wines, rum, British spirits, and several other articles, the imposts on which pressed the most heavily upon the poorer classes. After these successful achievements, parliament was prorogued on the 6th of July, and the members retired to their homes, elate with the present prospects, and still happier anticipations for the future.

But now came a crash, like that of an earthquake in the midst of a noontide brightness, silence, and security. To understand its causes aright, and the calamities of 1825—a year so eventful in our mercantile history—we must again revert to the condition and prospects of 1824. Money, as we have noticed, had then become abundant, while the rate of regular interest had lowered so much, that money-holders became impatient for a more profitable investment of their capital. They were in that state in which men's wits are proverbially said to waver; and we know, by many a melancholy proof, that this wavering can affect whole communities and nations, as well as individuals. Hence, in regular merchandise a spirit of over-trading commenced, in which vague prospects were accepted for certainties, and promises and paper for the substantialities of gold and goods. But this was not enough for the headlong spirit of enterprise that had now started into full activity; and joint-stock companies were formed, by which every possible or impossible improvement was to be effected for the community, and pecuniary benefit to the shareholders. The humblest details of every-day life, also, were not beyond the reach of this mania of speculation; and there were joint-stock companies for baking, for washing, for baths, for brewing, for coal-portage, for wool-growing, and the like, after it had laid its hold upon the higher departments of life assurance, steam navigation, railroads, and canals; while gold and silver were to become so abundant under this mercantile millennium, that England would pay off the

national debt in a single day, and not know how to dispose of the surplus that remained. But the recognition of the independence of the South American colonies, and the establishment of British consuls at their principal ports, formed the chief outlet for that accumulated volume which could no longer be satisfied with the ordinary channels, and the lands of Cortez and Pizarro were to yield a richer produce to British talent and industry, than ever they had bestowed upon Spain. There were share companies for the working of gold and silver mines, and for the gathering of pearls and precious stones; while merchants hurried their disposable goods to America without selection and without stint, in the hope that their value would be returned fivefold. In this way, warming-pans were sent to those countries whose inhabitants sweltered upon their beds under the lightest of coverlets; and skates, which were to be used on rivers that glide through a perennial blaze of sunshine. One of these many speculations will suffice as a specimen of the rest. It was found that the united provinces of Rio de la Plata abounded in good pasture and excellent cows, while the people of Buenos Ayres had no butter. Here, then, was a profitable investment; an English company was formed, and a ship-load of Scottish milk-maids was sent out to enrich the bread of the Buenos Ayreans, and the pockets of their sanguine employers. On landing, however, they found that the cows were wild cattle, that could neither be milked nor even approached, instead of the civilized creatures to which they were accustomed, and had to be lassoed by the Guachos before they could be manipulated by the milk-maids. When this difficulty was overcome, butter enough was produced to overstock the whole province, when a serious error was discovered in the calculation: on account of the climate, the butter would not keep, and the people of Buenos Ayres liked oil better. The unfortunate damsels were obliged to return to their own home dairies, and their employers to resign themselves to their disappointment.

This frenzy had lasted until the middle of 1825, but with the latter part of the year the reaction commenced. Few or no returns were made for the money advanced, or for the goods sent out, and there was nothing to encounter the responsibilities that had been incurred and the waste which these empty expectations had encouraged. The losers had recourse to the banks, for the purpose of averting the evil consequences and repairing their failing credit; but the Bank of England had contracted its issues, and the provincial bankers followed their example. Then came a crash among the commercial houses of the least established standing; soon there was a following of those that had been rich and stable; and finally,

as a necessary consequence, there was a downfall in the banks themselves, which extended from Lombard Street, its centre, to the very extremities of our island. In the short space of five or six weeks, from sixty to seventy banking establishments had stopped payment. When paper money had thus lost its value, and gold became alarmingly scarce, cabinet meetings were held in rapid succession, to devise some remedy, and the first steps were an issue of one and two pound notes for country circulation, and a brisk coinage set on foot at the Mint, where for more than a week the rate of coinage was 150,000 sovereigns per day. Such was the state of the country at the end of 1825 and the commencement of the following year; and when parliament met on the 2d of February (1826), being opened by commission, the king's speech recommended an inquiry into these evils, to ascertain how much of them had been occasioned by bad laws, and how much of them had been independent of legislation. The House of Commons in this case concluded to protect public and private interests against sudden changes and reverses, by placing the currency on a secure basis, and for this purpose, resolved itself into a committee on the bank charter. A proposal was made by the chancellor of the exchequer that the issue of small notes below the value of £5 should be prohibited, and that those already in circulation should be withdrawn after a period of three years—this prohibition not to extend to Scotland, where a different system of banking made it unnecessary. This measure for the extinction of small notes was carried by a majority of 232 to 89. Two other bills were brought in, by which it was proposed that the directors of the Bank of England should establish branch banks in the commercial centres of the provinces, and permit the number of partners in each country bank to be unlimited. These were complained of as imperious measures, and an invasion of guaranteed rights; but the arrest upon the small note circulation was an urgent necessity, on account of its undue multiplication in previous years, and the depreciation into which such money, which was chiefly in the hands of the poorer classes, had now fallen; it was also necessary for bringing back the metallic currency, which had become scarce throughout the kingdom. Before the month was ended, also, the Bank agreed to advance deposits on merchants' goods to the amount of £3,000,000. This offer restored public confidence, by showing that money was to be had; and the whole amount was not applied for. Trade, now unshackled by old restrictions, betook itself once more to active enterprise, with improved experience and happier effect than before. During this melancholy period, also, the remedy of emigration was adopted upon a regular and

wholesale plan, instead of the local, temporary, and hap-hazard mode in which it had hitherto been tried. It originated in a motion, made on the 14th of March, by Mr. R. Wilmot Horton, "that a select committee be appointed to inquire into the expediency of encouraging emigration from the United Kingdom." The inquiry which was instituted taught the nation to repudiate the idea of merely expatriating our paupers to get rid of their helplessness and importunity, and showed that emigration was the most effectual means of extending our empire, opening up new fields for our commercial aggrandizement, benefiting the world at large, and perpetuating our own advantages to coming ages and future empires.

The present parliament was prorogued, after six sessions, on the 31st of May, and dissolved on the 2d of June. During the interval that followed, a necessity occurred which accelerated the meeting of the new parliament. Towards the end of August there was a deficiency in the harvest, which caused the prices of grain to rise above the importation limit. The season had been so unusually hot, that while vegetation was withered by the drought, men had been killed by sun-stroke, not only in the midst of work, but even while assembled for the election of new representatives. This calamity was a fruitful source of political agitation; and the parliamentary tables were loaded with petitions, chiefly from the manufacturing districts, demanding that the corn-laws should be altered. Although a motion for inquiry into the operation of these laws was rejected, it was still felt that some concession was necessary; and as the averages could not be taken, or foreign corn legally brought to market before the 15th of November, ministers were obliged to meet the temporary dearth on their own responsibility. Foreign corn was accordingly admitted on the 1st of September, and it was necessary that parliament should meet on the 14th of November, to give indemnity to the ministers for the alteration. But as there was an average crop of wheat, and a plentiful one of potatoes, in addition to this supply of foreign grain, the apprehended dearth was soon surmounted. Another and still more urgent affair, which occasioned this early meeting of parliament, was the troubled state of the affairs of Portugal, which called for British interference.

As has been previously noticed, the hostile entrance of the French into Madrid in 1823 had produced a counter-revolution, headed by Dom Miguel, second son of John VI., aided by his mother, by which John was deposed, and Miguel exalted to the throne with arbitrary power, having for his chief supporters the priests and peasantry of Portugal, to whom liberal opinions were strange and blasphemous innovations. But

in 1824 the wheel of revolution turned; Miguel was driven out of the country, in spite of the French faction by which he was backed; and John, his father, was restored. Brazil had proclaimed its independence during the great South American revolution, an independence, however, which Portugal had refused to recognize until 1825, when John VI., acting by the advice of Mr. Canning, and under English influence, acknowledged Brazil to be free and independent of the Portuguese crown; while the Brazilians, who had no purpose to establish a republic, still continued to recognize the sovereignty of the Braganza family over them. On the 10th of March, 1826, King John died, and his elder son, Dom Pedro, at that time in Brazil, was in a strait between the choice of ruling over the ancient kingdom of Portugal or its transatlantic empire; for by a decree of the Brazilian constitution, the two crowns could not be united on the head of one prince. Pedro compromised the difficulty by retaining the throne of Brazil for himself, and appointing his eldest daughter, Donna Maria de Gloria, to that of Portugal. With this appointment he also drew up a constitution for the Portuguese nation, which the latter joyfully accepted; and to prevent the evils of a disputed succession, he directed that his daughter Maria should marry her uncle, Dom Miguel, and share the throne of Portugal with him. Such incestuous unions, however revolting to Christian or to natural feelings, had been no unusual event in the royal family of Braganza, and they were sanctioned by the spiritual court of Rome, when the welfare of dynasties and nations was supposed to require them.

These measures were certain to bring into fierce collision the two political parties between which Portugal was divided. The liberals had now a constitutional or representative form of government, with the young queen at its head; and the advocates of the old despotic system saw that Miguel, by the new arrangement, would be lost to their cause if he became joint sovereign with Donna Maria. It was necessary for their interests that he should reign without a partner, and in this purpose they were supported by the representatives of the foreign despotic powers; it was even said that French gold was liberally circulated in Portugal, to accomplish a revolution, by which Miguel should be sole king. Several Portuguese regiments, also, and many of the malcontents, crossed the Spanish frontier, that they might organize a revolution; and there they were secretly aided by the Spanish government with arms, ammunition, and equipments. As an invasion of Portugal was evidently at hand, the Marquis of Palmella, the Portuguese ambassador at London, invoked the aid of the

British government, and this aid we were bound to give, on the faith of ancient treaties, that had been continued to the present hour. A message to that effect was brought down to both Houses of Parliament from the king on the 11th of December (1826), and the proposal for an address to the throne on the occasion, produced from Mr. Canning one of the most thrilling of his many eloquent speeches. The conduct of the enemies of Portugal had been so unjustifiable and so violent, her danger was so imminent, and the call upon British honour and British faith to interpose in her behalf so just and urgent, that no alternative remained, whatever might be the issue. "The consequence," he said in conclusion, "of letting loose the passions at present chained and confined, would be to produce a scene of desolation which no man can contemplate without horror; and I should not sleep easy on my couch if I were conscious that I had contributed to precipitate it by a single moment. This is the reason—a reason very different from fear—the reverse of a consciousness of disability—why I dread the recurrence of hostilities in any part of Europe; why I would bear much and forbear long; why I would put up with almost anything that did not touch national faith and national honour, rather than let slip the furies of war, the leash of which we hold in our hand, not knowing whom they may reach, or how far their ravages may be carried. Such is the love of peace, which the British government acknowledges; and such the necessity for peace, which the circumstances of the world inculcate. Let us flee to the aid of Portugal by whomsoever attacked, because it is our duty to do so; and let us cease our interference where that duty ends. We go to Portugal not to rule, not to dictate, not to prescribe constitutions, but to defend and to preserve the independence of an ally. We go to plant the standard of England on the well-known heights of Lisbon. Where that standard is planted, foreign dominion shall not come."

The effect of this speech upon the house was electric. Mr. Brougham, himself a master and judge of eloquence, was won by it into unqualified admiration; and in supporting the motion, he declared "that the burdens of the country, however oppressive, would be borne cheerfully through the impending struggle, if war should be the result; for now we were governed on wise, liberal, and truly English principles." The Portuguese constitution, he added, was worthy of that distinguished statesman's patronage who had the present management of our foreign affairs: the subject had inspired his eloquence with a degree of fervour unprecedented in effect even—and he could not rank it higher—beyond

that right honourable gentleman's former most eloquent orations. As if to heighten its effect, also, Mr. Joseph Hume made one of his cold, hard, dry speeches, complaining of the cost of the contemplated war, and moving that "the house be called over this day week;" but the reply of Mr. Canning, which even surpassed the eloquence of his previous speech, bore down opposition as with a resistless whirlwind, and the resolution passed unanimously, with the exception of three or four members. It was also passed in the lords, although the Duke of Wellington deplored the necessity, and endeavoured to apologize for the treacherous dealings of the Spanish king, Ferdinand the Beloved. So quickly, too, was the resolution followed up, that only two days after (December 14th), 5000 troops, under the command of Sir William Clinton, were marched to the coast upon this expedition, and on the 25th were in the Tagus. The effect of this decision and promptitude was, that Ferdinand of Spain was cowed into neutrality, and French intrigue in Portuguese affairs was abandoned. While Portugal was thus rescued, a still weightier effect was produced by the wonderful speech of Mr. Canning. The report of it, and the sentiments it contained, were diffused over Europe, to shake the thrones of despotism, and give courage to those hearts that longed to free their country from the oppressive bondage of foreign rulers. It was an immense transition which the British cabinet had made from the political school of Castlereagh to that of Canning, his successor.

In another country, with the wrongs of which Britain could not so justly interfere, the cause of liberty had a still more unequal conflict to wage than in the case of Portugal. The Greek revolt against Turkish oppression was still continued, but with disastrous consequences to the Greeks; and Missolonghi, the key of Western Greece, had fallen before the merciless attacks of Ibrahim Pacha, the ruler of Egypt. In this strait, the Greek national assembly made an affecting appeal to the patriotism of Europe at large, and especially to Britain, as the natural home of freedom, but our government could offer nothing more than its sympathy, tied up as it was by treaties, and a regard for the general peace of the world. Contributions, however, to a large extent from individuals were not wanting, and Greek scrip assumed a poetical and classical

character in the money-market, on account of the cause to which it was consecrated. But here selfish speculators stepped in, who turned this liberality to their own aggrandizement; the fund was mismanaged, and a large portion of it, instead of finding its way to Greece, was embezzled by selfish contractors, who would have set their own country to sale, if they could but have found a purchaser. But the time was drawing nigh when British sympathy was to find a more effectual vent, and to vindicate the cause of Greece upon our own favourite element, by the battle of Navarino.

On the 13th of December parliament adjourned till the 8th of February.

Long before this, intelligence had arrived of the triumphant close of the Burmese war in the East.

The Burmese or Burmans had long been elated

BURMESE ¹ 1, Kee Wongee, or Prime Minister 2, A Trooper 3, A Cassay Horseman

by conquests easily made over their unwarlike neighbours. They had conquered Pegu; they had subdued Assam; they had reduced a congeries of small independent states, and they had concealed themselves into the belief that nothing in Asia could resist their arms. Not even in the East had conquest often been attended with such extermination and cruelty as had been practised by these semi-barbarians. Towards the end of the year 1823, their conquests having brought them into immediate contact with the frontiers of the British-Indian empire, they began to make sundry unprovoked aggressions upon it. In a sudden night attack they drove away a small guard of British troops, and took possession

¹ From Snodgrass's *Narrative of the Burmese War*, Cox's *Residence in the Burman Empire*, and Symes' *Embassy to the Kingdom of Ava*

of the little island of Shapoorée, on the coast of Aracan. Our Indian government sent in a very gentle remonstrance, which the arrogant court of Ava considered as a pusillanimous attempt to deprecate the resentment of the warlike, conquering Burmese. They triumphantly appealed to the paper as a proof that the British dreaded to enter upon a contest with them; and they intimated that unless their right to the island of Shapoorée was distinctly admitted, the "Victorious Lord of the White Elephant and the Golden Foot" would invade the Company's dominions. In the meanwhile, two companies of our 20th regiment landed on the disputed island, drove off the Burmese, and stockaded themselves; and, on the other side, the Burmese seized on the mainland the commanding officer and some of the crew of the Company's cruiser *Sophia*, loaded them with chains, and carried them up the country. War could no longer be avoided; but while we were preparing for it, from 4000 to 5000 Burmese and Assamese burst across the south-east frontier of Bengal, and claimed the province of Cachar as their own. At daybreak on the 17th of January, 1824, Major Newton attacked them in their stockades, gave them a terrible defeat, and drove them back to their hills. Major Newton had scarcely retired when they repeated their attack in greater force than before. They were defeated by Captain Johnstone on the 13th of February. On the following day Lieutenant-colonel Bowen came up, and, taking the command over Captain Johnstone, marched in pursuit of the retreating enemy. They were driven by the bayonet from some of their stockades; but one of these works was so formidable, and the fire from within so well sustained, that five of our officers and about 100 of our sepoy were killed or wounded; and Lieutenant-colonel Bowen was obliged to call off the attacking party, and retire to Chayrapoor, at a short distance. On the 27th of February (1824), Colonel Innes came up with four guns and a battalion of fresh troops, and assumed the command; but in the meanwhile the Burmese had retreated from their formidable position, and retired into their own country.

But before this time the great Burmese chief, the Maha Bandoola, had collected a large army near the southern extremity of our frontier, and had marched into Aracan, provided with golden fetters, in which the Governor-general of India was to be led captive to Ava. This Maha Bandoola had convinced his king that with 100,000 men the conquest of Bengal might be achieved. Therefore the "Lord of the Golden Foot" now laid claim to all the territories east of Moorshedabad, as having formerly belonged to the kingdom of Aracan, which he and his ancestors had conquered.

On the 10th of May, 1824, a British fleet and a land force of from 5000 to 6000 men arrived within the bar of the Rangoon river. The Burmese discharged a feeble ineffectual fire from some batteries, and then fled. Our troops being landed took quiet possession of Rangoon; but it was an utterly deserted town, from which everything had been removed except the miserable houses. Oxen, horses, boats, provisions, everything that was at all likely to be of use to an invading army, had, by order of the court of Ava, been previously carried far up the Irrawadi river. This system hampered Sir Archibald Campbell's movements from the first; and as it was steadily and effectually pursued afterwards, our advances were slow, and the war became a long one. The British troops and sepoy were compelled by the rainy monsoon to take up a long residence at Rangoon, situated in the midst of unhealthy swamps and rice-grounds. A fearful mortality soon began. Many bold attempts were made by the Burmese to drive the invaders from the town. The river was covered with long and gilded war-boats, the warriors in which often fought desperately. A series, a perfect continuity of stockades was erected, and was gradually pushed nearer and nearer to Rangoon. Like the Singhalese, the Burmans rarely met an enemy in the open field: their conquests had all been made through the system of stockades. Instructed and trained from their youth in the formation and defence of these works, they had attained to great skill and judgment in the use of them. By making gradual approaches, and by carefully stockading all their positions as they advanced, their wars had for many years been an uninterrupted series of triumphs. When they were getting rather too near to Rangoon, Sir Archibald Campbell beat up their quarters. There was some very hard fighting before the stockades could be destroyed. On the last day of June all the woods in Sir Archibald's front again exhibited bustle and commotion; 8000 men had crossed to the Rangoon side of the river; the jungles around seemed full of life; clouds of rising smoke marked the encampments of the different corps of the Burmese army in the forest, and their noisy preparation for attack formed a striking contrast to the still and quiet aspect of the British line.¹ The Shoo Dagon, or the Golden Dagon Pagoda, was the key of the British position. On the morning of the 1st of July the enemy, with their stockading materials, issued in dense masses to the right and front of the pagoda. They were very soon repulsed by two field-pieces served with grape and shrapnel, and by a brilliant charge of the 43d Madras native infantry. On the 8th of July, Sir Archibald Campbell advanced to

¹ Major Snodgrass's Narrative of the Burmese War.

Kemendine, attacked a great army stockaded there, and inflicted upon them a terrible loss. The commander-in-chief, several chieftains of high rank, and 800 men were found lying dead

the night of the 13th of August, but it was only to encounter defeat and a slaughter more terrible than they had ever yet sustained. The Invulnerables ventured no more near any of our posts.

But a far more terrible enemy had gotten within our lines—the dysentery broke out among our troops, killing many of them, and reducing more to a most emaciated and feeble state. At one time scarcely 3000 duty-soldiers were left to guard our lines.

Giving up for the present the notion of conquering Bengal, the great Maha Bandoola quitted the southern extremity of our frontier, and marched to the Irrawadi to reinforce the army there. His own army was reinforced on its way down to the river. He began his march about the end of August, at a season of the year when none but Burmese could have

From Moore's Views in Rangoon

within the stockades, and the neighbouring jungles were filled with the wounded.

A detachment under Colonel Miles subdued the maritime possessions of the Burmese to the eastward, in the hope that their loss might induce the court of Ava to sue for peace. Tavoy surrendered; Mergui was taken by storm; and the people all along the coast of Tenasserim gladly placed themselves under British protection. But these achievements occupied time, and when the result was known at Ava it seemed to produce no effect on the determined temper of that court. The "Lord of the Golden Foot," who had recalled all his unsuccessful commanders-in-chief who had not been slain in battle, now sent his own brothers, the Prince of Tongboo and the Prince of Sarrawadi, with a whole host of astrologers, and a corps of "Invulnerables," to join the army, to direct the future operations of the war and to drive the English into the sea—or die. The astrologers were to fix the lucky moment for attacking: the Invulnerables had some points of resemblance to the Turkish Delhis; they were the desperadoes or madmen of the army, and their madness was kept up by enormous doses of opium. The corps of Invulnerables consisted of several thousand men, divided into classes, the most select band of all being called the "King's Invulnerables." It was soon found that they were as susceptible of wounds and death as the astrologers were incapable of interpreting the stars. Upon the arrival of the two princes the Burmese resumed the offensive. They made a fierce attack upon the Golden Dagon Pagoda on

kept the field for a week; and he reached Donoo-pew, on the Irrawadi, before Sir Archibald knew that he had left Aracan. Happily our troops, though wofully reduced in numbers, were now fast recovering their health and strength; and two fresh British regiments, some battalions of native infantry, a regiment of cavalry, a troop of horse-artillery, and a troop of rockets, arrived from Calcutta and Madras, together with some admirable draught cattle. 500 native boatmen came round from Chittagong, and were busily employed in preparing boats for river service.

A small detached force, under Lieutenant-colonel Godwin, sailed from Rangoon on the 13th of October to Martaban, once the splendid capital of the kingdom of Pegu. The Burmese were soon driven with loss from the town and from all their defences. The inhabitants of Martaban, being chiefly Talains or Peguers, received the British troops with every appearance of satisfaction. Another frontier-fortress of the Burmese, called Yeh, next fell into our hands. In all this part of the country the native population were eager to be released from the iron sceptre of Ava, and to be included among the subjects of the British.

By the end of October the rains had entirely ceased at Rangoon. Sir Archibald Campbell was preparing to put his army in motion, when Maha Bandoola came down to meet him at Kemendine, with 60,000 fighting men, of whom 35,000 were musketeers, a considerable train of artillery, and a body of Cassay horse, the best cavalry of this part of Asia. It was thought

best to wait for him. Our troops were thus spared much fatigue, and a great decisive battle might bring the court of Ava to reason. On the 1st of December the Maha Bandoola attacked both by water and by land. War-boats and rafts, filled with combustible materials, and favoured by wind and current, were poured against our flotilla on the Irrawadi; but the skill and intrepidity of British seamen proved too much for the numbers and devices of the Burmese. Not one of our ships was injured. The fire rafts exploded like mere fire-works; our sailors clapping their hands at the pretty spectacle they afforded. On land the Burmese were still less successful. They were driven from their stockades, were cut to pieces, or scattered to the winds by the gallant Major Sale (afterwards the hero of the Afghan war), and the no less gallant Major Walker, who unfortunately fell in the action, together with a good number of his brave comrades and men. This fighting lasted in all, and at all points, through the 1st, 2d, 3d, 4th, and 5th of December. On the 6th, Bandoola was employed in rallying his defeated troops. On the 7th he made his last and grand attack on the Shoo Dagon Pagoda. Here his troops were beaten again, driven back to their entrenchments, then driven out of them, and forced back into the jungle at the point of the bayonet. During these seven busy and fiery days the Burmese, in addition to a prodigious loss of lives, had lost every gun they had, and the entire materiel of their army.

On the 11th of February, 1825, the British began to move up the Irrawadi. A few wretched families were found wandering in the woods, and looking like spectres from starvation and misery; but, with the exception of these poor people, the country seemed to be left to the dominion of the tiger and wild hog. A mistake was committed by Sir Archibald in dividing his small force; and Brigadier-general Willoughby Cotton, commanding one of the divisions, and acting with very little judgment, failed in an attack upon the works of Donoopew. No fewer than 150 of our men were there killed or wounded; and the retreat was so precipitate and so shamefully managed, that the wounded were not carried off, although it was well known that they would all be put to a cruel death. The next day most of our killed and wounded men who had been left in the stockade were crucified and put upon rafts, which were sent floating down the river towards our flotilla. On the 25th of March, Sir Archibald Campbell himself sat down before the truly formidable works of Donoopew, and commenced making regular approaches. On the 1st of April, after several sorties had been made and repulsed with loss, our mortar batteries and rockets began

their work of destruction, and continued firing at intervals during the day and part of the succeeding night. The Burmese remained close under the protection of their works, making at first little, then less, and at last no return at all to our fire. "This excited much surprise, but on the next morning the mystery was explained. At daylight on the 2d of April, just as our breaching-batteries began to open, two lascars, who had been prisoners in the fort, came running out, and informed our people that the great Bandoola had been killed the day before by one of our shells or rockets; that after his death was known no entreaties of the other chiefs could prevail upon the Burmese to remain at their posts; and, in short, that the whole army had fled or dispersed during the dark hours of the night."¹ By possession of Donoopew, that magnificent river, the Irrawadi, was entirely under our command, from its broad mouths on the ocean to the valley of Ava and Amarapura, where it contracts and becomes unnavigable. On the 4th of April, two days after taking possession of Donoopew, our main army recommenced its march for Prome. On the 24th of April it came within sight of that city. On the next day the Burmese set fire to Prome, and fled higher up the river. By the exertions of our troops a considerable part of the town was saved from destruction. The rainy monsoon now set in, and rendered necessary a suspension of operations. By order of the "Golden Foot," fire was set to every town and village that was likely to be in or near to the British line of march; and horses, cattle, provisions, and all things were removed towards Ava. At the same time, the court of Ava took most vigorous measures for recruiting the army, and for providing it with powder and weapons. A truce was agreed to, which was not observed by the Burmese, and a negotiation for a peace was entered upon by the court of Ava, solely as a means of gaining time and lulling the British into a false and perilous security. At last the Burmese negotiated, and sent the following laconic epistle to Sir Archibald:—"If you wish for peace, you may go away; but if you ask either money or territory, no friendship can exist between us. This is Burmese custom." So soon as this letter was sent, the Burmese, who had collected all the force they could assemble, left a reserve of 10,000 men in a strongly-fortified post at Melloon, and advanced against Sir Archibald with 60,000 men. Although he had received reinforcements, Sir Archibald, after providing a garrison for Prome, had a field force of not above 5000 men, but of these 3000 were British. In the first encounter the Burmese were successful, beating back two brigades of

¹ Macartney's *Indian Empire*.

native Madras infantry, killing Colonel M'Dowall, the commander, wounding four of the junior officers, and killing or wounding a great many of the sepoys. But about a fortnight after this

encounter, or on the 1st of December, the great Burmese army was most thoroughly discomfited; and those who rallied were beaten to pieces on the 2d of December Sir Archibald Campbell

PROME, from the Heights — From a sketch by Lieut Willoughby Bengal Artillery

then proceeded to Melloon. On the 12th, while the army was on its march, the cholera broke out, and ere it could be checked, it carried off many men of the native Madras divisions, and rendered two British regiments almost unfit for duty. On the 26th of December, when our troops were within ten miles of Melloon, a flag of truce was sent to Sir Archibald Campbell from the last-named place, with letters communicating the arrival of a high commissioner from Ava, with full powers to conclude a treaty of peace. This was another delusion; but time was granted in order to see whether the Burmese had been beaten enough, and were really sincere in their desire for peace. It was soon found that they required more beating. On the 19th of January, 1826, when two pieces of artillery had opened the way for our storming column, the works of Melloon were stormed and taken, and from 10,000 to 15,000 Burmese were driven away in a confused and helpless mass from the strongest works they had ever erected. The beaten army, and all the beaten divisions and detachments of it, continued to retreat upon Ava with all possible speed. On the 25th of January, Sir Archibald Campbell resumed his march over a barren country and execrable roads. On approaching Pagham-mew, a town about 100 miles above Melloon, he obtained positive information that a levy of 40,000 men had been ordered, and that the people had been induced to enrol by means of a high bounty and several honourable privileges and distinctions; that the "Golden Foot" had bestowed upon this new army the flattering appellation of "Retrievers of the King's Glory;" and that this army had been

placed under the command of a savage warrior, styled Nee Woon-Breen, which has been variously translated as "Prince of Darkness," "King of Hell," and "Prince of the Setting Sun." Upon the 8th February, when within a few days' march from Pagham-mew, Sir Archibald ascertained that the "Retrievers of the King's Glory" and the "Prince of Darkness" were prepared to meet him under the walls of that city. On the 9th the British column moved forward in order of attack, being much reduced by the absence of two brigades, and considerably under 2000 fighting men. The advanced guard was met in the jungle by strong bodies of skirmishers; and, after maintaining a running fight for several miles, the column debouched into the open country, and there discovered the Burmese army, from 16,000 to 20,000 strong, drawn up in an inverted crescent, the wings of which threatened the little body of assailants on both their flanks. But Sir Archibald pushed boldly forward for their centre, threw the whole weight of his column upon that point, broke and shattered it in the twinkling of an eye, and left the unconnected wings severed from each other. The "Retrievers of the King's Glory" did not fight so well as those who had been accused of forfeiting his majesty's glory. they all fled as fast as their legs could carry them to a second line of redoubts and stockades, close under the walls of Pagham-mew; but the British column followed them so closely that they had little time for rallying in those works, and so soon as a few English bayonets got within the stockades, all the Burmese went off, screaming like a scared flock of wild geese. Hundreds jumped into the river to escape their assail-

ants, and perished in the water; and, with the exception of 2000 or 3000 men, the whole army dispersed upon the spot. The unfortunate "Prince of Darkness," or "King of Hell," or "Prince of the Setting Sun," fled to Ava; and he had no sooner reached the court than he was put to a cruel death by order of the king.¹ The court of Ava now gave in, and sent commissioners to treat honestly for a peace. Sir Archibald, however, continued his advance until he reached Yandaboo, only forty-five miles from the capital. Some prisoners, British subjects and others, who had been residing up the country when the war broke out, and who had been treated with execrable barbarity, were now liberated, and were the principal negotiators for the Burmese sovereign. On the 24th of February, 1826, the treaty of peace was settled and finally signed at Yandaboo. By this treaty it was agreed that there should be perpetual peace and friendship between the honourable Company and his majesty the King of Ava; that the King of Ava should renounce all claims upon, and abstain from all future interference with, the principality of Assam and its dependencies, as also with the contiguous petty states of Cachar, Iyntein, and Manipoor; that his majesty should cede to the Company in perpetuity the conquered provinces of Aracan, including the four great divisions of Aracan, Ramree, Cheduba, and Sandoway; that the Aracan Mountains should henceforward form the boundary between the two great nations on that side; that his majesty should also cede the conquered provinces of Yeh, Tavoy, Mergui, and Tenasserim, with the islands and dependencies thereunto appertaining, taking the Saluen river as the line of demarcation on that frontier; that his majesty, as part indemnification for the expenses of the war, should pay the sum of one crore of rupees; that henceforth accredited British ministers, with a body-guard of fifty men, should be allowed to reside at Ava, and that an accredited Burmese minister should be sent to reside at Calcutta; and that free trade should be allowed to British subjects in all the dominions of his majesty, who should abolish all exactions upon British ships entering his ports, &c.; and that "the good and faithful ally of the British government, his majesty the King of Siam, having taken a part in the present war," should, to the fullest extent, as far as regards his majesty and his subjects, be included in the above treaty.²

The money demanded as part indemnification was far too moderate a sum. The king was rich, and both gold and silver bullion abounded in Ava. A crore of Sicca rupees at par were barely equivalent to £1,000,000 sterling. The war had cost us from £7,000,000 to £8,000,000. With an easy liberality our commissioners waived all claims for indemnities or recompenses for the cruel sufferings of our unfortunate prisoners, or for the losses they had sustained, not only in property but in health, by their long and torturing captivity; and although they stipulated in an article that private debts owing by Burmese to British subjects should be liquidated, they consented to consider a part of the property which had been seized by the king, at the time when he threw the Englishmen at Ava into prison, as *confiscated* by the laws of the country, and so removed out of the operation of any treaty of peace. In other respects the treaty was such as it should be. The cession of Aracan gave us an admirable mountain frontier, and amply provided for the freedom from Burmese interference with our Indian territories on that side. The possession of the Tenasserim provinces, and of the islands that lie off that coast, and off the coast of Aracan, gives increased security to our commercial navigation, opens the road to an inland commerce with the Siamese, Shans, and other distant people; places at our disposal teak-forests of enormous extent, and productive of the very best timber. Moreover, a variety of valuable raw produce is procurable, or may be raised, from these new territories, to be replaced by the manufactures of India or of Great Britain. The whole country of Tenasserim is known to be rich in minerals; iron ore of good quality is found in abundance in the vicinity of Tavoy; and extensive coal-measures have been lately discovered in several places on the banks of the Tenasserim river. The discovery of these coal-measures must have an advantageous effect on the steam navigation of the Gulf of Bengal and the Straits of Malacca. The provinces of Cachar and Assam, though holding out less promising prospects to commerce, help to form a well-defined and strong frontier; and in the approximation they afford to Tibet and China, our trade may possibly be extended, in process of time, in those directions. Nor was there wanting the consolation that the condition and prospects of some millions of natives were improved immeasurably by being placed under our rule. On the whole, the Burmese war is a grand episode in the history of the nineteenth century.

CHAPTER XV.—CIVIL AND MILITARY HISTORY.—A.D. 1827—1828.

GEORGE IV.

Death of the Duke of York—His character—Parliamentary affairs—The corn laws—Claims of the Roman Catholics—Offensive proceedings of the Irish claimants—Mr. Canning appointed premier—Formation of the new cabinet—Complaints at Canning's acceptance of office—Opposition to the new administration—Penryn disfranchised—Motions on the corruptions of parliamentary elections—Enactments on the subject—Unsuccessful attempts to modify the game laws—Improvements in the criminal law—Coalition of England, France, and Russia, in behalf of Greece—Death of Mr. Canning—Lord Goderich becomes premier—The Goderich ministry—Cruelties inflicted on the Greeks by the Turks—Feroocious proceedings of Ibrahim Pacha in the Morea—The admirals of the three allied powers interfere—The Egyptian fleet consents to remain at Navarino—It attempts to escape, but is compelled to return—The barbarities in the Morea continued—The allied admirals block up the Egyptian fleet at Navarino—Battle of Navarino—The Egyptian fleet totally destroyed—Dissolution of the Goderich ministry—The Duke of Wellington appointed premier—Parliament opened—The battle of Navarino condemned—Mr. Brougham's speech on the public fears of a military dictatorship—Misunderstanding between the Duke of Wellington and Mr. Huskisson—State of finance—Appointment of the finance committee—Its report—Proposal of a pension to Mr. Canning's family carried—Motion for the repeal of the test and corporation acts—Discussion of the subject in both houses—The acts repealed—The repeal opens the way for Catholic emancipation—Motion on the subject made and negatived—Mr. Huskisson inadvertently resigns office—The resignation accepted—He endeavours unsuccessfully to retract his resignation—Others of the cabinet go out with him—Parliamentary proceedings in law reform and the corn bill—Parliament prorogued.

THE year 1827 was commenced with a breach in the royal house—the death of the Duke of York—who expired, after a short illness, on the 5th of January. His early private life had been disfigured by the licentiousness that marked the career of his elder brother, while his ambition to distinguish himself as a soldier had cost the country much unprofitable expense, as well as loss to its military reputation. He was also overwhelmed with debt, which he had no means of liquidating, and which he recklessly suffered to accumulate to the last. And yet, in spite of these faults, which were attributed to his imperfect education and constitutional thoughtlessness, he was beloved by those who knew him best, on account of his many good and amiable qualities; while his administration for thirty-two years as commander-in-chief had improved our armies, and endeared his name to the British soldiery at large. Even by the anti-Catholic portion of the religious community, it was felt that a better man could have been better spared, on account of his steadfast resistance to the claims of Popery, on which account he had been considered as the chief break-water of the advancing tide. As naturally as if it had been an established inheritance, his office of commander-in-chief devolved upon the Duke of Wellington, while an increase was made to the income of the Duke of Clarence, who was now presumptive heir to the crown.

Parliament re-assembled on the 8th of February.

VOL. IV.

ary, when the prospects of the country were very flattering. The first important question brought under discussion was that of the corn laws. On the 1st of March, Mr. Canning proposed a scale of the average prices of the various kinds of grain within the kingdom, at which, upon the payment of a specified scale of duties, foreign grain should be admissible into the market. The debate upon the question was protracted, and there was a great divergency of opinion and theory. Ministers took the medium price of wheat at sixty shillings. The landed interest would have taken it higher; the manufacturing interest much lower. In the end the ministerial measure passed the House of Commons by large majorities.

The Roman Catholic claims were revived by Sir Francis Burdett, who was charged with a petition from Ireland. The tone and attitude of the Roman Catholics of that country had exasperated the English people; and the table of the house was covered with anti-Catholic petitions. The tone of the Irish was indeed calculated to excite feelings of anger, or alarm, or annoyance, in unprejudiced minds. The Catholic Association, in about six months after it had been put down by law, reappeared under a new form, and pursued its object with more animation than ever, while "the rent" in support of its measures was exacted from the people as usual, under the name of "free gifts." Part of this money was avowedly spent in influencing the elections of members of parliament. Mr. Daniel O'Connell and the other orators who presided over, and

directed as they listed, this remodelled association, preserved no measure towards England, or the religion or morals of the English people. Their harangues had become, at every new meeting, more and more intemperate, and they had long been threatening and bullying the English and Scotch portions of the Union. Ever since Mr. Pitt's second administration, the Catholic question had been left in the cabinet an open one. Mr. Canning was as eager as ever to go the full length of emancipation: some of his colleagues, and foremost of all Lord-chancellor Eldon and Viscount Sidmouth, were strongly opposed to the measure, or to any further concessions. But Mr. Canning had now his foot on the step of the highest office in the government. The health of Lord Liverpool, the premier, had long been declining. He had been seized with paralysis in the month of February; he partially recovered, but had a relapse which left him in a hopeless state. On the 28th of March, Mr. Canning attended the king, on his majesty's summons, to consider how the cabinet was to be continued. The king required that some one holding the opinions of Lord Liverpool on the Catholic question should be called to supply his place. Mr. Canning declared that if an opinion favourable to the Roman Catholics was to be a disqualification for the office of prime minister, he would not be the individual in whose person that principle of exclusion should be established, and advised the king to form an anti-Catholic administration. His majesty, who knew the importance of retaining Mr. Canning, dissented, and nothing was settled at that meeting. The anti-Catholics thought they could count upon the Duke of Wellington and Mr. Peel; and they were desirous that a new cabinet should be formed, with Peel and Wellington at the head of it. But Mr. Canning's popularity was at its very spring-tide; difficulties stood in the way of any other arrangement; and on the 10th of April, the king commissioned Mr. Canning to propose a plan of his own for the re-construction of the ministry. To form an entirely pro-Catholic or pro-emancipation cabinet was still impracticable; and there was some difficulty for Mr. Canning in constructing any cabinet of which he was to be the head. The Duke of Wellington, Mr. Peel, Lord Westmoreland, Lord-chancellor Eldon, and Lord Bathurst preferred resigning. It was expected that these resignations would alarm the king and induce him to part with Mr. Canning; but his majesty confirmed the appointment of the great leader of the commons as premier; and the announcement was vociferously cheered by the great majority of the House of Commons. One circumstance clouded the joy of the new premier's ardent friends: his health had been seriously

affected; in December and January he had suffered a severe illness; and now the increase of toil, anxiety, and the perpetual excitement to which he was exposed, boded ill for his recovery.

Lord Melville joined his resignation to those who had followed the Duke of Wellington and Mr. Peel. There therefore remained of the Liverpool cabinet only Lord Harrowby, and Messrs. Huskisson, Robinson, and Wynne. The morning after the resignation of Lord Melville, who had been the first lord of the admiralty, Mr. Canning brought about the appointment of the Duke of Clarence as lord high-admiral—a dignity which had long lain dormant—and as lord high-admiral the duke became head of the navy and supreme over the lords of the admiralty. His acceptance of office under Mr. Canning is thought to have had no small weight among official men. Lord Bexley immediately retracted his resignation, and Sir John Copley, the master of the rolls, who had differed with Mr. Canning, now condescended to become lord high-chancellor, with a peerage by the title of Baron Lyndhurst. Lord Anglesey was appointed master-general of the ordnance, with a seat in the cabinet, as successor to the Duke of Wellington. Mr. Sturges Bourne took the home department. To supply the remaining places in the cabinet, Mr. Canning opened a negotiation with the Marquis of Lansdowne and other Whigs. No official arrangements ensued; but Lord Lansdowne, and the main body of the Whigs, with Sir Francis Burdett, and most of the Radicals that followed that baronet, volunteered their unofficial support of the new government. Upon Mr. Canning's appointment to the chancellorship of the exchequer, Mr. Prosperity Robinson was called to the House of Peers as Lord Goderich, and the accomplished Lord Dudley and Ward succeeded Mr. Canning in the foreign office.

The House of Commons, which had adjourned on the 12th of April for the Easter holidays, re-assembled on the 1st of May. Mr. Canning detailed the circumstances which had preceded his appointment as head of the government. "If," said he, "I had submitted in my person to the principle of exclusion as a friend to the Catholic claims, I should have dishonoured myself. Such a submission would have been a badge of helotism, and the indelible disgrace of my political life." In the upper house explanations were given by most of the ministers who had resigned. In both houses it was evident that the opposition to Mr. Canning would be vehement. A portion of the Whigs joined the Tories in denouncing the new cabinet, and thereby increased the difficulties of the premier's position, but some of the Whigs took office as soon as they saw that the premier was firmly seated. Before the close of

the session, Lord Lansdowne became secretary for the home department; Lord Carlisle accepted the privy seal, and Mr. Tierney became master of the mint. But at the same time Mr. Peel put himself in a hostile attitude, and complaints were made to ring through the country of Mr. Canning's abandonment of his old party connections, of his latitudinarianism in religious questions, and of his too great boldness in political ones. The corn bill, which had been sanctioned by the late Lord Liverpool, was so cut and hacked in the upper house, that Lord Goderich was induced to abandon it. To provide against a scarcity during the recess of parliament, a temporary bill, permitting the release of foreign corn from bond, was brought in by Mr. Canning, and was passed expeditiously through both houses.

A fixed design to overturn the new administration was now very apparent, and the strife of party was waged with very little moderation or delicacy. The genius of Mr. Canning was not respected as it ever ought to have been. The opposition in the House of Commons, as well as in the lords, assumed a most formidable and irritating character; but though the premier was suffering under extreme anxiety of mind and sickness of body, his rhetorical powers and his sparkling wit never for one moment failed him. The impatient Whig reformers joined the Tories in attacking him. It was in these debates that Mr. Canning repeated his determination to oppose parliamentary reform, and declared himself hostile to the repeal of the test and corporation acts. On the test act, however, he had never before fully delivered an opinion to the house; and his opposition to its repeal, or the agitating that question *then*, may have arisen out of a natural fear of complicating and prejudicing the Catholic question. All the more moderate Whigs were disposed to put off any serious discussion of the question of a sweeping reform; but the subject was, to some extent, forced upon parliament. The reports of the election committees had disclosed more than one scene of gross bribery and corruption. These scenes had been enacted chiefly at Colchester, Northampton, Leicester, Preston, and East Retford. Several motions were made; and a bill was brought in for "the more effectual preventing of bribery and corruption" in the borough of Penryn. Lord John Russell thought that the house ought to follow the example which had been set in the case of Grampound, and disfranchise the borough altogether, with the ultimate view of transferring its rights to some of the great, populous, and unrepresented towns; and his lordship moved as an amendment that "therefore the borough of Penryn shall be excluded hereafter from returning burgesses to serve in parliament." The original

motion was supported by the ministry; Mr. Canning, Mr. Sturges Bourne, and Mr. Charles Wynne speaking in defence of it. On a division the amendment was carried by 124 against 69. No resolution was taken concerning the place to which the rights should be transferred; but the populous and rich Manchester seemed to unite the suffrages of most of the members who adverted to the transfer. Similar resolutions were adopted in regard to East Retford; but the session closed before any effective proceedings were taken for the disfranchisement of either of these boroughs. The aim of the moderate Whigs now was to reform parliament gradually; to punish known instances of corruption; to transfer the rights of small rotten boroughs to the great unrepresented cities; and gradually to extend the elective franchise until it comprehended a much larger portion of the population. They had at this moment no design of introducing into the constitution those extensive changes which were forced from parliament by the pressure from without in 1832.
